Z	Zimmermann catalogue [Purcell]
zar(s)	zarzuela(s)
zargc	*zarzuela género chico*

Bibliographical Abbreviations

All bibliographical abbreviations used in this dictionary are listed below, following the typography used in the text of the dictionary. Broadly, *italic* type is used for periodicals and for reference works; roman type is used for anthologies, series etc. (titles of individual volumes are italicized).

Full bibliographical information is not normally supplied in the list below if it is available elsewhere in the dictionary. Its availability is indicated as follows: D – in the list of 'Dictionaries and encyclopedias of music'; E – in the list of 'Editions, historical'; and P – in the list of 'Periodicals'; these lists are located in vol.28. For other items, in particular national (non-musical) biographical dictionaries, basic bibliographical information is given here; and in some cases extra information is supplied to clarify the abbreviation used.

Festschriften and congress reports are not generally covered in this list. Although Festschrift titles are sometimes shortened in the dictionary, sufficient information is always given for unambiguous identification (dedicatee; occasion, if the same person is dedicatee of more than one Festschrift; place and date of publication; and name(s) of editor(s) if known). For fuller information on musical Festschriften up to 1967 see W. Gerboth: *An Index to Musical Festschriften and Similar Publications* (New York, 1969). The published titles of congress reports are generally reduced to their essentials, but sufficient information is always given for purposes of identification (society or topic; place and date of occurrence; journal issue if published in a periodical; editor(s) and publication details in unfamiliar cases). A comprehensive list of musical and music-related 'Congress reports' appears in vol.28. Further information can be found in J. Tyrrell and R. Wise: *A Guide to International Congress Reports in Music, 1900–1975* (London, 1979).

Library Sigla

The system of library sigla in this dictionary follows that used by Répertoire International des Sources Musicales, Kassel, as listed in its publication *RISM-Bibliothekssigel* (Kassel, 1999). Below are listed the sigla to be found; a few of them are additional to those published in the RISM list, but have been established in consultation with the RISM organization. Some original RISM sigla that have now been changed are retained here.

More information on individual libraries is available in the libraries list in volume 28.

In the dictionary, sigla are always printed in *italic*. In any listing of sources a national sigillum applies without repetition until it is contradicted.

Within each national list, entries are alphabetized by sigillum, first by capital letters (showing the city or town) and then by lower-case ones (showing the institution or collection).

A Note on the Use of the Dictionary

This note is intended as a short guide to the basic procedures and organization of the dictionary. A fuller account will be found in the Introduction, vol. l, pp.xix–xxix.

Abbreviations in general use in the dictionary are listed on pp.vii–xi; bibliographical ones (periodicals, reference works, editions etc.) are listed on pp.xiii–xviii and discographical abbrevations on pp.xix–xx.

Alphabetization of headings is based on the principle that words are read continuously, ignoring spaces, hyphens, accents, bracketed matter etc., up to the first comma; the same principle applies thereafter. 'Mc' and 'M'' are listed as 'Mac', 'St' as 'Saint'.

Bibliographies are arranged chronologically (within section, where divided), in order of year of first publication, and alphabetically by author within years.

Cross-references are shown in small capitals, with a large capital at the beginning of the first word of the entry referred to. Thus 'The instrument is related to the BASS TUBA' would mean that the entry referred to is not 'Bass tuba' but 'Tuba, bass'.

Signatures where the article was compiled by the editors or in the few cases where an author has wished to remain anonymous are indicated by a square box (□).

Work-lists are normally arranged chronologically (within section, where divided). Italic symbols used in them (like *D-Dl* or *GB-Lbl*) refer to the libraries holding sources, and are explained on pp.xxi–xxxvii; each national sigillum stands until contradicted.

Contents

C

[continued]

Claudel, Paul(-Louis-Charles-Marie) (*b* Villeneuve-sur-Fère-en-Tardenois, Aisne, 6 Aug 1868; *d* Paris, 23 Feb 1955). French writer. His most important musical collaborator was Milhaud, whom he first met in 1912. Milhaud was soon involved in providing music for his translations of the first two parts of the *Oresteia* (1913–15), thus beginning a working friendship that lasted, with more or less intensity, for 40 years. There is some curiosity in the fact that Claudel – a northerner and an undoubting Catholic, who came increasingly to see his role as that of a Biblical exegetist and interpreter of the faith – should have been able to collaborate with the Provençal Jewish composer. Milhaud might have shared Claudel's enthusiasm for the Old Testament, but nothing came of the major religious works they discussed. When Claudel produced a work of patriotic and Catholic hagiography, *Jeanne d'Arc au bûcher*, it was to Honegger that he turned for the music. However, Claudel did admire Milhaud's facility, his ability to intensify verbal rhythms (often in percussion music) and his handling of declamatory choruses. And the very eclecticism of Milhaud's music made it an adaptable instrument in defining the complicated levels of Claudel's drama. These separate levels of action are sometimes physically present on the stage, as in the nocturnal-forest ballet *L'homme et son désir*, written when Claudel and Milhaud were both attached to the French embassy in Rio de Janeiro (1916–19) and for which Claudel imagined a setting in four layers. From 1921 to 1925 Claudel was French ambassador to Japan, where he encountered the kabuki theatre and wrote a sort of sequel to *L'homme et son désir* in *La femme et son ombre*. This was produced in Tokyo with music for Japanese instruments by Kineya Sakichi.

With his stage resources thus further expanded (the Greek drama had already enlarged his view of the possible relationships between music and text) Claudel set about a large-scale work for the musical theatre, *Christophe Colomb* (1927), part morality, part historical pageant, part liturgy. The hero is an allegorical figure: Claudel once compared him with Prometheus, and in a sense he represents Claudel's view of the artist as one who reveals the truth of the created universe to men; he is also, as his name suggests, a missionary – the 'Christ-bearer' and the 'colombe', or dove, of the Holy Spirit moving over the face of the waters. Columbus's story is presented in flashback by means of multiple staging and doubled (even trebled) characters. The audience is to exercise its judgment and be edified: a speaking 'explicateur' has the function of involving the audience as jury, not distancing it as in the Cocteau–Stravinsky *Oedipus rex*, and Claudel imagined the chorus, persistently moving in and out of the dramatic events, as another link with the audience. Finally, he intended that the mobility – in time, space and realism – of the text should be matched in the music, so that sound and word would oscillate in inverse importance, from grandiose choral-orchestral numbers to straight speech. Claudel also incorporated film into the drama for the first time. After *Christophe Colomb* Claudel took a close interest in Milhaud's incidental score for a revival of *L'annonce faite à Marie* (1932) and worked on two spectacles for Ida Rubinstein, *La sagesse* (with Milhaud) and *Jeanne d'Arc*, both in 1935. During the last 20 years of his life, however, his interest in music and in the stage declined. Recent settings of Claudel include Bancquart's Symphony no.5 'Partage de Midi' (1992), in which the baritone soloist's words are drawn from Claudel's play of the same name, Barraud's *Tête d'or* (1980), a *tragédie lyrique* and *Cent phrases pour éventails* (1996) for solo voices and chamber ensemble by Michel Decoust. Boulez, an admirer of Claudel's writing, remembered a line from *Le soulier du stain* in the title *Dialogue de l'ombre double* (1982–5).

WORKS SET TO MUSIC

STAGE

Tête d'or (play, 1889): music for radio production by Honegger, 1949–50; opera (tragédie lyrique) by Barraud, 1980

Le repos du septième jour (play, 1896): music for radio production by Milhaud, op.301, 1950; incidental music by Boucourechliev, 1966

L'otage (play, 1909): incidental music by J. Berghmans, 1962; incidental music by Amy, 1968

L'annonce faite à Marie (play, 1910): incidental music by Milhaud, op.117, 1932, 2nd version, op.231a, 1942; incidental music by R. Massarani, 1941; incidental music by M. Scibor, 1941; incidental music by C. Estrada, 1943; incidental music by K. Albert; opera by R. Rossellini, 1970

Agamemnon (play, after Aeschylus, 1912): incidental music by Milhaud, op.14, 1913–14; incidental music by Boulez, 1955

Protée (play, 1912): incidental music by Milhaud, op.17, 1913–19, 2nd version, op.341, 1955

Le pain dur (play, 1913): incidental music by Berghmans, 1962

Les choéphores (play, after Aeschylus, 1913–14): incidental music by Milhaud, op.24, 1915; incidental music by Boulez, 1955

Les eumenides (play, after Aeschylus, 1913–16): opera by Milhaud, op.41, 1917–22; incidental music by Boulez, 1955

Le père humilié (play, 1916): incidental music by Scibor, 1946; incidental music by Berghmans, 1962

L'homme et son désir (ballet, 1917): ballet by Milhaud, op.48, 1918

L'ours et la lune (marionette play, 1917): ov. *Hymne à la terre* by J. Cartan, chorus, orch (1932); music for the Trio by Milhaud, 3vv, tambour, 1918
La femme et son ombre (mimodrama, 1923): mimodrama by K. Sakichi, 1923; opera by Alexander Tcherepnin, op.79, 1948
Le soulier de satin (play, 1922–4): incidental music by Honegger, 1943
Christophe Colomb (libretto, 1927): opera by Milhaud, op.102, 1928; music for radio production as play by Jolivet, 1946; incidental music for stage production as play by Milhaud, op.318, 1952
Sous le rempart d'Athènes (play, 1927): incidental music by Tailleferre, 1927
La sagesse (mimodrama, 1935): mimodrama by Milhaud, op.141, 1935
Jeanne d'Arc au bûcher (mimodrama, 1935): mimodrama by Honegger, 1935
La fête de la musique (ballet on the Seine, 1937): music by Milhaud, op.159, 1936–7
L'histoire de Tobie et de Sara (mimodrama, 1938): music to have been by Stravinsky, then Milhaud; pt 1 set as opera-oratorio by A. Letelier, op.26, 1955
Le ravissement de Scapin (play, after Molière, 1952): incidental music by Honegger and Milhaud, 1952

CANTATAS AND CHORAL WORKS

Psalm cxxxvi (trans.): music by Milhaud, op.53, Bar, male chorus, small orch, 1918
Psalm cxxix (trans.): music by Milhaud, op.53b, Bar, small orch, 1919
Psalm cxxvi (trans.): music by Milhaud, op.72, male chorus, 1921
2 projected oratorios: *Israël* (1930); untitled (after Bible: *Jeremiah, Ezekiel, Revelation*, 1931): music for both to have been by Milhaud
Pan et la Syrinx (cant., after P.-A.-A. de Piis, 1933): music by Milhaud, op.130, 1934
Cantique du Rhône (from *La cantate à trois voix*, 1913): music by Milhaud, op.155, chorus, 1936
Cantate de la paix (after Bible, 1937): music by Milhaud, op.166, children's chorus, male chorus, 1937
Les deux cités (after Bible, 1937): music by Milhaud, op.170, chorus, 1937
La danse des morts (oratorio, 1938): music by Honegger, 1938
Cantate de la guerre (1940): music by Milhaud, op.213, chorus, 1940
Vitrales de la Anunciación: cantata by Letelier, SSA, orch, 1950
Psalm vi (trans.): music by J. Pagot, chorus, org (1950)
Psalm ci (trans.): music by Pagot, chorus (1950)
Trois psaumes de la pénitence (trans.): music by P. Hasquenoph, chorus, 1951–2
Ite angeli veloces (cantata, 1953–5): music by Hindemith, 1953–5
Invocation à l'ange Raphaël (from *L'histoire de Tobie et de Sara*, 1938): music by Milhaud, op.395, 2 female choruses, orch, 1962
Le chemin de la croix (1911): oratorio by Dorati (1963)
Cantate de psaumes (trans. of Pss cxxix, cxlv, cxlvii, cxxxvi, cxxviii, cxxvii): music by Milhaud, op.425, Bar, small orch, 1967
Cent phrases pour éventails (poems, 1927): music by Michel Decoust, 6 solo vv, chbr ens, 1996

SONGS

Milhaud: 7 poèmes de Connaissance de l'est, op.7, 1912–13; 4 poèmes, op.26, 1915–17; 2 poèmes de Coventry Patmore, op.31 (trans.), 1915; Verso carioca, part of op.44, 1917; Poème de Francis Thompson (trans.), 1919; Le cygne I et II, op.142, 1935
Other settings: P. Arma: Présent (1952); F. Berthet: Dissolution (1926); L. Bienvenu: Il est midi; F. Brun: La chanson de l'avoine; F. Decruck: Jésus tombe pour la seconde fois (1944); M. Gay: Tu ne saurais effacer de ton coeur (1929); Honegger: 3 poèmes, 1939–40; Koechlin: Dissolution, 1918; L. Nicolau: 6 mélodies; Scibor: 26 chansons japonaises, 1938

Clausula (Lat., from *claudere*: 'to close', 'to conclude'). A term used in medieval grammar and rhetoric in a number of senses, all denoting either the concluding of a passage, or the passage itself thus concluded. Its uses in medieval music theory apparently sprang from these, and occupy a similar range of meanings.

Throughout the 11th to 15th centuries the word 'clausula' may have had any of the following meanings, depending on the date of writing and the context: (1) a musical ending, in a general sense; (2) an ending specifically on the final of the mode (hence a close connection with the dual ideas of *apertum–clausum* (Lat.), *ouvert–clos* (Fr.), or half- and full close); (3) a specific melodic formula for use at a close; (4) a formal section within plainchant; (5) correspondingly, a section within a polyphonic setting of plainchant; (6) as a special case of the last, a polyphonic section that is marked out from its context by its use of a particular technique of composition.

All these senses are defined primarily by linear, melodic considerations, either directly so, or via the tenor that forms the basis of the polyphonic composition. Consequently, the notion of 'cadence', defined more in terms of harmony (or at least thought of as chords), came to form an antithesis to clausula from the early 16th century onwards. (Cadence is concerned with the total effect of the parts at a close. By contrast, the melodic formulae present in the individual voices at such a close are themselves the clausulas. Not until the 18th century was this distinction lost sight of, so that clausula too took on the sense of cadence.)

In its formal sense the word 'clausula' is reserved nowadays almost exclusively for its most important historical application, the clausula of the Notre Dame period. The musicians involved seem by nature to have been concerned not with creating new compositions but rather with taking up and developing an older practice. From the very beginnings of sacred polyphony, plainchant melodies were not always set in their entirety; often only certain sections were set polyphonically, the remainder being left monophonic. This practice became more common and was applied in a variety of ways.

First, and most important, only specific parts of the plainchant were set. Later, these parts, in an organum style that was not yet modally rhythmic, came to be replaced by new passages (specifically called 'clausul sive puncta') that used modal rhythm. At this stage, the contrast between monophonic and polyphonic sound that had hitherto been effective was supplanted by the contrast between different types of rhythm, resulting from different techniques of composition.

The chance combination of the clausula principle with modal rhythm was at its most powerfully influential on the revisions made to the two-voice settings in the *Magnus liber* which were carried out with the aim of modernizing its style. Hundreds of two-voice passages were composed for this work, and occasionally also for the three- and four-voice organum settings. Some were incorporated into later versions of the *Magnus liber*; others, placed in liturgical order, were assembled in special fascicles of the appropriate manuscripts, so that a clausula could easily be introduced into an organum setting, or into a piece of plainchant.

These clausulas thus became the most important area for experimentation in the compositional techniques of the day, especially for the development of discant. A great many of the cardinal principles of composition and methods of formal construction found in later music either came to fruition within clausulas or were foreshadowed by them: the melodic and formal implications of divisive rhythm, hocket, repetition of all kinds, phrase structure, imitation, retrogression, augmentation, diminution and so on (ex.1). Because of this, and also because of the practice of notating clausulas separately, there was a marked tendency for clausulas to increase in size and to become independent compositions. (The repeating of the tenor one or more times, which is necessary to achieve this expansion, lies at the roots of the later phenomenon of isorhythm.)

By the introduction of new texts (which often troped the tenor but rapidly broke free of this function) as underlay for the upper voices of these clausulas, many of the Notre Dame motets seemed to come into existence. The earlier hypothesis that the motet form was created in this way is now doubted, however. Such early motets served only for a very short time in the role of substitute section, quickly becoming independent compositions in their own right. They also superseded clausulas as the principal experimental form. The production of clausulas died out in the second half of the 13th century.

Ex.1 Clausula *Regnat*, *D-W* 677, f.59, for use in the Alleluia verse *Hodie Maria*.

RUDOLF FLOTZINGER

Claux [Nicolai], **Johannes** (*b c*1515; *d* 1573). Flemish composer. He was cantor (1542–5) and then succentor (1552–5; 1565–6) at the collegiate church of St Jean l'Evangéliste, Liège. The execution of his will, begun on 3 October 1573, gave rise to much litigation which was not settled until 5 June 1574.

He composed a five-voice motet (in RISM 1553[13]), which he used as the model for his Missa 'Christi virgo dilectissima' (D-AAm, Chorbuch I, 72v–92r). The writing is conscientious but laboured and a little disappointing. On 3 March 1573 Johannes Mangon added a third voice to the duet 'Pleni sunt' from this mass, as a gesture of respect to a deceased colleague.

JOSÉ QUITIN/HENRI VANHULST

Clavé, (José) Anselmo (*b* Barcelona, 21 April 1824; *d* Barcelona, 24 Feb 1874). Spanish choirmaster, composer and poet. He was largely self-taught in music. Strongly republican, he spent two years in prison for his part in the revolutionary events in Barcelona in 1843. During this time he conceived the idea of organizing choral societies for humanitarian and egalitarian purposes. In 1845 he took on the direction of a small musical society, La Aurora, made up of workers and artisans. Out of this successful venture came La Fraternidad, the first Spanish choral society, which in 1857 changed its name to Euterpe and from which grew many other Sociedades Euterpenses. From 1860 to 1874 he organized annual choral festivals; in the largest of these (1864) 57 societies with more than 2000 singers and an orchestra of 300 participated. After the Revolution of 1868 he took an important part in politics, as president of the Diputación of Barcelona, representative to the Cortes in Madrid, civil governor of Castellon and government representative in Tarragona. He contributed to numerous publications and wrote poetry in both Spanish and Catalan. His compositions, many of them on politically inspired texts, particularly his male choruses, include zarzuelas, comedies, cantatas, waltzes, polkas and *romances*. Of his many songs, *Els pescadors*, *La maquinista*, *Gloria a Espanya* and *Flors de maig* are still popular.

Clavecin organisé (Fr.). *See* CLAVIORGAN.

Clavecin vertical (Fr.). *See* CLAVICYTHERIUM.

Clavecin-vielle. A large type of hurdy-gurdy. *See* SOSTENENTE PIANO, §1.

Clavel, Antoinette Cécile. *See* SAINT-HUBERTY, MME DE.

Claves (Sp.). Concussion idiophones of Cuban origin consisting of two cylindrical hardwood sticks measuring from 20 to 25 cm in length and from 2·5 to 3 cm in diameter. In Latin-American dance rhythms, particularly the rumba, the steady and unchangeable beat of the claves constitutes a relentless ostinato. To obtain the required clear and penetrating tone, one stick rests lightly on the fingertips of one hand with the cupped palm acting as a resonator, while the other stick (the striker) is held between the thumb and first two fingers.

Although primarily an instrument of the Latin-American dance orchestra, claves have been adopted in Western rhythm combinations and by notable composers. They are included in *Ionisation* (Varèse); *Sinfonía india* (Chávez); Copland's Third Symphony and *Appalachian Spring*; *Ode an den Westwind* (Henze); and in the charade *Time Off? Not a Ghost of a Chance!* by Elisabeth Lutyens.

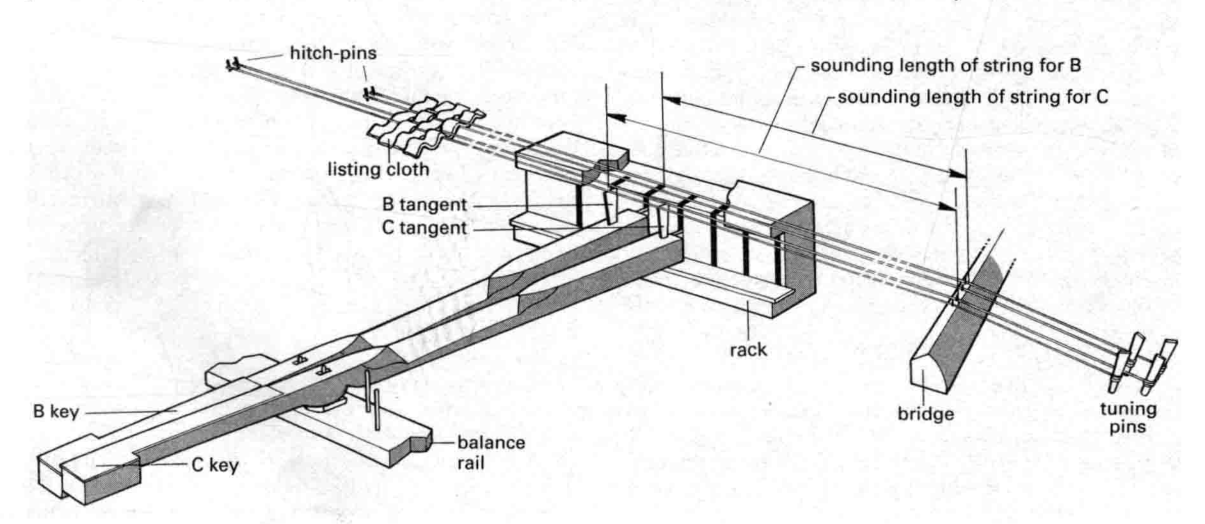
JAMES BLADES

Clavessin électrique. An alternative spelling for the *clavecin électrique*. *See* LA BORDE, JEAN-BAPTISTE.

Clavicembalo (It.; Sp. *clavicémbalo*). *See* HARPSICHORD.

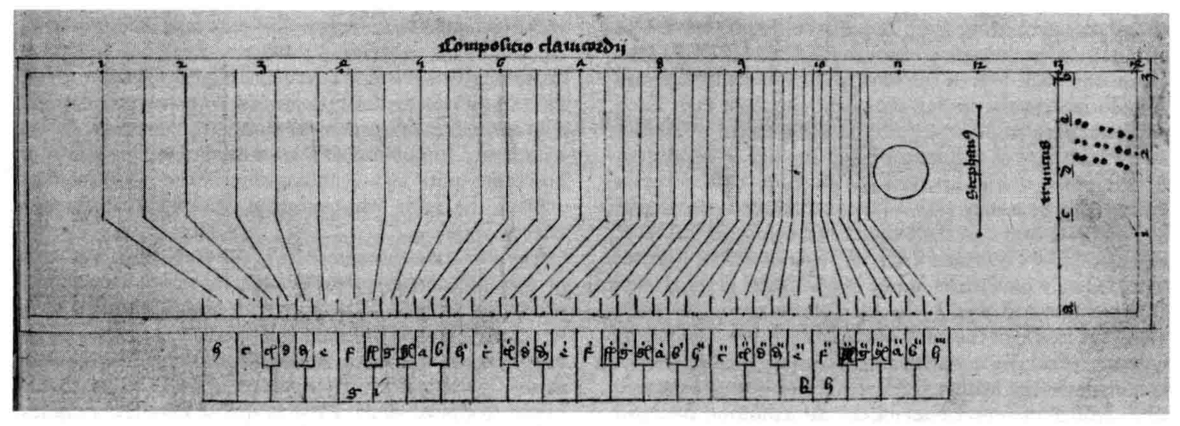
Clavichord (Fr. *clavicorde*, *manicorde*, *manicordion*; Ger. *Clavichord*, *Klavichord*; It. *clavicordio*, *clavicordo*, *manicordo*, *monacordo*, *monocordo*, *sordino*; Lat. *clavicordium*; Port. *clavicórdio*; Sp. *clavicordio*, *manicordio*, *manucordio*, *monacordio*). A keyboard instrument, the simplest and at the same time the most subtle and expressive of those whose sound is produced by strings rather than by pipes. The oldest and most enduring type of clavichord is 'fretted', in which a given pair of strings may be struck by more than one tangent, producing two, three, or even four different notes according to the distance from the bridge, but only one at a time. 'Unfretted' clavichords, in which each tangent strikes its own string, began to appear in the late 17th century. It is likely that the mysterious CHEKKER of the 14th century was, in fact, a clavichord; in any event, it is clear from both pictures and writings that clavichords not too unlike those that are known from surviving examples were in existence in the early years of the 15th century. Clavichords were used throughout western Europe during the Renaissance, and in Germany and Scandinavia until the early 19th century. In Spain it was still used as a practice instrument in some ecclesiastical establishments in the second half of the 19th century. The instrument is classified as a box zither.

1. STRUCTURE AND TONE PRODUCTION. The usual shape of the clavichord is a rectangular box, with the keyboard



set into or projecting from one of the longer sides. The strings pass from hitch-pins near the left end of the box across the back half of the keys and over the bridge and soundboard to the tuning-pins near the right end. Each key rests on a transverse piece of wood called a balance rail, which acts as a fulcrum when the key is depressed. At the point of the fulcrum the position of the key is maintained by a pin, which passes through a slot in the key and is driven into the balance rail below. In the back end of each key is driven a slip or blade of wood, horn or whalebone, which slides in one of a series of vertical slots cut in a piece of wood (the rack or diapason) running along the inside of the back of the case. Some clavichords have a vertical guide pin set in a rail under the key end; in the key-lever is a leather-lined slot which engages the pin. This arrangement is quieter than the common one and therefore an advantage for the small volume of the clavichord. A third system consists of wooden strips, attached to the inside of the case back, between which the keys ends move. Between the back of the key-lever and the balance rail, a brass blade called a tangent is driven down into each key; when the front of the key is depressed by the player's finger, this blade rises until its top edge strikes the pair of strings above it (at a point between the hitch-pins and the bridge), setting them into vibration. The vibrations of the section of each string between the tangent and the bridge are communicated to the soundboard, yielding a tone of small volume but great sensitivity and flexibility. The vibrations of the section of each string between the tangent and the hitch-pins are damped out by strips of cloth called 'listing' that are woven between the strings; when the key is released, causing the tangent to drop from the string, this cloth immediately damps out the vibrations of the string as a whole, instantly silencing the tone (fig.1).

The loudness of the tone depends on the force with which the tangent strikes the strings and thus is under the direct control of the player. Moreover, as the tangent remains in contact with the strings while they are sounding, the performer can continue to influence the sound of a note after it has been struck. By increasing or decreasing the pressure on the key, the pitch of a note can be altered after it has begun, thereby producing a portamento, a vibrato (BEBUNG) or even the illusion, within its quiet range, of swelling the tone. While striking the key with velocity produces a louder sound than depressing it slowly, too much pressure lifts the strings too far, increasing their tension and distorting their pitch. The dynamic range between the instrument's all but inaudible *pianissimo* and this rather limited *fortissimo* is, however, quite significant: within it the performer can achieve the most sensitive possible control of dynamic effects.



The soft tone characteristic of the clavichord is a result of the acoustically inefficient way in which its sound is produced. Instead of a string with both ends fixed being struck or plucked at some intermediate point (as in the harpsichord or piano), the clavichord string, fixed only at the bridge end, is first 'stopped' and then, in effect, shaken by the stopping agent. There is a close parallel in a guitar technique, where instead of the usual plucking action, the stopping finger presses the string smartly on to the fret to set it vibrating. The result, as in the clavichord, is a sound which is much quieter than the plucked sound. In a well-designed clavichord, however, the sound is strong enough to be effective in a domestic situation.

Almost invariably, bichord stringing is used on clavichords, i.e. the strings are sounded in unison pairs. As in the piano, multiple stringing allows the desired total tension for the note to be divided between several strings, each of which is thinner than the single string that would otherwise be needed. Thinner strings have the advantage of giving harmonics which are better in tune and so sound clearer and truer. A more important advantage of bichord stringing for clavichords, however, lies in the strong coupling action between the two strings due to the comparatively light tangent. This causes the two strings to react on each other and gives a more prominent attack than is heard with single stringing (which sounds insipid by comparison). Careful tuning of the unisons is necessary, otherwise the strength and sustaining power of the note concerned will be affected.

The bass strings of clavichords are foreshortened more than is usual with harpsichords, and octave strings were sometimes introduced in the bass of 18th-century clavichords to brighten and add definition to the sound. These strings usually had their own separate bridge on the soundboard, but sometimes they matched the unison

1. Mechanism of the clavichord

2. Henri Arnaut de Zwolle's scale diagram of a clavichord layout from his MS treatise, c1440 (F-Pn lat.7295, f.129r)

strings in length and used the unison bridge. The other method of improving the sound of the bass was to use covered strings consisting of a core, usually brass, wound with an open spiral of a thinner wire, usually copper. These became common after about 1750. Sometimes octave strings and covered strings are found on the same instrument.

In determining the vibrating length of the strings, the tangent (while in contact with them) also determines the resulting pitch in much the same way as a guitarist determines the pitch that a string will sound by pressing it against one or another of the frets on the fingerboard of his instrument. Accordingly, by positioning a series of clavichord tangents so that they will strike the same pair of strings at different points along their length, a series of different notes can be sounded. This possibility was exploited in all the earliest clavichords, which are termed 'fretted' to distinguish them from 'unfretted' instruments (of the late 17th century and since), in which each note is produced by its own pair of strings. The use of only a single pair of strings to serve several keys has the obvious advantage of reducing the number of strings on the instrument, which permits in turn a lighter and simpler case to withstand their tension. Moreover, the narrower stringband reduces the length of the treble keys, which tend to give the player slightly better control. Finally, the smaller number of strings permits the instrument to be tuned more rapidly and more easily (see §2 below).

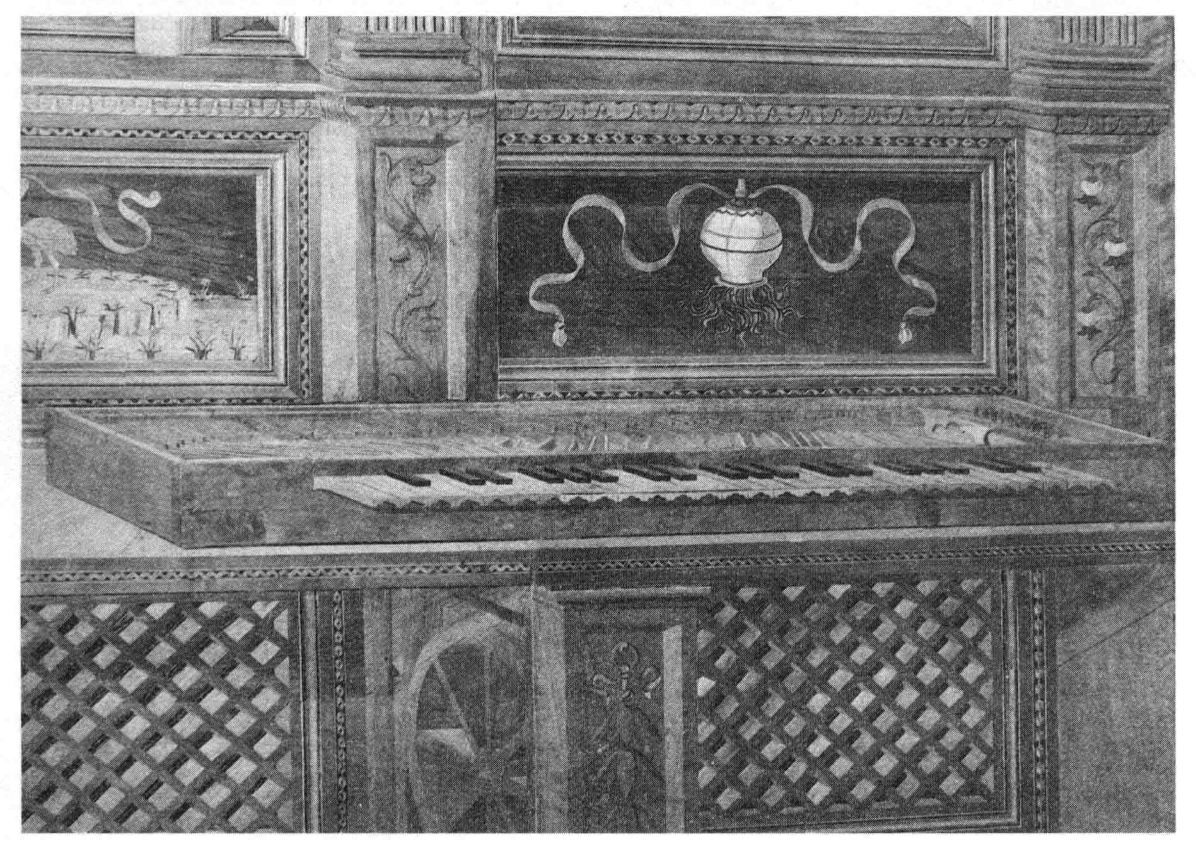
A disadvantage of the fretted clavichord comes from the fact that a single pair of strings can sound only one note at a time, making it impossible to play chords involving two notes whose tangents strike the same pair of strings (only the upper note will be heard, usually with an unpleasant clicking from the tangent of the lower note). The same factor makes it necessary to preserve a slightly detached touch in playing scale passages (particularly descending) on a fretted clavichord when the scale involves consecutive notes produced from the same pair of strings.

The clavichord is not easy to play well, the chief difficulty being to control the tendency in instruments of traditional design for the tangent to bounce off the strings at first contact, particularly in the treble. To produce clean notes, the player has to acquire an especially firm touch, a matter of training which was well understood in the 18th century and was thought beneficial when playing other keyboard instruments. Clavichords have been designed during the early revival which are easier to play, but always at the sacrifice of dynamic range, pitch stability or both. Notes must always be held on the clavichord with the appropriate pressure, since this affects the pitch, so that holding a three- or four-note chord with one hand requires a greater continuous arm pressure than a pianist or harpsichordist is accustomed to apply.

2. 15TH AND 16TH CENTURIES. The earliest known appearance of the term 'clavichord' occurs in the *Minneregal* (1404) by Eberhard von Cersne of Minden, northwest Germany, and the oldest known representation of the instrument with a precise dating is in a carved altarpiece of 1425, also from Minden.

As described, all the earliest clavichords were so designed that each pair of strings was struck by the tangents of several keys; hence the keys had to be curved or bent laterally (fig.2) so that their tangents would touch the strings at appropriate points along their length. These points were determined by the monochord measurements for the intervals, and clavichords were, accordingly, called *monochordia* by many 15th- and 16th-century writers. It was, of course, necessary to have more than a single string or pair of strings, as it would otherwise have been impossible to sound more than one note at a time; nevertheless in the earliest clavichords the strings were all of the same length and all tuned in unison, so that these instruments were, in effect, a series of identical monochords built into a single box, and the positions of the tangents along the strings were determined as if there had been only a single string. This may be seen clearly in the directions for laying out clavichords that occur in a number of 15th-century sources, the first step in which is to divide the total string from the bridge to the tangent of the lowest key into several parts corresponding to notes covering virtually the entire compass of the instrument.

Instructions of this kind accompany the scale diagram of a clavichord layout (fig.2) given in the manuscript treatise (*c*1440) by Henri Arnaut de Zwolle, which is the earliest source of information on the way in which the tangents were apportioned to the strings of the instrument. The tangents for the first seven pairs of strings on Arnaut's three-octave instrument (after this point there seems to be an error in the manuscript) are assigned in fours and threes corresponding to the following groups of notes: *B*–*d*, *e*♭–*f*♯, *g*–*a*, *b*♭–*c*♯′, *d*′–*e*′, *f*′–*g*♯′ and *a*′–*b*′. Except in the first of these groups, four keys are served by the same



string only when the outermost notes form an augmented 2nd, and whenever a fourth key would produce the interval of a minor 3rd (such as *d′–f′* or *a′–c″*) the number of tangents allotted to a single pair of strings is reduced to three. The result of this arrangement is that virtually any consonant chord can be played, as its constituent notes will always be sounded from different strings, and the only notes that cannot be sounded simultaneously are those forming the dissonances of a minor, major or augmented 2nd. The clear implication of having the tangents allotted in this pattern, which continued in use on some clavichords until the end of the 17th century, is that even as early as the mid-15th century, keyboard players expected to be able to play consonant chords with complete freedom. The tangents are positioned for Pythagorean temperament.

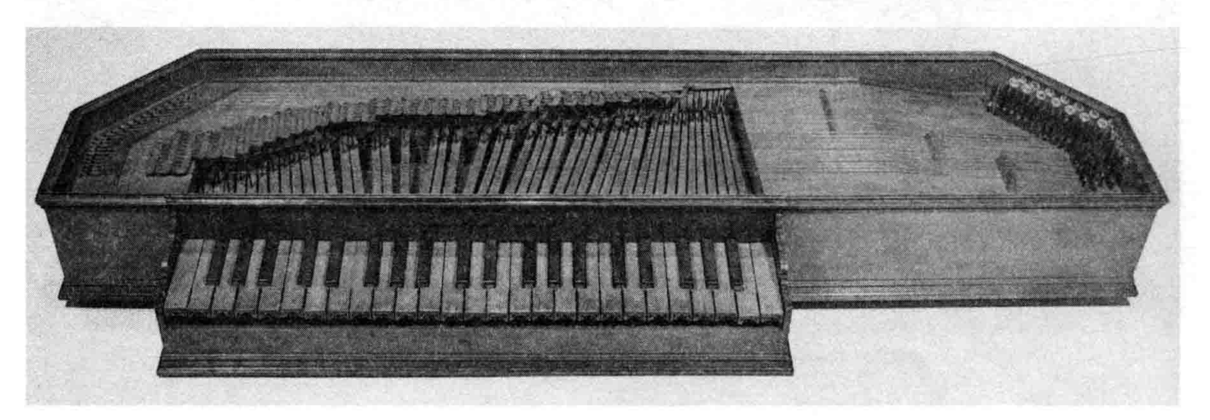
In addition to having all its strings of equal length and tuned in unison, the mid-15th-century clavichord differed from later ones in having its soundboard located near the bottom of the instrument and extending underneath the keys. The bridge over which the strings passed was, accordingly, quite high, and 15th-century representations are unanimous in indicating that it had a shape resembling that of the bridge of a viol.

Despite the ease of laying out a clavichord of the kind just described, and the ease in tuning suggested by the intriguing possibility of simply removing the listing cloth from the strings, strumming them, and bringing them into unison, instruments of this type had at least one important disadvantage. Because on such an instrument the sounding length of the strings had to double for each octave, the sounding length of the string for the lowest note of an instrument with a three-octave compass like Arnaut's had to be fully eight times as long as that for the highest note. This meant that some of its keys had to be sharply bent, and any appreciable increase in range would have required keys too bent (in the tenor) or too thin (in the treble) to function.

It was not really necessary, however, to leave the same amount of space between keys playing on different strings that would be required if they played on the same strings. For each change of string, a space could be eliminated by placing the highest key playing one pair of strings immediately next to the lowest key playing the adjacent pair of strings. This, however, sacrifices the unison tuning of all the strings because the pair of strings of the lower group of keys would be tuned somewhat lower to compensate for this group being relatively closer to the bridge. Carrying this principle to its logical conclusion, the inordinately wide spaces between each of the keys in the extreme bass could all be avoided by giving each key its own pair of strings. Thus, abandoning unison tuning of all the strings would make it possible to produce a far more compact three-octave instrument with less sharply cranked keys, or to make a workable instrument of wider compass.

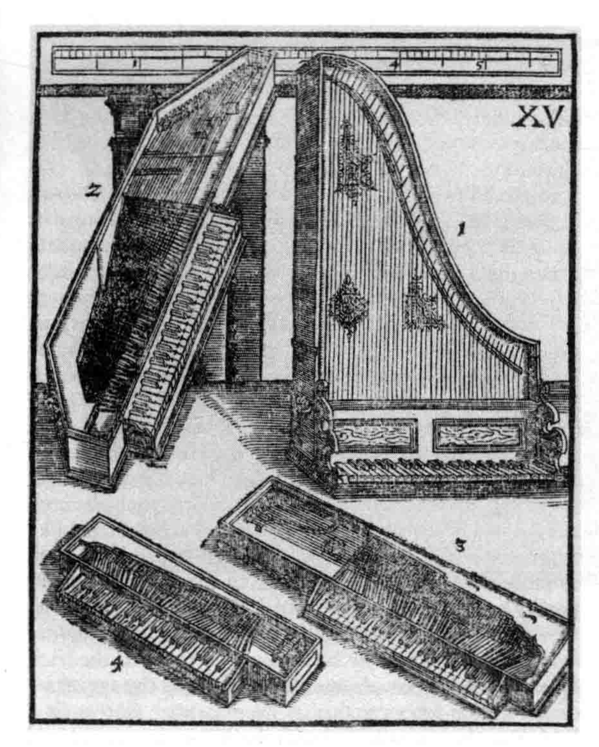
The earliest representation of the newer type of instrument is the intarsia of a clavichord in the ducal palace at Urbino (fig.3), dating from 1476, which shows an instrument with a four-octave range *F* to *f‴* (but without *F*♯ and *G*♯), sounded from 17 pairs of strings. The first five notes (*F*, *G*, *A*, *B*♭, *B*) each have strings of

3. Intarsia of a clavichord in the studiolo, 1476 (Palazzo Ducale, Urbino)



4. 'Girl Playing a Clavichord': painting attributed to Jan Sanders van Hemessen, 1530s (Worcester Art Museum, MA)

their own, and the remaining three and a half octaves are accommodated on 12 pairs of strings, which, with the exception of the highest pair, have their tangents arranged in threes and fours in the manner described for Arnaut's instrument (i.e. no group of four tangents encompassing a consonant interval). The Urbino example avoids Arnaut's anomalous inclusion of his bottom note (*B*) in a group of four tangents (*B* to *d*) but includes the top note (*f‴*) in a group of four tangents rather than giving it an extra pair of strings to itself. The rack is so accurately depicted in the intarsia that it is possible to identify the temperament as Pythagorean and the accidentals as flats rather than sharps.



Clavichords of this kind were probably still being made in the 1530s, when an interesting representation attributed to the South Netherlandish artist Jan van Hemessen was painted (fig.4). This instrument still has a low soundboard, and its keyboard range of *E* to *a″* (without *F*♯, *G*♯ and *g*♯″) is sufficient for Hugh Aston's famous *Hornpype*, Attaingnant's *Quatorze gaillards* (1531) and Gardane's *Intavolatura nova di varie sorte de balli* (1551).

By the date of the earliest surviving clavichord, a hexagonal instrument made by Domenico da Pesaro in 1543 (fig.5), a second significant change in clavichord design had occurred. The soundboard of Domenico's instrument does not run beneath the keys, but, as in all other surviving instruments, it is at a higher level than the keys and placed entirely to their right. As a result, the keyboard is no longer placed at the centre of one of the long sides of the case but is off-centre to the left. The shift in the position of the soundboard also meant that there was no longer the need for the bridge to be so high, although it had to be quite close to the left edge of the soundboard in the treble if the treble strings were to be short enough to be tuned to an appropriately high pitch. However, if the bridge ran straight across the soundboard from front to back, like the bridges on Arnaut's clavichord and the one shown in the Urbino intarsia, this would have left the bridge too close to the edge of the soundboard, causing the resonance of the bass notes to suffer. The solution adopted by Domenico and a number of other 16th-century makers, still to be seen in the clavichord 'italienischer Mensur' depicted by Praetorius (fig.6) and that shown by Mersenne (1636–7), was to divide the bridge into segments. One segment, carrying the 11 pairs of strings that serve more than a single key, is set near the left-hand edge of the soundboard; two others carrying five and six pairs respectively (the 11 pairs of strings serving the first 11 notes in the bass) are set farther to the right. The soundboard slopes downwards to the right, so that the strings leave the low treble bridge at a fairly sharp angle and exert a downward pressure on the bridge that ensures their not being lifted from the bridge when they are struck by the tangents. Neither the sloping soundboard nor a hexagonal shape characterizes all 16th-century Italian clavichords; some are rectangular and have horizontal soundboards. In the latter type, transverse bars placed over the strings behind the bridges are provided to press down on the strings. The bridges of all the clavichords so far mentioned were without the spacing pins found on later instruments.

Like the case of an Italian virginal, the case of an Italian clavichord may be made of thin wood strengthened by elegant mouldings, or of thicker softwood with a cypress lining and half-moulding to counterfeit the appearance of a thin-cased instrument in a protective outer case. The similarities in style between German and Italian instruments

5. Earliest surviving clavichord, by Domenico da Pesaro, 1543 (Musikinstrumenten-Museum, University of Leipzig)

6. Polygonal Italian clavichord (2), with two rectangular 'Gemein' (3) and 'Octav' (4) clavichords, and a clavicytherium (1): woodcut from Praetorius's 'Theatrum instrumentorum' (1620)

make it unclear whether all the surviving examples of clavichords with segmented bridges and relatively thin cases are actually of Italian origin, and there is some evidence that, of the two well-known rectangular examples in the Henkel catalogue (1981) of the Musikinstrumenten-Museum, Universität Leipzig, no.2 is from Naples and no.3 from Leipzig (see Steiner, 1993).

The sound of the surviving 16th-century clavichords is surprisingly loud and virginal-like; they are sensitive and exciting instruments to play, ideally suited to pieces like the dances found in the Attaingnant and Gardane collections (both of whose title-pages mention the clavichord) as well as the elaborate intabulations of vocal works that seem to have comprised most of the balance of the 16th-century keyboard player's repertory.

Despite the 16th-century title-page references to the clavichord, implying an importance comparable with the harpsichord and virginal, the clavichord at this period seems to have been thought of primarily as a teaching and practice instrument. Many early references cite it in these connections, extolling its virtues in developing facility and a proper touch which might then be transferred to other instruments, notably the organ. Its advantages as a practice instrument were outstanding, especially its cheapness; it gave organists the opportunity of practising at home instead of in an unheated church in winter, and eliminated the need for an assistant to pump the bellows. A number of writers even praise the softness of the clavichord's sound as being of advantage when practising.

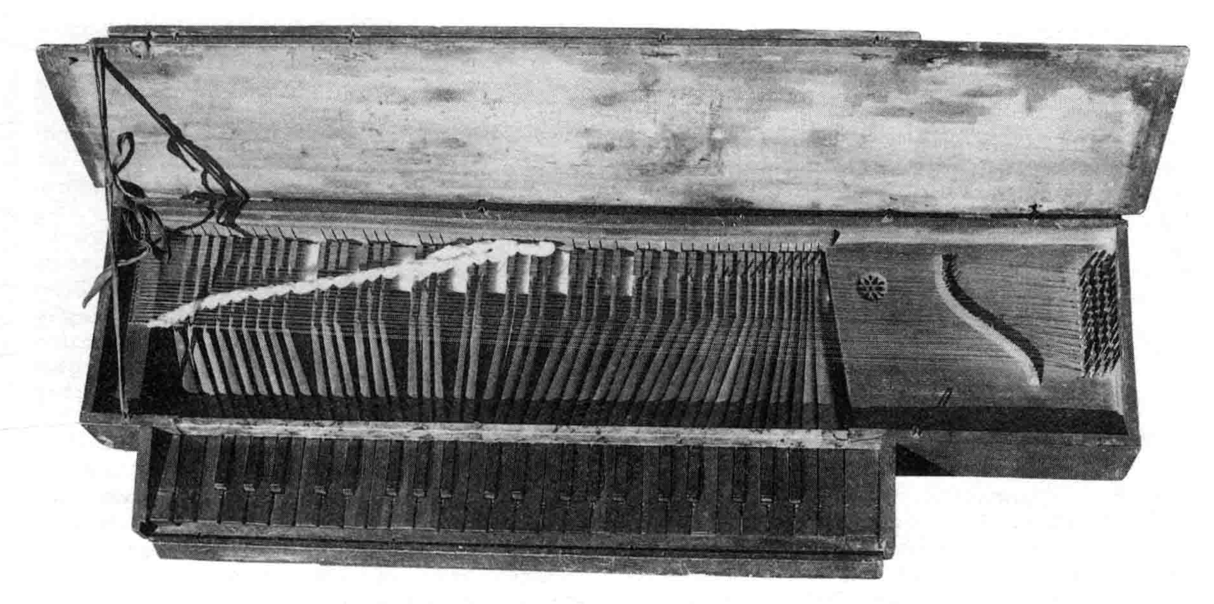
A further advantage of the clavichord was that it tended to stay in tune and was easy to put back into tune when necessary. With most of the strings serving several keys, there were fewer strings to tune, and as the intervals between notes sounded from the same pair of strings were 'built in' by the spacing of the tangents, much of the difficulty in setting the base tuning of the instrument was eliminated and a means of checking the accuracy of one's attempts was more quickly arrived at. One highly ingenious system set down by Correa de Arauxo (1626) makes use of the alternating fretting pattern of threes and fours (which produces different groupings of notes in adjacent octaves) to tune the instrument entirely by alternating upward and downward octaves, without having to use 5ths or 4ths. Although clavichords are usually strung with brass wire, it seems likely that many in 16th-century Italy were strung with iron.

Several of the 16th-century instrument treatises and methods provide considerable information about the clavichord. Virdung mentioned clavichords with all their strings tuned in unison and showed a clavichord keyboard with a range of just over three octaves, *F* to *g″* without *F*♯. He stated that the 'newer' clavichords – which might have a range as great as four octaves – might be triple-strung to avoid problems if a string broke during playing and that the treble was strung with steel and the bass with brass. The use of strings made of different types of wire makes it clear that these larger instruments did not have all their strings tuned in unison. Virdung also wrote that the four-octave instruments had pedals hanging from their lowest keys and that such clavichords had extra strings which were not struck by any tangents. No surviving clavichord has sympathetic strings, but one can imagine how they might enhance the tone with a halo of sustained sound.

Both Bermudo (1555) and Santa María (1565) included diagrams of a clavichord keyboard extending to *a″* in the treble (including *g*♯*″*) and *C* in the bass by means of a SHORT OCTAVE, like that in Domenico da Pesaro's 1543 clavichord. Santa María provided a highly detailed discussion of clavichord technique, but neither he nor any of the other early writers alluded to the instrument's expressive possibilities or suggested that they felt the clavichord to have any special musical potential of its own. A brief biography (in F. Pacheco: *Libro de descripción de verdaderos retratos*, 1599) of the Spanish organist, Francisco Peraza (*d* 1598), however, refers to his ability to reproduce the undulating Vox humana organ stop on the clavichord, suggesting the use of *Bebung*technique (see §1 above). Information on the clavichord in Austria is only fragmentary, but it seems that the new keyboard instrument was accepted relatively early. The monks of the Styrian monastery of Seckau were granted permission to play the clavichord in 1418, which suggests that controversial discussion of the subject had been going on for some time before that date. Expenditure 'pro clavicordio' is recorded in the accounts of the monastery of Klosterneuburg near Vienna for 1438 and 1442. An early picture of a clavichord is in the Kuttenberger Codex, a late 15th-century Bohemian manuscript (*A-Wn*, 15501, f.12v; fig.7). The clavichord was probably very highly esteemed early in its history, as shown by a woodcut of 1505–16 by Hans Burgkmair, showing Emperor Maximilian I (1459–1519) in the character of *Weisskunig* in his music room (*see* HABSBURG, fig.1); the only keyboard instruments in sight are a positive organ and a clavichord, the latter chosen as the representative of the relatively new genre of string keyboard instruments. The clavichord lost this privileged position in the Habsburg provinces during the 16th century, and was probably chiefly used,

7. Clavichord (right) and dulcimer: initial from the Kuttenberger Codex, late 15th or early 16th century (A-Wn 15501, f.12v)

as elsewhere, as a cheap and convenient practice instrument for organists. No Austrian clavichords of the 16th and 17th centuries have been preserved, and there are only sporadic mentions of the instrument in written records of the time: for instance, an inventory drawn up by the organist at Kremsmünster in 1584 lists '2 clavicordi, darzue ein Pedall', and the purchase of a second pedal clavichord made by the Styrian organ builder Georg Hacker is documented in 1591.



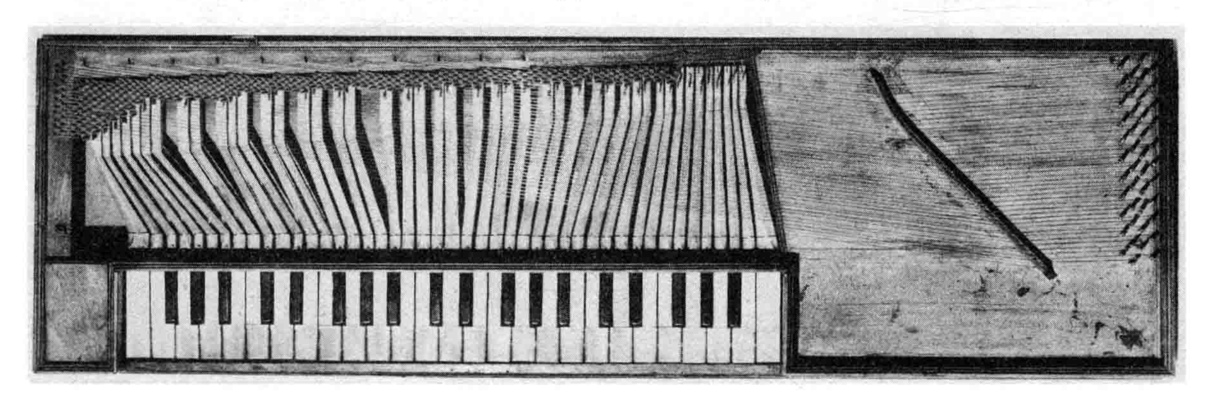
3. 17TH CENTURY. Inventories, account-book entries, and other writings suggest that clavichords were common all over Europe in the 16th century but that in time the instrument became appreciably less popular outside Germany, Spain, Portugal and Scandinavia. As early as 1547 the collection of instruments owned by Henry VIII included only two clavichords in contrast to 30 'virginalles' of various types, 24 'regalles', 'portatives' and 'organes' and three 'virgynalles' and 'regalles' combined. In France, Mersenne (1636–7) provided a description of a clavichord so vague and inconsistent that one wonders if he had ever actually seen one; and the instrument in his illustration, despite its vaulted lid and alleged chromatic bass octave, looks more like the hexagonal, thin-cased Domenico da Pesaro instrument of 1543 set into a protective outer case than it does an instrument made either in France or in the 17th century. In the Low Countries the clavichord appears in a small number of 17th-century paintings. Relatively unsophisticated types were discussed by both Douwes (1699) and Blankenburg (1739), the latter specifically referring to the clavichord as 'the organist's study instrument'; but, although Douwes described a PEDAL CLAVICHORD and Blankenburg mentioned a two-manual instrument, neither devoted as much space to clavichords as to quilled instruments, and Verschuere-Reynvaan, when he copied Douwes's already archaic text (1795), added nothing but an illustration of a pedal clavichord. This suggests that the clavichord was well out of the mainstream in the Low Countries, which is hardly surprising in view of the great importance of Flemish harpsichord building.

The surviving instruments support the written evidence: most of the surviving clavichords of the 17th, 18th and 19th centuries are German, the rest being mostly Scandinavian and Iberian. Only a few clavichords that may have been made in the Low Countries are known; there is only one English example and no French example at all. Accordingly, the history of the clavichord from the 17th century onwards is largely the history of the clavichord in Germany.

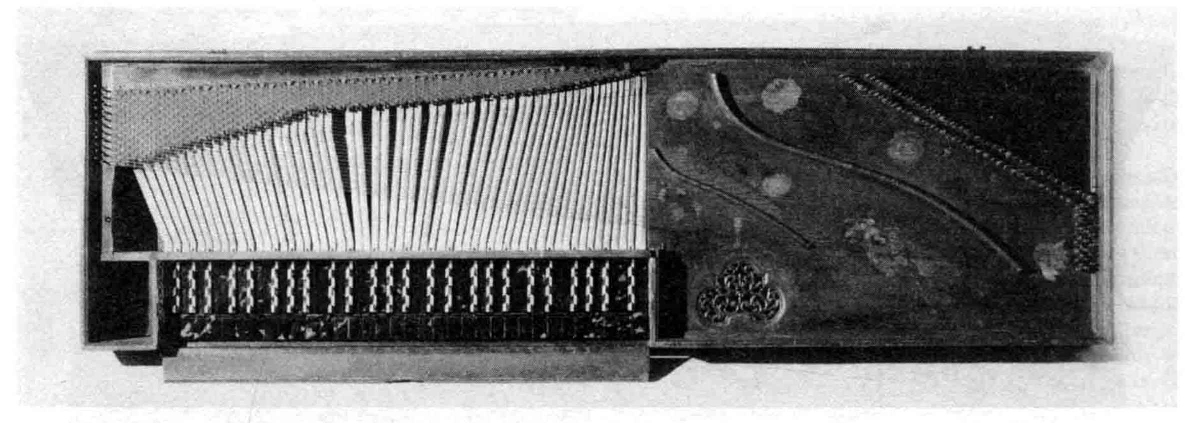
In 1618 Praetorius gave a good idea of the clavichord's importance in Germany at the time, predictably citing its value as a practice instrument, and one of the woodcut plates (fig.6) later issued to illustrate his text shows three representative types: a polygonal Italian instrument (labelled 'Clavichordium, Italienischer Mensur' which Praetorius said had been brought to Germany 30 years before, and two rectangular instruments presumably of German make. The smaller of these has a compass of *C/E–a″* (without g♯″), is designed to sound at octave pitch and appears to have a high viol-shaped bridge with a low soundboard. The larger one, labelled 'Gemein clavichord' ('ordinary clavichord'; shown reversed in the engraving), has a *C/E–c‴* compass and a protruding keyboard like Praetorius's other two clavichords, but it also has a high soundboard and a bridge similar to that of the contemporary harpsichord, curved and with a pin for each string, very prominently shown in the engraving. The strings are held against the pins by being diverted towards the back by a small angle known as 'side-draft', and the aggregate of these side-forces makes it necessary to glue such a bridge to the soundboard. All the hitch-pins are placed along the bass end. As far as is known, only a single example (without a tangent rail) has survived with this combination of characteristics (fig.8). The application to the clavichord of this type of bridge was a great technical advance, having its treble end close to the left edge of the soundboard and its bass end towards the opposite edge, so that the bass strings could be longer and the possibility of resonance improved.

Each of Praetorius's clavichords is equipped with a tangent rail, a flat triangular board padded with cloth on its underside that rests on the damped section of the strings. This is surprising, since tangent rails are rare on surviving 17th-century clavichords. It is possible that such boards obviated the need for listing woven between the strings, which would have simplified the replacement of broken strings, but experience with the tangent rails on surviving original instruments and on 20th-century examples suggests that listing is still required and that the principal function of the tangent rail is to restrict somewhat the upward movement of the strings caused by the tangents, making the touch less yielding. Alternatively, some makers may have included it as a decorative feature or may have found that it eliminated the tendency for woven listing to transmit the impact of the tangent to adjoining strings and produce a faint drumming sound.

Surviving 17th-century German instruments show a number of variable features. In many cases, the bridge is not S-shaped like those shown by Praetorius and fig.6 but rather is straight or only gently curved, and placed obliquely on the soundboard (fig.9); other instruments have a bridge with a single sharp curve at the treble end, a shape seen commonly on 18th-century instruments as well. The system of fretting in fours and threes began to be replaced later in the 17th century by systems involving only threes and eventually by another system of great importance involving the allotment of no more than two keys to any pair of strings (see below).



8. Sole surviving clavichord of the 'Gemein' type (Mirrey Collection, London), as illustrated by Praetorius (fig.6)



The single greatest advance in clavichord design during the period following Praetorius was the adoption of a layout that included bringing the front of the case forward so that the keyboard would be inset rather than projecting (fig.8). This resulted in an enlargement of the soundboard area and made it possible to use diagonal stringing, as the front part of the bridge carrying the bass strings could now be brought forward on the soundboard. As a result of diagonal stringing, with about half of the hitch-pins along the back of the instrument, the row of tangents could follow a line far more nearly parallel to the front of the keys, and the keys could be made somewhat shorter and more uniform in length, thereby improving the touch of the instrument. This design had certainly appeared by about 1665, when it is shown in a group of paintings by Gerrit Dou. It may by that time have been known for two or three decades, but this is uncertain since none of the surviving clavichords of this style is reliably dated until 1670.

An instrument of this kind with a *C/E* to *c'''* four-octave compass can be quite small – a typical example (inscribed DOM 1652, at Yare University, New Haven) is only 109 × 32 × 10 cm and uses only 20 pairs of strings. The first six notes in the bass each have their own pair of strings, there are two groups of two keys each, and the rest of the compass is fretted in threes. These 17th-century clavichords retain much of the bright assertive tone of 16th-century examples, while their improved touch tends to make their sound rather more flexible.

By the 1690s instruments of this size or even a trifle smaller were being made with no pair of strings struck by more than two tangents. The first five to eight keys would each have their own pair of strings, and in a version of the system used in Germany the remaining notes would be disposed as follows: all Cs paired with C♯, all Ds unpaired, all Es paired with E♭, all Fs paired with F♯, all Gs paired with G♯, all As unpaired, and all Bs paired with B♭. The advantages of this arrangement to the performer are enormous. There are still relatively few strings to go out of tune – a maximum of 30 pairs for a four-octave instrument – and to some extent the simplified tuning of earlier instruments remains; however, the performer gains virtually all the freedom in playing dissonant chords and legato scales as if each key had its own pair of strings – as long as the piece remains within the bounds of those tonalities employing no more than two flats or three sharps, since none of the paired notes will then be required simultaneously, and rarely in immediate succession.

9. German fretted clavichord, c1700 (Russell Collection, Edinburgh University Collection of Historic Musical Instruments)

10. Clavichord with the signature 'Johan Christian Fleischer Auxit Hamb. 1739'

At this time, however, clavichords were already being made in which each key was provided with its own pair of strings, and Johannes Speth, in the preface to his collection of keyboard pieces, *Ars magna Consoni et Dissoni* (1693), specified that the music should be played on a virginal or a clavichord 'so made that each key has its own strings and not so that two, three and up to four keys touch a single string'. (Yet there is nothing apparent in Speth's music itself to require such an instrument rather than one fretted in pairs.)

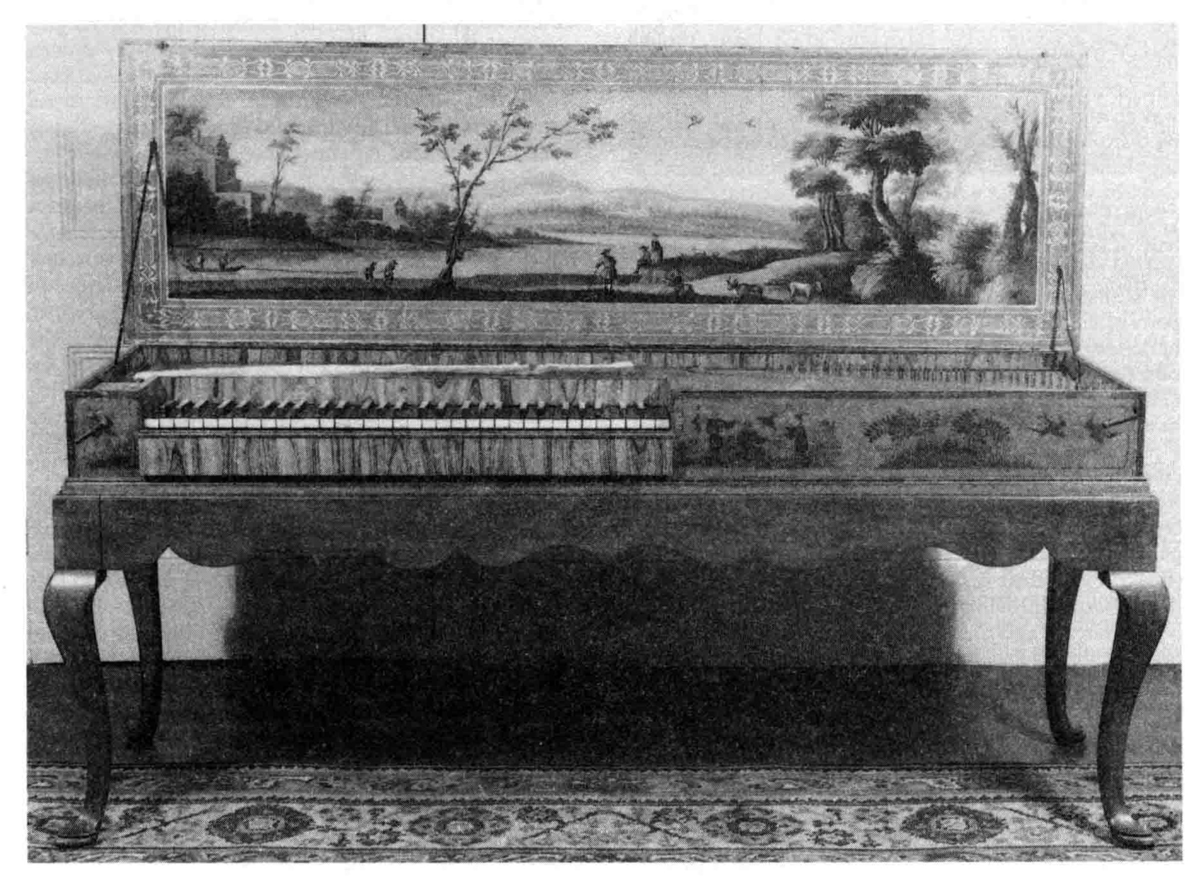
The structure of a 17th-century clavichord tends to be very simple. The sides of the case, usually dovetailed together at the corners, are mounted on a solid bottom, which is not stiffened by any transverse member other than the balance rail of the keyboard. The wrest plank is attached to the right-hand end of the case and in some examples does not run all the way down to the bottom; the hitch-pins for the left-hand ends of the strings are driven into hardwood liners along the back and left-hand ends of the case, and the slotted diapason and a padded rail on which the keys rest are placed immediately in front of the back liner. A small toolbox is usually provided in the space to the left of the keyboard, and a major brace supporting the left-hand edge of the soundboard runs from the front of the case to the back at the right of the keyboard. This brace is often pierced by a soundhole, or there may be a soundhole decorated with a rose in the soundboard itself.

4. 18TH-CENTURY GERMANY. Occasional clavichords from the last years of the 17th century have divided sharps in the lowest octave to provide the *F♯* and *G♯* omitted in the normal *C/E* short octave, and some instruments were made with chromatic bass octave (still occasionally omitting the *C♯*) around 1700.

The disappearance of fretting in threes and its replacement by the much less restrictive fretting in pairs seems to have coincided with a new appreciation of the unique virtues of the clavichord as contrasted with those of the harpsichord and organ that had begun to appear in writings on music. As early as 1713 Mattheson singled out the clavichord as 'beloved above all' other keyboard instruments and declared it superior for performing 'overtures, sonatas, toccatas, suites, etc.' because it permits one to produce a 'singing style' of performance. The importance of such a style is emphasized in the title of Bach's Two-and Three-part Inventions (1723), where the pedagogical purpose of the music is specified as being 'above all to achieve a cantabile manner of playing'; it is in just this respect that the clavichord excels in contrast (to quote Mattheson again) to the 'always equally loud, resonant harpsichord'. This emphasis on singing style, with dynamic nuance explicitly demanded, heralds the period in which the clavichord began to have a literature of its own and in which large clavichords were first made.

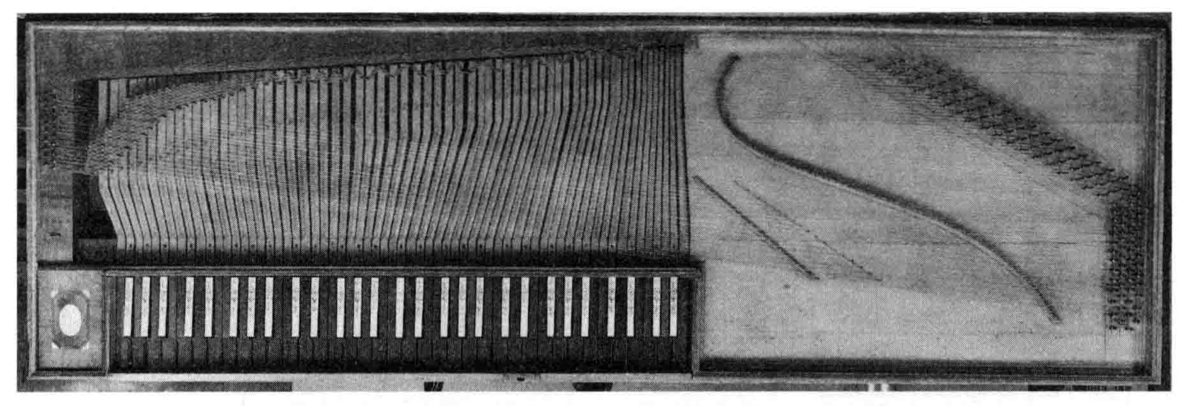
The earliest surviving instruments of this type, longer and wider than the previous norm and with string lengths implying a lower pitch, were all made in Hamburg. They were of two distinct kinds, which persisted in Germany almost to the end of the century, either fretted in pairs with the 'organ compass' from *C*, or unfretted with the 'harpsichord compass' from *F′* or *G′*. The earliest survivors of each are by J.C. Fleischer: one of 1722, fretted and with a compass of *C–c‴*, in the Stiftelsen Musikkulturens Främjande, Stockholm, and an unfretted clavichord of the following year, *F′–c‴* compass, in the Drottningholm Court Theatre museum, near Stockholm. By 1742, H.A. Hass had extended the compass of the unfretted type up to *f‴*, giving the full harpsichord compass of five octaves. If we may judge by surviving examples, the five-octave unfretted clavichord became the normal Hamburg model from this date, although the fretted type with a *C–d‴* compass continued to be made in smaller quantities, probably for the needs of organists. The Hamburg clavichords have, in addition to the usual unison pair of strings, a third string tuned an octave higher in the bass and extending mostly to *d*. These strings have a short, straight bridge of their own and are held by hitch-pins set in the soundboard, rather like the 4′ strings of a harpsichord; their tuning pins are at the left-hand end of the case. The effect of such strings, which seem to be a particular feature of the Hamburg instruments and those of makers in nearby Brunswick, is to brighten and lend definition to the bass, but there tends to be an audible break at the point at which they are no longer present. The unison bridge has an S-shape curve and all the bass strings of Hamburg clavichords are plain brass.

Hass's clavichords are impeccable in their workmanship and choice of materials, and are often decorated with rich veneers, engraved toolbox lids, painted soundboards, and chinoiserie casework (fig.11). With well-chosen string lengths, well-balanced keys and an ample soundboard area, they are very rewarding to play. The survival of at least 27 Hass clavichords has tended to overshadow the merits of the Saxon school, but this large number may be



partly due to their having been selectively preserved for their lavish decoration and because many were exported to more stable regions, Hamburg being a busy seaport.

The clavichords of the Saxon builders differed from those of Hamburg by having a bridge that was hooked in the treble but otherwise completely straight, and had along the straight section a series of shallow channels to guide each string across the bridge. Instead of using plain strings in the bass and brightening the effect with octave strings, the Saxon builders chose to use covered strings which sound bright enough without octave strings. When properly designed, covered strings have the advantage over plain strings of keeping in tune with the treble when the temperature varies, and the transition between covered and plain strings is almost inaudible.



The history of the Saxon school is less secure than that of Hamburg because fewer examples now exist. For instance, Gottfried Joseph Horn made more than 500 clavichords of which only four appear to have survived. The important Saxon builders were Christian Gotthelf Hoffmann of Ronneburg, the Fridericis of Gera, Gottfried Silbermann of Freiberg, Lower Saxony, the Horns of Dresden and Deckett of Grossbreitenbach. Surviving examples cover the years 1765–95, but the Saxon school probably began at least a decade earlier. They are excellently made and of outstanding musical quality, but are mostly sober in appearance.

Throughout the 18th century small, unpretentious instruments, many of them fretted, continued to be made in Germany in addition to the large unfretted ones (fig.12). Some of these were designed as travelling instruments, like the one made by Johann Andreas Stein for the Mozart family in 1763 and the small ones belonging to Beethoven and Grétry. But certain makers, most notably C.G. Hubert of Ansbach, specialized in making intermediate-sized fretted instruments of the highest quality, with a four-and-a-half-octave range of C to *f‴* or C to *g‴*. Although these instruments might be about as long as an unfretted instrument of comparable range, permitting bass strings of adequate length for good sound, the elimination of the notes below C and the use of fretting by pairs yields a very narrow stringband and permits the keys to be short, which provides a snappy action and superb, sensitive touch.

This advantage, together with that of easier and quicker tuning, had to be balanced against the inconvenience that the player experienced when straying into tonalities with more than two flats or three sharps. These remoter keys might demand playing two notes sounded from the same pair of strings either in quick succession (which would circumscribe the use of a legato touch) or even simultaneously (which would be impossible). With the smaller instruments which ended in the bass on 'organ C', the advantages of fretting remained real, though some unfretted clavichords with this bass limit were built during the later 18th century. However, the larger clavichords with a full five-octave compass from *F′* were becoming more popular as the century advanced, and fretting had little effect in reducing their size or improving their touch.

11. Unfretted German clavichord by J.A. Hass, 1763 (Russell Collection, Edinburgh University Collection of Historic Musical Instruments)

12. Unfretted clavichord by Barthold Fritz, Brunswick, 1751 (Victoria and Albert Museum, London)

In Germany they were, in consequence, almost always unfretted.

Thus, during the 18th century, the German clavichord gradually changed from a small fretted instrument probably kept in a cupboard and placed on a table when used for domestic practice, into a piece of furniture with its own stand and occupying a permanent place in the home. Then, for the first time, composers recognized the clavichord's particular advantages for serious musical study, and composed music which exploited its dynamic expression and its ability to introduce slight variations of pitch. Such music only achieved its full effect on the clavichord.

Jacob Adlung (1758 and 1768) gave the most detailed surviving account of the clavichord in Germany, though much of his text is devoted to elementary descriptions and to faults only found in amateur-built clavichords (he was an amateur clavichord builder himself). His writings on instruments, which were began in 1726 and gradually supplemented until his death in 1762, included descriptions of such types as the PEDAL CLAVICHORD and the CEMBAL D'AMOUR. He describes a BUFF STOP in which half of each tangent is covered with leather, so that by shifting the whole keyboard in or out a very short distance, the strings are either struck by the bare or the covered parts of the tangents. He also describes a PANTALON STOP or 'celeste stop' (Ger. *Cälestin*) which, when engaged, raises a series of extra tangents, each one close to the right of the corresponding normal tangent (the clavichord must be unfretted). In playing, when the normal tangent releases a pair of strings they settle on the celeste tangent and continue to sound. If the sustaining effect is too obtrusive, Adlung suggests that the celeste tangents should be covered with thin leather or even cloth. He mentions in passing that he had never seen a single-strung clavichord (thus proving their rarity) and also that builders were in the habit of improving their soundboard wood by boiling it in water. He also rightly insists that the lengths of string between the bridge and the tuning pins should always be undamped (and also free from makeshift joins) in order to provide a resonance which he calls 'after-singing' (*nachsingen*).

A more systematic account of clavichord building was published by Peter Sprengel in 1773, detailing the woods and tools used and including descriptions of wire drawing and the winding of covered strings for the bass. He gives a drawing of a hand-driven string winding machine. Sprengel says that by his time the buff and celeste stops of the clavichord had gone out of fashion, because they tended to put the instrument out of tune and provided no real benefit.

C.P.E. Bach, writing in 1753, confirmed that musicians continued to value the clavichord in its basic form. He mentioned no stops or special effects, speaking rather of the instrument's ability to render all shades of dynamic nuance and to produce a vibrato and portamento, and concentrating on such essentials of a good clavichord as an even, responsive touch, a 'sustaining, caressing tone', and a range of at least C to e''' (the highest notes being required when playing music intended for other instruments – presumably the violin or the flute). C.P.E. Bach 'could not bear' octave strings in the bass of a clavichord and made no distinction between fretted and unfretted instruments, while J.S. Petri (2/1782) and D.G. Türk (1789) insisted on the latter. Bach's own personal instruments by Silbermann and Friderici were almost certainly unfretted.

C.P.E. Bach's views concerning the clavichord are especially significant, as in addition to writing the most influential treatise on 18th-century keyboard playing he was certainly the most important composer to conceive his music in terms of the clavichord. The appearance of *pianissimo* indications, as well as *forte* and *piano*, in certain of his sonatas published in the 1740s, despite the title-pages describing them as 'per cembalo', suggests that he had the clavichord in mind for these works. Explicit *Bebung* indications appear in one of the compositions written to illustrate his *Versuch* (1753–62) and in the first of the *Kenner und Liebhaber* collections (1779).

Later German writers were utterly unrestrained in their praise of the clavichord, especially as a vehicle for the most intense and private personal expression. Schubart wrote (in 1786) that a clavichord 'made by Stein, Fritz, Silbermann, or Späth is tender and responsive to your soul's every inspiration, and it is here that you will find your heart's soundboard ... Sweet melancholy, languishing love, parting grief, the soul's communing with God, uneasy forebodings, glimpses of Paradise through suddenly rent clouds, sweetly purling tears ... [are to be found] in the contact with those wonderful strings and caressing keys'. The heightened sensibility and sentimentality evident in Schubart's rhapsodizing are closely attuned to the *Sturm und Drang* and *Empfindsamkeit* styles of the second half of the 18th century, part of the special climate in which the clavichord had its great

flowering of popularity and in which all of its special literature was created.

During the last quarter of the century some clavichord makers seem to have been working towards an instrument with the intimate sensitivity and flexibility so highly praised by Schubart, while others seem to have been aiming to achieve a louder sound more appropriate for the piano repertory that was developing at this time. Virtually all the important German clavichord makers were by this time building pianos as well. F.C.W. Lemme, who developed a clavichord with a case with rounded ends for which he claimed 'an uncommonly beautiful tone', advertised in 1802 that he made 'large grand pianos in the style of the English masters ... another large grand piano ... square pianos ... and clavichords of all kinds, all of them unfretted'. (He listed no fewer than 14 different models.)

The tendency to build piano-like clavichords was increasingly reflected in the sound and massiveness of structure of many instruments made in the 19th century by such German builders as Voit and Schmahl and the Scandinavian makers, some of whom were still producing clavichords in the 1820s. The structure of a large 18th-century clavichord differs from that of a 17th-century instrument in a number of details. A certain massiveness was required to withstand the tension imposed by the greater number of strings used for the expanded range of the later instruments and because they were generally unfretted. In the 1790s a diagonal brace running parallel to the strings was often attached above the bottom to stiffen it and thus help prevent twisting of the case. The diagonal section of the wrestplank was not usually thick enough to reach the bottom of the case but, rather, was let into the case linings at its ends and supported along its length by blocks resting on the bottom, so that the air chamber below the soundboard was not divided.

The soundboard barring found on 18th-century instruments is extremely variable, some instruments having a series of diagonal ribs passing under the bridge approximately at right angles to its tenor section, while others have a cut-off bar running parallel to the tenor section of the bridge to separate the bridge from the triangular portion of the soundboard nearest to the keyboard. (In those instruments having octave strings in the bass, a cut-off bar of this sort serves as a hitch-pin rail for the octave strings.) Some instruments have a similar diagonal rib behind the bridge that cuts off the soundboard at the back right-hand corner as well. The use of one or even two decorated soundholes in the soundboard is characteristic of the work of the Saxon makers listed above.

5. Spain, Portugal and Scandinavia. The interest in clavichords displayed by Bermudo and Santa María in the 16th century continued on the Iberian peninsula in the 17th and 18th centuries, although the instruments themselves appear to have been predictably conservative and intended for use principally as practice instruments for organists. As late as 1723–4 Nassarre wrote about clavichords having a projecting keyboard and, a compass of only *C/E* to *a''*, a soundboard running underneath and divided bridges. Nassarre's remarks on musical instruments tended to be out of date, however, and more modern clavichords with paired fretting may already have been available in Spain, as they seem to have been in Portugal. In surviving Spanish and Portuguese instruments of this type, there tends to be a different arrangement of tangents from that found in German instruments fretted in pairs. Instead of the Es being paired with E♭ and the Bs being paired with B♭ so that the Ds and As are left unpaired, the Iberian instruments (and some Scandinavian ones) pair E♭ with D and B♭ with A, leaving the Es and Bs unpaired.

Other less common fretting arrangements found on Spanish clavichords include the pairing of a few bass notes, unfretted G♯s (allowing the string to be retuned to A♭, a requirement of certain church modes expressed by Bermudo nearly two centuries earlier), and consecutive paired fretting in the treble. A feature peculiar to 18th- and 19th-century Spain is the use of straight key-levers in a number of fretted clavichords. Another element, unusual for the period and found in at least two 18th-century Spanish clavichords and several Latin American examples dating from the 17th to the 19th century, is the so-called 'second soundboard', i.e. a board running underneath the key-levers and thus below the level of the main soundboard. This enlarges the soundbox but has no contact with the bridges and thus cannot contribute to transmitting the vibrations of the strings to the resonating chamber. Latin American clavichords not uncommonly have tool compartments on both sides of the keyboard.

In Spain, short-octave instruments continued to be built until the end of the 18th century, and small 51-key instruments as late as 1829 (a clavichord by Antonio López de Dueñas). Although few instruments with five or more octaves survive, contemporary newspaper advertisements show that unfretted, five-octave instruments were being built in Madrid in competition with square pianos and that ownership at that time was not limited to organ players, although no specific repertory for the clavichord seems to have been created. As a tool for organists, however, the clavichord survived as late as the 1870s and 80s in some cathedrals and churches, and even into the first half of the 20th century in some closed-order convents.

The majority of Iberian clavichords are anonymous. The earliest identified Spanish maker was Juce Albariel (*fl* Saragossa, 1465), and the latest were Pedro and Teodoro Serrano, father and son, who worked in the second third of the 19th century. Those Portuguese makers whose signatures appear on surviving clavichords are all from a late period: Jacinto Ferreira (Lisbon, 1783), Manuel do Carmo (Porto, 1796) and José Baptista Camacho (Braga, 1841).

Although about 12 Danish-built clavichords are known, Scandinavian building was dominated by Sweden, from which at least 150 clavichords dated between 1688 and 1832 have survived. This was probably the result of a healthy domestic market protected by import duty. The early Swedish builders followed the German tradition, but an intervention by the Royal Academy of Science of Stockholm in about 1740 resulted in the development of a typically Swedish design which became standardized by about 1770. An instrument of this kind is unfretted with octave strings in the bass (with the tuning pins at the left-hand end of the case, as in the Hamburg instruments), has a soundboard with diagonal grain, a treble scaling appropriate to the use of iron wire, and a compass of more than five octaves. The left-hand edge of the soundboard has a gracefully curved shape, partly overhanging a few of the top keys. By 1775 the compass had reached *F'–a'''*, by 1785 *F'–c''''*, and by 1795 some

instruments were built with extra bass notes giving six octaves (*C′–c″″*), although *F′–c″″* remained the more usual compass. Whereas German clavichords are restricted to a length of about 1·75 metres so that the tuner can reach the bottom note from the tuning pins on the right, a typical Swedish clavichord is over two metres long. In order to tune the lower strings, the tuner would first tune the octave strings on the left-hand tuning pins, and then tune the unisons to the octaves, presumably using a hand-held stick to reach the lower keys while working on the tuning pins at the right-hand end of the case. This proves how the octave strings had become an indispensable part of the design.

Iron stringing gives a treble with a clear, relatively strong sound and the extra length and ample soundboard area give a fine bass. The instruments are also surprisingly sensitive and controllable in spite of their size. Their popularity, together with their large compasses, made them a substitute in Swedish homes for the early piano.

6. Austria. The few surviving Austrian clavichords date from the 18th century onwards. Many of them display structural characteristics that were out of date in contemporary German clavichords. They generally have a compass of *C/E–c‴* or *C/E–d‴*, and in later instruments *C/E–f‴*. The layout of the keywork usually displays a modified mean-tone temperament, the kind in use in small organs until the early 19th century. It seems to be typical of these relatively small clavichords to have a soundboard with no bars, or at most only one, and instruments with a straight bridge were still being built in the second half of the 18th century. The relatively short scaling indicates a high Chorton pitch standard. Surviving strings indicate that iron wire was preferred. The material used for the tangents was usually tinned iron. The large unfretted clavichords preferred in the mid-18th century in northern Germany and Scandinavia were something of an exception in Austria. The cases of those instruments that have survived are usually made of solid walnut, with plain ornamentation. The interior of the soundboard and keyboard area may be painted with red bole. An unfretted instrument of this kind (compass *F′–f‴*) was built in 1794 for Haydn by the Bohemian organ builder Johann Bohák and is now in the Royal College of Music, London. A similar instrument made by Ferdinand Hofmann is kept in the house where Haydn died in Vienna. When the pianoforte ousted the clavichord around the turn of the century, a small circle of people remained loyal to the clavichord, partly out of enthusiam, partly for economic reasons. Türk recommended the clavichord instead of the piano for teaching children in the Viennese edition of *Clavierschule* (1789). As late as 1831 the board of the civic music school in Buda was urgently requesting repairs to the 11 clavichords which had been the only instruments available for teaching the keyboard ever since the school was founded in 1777.

The last traditionally built instrument (compass *F′–f‴*, fretted) was made in 1839 by Klemens Kunz (1786–1840) in Jaroměřice, Bohemia (now in the Museum of Czech Music, Prague). Other Austrian clavichord makers included Johann Moysè (*c*1700–71), Ferdinand Hofmann (1756 or 1762–1829), Englebert Klingler and Johann Bohák (1754–1805) in Vienna; Carl Matthias Gschwandtner, Georg Mitterreiter, Franz Xaver Schwarz and Anton Römer in Graz, J.C. Egedacher (1664–1747) in Salzburg, and Johann Anton Fuchs (*fl* 1770–96) in Innsbruck.

7. The modern revival. The first clavichords to be built in modern times were the work of Arnold Dolmetsch. Having restored a five-octave Hass clavichord with octave strings in the bass, one that he owned himself, and having played it in some of his historical concerts in London in the 1890s, he created an interest in the clavichord among a group of enthusiasts, one of the most supportive being Bernard Shaw. This led to his making four accurate copies of the Hass instrument in 1894, three of which were immediately sold, followed by two more in 1895 and 1896. Apart from three smaller pentagonal clavichords of compass *C′–f‴*, made to his own design in 1897, his next clavichords were a group of 34 made between 1906 and 1910 while he was working with the Chickering company in Boston. These were based on a Saxon five-octave clavichord of 1784 by Christian Gotthelf Hoffmann, without octave strings, and which was also owned and restored by Dolmetsch. Rather than copying it strictly, Dolmetsch combined its general layout with a bridge shape derived from Hass.

Initially, in 1894, Dolmetsch fitted strings of traditional diameters in the treble, presumably having measured the strings he found on his Hass, but he soon reduced the diameters, and thus the tensions, presumably to make playing easier. In Boston, Dolmetsch standardized on treble tensions about 30% below those of Hass. In 1912, while working for Gaveau near Paris, he took the decisive step of introducing the well-known model of his own design with a *C–d‴* compass (and a further small reduction of treble tension). Dolmetsch thus abandoned copying, 'the best training for a beginner', in order 'henceforth to realise my own ideals', the better to overcome the prejudice of a piano-based culture. A similar redesigning was currently taking place with harpsichords. This ensured the successful revival of interest in the clavichord and was a potent influence on builders of the early revival, mostly in England and Germany.

While most makers followed the conventional layout, some took the basic idea of the tangent action and experimented with single-stringing, down-striking, metal frames or even metal soundboards, none of which has proved to be of lasting value. The only non-traditional design apart from Dolmetsch's to gain a significant following among players was that developed by Thomas Goff in 1934, which had a long sustaining power derived from heavy keys and a heavy bridge. This school of players on Goff instruments, led by Thurston Dart, developed a delicate, legato, romantic style of playing in which vibrato had a prominent role.

From about 1965, clavichord makers began following the lead of harpsichord makers in returning to making accurate copies of old designs, giving players the opportunity of exploring the more vigorous style of playing witnessed by Burney on his visit to C.P.E. Bach and described in his book of 1773. The Nederlands Clavichord Genootschap was formed in 1988 to support the study of all periods of the instrument, and they began to publish a journal in the same year. Clavichord societies have also been formed in Germany, Britain, Switzerland, Japan and the USA, and the first of a series of biennial international clavichord symposia was held in 1993 in Magnano, Italy.

8. Repertory. For most of its long history the clavichord was primarily valued as an instrument on which to learn, to practise and occasionally to compose. It appears as an

alternative to the virginal and the harpsichord on the title-pages of a number of 16th-century keyboard collections and is similarly mentioned in some German publications of the late 17th century, but there seems to have been little or no recognition of the clavichord's special capabilities before the beginning of the 18th century and no music specifically composed for it before the mid-18th century. At that time a large body of music written particularly for the clavichord or alternatively for the clavichord and the relatively new fortepiano began to be composed, but only in Germany, where the clavichord was still very popular, judging by the output of makers such as Lemme and the Horn brothers, who numbered their instruments. Some of this music, including most of that by C.P.E. Bach, is highly demanding from both musical and technical standpoints, but much of it was composed for middle-class ladies of modest capabilities and is accordingly far easier to play. The most notable composers of clavichord music apart from C.P.E. Bach include W.F. Bach, E.W. Wolf, J.G. Müthel, J.W. Hässler, C.G. Neefe, D.G. Türk, and F.W. Rust, one of whose sonatas includes a variety of special effects to be achieved by strumming or drumming on the strings, playing harmonics, and the like. Haydn's solo keyboard works, also, must be counted as essentially for clavichord over most of his life, since the Esterházy court appears to have received its first piano when he was 49 and he only acquired his own piano at the age of 56. His sonatas lose much when played on the harpsichord and even the late ones remain idiomatic and effective on the clavichord.

Although the clavichord is *par excellence* a solo instrument on which one plays by oneself for oneself, it was also used in the 18th century to accompany solo singing; it is specifically cited in this connection by writers of the period and on the title-pages of several song collections.

The 20th-century repertory for clavichord is far less extensive than that for the harpsichord, reflecting not only the inability of the clavichord to make itself heard in an ensemble but also the problems encountered in public performance even when it is presented as a solo instrument (although some of these have been partly overcome with the aid of discreet electronic amplification). However, especially in England and clearly as a reflection of the importance of English makers in the modern revival of the instrument, a number of compositions specifically for the clavichord have appeared, beginning in 1928 with Herbert Howells's *Lambert's Clavichord*, op.41; a smaller group of works by German composers, beginning with Ernst Pepping's Sonata no.1 of 1938, similarly reflects the German revival of the instrument between the wars. The jazz pianist Oscar Peterson played the clavichord on the album *Porgy and Bess* (Pablo, 1976), a duo with Joe Pass, who plays the guitar. To compensate for the low volume of the clavichord, microphones were evidently placed close to the strings for the recording; the resulting timbre is biting, like that of the harpsichord. A feature of the performance is Peterson's playing of bends and blue notes by using the *Bebung* technique of varying the pressure with which the key is held down.

Clavicor. A valved brasswind instrument of tenor pitch invented in Paris by Danays in 1837 and made by the firm of Guichard (see illustration). It was built in various pitches from from $6\frac{1}{2}'$ E♭ down to 9′ B♭; a smaller instrument, the néocor (pitched in 6′ F with crooks for lower tonalities), was seen as a member of a family comprising *cornet à pistons*, néocor and clavicor, undermining the claim of Adolphe Sax to have been the first to introduce a homologous brasswind family. The clavicor, also sometimes known as the ALTHORN, had three valves, two of them operated by the right hand and one by the left, but from about 1840 all three were operated by the right hand. Its bore was narrow compared with modern saxhorns; the instrument was held up vertically in front of the performer.

The clavicor provided a tenor voice in bands. Although its active life ceased long before the turn of the century, since it was supplanted by the E♭ tenor horn, it was commemorated for some considerable time in Italian military-band nomenclature, in which the E♭ tenor horn part used to be called *clavicorno in mi ♭*. In England clavicors were made by Pace, and a part for 'E♭ clavicor solo' is included in some brass-band journals issued in the 1850s.

Clavicor in C by Guichard, Paris, after 1838 (Horniman Museum, London)

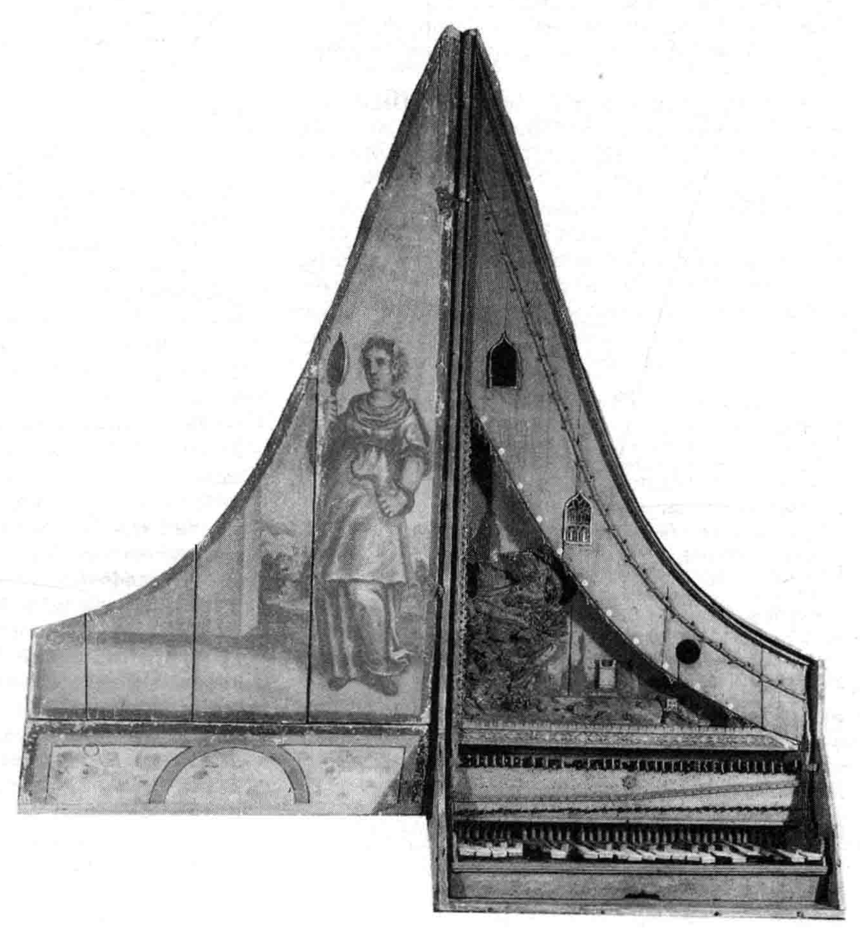
Clavicordio (It., Sp.; Port. *clavicórdio*). (1) A generic term for a string keyboard instrument.

(2) *See* CLAVICHORD.

(3) (Sp.) *See* HARPSICHORD.

(4) An Italian term for the polygonal VIRGINAL.

Clavicylinder. *See* KLAVIZYLINDER.



Clavicymbelpedal (Ger.). *See* PEDAL HARPSICHORD.

Clavicytherium (Fr. *clavecin vertical*; Ger. *Klaviziterium*; It. *cembalo verticale*). An upright harpsichord with a vertical soundboard. The main advantages of such an instrument are that it takes up less floor space than a normal harpsichord and the sound is projected more

directly at the player. Since the jacks must move horizontally rather than vertically, it requires a complex action often involving the use of springs rather than gravity to return the jacks to their position of rest. As a result clavicytheria usually have a fairly heavy touch and unresponsive action.

The earliest known reference to a clavicytherium is in the manuscript treatise of Paulus Paulirinus of Prague (1459–63), which describes a combination of an upright harpsichord and an organ played from the same keyboard. The oldest depiction of a clavicytherium dates from about 1463 and the oldest surviving string keyboard of any kind is a clavicytherium. This instrument, probably made in Ulm in the late 15th century and now in the Donaldson Collection of the Royal College of Music, London, is 142·5 cm high and has a keyboard range of 40 notes (see illustration; *see also* HARPSICHORD, §2 (ii)). The compass is now *C/E–g″*, but originally (as established by Debenham) was *EE♯FG–g″*. However, the apparent *E♯* cannot have been tuned as such; instead a full diatonic bass octave *C, D, E, F, G, A, B♭, B* may have been used. The instrument has a unique and astonishingly simple action in which the key, a vertical lever and the forward-projecting jack are all assembled into a single rigid piece. When the key is depressed the entire assembly rocks forward, so that the jack (moving along the path of an arc) is forced past its string. When the key is released the assembly falls back under its own weight, returning the jack to its original position. Another early example, perhaps from around 1600, is in the Norsk Folkemuseum, Oslo.

The earliest writer to use the term clavicytherium for the upright harpsichord was Sebastian Virdung (*Musica getutscht*, 1511), but he gave no description to accompany his crude woodcut illustration, which is a reversed rendering of an instrument with a 38-note range of *FG–g″* (lacking *F♯*). Stradner has argued that the instrument had metal strings. Praetorius showed a substantial example in *Theatrum instrumentorum* (1620; *see* CLAVICHORD, fig.6) and stated that its sound was almost the same as that of a cittern or harp. A German example of the same period (in the Germanisches Nationalmuseum, Nuremberg) has two sets of unison strings at normal pitch, and a third tuned an octave higher. There are four rows of jacks, one of which plucks one of the unison strings very close to the nut to produce a nasal tone (like a LUTE STOP on a harpsichord). In addition, a sliding batten fitted with leather pads can be moved to mute the sound of one of the unison strings (like a BUFF STOP). In this instrument a vertical arm set in the back of each key has four finger-like projections, each of which fits into a slot in one of the four jacks provided for each note. Since the connection between the jacks and this arm is not a rigid one, as in the Donaldson instrument, it is possible for the jacks to move forward and back horizontally instead of in a curved path, and it is also possible to change registers by shifting the jackslides, as one would on a harpsichord.

German clavicytherium, probably from Ulm, c1480 (Royal College of Music, London)

In the late 17th century and the 18th, clavicytheria were built throughout Europe, including Scandinavia and Great Britain. Of the 18 Italian examples known, only three are genuine clavicytheria, the remainder having been constructed from harpsichords. One of the genuine clavicytheria, in the Museo degli Antichi Strumenti Musicali in Rome, was possibly made by Cristofori (perhaps the one of 1697 that is recorded in a Medici inventory of 1700; illustrated in van der Meer, 1983, p.168). Another instrument made by Martin Kaiser in about 1675 to a similar design, probably for the Emperor Leopold I, is in the Kunsthistorisches Museum, Vienna (illustrated in Russell, pl.84). This has two sets of strings tuned in unison and clearly shows the influence of organ builders: the strings are arranged symmetrically with the bass strings in the centre and the treble strings at the sides, like a rank of organ pipes in mitre shape, and a ROLLERBOARD is used to connect the keys with their corresponding jacks. Although this instrument pre-dates Cristofori's, Kaiser worked in Venice at some time (see Luithlen), and may have met and been influenced by Cristofori there. An enormous example about 365 cm high, constructed by Nicolas Brelin in Sweden in 1741, was equipped with eight register-changing pedals. A number of handsome clavicytheria were made in Dublin in the second half of the 18th century: two by Ferdinand Weber (one undated and the other of 1764; illustrated in Russell, pls.77 and 78) use oblique stringing to achieve a symmetrical 'pyramid' form similar to Kaiser's instrument but without the mechanical complexity. This design could have derived from the earliest known upright pianos, which were also pyramid-shaped (*see* UPRIGHT PIANOFORTE).

Three important examples by Albert Delin (who worked in Tournai between 1750 and 1770; an instrument is illustrated in Russell, pl.41) are notable for their smoothness of action and fine tone. Delin's action uses a pivoted bell crank, the horizontal arm of which is pushed upwards by a vertical sticker resting on the back of the key; the jacks are hooked into the vertical arm of the bell crank, which is so balanced that when the key is released it brings the jacks back to the rest position without additional weights or springs. The clavicytherium has received little attention from 20th-century makers.

EDWIN M. RIPIN/DENZIL WRAIGHT

Clavier. (1) (Fr.). A term for the keyboard of a piano, harpsichord, organ etc. It was used to denote 'manual keyboard' at Rouen as early as 1386.

(2) (Ger.). The most common spelling of KLAVIER before the 19th century.

(3) A term sometimes applied to pianists' practice instruments that have silent keyboards ('dumb claviers') or produce only a clicking sound when the keys are depressed and released.

EDWIN M. RIPIN/JOHN KOSTER

Clavier de pédales (Fr.). *See* PEDAL PIANOFORTE.

Claviergamba (Ger.). A bowed keyboard instrument invented by Johann Georg Gleichmann in 1709. *See* SOSTENENTE PIANO, §1.

Claviharpe. A HARP-PIANO made by J.C. Dietz (i).

Clavijo del Castillo, Bernardo (*b c*1545; *d* Madrid, 1 Feb 1626). Spanish composer and keyboard player. Nothing is known of his early life and musical training. On 6 December 1569 he was listed among the members of the royal chapel in Palermo and at the same time as a soldier of the Viceroy of Sicily. In 1587–8 he was organist in the Sicilian royal chapel, and in the dedication of his motet collection he asserted that he had at one time been *maestro di cappella* there. On his return to Spain in November 1589 he was appointed organist of Palencia Cathedral. In February 1592 he left Palencia to become organist of Salamanca Cathedral; he became Professor of Music in the University of Salamanca on 3 April 1593, having been awarded the degree of Bachelor of Arts *por suficiencia*, that is, without entitlement, the previous month. In July 1594 he obtained the degree of Licentiate and Master of Arts of the University of Oñate. As well as teaching in the University of Salamanca, he also performed on the organ there on certain occasions.

On the death of Hernando de Cabezón (1 October 1602), Philip III summoned Clavijo del Castillo to Valladolid, where the Spanish court was in residence, to fill the resultant vacancy. He began to serve there in November 1602, although he did not finally leave his cathedral and university posts at Salamanca until July 1603. His official appointment, of 29 March 1603, specified that he was to serve as keyboard musician of both the royal chapel and the royal chamber (as Antonio and Hernando de Cabezón had done), and that he was to teach some of the boys of the royal choir school. Although he was not the only keyboard player at the royal chapel, he was named as 'His Majesty's principal organist' in 1618–19, a title he held until his death. His skill was praised by many contemporaries. Outstanding among these was Vicente Espinel, who, in his novel *Relaciones de la vida del escudero Marcos de Obregón* (Madrid, 1618), mentioned the musical academies which met in his house and in which his daughter Bernardina (an excellent keyboard and harp player) took part.

The famous musical library of King João IV of Portugal included some tientos by Clavijo del Castillo, one of which has survived (ed. in W. Apel: *Spanish Organ*

Masters after Antonio de Cabezón, CEKM, xiv, 1971). His main compositional output is contained in his *Motecta ad canendum tam quattuor, quinque, sex et octo vocibus quam cum instrumentis composita* (Rome, 1588). The volume contains 19 motets: six for four voices, six for five voices, six for six voices and one for eight voices; as the title of the collection suggests, instruments may be substituted for voices.

LUIS ROBLEDO

Clavinet. A five-octave electronic keyboard instrument similar to an electric piano. It was designed by Ernst Zacharias and has been manufactured by HOHNER from around 1960. The sound resembles that of the clavichord, and is produced by small hammers, mounted under the touch-sensitive keys, which strike short strings directly beneath them; the vibrations of the strings are converted by electrostatic transducers into voltage variations and made audible over a loudspeaker. Although the Clavinet was originally less successful than Hohner's Pianet, many rock and jazz musicians, including Stevie Wonder and Chick Corea, have exploited its percussive quality.

HUGH DAVIES

Claviola (i). A bowed keyboard instrument, in the shape of an upright piano, invented by JOHN ISAAC HAWKINS, who called it the 'claviole'. It had four semi-circular columns of gut strings with four semi-circular rotating horsehair bows operated by a pulley. A foot treadle kept the bows in motion and the keys brought the strings into contact with the bow. It was first demonstrated publicly at a concert on 21 June 1802 in Philadelphia, when it was used to perform Hawkins's own concerto. It was shown again in London in 1813–14 and illustrated in Rees. The most famous claviola to survive is a kind of upright zither by Ole Breiby, now at the Metropolitan Museum, New York. Behind the keyboard is a resonance chest on which is mounted a small viol-shaped soundboard bearing 25 metal strings stretched over three nuts and three bridges. The player fingers the keys with the left hand and with the right manipulates the bow, which moves in a groove. When a key is depressed the corresponding string is raised and brought into contact with the bow; dynamics can be controlled by touch. The range of the Claviola is just over two octaves (*g*–*b″*), but the top four keys lack strings of their own; by means of a lever the player operates a small bar which stops the string belonging to the note an octave lower, so that a harmonic (said to sound like a flageolet) is produced at the required pitch. The instrument enjoyed some popularity and was manufactured until the end of the 19th century. Breiby patented a larger version requiring two foot-operated bows on 4 May 1897.

HOWARD SCHOTT, MARGARET CRANMER

Claviola (ii). The name given by their inventors to two keyboard instruments in which the sounds were produced by hammers striking short, thin steel bars. The first was invented by Papelard of Paris and patented on 11 August 1847; for each note over a compass of *c* to *c″″* it had two bars fixed at both ends and tuned an octave apart. In 1848 Papelard constructed a successor to the claviola, the *clavi-lame*, in which the bars were fixed at one end only (its mechanism thus resembled that of the celesta).

George Crawford's claviola, patented in London on 22 May 1862, resembled Papelard's first instrument; Crawford referred to his invention as a 'pianoforte'. □

Claviorgan [organized piano, harpischord, etc.] (Fr. *clavecin organisé*; Ger. *Orgelklavier*; It., Sp. *claviórgano*). An English equivalent to the quasi-Latin *claviorganum*, denoting a keyboard instrument in which strings and pipes 'sound together to produce a pleasing sound' (Praetorius, 2/1619). In early sources, late 15th-century Spanish or 16th-century Italian collections, for example, it cannot be assumed that *clabiórgano*, etc., invariably denotes a composite keyboard instrument of this kind; often the word may have been used for (secular) organs in general, perhaps to distinguish them from portatives or regals. The English term seems to have appeared only at the end of the 19th century (Engel, Hipkins) but it may be earlier. The adjective 'organisé' was used in France at least by the middle of the 16th century and copied by English lexicographers (e.g. Randle Cotgrave, 1611).

The true claviorgan remained on the fringe of music-making for at least three centuries; its history is thus neither continuous nor connected but comprises a series of important types. In the 16th century spinets or virginals 'with pipes undernethe' are known to have existed from documentary evidence (e.g. at least five are listed in the inventories of Henry VIII, 1547) and from surviving examples (e.g. the spinet-regal-organ formerly in Schloss Ambras); double- or triple-strung, full-size harpsichords with positive organs incorporated are to be found in Germany (a Dresden inventory, 1593), Italy (Banchieri, 1605), England (one made by Theeus, 1579 Victoria and Albert Museum, London) and elsewhere. Many examples must have been little more than toys (e.g. the mechanical claviorgan patented in Venice, 1575). In the 17th century there was immense variety, from the clavichord-organ combinations known from theorists (Barcotto *c*1640, Todini, 1676) and extant examples (V. Zeiss of Linz, 1639) to the organ-spinet-harpsichord-*Geigenwerk* (*Galleria armonica*) made in Rome by MICHELE TODINI from about 1650. The acoustic and mechanical theorists (e.g. Kircher, 1650) were attracted to the more doubtful aspects of these composite instruments. From about 1580 to about 1780, many large organs are known to have had a row or two of harpsichord strings, especially those in German court churches, but also in various other places from Sicily to Coventry. Particularly in England, chest-like or even harpsichord-shaped chamber organs were made during the 18th century specifically to carry a harpsichord on top whose keys depressed the organ pallets below through simple stickers; this is known both from theoretical sources (e.g. Burney: 'Schudi', 'Snetzler' in *Rees's Cyclopaedia*, 1819, and the varied and detailed

drawings given by Dom Bédos de Celles, 1766–78) and from extant examples (e.g. the Earl of Wemyss's Kirkman-Snetzler claviorgan of 1745–51, see illustration). Even in many quite late sources it is not clear what exactly 'claviorgano' denoted (e.g. Cristofori's accounts, Florence, 1693). Late in the 18th century, many pianos, particularly large square ones, were made with several ranks of flute and chorus organ pipes, often by the best makers in London (e.g. Broadwood) and, to a lesser extent, Paris (Taskin). John Geib (1744–1818) claimed to be the first to make 'organized pianos' in London. By about 1840, harmonium-pianos played only a minor role among the vast array of composite, hybrid and other fanciful, constantly patented inventions.

There never was a specific claviorgan repertory, although some pieces were written to exploit individual instruments (e.g. one of Handel's organ concertos, 1739, composed for the organ-harpsichord used in *Saul*, 1738 – probably Handel's famous 'maggot'). Claviorgans were used occasionally in the Florentine *intermedii* in the 16th century. Many theorists pointed out the variety of colours possible, often calculating them mathematically. Claviorgans were occasionally named on the title-pages or in prefaces to various publications (e.g. A. de Arena, *Bassas dansas*, 1572, for 'espineta sola, espinate organisati', and S. Seminiati, *Salmi*, 1620, for 'leuti ... organi o claviorgani'). They are sometimes mentioned in diaries and the like as having been played in works not expressly calling for them. For example, Michael Arne played a theatre concerto in 1784 on an 'Organized Piano Forte' (R.J.S. Stevens's MS); Burney (*Travels*) heard an Italian nun using a claviorgan in church; Mattheson recommended them in Hamburg for church cantatas (1739, etc). By about 1770 (J.A. Stein), a *clavecin organisé* was played in order to give dynamic changes by adding or subtracting organ stops. In 1768 Adlung remarked that the claviorgan was less common than in his 'young days', the new piano having replaced it in expressive music.

DONALD HOWARD BOALCH, PETER WILLIAMS

Clavisimbalum (Lat.). Name for the harpsichord described in a treatise by HENRI ARNAUT DE ZWOLLE.

Clavius, Christophorus [Christoph] (*b* at or nr Bamberg, *c*1538; *d* Rome, 6 Feb 1612). German composer and mathematician, active mainly in Italy. As a Jesuit novice he studied theology, mathematics, astronomy and music at the priory of S Cruz, Coimbra, from 1555. He was still at Coimbra on 21 August 1560. From 1565 to 1579 or 1580 he taught mathematics at the Jesuit Collegio Romano and later continued to live in Rome. He won fame through the publication in 1574 of *Euclidis elementorum libri XVI, cum scholiis*, one of his numerous scholarly publications. Pope Gregory XIII appointed him to a papal commission to correct the errors of the Julian calendar, and the new Gregorian calendar was announced in a papal bull of 22 February 1582. He also contributed to the study of coss, a form of algebra developed in the 15th and 16th centuries. Although he enjoyed a wide correspondence with leading astronomers and mathematicians of his day, among them Tycho Brahe and Galileo, he had to spend much time answering polemics from such

Claviorgan by Jacob Kirkman and John Snetzler, 1745–51 (private collection)

critics as Mästlin and Scaliger who aimed at undermining his great achievements. He wrote a small amount of music which has not yet been studied. His surviving pieces comprise a motet in two sections to words from the Song of Songs (in RISM 1596[2]), ten other motets (in *A-Wn* and *D-Dl*, *Mbs*, *Rp* and *Z*) and three sacred songs (in *PL-WRu*, inc.); 13 other motets (formerly in *D-Bsb*, the Biblioteca Rudolfina, Legnica, *WRu* and *RUS-KA*) are lost.

E. FRED FLINDELL

Clay, Frederic (Emes) (*b* Paris, 3 Aug 1838; *d* Great Marlow, 29 Nov 1889). English composer. He studied harmony and counterpoint with Molique in London, and through a promising career in the Treasury Department supported his early compositions and also a brief period of further study with Hauptmann in Leipzig in 1863. In 1862 he made his public début at Covent Garden with *Court and Cottage* and it was during the rehearsals of his first real success, *Ages Ago* (1869), that Clay introduced his librettist, W.S. Gilbert, to his close friend Arthur Sullivan. In 1873, a comfortable legacy from his father enabled him to devote his attention completely to composition and in 1877 he tried his fortune in the USA, achieving only moderate success. On his return to England in 1881, he found a new librettist in George Sims but, after the second performance of *The Golden Ring* on 4 December 1883, Clay collapsed; he was paralysed for the rest of his life. Among his other stage works were *Babil and Bijou*, *Happy Arcadia* and *The Black Crook* (all 1872), *Oriana* (1873), *Princess Toto* and *Don Quixote* (both 1876), and *The Merry Duchess* (1883).

Most of Clay's works were written for the stage, although he wrote many popular songs, some hymns and two cantatas, one of which, *Lalla Rookh*, included the famous 'I'll sing thee songs of Araby'. His melodies are always fresh and graceful; his harmonic treatment, though sometimes strikingly original, owes much to Rossini and Auber. Successful though he was, he never really broke away from the drawing-room ballad and, lacking Sullivan's sense of fun and powers of invention, remained largely in his shadow. His works have recently enjoyed renewed popularity on both sides of the Atlantic.

CHRISTOPHER KNOWLES/R

Clayton, Norman John (*b* Brooklyn, NY, 22 Jan 1903). American radio evangelist and composer of gospel hymns. From the age of 12 he played a pump organ in the South Brooklyn Gospel Church and later took up the trumpet. While continuing to serve as an organist he held various jobs, until in 1942 he joined the staff of the radio evangelist Jack Wyrtzen for his 'Word of Life' rallies in New York. Clayton served this organization for 15 years as organist, vibraphonist and director of the inquiry room. During this period he also worked with Erling C. Olsen on the 'Sunday Morning Radio Bible Class' and with the Bellerose Baptist Church on their radio programmes. Between 1945 and 1959 Clayton published some 30 gospel songbooks; he then became associated with the Rodeheaver Company as a writer and editor. His best-known gospel hymn is *Now I belong to Jesus*, first published in his *Word of Life Melodies no.1* (1943). In their texts and harmonies, Clayton's songs represent a trend toward a romantic style of gospel hymnody.

HARRY ESKEW

Clayton, Thomas (*b* London, bap. 28 Oct 1673; *d* London, bur. 23 Sept 1725). English composer and violinist. His father, William Clayton (*c*1636–1697), was given one of the nine new places for the violin created for Charles II's Royal Private Musick in 1660. Some violin tunes by him survive in manuscript. Thomas joined his father in the royal musical establishment as a violinist in 1689, receiving a full place in 1693. He inherited property from both parents (his mother died in 1700) and received his father's music books and instruments and his shares in the Drury Lane theatre. By autumn 1704 he had been to Italy to study music, although he was in England to sign each year for the livery payment due to him on 30 November.

On 28 October 1704 the *Diverting Post* reported that two operas, one of them by Clayton, were being prepared for the opening of John Vanbrugh's new playhouse in the Haymarket. However, Clayton's opera, *Arsinoe, Queen of Cyprus*, was put on by Christopher Rich's company at Drury Lane on 16 January 1705. It was the first all-sung opera in the Italian style to be performed on the English stage and was a considerable success for two seasons. The libretto by Stanzani had originally been set by Franceschini in 1676, and it is not clear whether Clayton set the English translation by Peter Motteux or asked Motteux to fit English words to his setting of the Italian. Later in the century Burney and Hawkins were united in their scorn of its music, and the anonymous author of *A Critical Discourse upon Opera's in England* (1709) wrote that 'it ought to be called the Hospital of the old Decrepid *Italian* Opera's'. This critic claimed that the success of *Arsinoe* 'encouraged the Author to Compose another worse than the first'. It also enabled Clayton to resign from the Private Musick in March 1706. His second opera was *Rosamond*, to an original English libretto by Joseph Addison. It was first performed on 4 March 1707 and was a complete failure, receiving only three performances. Clayton's music has always been held responsible for this, but Addison's libretto is far from perfect, and its flattery of the Duke of Marlborough alienated the Tories. In 1709 the Whig Lord Wharton was appointed Lord Lieutenant of Ireland and Addison became his Principal Secretary, accompanying him on visits to Ireland in 1709 and 1710. They took Clayton with them and he organized operatic entertainments at Dublin Castle.

By that time opera in London was being performed in Italian. Addison and Richard Steele, in *The Tatler* and later *The Spectator*, mounted a rearguard action against the absurdity of this, and Steele backed Clayton in a series of concerts at York Buildings between 1710 and 1712, which featured Clayton's settings of English poetry. His *Pastoral Masque* was performed in May 1710, and *The Feast of Alexander*, *The Passion of Sappho* and *If Wine and Music* followed in 1711. In these concerts Clayton was joined by Haym and Dieupart, who had assisted in the production of *Arsinoe*. The resentment of the three musicians at their exclusion from the current operatic scene is shown in their letter to *The Spectator* in December 1711.

Very little is known about the final stage of Clayton's career. A concert at Hickford's Room on 13 December 1716 included his *Ode for the Prince's Birthday* and *Ode on the King*, and his *Passion of Sappho* was performed again at Lincoln's Inn Fields in November 1718. Clayton's preface to the libretto of *Arsinoe* began: 'The Design of this Entertainment being to introduce the Italian manner of Musick on the English Stage' and concluded: 'if this Attempt shall ... be a Means of bringing this manner of Musick to be us'd in my Native Country, I shall think all my Study and Pains very well employ'd'. He is certainly remembered for this achievement, and for being himself a very indifferent composer.

WORKS

all first performances and publications in London

OLIVE BALDWIN, THELMA WILSON

Cleemann, Friedrich (Joseph Christoph) (*b* Crivitz, 16 Sept ?1770; *d* Parchim, 26 Dec 1825). German theorist and composer. He studied theology in Ludwigslust, and in 1797 became an assistant to the superintendent in Sternberg. He moved to Leipzig in 1801 to work for Breitkopf & Härtel on the new *Allgemeine musikalische Zeitung*, returning to Mecklenburg on his father's death. In 1809 he became a music teacher in Parchim.

The principal surviving source of his music is the *Oden und Lieder für das Clavier* (Ludwigslust, 1797), a set of 28 solo songs to texts of Schiller, Kosegarten and others; perhaps his most significant work is the unpublished collection of 17 settings of ballads by Schiller (1799), the manuscript of which is unfortunately lost. His writings include a two-volume *Handbuch der Tonkunst*, announced in the *Allgemeine musikalische Zeitung* but never published, and a *Verzeichnis und Vergleichung der Choralmelodien zu dem Mecklenburgischen Kirchengesangbuche* (Parchim, 1818), the single musical contribution among his numerous writings devoted to the history of the city and church of Parchim.

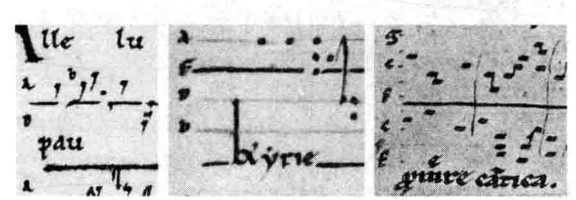
EDWARD F. KRAVITT

Clef (from Lat. *clavis*: 'key'). In Western notation the sign placed at the beginning of a staff to denote the pitch of one of its lines, and hence of the other lines. Apart from instances in theoretical writings of the late 9th century, clefs were first systematically used in functional liturgical manuscripts of the 11th century, where they take the form of simple letters. *F* and *c* clefs were always the most widely used, the letters soon becoming formalized to take on their early shapes as 'clefs'. The *g* clef became increasingly common in the 15th century, when the range of part-writing expanded upwards. With the general adoption of *F* (for the left hand) and *g* (for the right) clefs for keyboard music at the end of the 18th century, the *c* clef became less common. The *F* and *g* clefs came to be known as the 'bass clef' and 'treble clef' respectively.

For the sake of clarity, *italic* letters are used (exclusively in this article) to represent the pitches as named by Guido of Arezzo (*see* PITCH NOMENCLATURE, fig.1); a figure after the letter-name of a clef denotes the staff line on which it stands, counting from the lowest (e.g. the modern treble clef, *g*2, the modern bass clef, *F*4).

1. Early theoretical writing and Guido of Arezzo. 2. Plainchant and early polyphony. 3. Clefs and pitch. 4. The modern system.

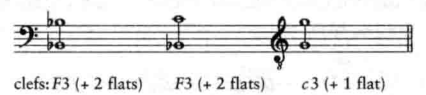


1. EARLY THEORETICAL WRITING AND GUIDO OF AREZZO. The use of a line with a sign to indicate its pitch is first found in the treatise *Musica enchiriadis* (*c*860 or *c*890: *see* MUSICA ENCHIRIADIS, SCOLICA ENCHIRIADIS, §4), where a dasian sign precedes each line of a staff in several examples (see facs. of *F-VAL* 337, ff.44*v*–45*r* in Smits van Waesberghe, 1969, p.105; facs. of *CH-E* 79, pp.7 and 25 in Stäblein, p.225; *see also* DASEIAN NOTATION). These pitch letters were not used outside theoretical writing.

Another system of alphabetical notation, using roman letters, was used in many progressive centres in the 11th century (the tonary *F-MOf* H.159, from St Bénigne, Dijon, before 1031, is a celebrated early example; it uses the letters from 'a' to 'p'; facs. in PalMus, 1st ser., viii, 1901–5/*R*). Such letters were adopted by Guido of Arezzo, whose treatise *Aliae regulae* (*GerbertS*, ii, 34) of about 1030 recommended using a staff with lines a 3rd apart, one or more of which should be prefaced by a letter (*littera*) to denote its pitch (Guido's alphabetic series ran from *A–G*, *a–g*, *aa–ee*; the term 'clavis' is post-Guidonian). He seems to have preferred to use a red line understood to be *F* and a yellow line understood to be *c*, rather than letters. *F* and *c* were singled out by Guido because of their frequency in plainchant (*GerbertS*, ii, 30; *CSM*, iv, 1955, p.207); their position as upper notes of a semitone was also crucial (which was presumably the reason why English scribes used ♭ or ♮ clefs without a letter-clef: see below). Both the letter-clef system and the coloured-line system (which is also a 'key' to pitch) came into use throughout most of Europe in the next two centuries

(except for conservative centres in German-speaking areas).

2. Plainchant and early polyphony. *F* and *c* are the clefs most commonly found in surviving chant manuscripts (*see* Notation, §III, 1(iv)). Smits van Waesberghe (1951) gave as a sequence from commonest to rarest: *F, c, f, C, D, a, g, e, gamma, b* (♭ or *quadratum* sign). They were often used in conjunction with coloured lines ruled between or superimposed on the dry-point lines of the staff: for example, the 12th-century troper from St Evroult, Normandy, uses a red *F* line (fig.1*a*), a green *c* line, and *D, a* and *e* clefs (colour facs. in Stäblein, p.119; the monochrome facs. in Parrish, pl.VII, shows a page of the manuscript where a green line is painted in the C space of the top staff, and later a red line painted in the *f* space). The Γ clef (Gk. G or *gamma*; the note was solmized as *gam-ut*) appears in *I-BV* VI 34 (ff.24*v*, 126*r*, 129*v*; facs. in PalMus, 1st ser., xv, 1925/*R*). Scribes might use only one clef or more, perhaps one for each line (fig.1*b*, and also *A-Gu* 807, facs. in PalMus, 1st ser., xix, 1955/*R*; see also Smits van Waesberghe, 1969, p.111, and Stäblein, p.153). There were few regional preferences, but there was an English idiosyncrasy of using ♭ or the *quadratum* sign alone (see W.H. Frere: *Graduale sarisburiense*, 1894; *Antiphonale sarisburiense*, 1901–25; PalMus, 1st ser., iii, 1892, pl.196, from St Albans, and xii, 1922*R*; Parrish, pl.XIX; Stäblein, pp.127, 159). Thus the last three folios of *GB-Lbl* 36881 were probably bound to the rest (a Catalan manuscript) by an English bibliophile or librarian.



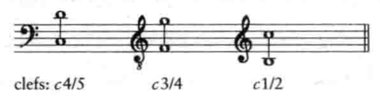
With an *F* clef on the second or third line of a four-line staff, the range *A–d* was available to a medieval scribe without the need for leger lines; a *c* clef on the second line increased the range to *aa*. Few chants include notes outside this range (some sequences, such as *Fulgens preclara*, reach *dd*, for which a scribe who had otherwise used orthodox *F* and *c* clefs would write a *g* clef; the Beneventan examples of a Γ clef cited above include *Fulgens preclara*, which is notated an octave lower than usual). The more extended range of individual voice parts and of the combined parts in polyphonic music of the early 13th century led to the general adoption of a five-line staff. Perhaps because much of the music consisted of a part or parts added above a plainchant or other pre-existing melody, it fell into the range covered by the *c* clef. The *g* clef is found simultaneously with *c* (perhaps *F* as well) in Aquitanian sources of polyphony up to about 1200 (fig.1*c*), but not in the Parisian and related sources of the next century. The *F* clef was sometimes used in these later sources for plainchant cantus firmi, out of respect for the traditional plainchant notation; only in *D-W* 677 does it occur elsewhere (f.110 [101] for *Eclypsim patitur*, a lament for Geoffrey, son of Henry II of England; also momentarily in the succeeding piece, which hails Richard I's accession). English sources of polyphony also use ♭ alone for a clef (*D-W* 677, f.67*v* [59*v*], fasc.6 and esp. fasc.11; see also H.E. Wooldridge: *Early English Harmony*, i, 1897, pls.33, 35, 36).

1. *Clefs in 12th-century sources: (a) a and D clefs with a red F line from the troper of St Evroult, 12th century (F-Pn lat.10508, f.101v); (b) a, f, d and b clefs with a red F line, from a 12th-century troper from Narbonne (F-Pn lat.778, f.15r); (c) g, c and F clefs for two-part polyphony, 12th-century songbook from southern France (GB-Lbl Add.36881, f.2v)*

3. Clefs and pitch. The choice of clef and its position on the staff for the first three centuries after Guido appears usually to have depended on the range and tonality of the melody, allowing for it to be written without accidentals (except for the flat or *quadratum* signs in the *b* space). This was irrespective of the pitch at which it may have sounded, if a pitch standard were understood to be in operation. Thus a Cistercian ordinance of the 12th century (see S.R. Marosszeki: *Les origines du chant Cistercien*, viii, 1952, p.62) restricted melodies to a range of ten notes, but not to ten stated pitch names. (Modern Roman chant books still proclaim that the pitch of their melodies is not absolute: see *Liber usualis*, 1961, p.xix.)

It has been thought that the appropriate absolute pitch of performance of some repertories of choral music between the 15th and 17th centuries is discernible from the clefs used for the individual voices: the written tessitura of the music was not the same as the performing tessitura, but the combination of clefs chosen encoded the required adjustment. (For an account of the arguments for this *see* Chiavette.) Because the range of a part rarely exceeded a 10th, as in music of the previous centuries, it was usually possible to notate the part on a five-line staff without leger lines. The question arises as to whether the recurrent use of a particular set of clefs was ever more than a result of persistent writing for the same voices in the same way: in other words, whether it was not voice ranges rather than clef combinations that were standardized. Three instances may be cited of situations where some adjustment of pitch to an agreed standard may have taken place in performance: but a 'clef code' need not have been in operation to control this adjustment:

(i) A composer might notate a piece without leger lines or key signature and with as few accidentals as possible, that is, regardless of any pitch standard. This might suggest that pieces written with key signatures of two or more flats were notated with a definite pitch standard in mind, for example the *Gloria* by Damett (*GB-Lbl* 57950, f.9*v*, ed. in CMM, xlvii/2. p.13: see ex.1) and about half the



2. F clefs from the 12th century to the 16th: (a) in an Old Roman Gradual from ?S Giovanni in Laterano, 11th–12th century (I-Rvat lat.5319, f.136r); (b) from the bassus partbook of 'Frottole libro primo' (Venice: Petrucci, 1504); (c) from the motet 'Benedicta es, coelorum regina' by Josquin Des Prez in Choirbook B (NL-L 1439, f.159v)

pieces in the *Cantiones sacrae* of 1575 by Tallis and Byrd. (Exx.1–5 show the range of each voice and indicate the original clef below. The clefs on the staff bear no direct relationship to the original clefs.)

(ii) The composer might include a cantus firmus at its traditional written pitch. For instance, in Josquin's *Missa de Beata Virgine* (*Werken: Missen*, iii: 30–31, 125) and Palestrina's *Missa de beata* (*Opera omnia*, iv, 1) the presence of cantus firmi of widely differing tessitura as traditionally notated results in movements of widely differing written tessitura, though of orthodox range (ex.2).

(iii) It is possible that conventional written tessituras of an earlier period were later abandoned when choral range expanded. Thus approximately two-thirds of the pieces of the Old Hall Manuscript that are notated in score are for three different voices (usual clefs and ranges in ex.3).

Ex.3 *GB-Lbl* 57950

The addition of another voice (with the *g* clef to notate it) is found in *GB-Cmc* Pepys 1236 (ex.4*a*); and this written tessitura survives into the Eton Choirbook, for example the *Magnificat* settings by Nesbett and Kellyk (ex.4*b*); but the other four *Magnificat* settings (ex.4*c*) avoid using clefs on outer lines and use the *F* clef again.

Few repertories have been investigated for data of this type; and any discussion of written tessitura should take into account the possible presence or absence of a pitch standard in the minds of composers or performers of the period, regardless of its relationship to modern standards (*see* PITCH).

4. THE MODERN SYSTEM. A few exceptional examples warn of unorthodox written tessitura: the *D*4 clef used in

Ex.4

the bass book (*GB-Lbl* 17805) of the Gyffard Partbooks (*Lbl* 17802–5) for Tallis's short mass (f.66*v*; ed. in TCM, vi, 31; ex.5); the Γ clef in Pierre de La Rue's *Requiem*

Ex.5 Tallis: short mass, *GB-Lbl* 17802–5

(facs. in Wolf, i, 387); and the *ff* clef of the Mulliner Book (*Lbl* 30513; ed. in MB, i, nos.48, 113). But otherwise the history of the clef from the 14th century is that of the *F*, *c* and *g* clefs. Their shape underwent considerable stylization. The two horizontals of the letter F became two dots as early as the 12th century (fig.2*a*; see PalMus, 1st ser., iii, 1892, pl.168; Stäblein, pp.121, 141), and in the 14th century the clef was commonly written as a long with two semibreves or minims to its right, one above the other. In the 15th century these three elements became void, like the note heads of the time. This type of *F* clef was adopted by Petrucci and other early Italian printers (fig.2*b*). The *F* clef made of a reversed C plus two dots was preferred by some Netherlandish and German printers, and is occasionally found in manuscript sources (e.g. *NL-L* 1439; facs. in Besseler and Gülke, p.117; fig.2*c*). The two horizontals of the *c* clef also became void and by 1500 were commonly written as two breves, one above the other, between two vertical lines. The upper flourish of the modern *g* clef is found from the 16th century (fig.3) and may be a stylized S[ol] (deriving from the solmization *g sol re ut*).

Whereas keyboard scores usually catered for the wide range of a part by increasing the number of lines of the staff (to eight or more), retaining *c* clefs, parts of high written tessitura for monophonic instruments or voices normally used a *g* clef. In the 17th and 18th centuries the French preferred *g*1 to *g*2; Couperin used both to

3. Early form of the modern g clef from Marenzio's 'Primo libro de madrigali a cinque voci' (Venice, 1580)

differentiate French and Italian styles in *Le Parnasse ou l'Apothéose de Lully* (1725). The *g* clef was adopted generally for the higher staff of keyboard scores in the late 18th century (e.g. in C.P.E. Bach's three sets of keyboard sonatas 'für Kenner und Liebhaber', 1779–81). This appears to have resulted eventually in lack of familiarity with the *c* clef, which from the late 19th century was gradually replaced in choral scores and opera solo parts by octave *g* clefs, written as in ex.6.

Ex.6

The use of three different clefs (*F*, *c*, *g*) on different lines of the staff has caused dissatisfaction since at least the 17th century, and prompted schemes of rationalization. Most of these have suggested the permanent association of a pitch name with a single place on the staff, different octaves being catered for by increased use of various octave signs. The earliest such scheme appears to be that put forward by Thomas Salmon in his *Essay to the Advancement of Musick by Casting Away the Perplexity of Different Cliffs and Uniting All Sorts of Musick in One Universal Character* (1672/*R*). Practising musicians have, however, persisted with the traditional system (for the others see Wolf, ii, 339–48), which at the most includes nine types of clef:

*g*1 – 'French violin'

*g*2 – treble or violin

*c*1 – soprano or descant

*c*2 – mezzo-soprano

*c*3 – alto (for viola; also the normal high clef for bass viol in the 17th and 18th centuries)

*c*4 – tenor (the normal high clef for cello, bassoon, trombone)

*c*5 – baritone

*F*3 – baritone

*F*4 – baritone

*F*5 – baritone

Of these only *g*2, *c*3, *c*4 and *F*4 appear in normal modern usage.

DAVID HILEY

Clegg, John (*b* Dublin, *c*1714; *d* London, *c*1750). Irish violinist and composer. He was a child prodigy who went on to play a prominent role as soloist and orchestral player in London from about 1730 to 1744. He was the product of a strong tradition of violin playing in Ireland. He was taught by his father (probably William Clegg, a state musician in Dublin until 1723) and William Viner from an exceptionally early age, and subsequently by Dubourg (violin) and Giovanni Bononcini (presumably composition). His first public concert was in Dublin in March 1723; his London début in May was considered by Burney to have been one of the most memorable musical events of that year. While he pursued his career mainly in London, Clegg returned to Dublin occasionally to participate in concerts with his sister, a leading soprano there. Hawkins remarked on the clarity and speed of Clegg's execution and the strength of his tone; Burney placed him with Veracini as one of the two most sought after solo violinists in London during the early 1730s. Mental disturbance led to his being admitted to Bethlem Hospital (1744–6), where he was encouraged to continue to perform. One of his compositions, a minuet, was published in *Forty-Five Airs and New Variations* (London, *c*1747), a collection of minor pieces for German flute or violin with harpsichord continuo by Handel, Geminiani, Quantz and others.

IAN BARTLETT

Clem, Johann Gottlob. *See* KLEMM, JOHANN GOTTLOB.

Clemencic, René (*b* Vienna, 27 Feb 1928). Austrian recorder player, conductor, teacher and composer. He studied the recorder with Hans Ulrich Staeps, Johannes Collette and Linda Höffer von Winterfeld, and keyboard instruments with Eta Harich-Schneider. He took his doctorate in philosophy at Vienna University in 1956. He cultivates a lyrical style of playing and is much attracted by improvisatory techniques in both early and contemporary music. His instrument collection includes a tenor trombone by Georg Neuschel of Nuremberg (1557), one of the oldest surviving specimens.

In 1958 he founded Musica Antiqua, known as the Ensemble Musica Antiqua from 1959. This group performed music of the Middle Ages to the Baroque on authentic instruments. In 1968 Clemencic founded a group known, from 1969, as the Clemencic Consort, an ensemble for the performance of medieval, Renaissance, Baroque and avant-garde music. Based in Vienna, it is notable for its exploration and staging of little-known 17th-century operas (such as Antonio Draghi's *L'eternita soggetta al tempo*, Emperor Leopold I's *Il lutto dell'universo* and Peri's *Euridice*), and performing church cantatas, the anonymous 12th-century *Play of Daniel*, the 14th-century *Ludus paschalis* from Cividale del Friuli and the *Roman de Fauvel*.

The Clemencic Consort has also performed many works by contemporary composers and several of Clemencic's own compositions, including *Maraviglia III* (1968), for speakers, recorders, strings, trombone and percussion, one of a number of his experimental compositions which use recorders, *Kabbala* (1992), an oratorio in ancient Hebrew, and *Apokalypsis* (1996), an oratorio in ancient Greek. Clemencic has taught regularly at the Accademia Musicale Chigiana in Siena, and in 1989 became a member of the Accademia Filharmonica Romana. He has written *Alte Musikinstrumente* (Frankfurt,

1970; Eng. trans., 1968/*R*) as well as articles for several journals; he has also made many recordings, mostly with the Clemencic Consort, several of which have won international awards.

J.M. THOMSON

Clemens, Johann Georg. *See* CLEMENT, JOHANN GEORG.

Clemens non Papa, Jacobus [Clement, Jacob] (*b c*1510–15; *d* 1555/6). South Netherlandish composer. One of the most prolific figures of the early 16th century, he is best known for his sacred music, particularly the *souterliedekens*, polyphonic settings of the psalms in Dutch.

1. LIFE. An epigram in Jacob Meiland's *Sacrae aliquot cantiones* (1575) refers to 'Belgica terra' as the homeland of Clemens, but Sweertius (*Athenae Belgicae*, 1626) described him as 'Batavus'; although this could mean the province now called Zuid-Holland, some historians (e.g. Jacobus Eyndius writing in about 1600) considered Batavia to include also the province of Zeeland. Clemens first appears in the historical record with the publication of several chansons by Attaingnant in Paris beginning in the late 1530s. The sobriquet 'non Papa' is first recorded in 1542, the date of the attribution of *Je prens en gre* (previously printed anonymously) in a set of manuscript partbooks belonging to the Flemish merchant Zeghere de Male (*F-CA* 124 [125–8]). In 1545 Clemens established a business relationship with the Antwerp printer Susato, one of his chief publishers. In Susato's *Souterliedekens* of 1556–7 the composer is called 'Jacobus Clement non papa', thus connecting his usual designation with what was clearly his original name, Jacob Clement. Variants occur in *B-Bc* 27087 ('Clemente nono Papa') and *LVu* mus.4 ('Clemens haud papa') which support the theory that the suffix was created in jest rather than for practical reasons: Pope Clemens VII had died in 1534 (before the composer appeared in print), and the possibility of confusion with the poet Jacobus Papa in Ypres is just as unlikely, for in this case the surnames were quite distinct.

Clemens was succentor at Bruges Cathedral from March 1544 until June 1545. The chapter acts of the cathedral for 12 March 1544 mention 'Jacobus Clement Pbro' (presbyter), and on 26 March Clemens was nominated succentor 'per modum probae'; the fact that he had to pass a proficiency examination indicates that he was hardly known. He honoured the cathedral's patron with his *Missa 'Gaude lux Donatiane'*. It is possible that he was subsequently appointed choirmaster to Philippe de Croy, Duke of Aerschot, one of Charles V's greatest generals: there is a reference to Clemens in Jean Scohier's *Généalogie . . . de la maison de Croy* (Douai, 1589), and the duke, who died in 1549, is commemorated in Clemens's motet *O quam moesta dies*. Three state motets, *Carole, magnus eras*, *Caesar habet naves validas* and *Quis te victorem dicat*, point to a relation with Charles V from 1544 to 1549. Clemens was employed as *sanger ende componist* by the Marian Brotherhood in 's-Hertogenbosch from 1 October to 24 December 1550. The motet 'ter eeren onser liever vrouwen', which he offered to the brotherhood on his departure, is no doubt his seven-voice *Ego flos campi* on a text from the Song of Songs. The words 'sicut lilium inter spinas', which are given prominent homophonic treatment, were the brotherhood's motto, and the use of seven voices (unique in Clemens's work) embodies the symbolic Marian number seven. According to J.B. Gramaye (*Ipretum*, i, Brussels, 1611), Clemens was also at Ypres; four motets honouring the city's patron St Martin lend support to this assertion. Furthermore, although his chanson *Congié je prens de vous* ends with the line 'adieu Dordrecht, jusque au revoir', so far it has not been proved that he stayed in Dordrecht. Some connection with Leiden is apparent, for all six choirbooks of the St Pieterskerk (Municipal Archives) dating from the mid-16th century contain works by Clemens: two masses (including the *Missa 'Or combien'* with an ascription to Crecquillon), a cycle of eight *Magnificat* settings and 34 motets; for one of the motets and the *Magnificat* cycle these choirbooks are a unique source. It is almost certain, however, that he was not choirmaster of the St Pieterskerk, and he may never have been resident in Leiden.

The year of Clemens's death has been a subject of controversy. There are several reasons for supposing that he died in 1555 or 1556. Although he is still listed as a living composer in Hermann Finck's *Practica musica* (1556), a manuscript copied in Antwerp in 1564–6 (*B-LVu* mus.4), contains his motet *Hic est vere martyr* with the annotation, 'Ultimum opus Clementis non Papae anno 1555 21 aprilis'. Ten of the *souterliedekens* printed in 1556–7 in volumes devoted to him are actually by Susato. In 1556 the first of Clemens's masses was published with a dedication written by the publisher, Phalèse. In 1558 Jacobus Vaet published in Nuremberg his *déploration* on Clemens's death, *Continuo lacrimas*, whose text suggests he met a violent end ('inclemens vis et violentia fati'). According to Sanderus (*Flandria subalterna*, ii, Cologne, 1644) Clemens was buried at Dixmuiden, near Ypres.

Lowinsky suggested that Clemens was a Protestant sympathizer on the basis of the texts he chose and his Dutch psalm settings, but his association with the emphatically Catholic Croy family and his settings of many liturgical texts cast doubt on this theory; Lowinsky may have underestimated the extent of the evangelical spirit in mid-16th-century Catholicism. It is notable that Clemens's Dutch psalms escaped the ban in 1569 when the government of the Duke of Alva censured all books deemed heretical. Clemens's only known pupil was the enigmatic Gerardus Mes, who declared himself a 'discipel van Jacobus non Papa' in his *Souterliedekens* (Antwerp, 1561).

2. WORKS. Clemens's surviving music comprises 15 masses, two mass fragments, some 233 motets, two cycles of *Magnificat* settings, 159 *souterliedekens* and *lofzangen* and just over 100 secular works. As in the work of most northern successors of Josquin, there are very few pieces using cantus-firmus technique. With the exception of the requiem mass all the masses are parody settings. Clemens chose his polyphonic models (eight motets and six chansons) from his own works and those of his contemporaries. As a rule he used a relatively large number of motives from the models, but adapted them with some freedom in the different movements of each mass. In most of the masses he expanded the number of voices by one or two in the Agnus Dei, though in the *Missa 'Ecce quam bonum'* the expansion by an extra voice begins with the Sanctus. In the *Missa defunctorum*, however, the four-voice texture is maintained throughout, and the polyphony paraphrases the appropriate plainsongs. The tract is

Absolve domine rather than *Sicut cervus*, found in the earlier polyphonic requiems of Ockeghem and La Rue.

Of the approximately 233 motets of Clemens only three have clearly secular texts (hymns in praise of music). All the others have sacred if not strictly liturgical texts, especially psalms, canticles, lessons, antiphons and responsories. Marian pieces form a relatively large group. Antiphon settings often consist of several antiphons strung together, a frequent practice towards the end of the 16th century. In setting not only responsories but many other texts, Clemens (like most of his contemporaries) followed the form of the plainsong responsory: he divided the music into two *partes*, exactly repeating the words and music of the end of the first section at the end of the second. Motets in more than two *partes* often have reduced scoring in the internal sections. Two motets, *Circumdederunt me* and *Si diligis me*, are built on a cantus firmus; a few others are built on an ostinato with its own text.

Clemens's three-voice *souterliedekens* and *lofzangen* (printed by Susato in 1556–7) were the first polyphonic settings of the 150 psalms in Dutch. The metric texts, presumed to be by Willem van Zuylen van Nijevelt, were printed for the first time by Symon Cock in Antwerp in 1540 with a popular song melody indicated for each psalm. The range of chosen songs was typically wide, as in the German chorale tradition, and included sacred songs, ballads, love-songs, dance songs and drinking-songs. Clemens used the tunes as cantus firmi either in the tenor or the superius. The settings are for the most part polyphonic in texture, sometimes using imitation, though some, based on dance-songs, tend to be homophonic with syllabic text in all three parts. The settings, simple and direct, were most likely intended to be performed at home. Despite the elegant appeal of Clemens's music there were apparently no reprints of Susato's edition. In contrast, 30 different editions of Cock's monophonic versions appeared before 1618.

Clemens's secular music consists of 88 or 89 chansons, eight Dutch songs, eight textless pieces, two intabulated chansons and one instrumental canon (doubtful). The texts of the chansons cover the entire range of poetic genres cultivated by composers of his generation. The four-voice chansons, as a rule, tend to be more homophonic and closer in style to the Parisian school of Claudin de Sermisy, while those for five and six voices are more contrapuntal and closer in style to the chansons of Gombert, but the extraordinary eight-voice *Amour au cueur me poingt* is, like the four-voice pieces, almost entirely homophonic. The Dutch songs make use of musical textures similar to those of the more polyphonic French chansons, but have a more retrospective character; a work as *Een Venus schoon* even echoes the style of the Josquin generation.

Throughout his music, but especially in the masses and motets, Clemens employed a consistent compositional style. Counterpoint is largely note against note, and the textures are dense and busy throughout, with motion most consistently in minims and semibreves. Pervasive imitation is the rule, but there is little use of strict canon, except in works such as the final two movements of the *Missa 'Ecce quam bonum'*, where canon is used to underscore the sense of the words of the model, 'habitare fratres in unum'. Although Clemens's normal texture is consistently dense, subtle texture changes are used to underscore the syntactic and rhetorical shape of the text, and in some cases, such as the final refrains of the six-voice *O magnum mysterium*, to create sharp contrasts within a section. Clemens sets the texts often in bursts of syllabic motion with clear if not always correctly accented declamation, but in numerous passages, particularly those involving repeated notes, one encounters the curious phenomenon of 'one note too many' or 'one note too few', in the relationship between text and music. Often the motivic shape of the music overrides the otherwise clear text-setting. In the same manner, certain passages of text drew from Clemens unusually dissonant music for expressive purposes, which led Lowinsky to propose the hypothesis of a 'secret chromatic art', which has met with little acceptance from other scholars. Some of the dissonance in Clemens's music arises from his treating motivic transposition rather rigidly, with an apparent unconcern for the tritones – some melodic and others harmonic – that result. Such procedures are frequent in the music of two of his most important contemporaries, Gombert and Morales; in the case of Morales we have contemporary testimony that the composer deliberately sought such clashes.

Clemens was an immensely prolific composer if we consider that his creative life lasted barely two decades. After his death his works, particularly the sacred music, received a wide distribution, especially in Germany, where his influence upon the motet style of Lassus is quite noticeable, but also in France, Spain and even among recusant Catholic circles in England. The detailed study of his influence upon later composers, particularly on the formation of the contrapuntal style of late-Renaissance German music, remains one of the unfinished tasks of modern scholarship.

WORKS

WILLEM ELDERS/KRISTINE FORNEY (1, work-list, bibliography)
ALEJANDRO ENRIQUE PLANCHART, WILLEM ELDERS (2)

Clement IX, Pope. *See* Rospigliosi, Giulio.

Clément, Charles-François (*b* Provence, *c*1720; *d* ?Paris, after 1789). French composer, arranger and theorist. His uncle was the Abbé Clément (*b* 1697), canon of St Louis-du-Louvre and author of an ode *Les progrès de la musique sous le règne de Louis-le Grand* (Paris, 1735). A piece by the great viol player Antoine Forqueray bore the title *La Clément* (1743) and in the same year Clément dedicated his first publication to Forqueray's son and daughter-in-law. In 1755–6 Clément began to work at the Comédie-Italienne; in 1757 Rosa Giovanna Balletti (1701–58), a Comédie-Italienne actress known as 'Sylvia', promised her daughter to him. He had been giving the girl harpsichord lessons for three years and she liked Clément and was willing to marry him until she met Casanova, a great friend of her mother's. 'Clément was dismissed, and I found myself in a worse position', wrote Casanova.

Clément was an arranger at the Comédie-Italienne, adapting the music of Pergolesi, Jommelli and Rinaldo di Capua to free translations of their intermezzos by Favart (and possibly others); however, no stage pieces are known after 1756. On 29 May 1755 his own arrangement for orchestra of 'la première suite des pièces de clavecin' was played at the Concert Spirituel, and from 1758 his main efforts were channelled into his two *Essais* and his *Journal de clavecin*, the first of its kind. He was still listed as a teacher in 1789.

Only a set of accompanied keyboard sonatas and three *cantatilles* survive as witnesses to Clément's powers of original composition. The *cantatilles* comprise six conventional little airs and some recitatives. The *Sonates en trio*, however, must have sounded quite fresh in 1743. The only precedents for this kind of music that Clément could have known were the sonatas for obbligato harpsichord and a melody instrument by Mondonville (*c*1738–40), Rameau (1741), and Boismortier and Corrette (1742). In style they are closest to Corrette's dull and perfunctory pieces, but Clément's sonatas are more modern, denser and more carefully wrought. Keyboard and violin are treated with scrupulous fairness, sometimes exchanging material, alternately accompanying and taking the lead, and often playing together with different but equally important material. The ideas themselves, however, have little individuality and the constant motion of all parts results in rather thick and monotonous textures similar to those in Guillemain's sonatas of two years later.

Clément's *Essai sur l'accompagnement* (1758) and *Essai sur la basse fondamentale* (1762), taken together, constitute a respectable composition method of about 60

pages, and from 1763 they were sold as a unit. The author acknowledged his reliance on Brossard's dictionary, on an 'analysis' of it in the *Journal de Trévoux* (xii, October 1703, p.1761), and on Rameau and d'Alembert. He explained the major and minor modes after Rameau, *supposition*, *emprunt*, the octave rule, Rameau's theory of the derivation of melody from harmony, and how to extract a *basse continue* from a *basse fondamentale*. The artistic side of composition gets short shrift:

> The composer has no further task than to give free rein to his taste, genius, and imagination, to vary his melody and make it agreeable, to phrase it by even numbers of bars, to take it through various keys, modes and genera according to the subject matter being treated: finally, to depict the passions in sound as painting depicts them in colours.

A new edition, rearranged and largely rewritten, appeared in 1775, and continued to be reprinted until 1790 or 1792.

Clément's main activity between 1762 and 1772–3 was the monthly publication of his *Journal de clavecin*. The title varied over the years, but the first one described the series well: 'Journal of harpsichord pieces composed on choice *ariettes* and airs from the most successful intermezzos and comic operas ... These pieces can also act as accompaniments to the songs; they can be played on the harp'. Most of the pieces were conceived with an optional violin accompaniment which was either printed in score or indicated on the keyboard part by the direction 'viol. et clav.'. The 'suites' consisted of two to six pieces, always chosen from different operas, by such composers as Duni, Monsigny, Philidor, Giardini, Gaviniès, Dauvergne and Blaise, arranged as idiomatic keyboard music, and all in the same key. The term 'suite' was dropped after 1766 and, by analogy with the sonata, the middle pieces were in contrasting keys. Clément's enterprise engendered a number of imitations, but in few was there any attempt to make real harpsichord music out of the arrangements as Clément had done.

WORKS

all printed works published in Paris

STAGE

all adaptations

La bohémienne (comédie, 2, Moustou), Paris, Foire St Laurent, 14 July 1755 (1755), adaptation of Rinaldo di Capua: La Zingara

La bohémienne (comédie, 2, C.S. Favart), Paris, Comédie-Italienne, 28 July 1755, adaptation of Rinaldo di Capua: La Zingara, excerpts pubd separately

La pipée (comédie, 2, P. Clément de Genève), Paris, Comédie-Italienne, 19 Jan 1756, adaptation of Jommelli: Il paratajo, excerpts pubd separately

Le prix de l'amour (parodie en vaudeville, Clément de Genève, J.L. Araignon), Paris, Comédie-Italienne, 27 Sept 1756, entrée in Talens lyriques

Other adaptations, 1755–6, unpubd

OTHER WORKS

Vocal: 2 cantatilles (Abbé Clément), 1v, vn/fl, bc (*c*1748–53): Le départ des guerriers, Le retour des guerriers; Cantatille, Le célibat (Abbé Clément), S, 2 vn, bc (1762)

Inst: Sonates en trio, hpd, vn, bc (1743); Pièces de clavecin (1752), lost; Nouvelles pièces de clavecin, hpd, acc. vn, bc, op.3 (1755), lost

Arrs: *Journal de clavecin* (1762–73), from which many overtures were pubd separately; J.-B. Davaux: Les 4 simphonies concertantes, hpd/pf, vn, bc, ad lib, 1772–3 (1775); Recueil ou choix d'airs anciens & nouveaux. . .arrangés en pièces avec variations, ?1v, hpd/pf/harp (1777);

DAVID FULLER/BRUCE GUSTAFSON

Clément, Edmond (*b* Paris, 28 March 1867; *d* Nice, 24 Feb 1928). French tenor. He studied singing at the Paris Conservatoire and made his début at the Opéra-Comique in 1889 in Gounod's *Mireille*. He took part in the premières of Saint-Saëns's *Phryné* and Bruneau's *L'attaque du moulin* as well as the first performances in Paris of *Falstaff* and *Butterfly*. In 1896 he was in the first *Don Giovanni* ever given at the Opéra-Comique, and in 1904 sang Don José in the 1000th performance of *Carmen* at that theatre. In 1909 he made his début at the Metropolitan in *Werther* and appeared in the only performances there of *Fra Diavolo* (1910). With the Boston Opera Company in 1912 he sang his first Hoffmann, a performance reputedly ideal in its mixture of masculinity and dreaminess, with finely shaded singing. His Don José also developed into a masterly portrayal. He returned to France to fight in World War I and was wounded; later he devoted himself to teaching, but gave a memorable last recital at the age of 60 in Paris, in November 1927. His recordings are models of their kind, with slim, clearly defined tone, a polished style and unostentatious personal charm.

J.B. STEANE

Clément, (Jacques) Félix (Alfred) (*b* Paris, 13 Jan 1822; *d* Paris, 23 Jan 1885). French historian and composer. After studying the organ (with Moncouteau) and composition, as well as classics, he decided in 1843 to devote himself to music, and for the next six years held several posts as organist and choirmaster, notably in Paris at the Collège Stanislas and at the Sorbonne. In 1849 he organized concerts of sacred music at the Ste Chapelle, where he conducted 13th-century music which he had discovered and edited himself, though unscholarly arrangements (which were published in several editions) provoked ardent controversy with Théodore Nisard. His official contacts and his report to a government ministry led to the foundation of the Ecole Niedermeyer. Though his various instruction manuals are now superseded, his many historical works retain some scholarly value, in particular his *Dictionnaire lyrique, ou Histoire des opéras*, published in 1867–81 with Pierre Larousse. This remains a valuable source of information on opera, especially French, but suffers from serious inaccuracies in dates and from a tendency to include as operas other genres such as

incidental music; the comments are partisan and include considerable abuse of Wagner. Clément's other publications include editions of religious music, transcriptions of plainsong, and a number of works on non-musical topics. He also composed two operas, choruses for *Athalie* and both sacred and secular vocal music.

ELISABETH LEBEAU

Clement, Franz (*b* Vienna, 17 Nov 1780; *d* Vienna, 3 Nov 1842). Austrian violinist, conductor and composer. He began to play the violin at the age of four with his father, who recognized his unusual musical gifts. By seven, under the tutelage of Kurzweil, he was giving successful concerts. His further studies were directed by Giovanni Giornovichi. He spent two years in England (1790–92) giving concerts, appearing with Haydn, Salomon and the young Bridgetower. Back in Vienna in 1793 he gave a concert, in effect a contest, with Viotti. He became conductor of the newly established Theater an der Wien (1802–11). From 1812 to 1818 he travelled in Russia and Germany (leading Weber's orchestra at Prague in 1813) and returned to Vienna to conduct the opera again from 1818 to 1821. From this date he began touring Germany, conducting concerts for Angelica Catalani. He died impoverished.

Clement's prodigious memory was legendary. He worked out a complete keyboard reduction of Haydn's *Creation* in his head, which the composer adopted for publication. His violin playing, contrasted with the Viotti school's marked style and powerful tone, was characterized by its clarity, elegance, and tenderness of expression. Rather than the Tourte-style bow, already in use by French violinists, he used a shorter bow of the older Italian school. His technical skill, combining perfect intonation with dexterity of bowing, amazed his contemporaries. Beethoven himself bore the highest testimony to his powers by writing the Violin Concerto specially for him. The autograph score reads: 'Concerto par Clemenza pour Clement'. At the première on 23 December 1806 Clement played some variations 'mit umgekehrter Violine' – with the violin upside down – between movements of the concerto. However, by 1808 his penchant for stunts was no longer in vogue. His compositions are primarily for the violin, and include a Violin Concerto in D major as well as chamber music.

JOHN MORAN

Clement, Jacob. *See* CLEMENS NON PAPA, JACOBUS.

Clement [Clemens, Clementi], **Johann Georg** (*b* Freudenthal [now Bruntál, Czech Republic], 1 April 1710; *d* Breslau [now Wrocław, Poland], 23 May 1794). German composer. He studied poetics and logic at the Jesuit Academia Leopoldina in Breslau and took part in plays performed there between 1727 and 1731. He is mentioned in 1729 as a bass singer at the church of St Vincent, and in 1730 as rector at the Sandkirche, a post he retained until at least 1750. After the death of Andreas Augustinus Specht in August 1735 he was made a bishop and Kapellmeister at Breslau Cathedral, and in 1737 he succeeded Kapidlawsky as organist and *regens chori* at the collegiate Heilige Kreuz church. He held both positions until his death, celebrating his golden jubilee as Kapellmeister on 5 November 1758. Title-pages of 1759 and 1772 name him as a Knight of the Golden Spur and *notarius apostolicus*; according to Hoffmann he was also *assessor juratus* and *senior* in the cathedral chapter.

It seems that Clement fulfilled well the expectations of the Catholic authorities in Breslau, who set great store in providing a spectacular rite (above all through music) in order to attract believers in a population dominated by Protestants. By 1730 he was being referred to as 'ornatissimus' and 'virtuosus dominus', and Steinberger's diary mentions numerous people hastening to the cathedral on 23 March 1736 to hear Passion music by him. Easter cantatas by Clement for soloists, choir and an augmented instrumental ensemble were performed in subsequent years. He presumably enjoyed good relations with the cathedral chapter, who in 1761 paid him 217 thaler for 540 manuscripts of church music, most of which remained in the possession of the Heilige Kreuz. The transaction was probably made to justify financial help given to Clement after the loss of his possessions in a fire on 9 June 1759.

Clement was expected to write concerted masses for Sundays and feast days and *missae chorales* for Advent and Lent. Most of these were tailored to the limitations of the musical establishments at the Heilige Kreuz and the cathedral; the latter consisted in 1760 of five boys (three

sopranos and two altos) and eight instrumentalists, five of whom were also singers. For special occasions additional musicians were hired from other churches and from the bishop's private chapel, which included Italian castratos. The largest-scale composition is the Requiem in D minor for two vocal and instrumental choirs (about 80 musicians), performed in Breslau Cathedral for the funeral of Emperor Charles VI on 15 December 1740. Hoffmann mentioned also a festive piece, probably a *Te Deum*, in honour of the victory of Mollwitz, performed in the presence of Frederick the Great in the Sandkirche, and another to consecrate the laying of the foundation stone of the Hedwigskirche, Berlin, in 1747 (both works are now lost).

C.F.D. Schubart, in his *Deutsche Chronik* of 1790, referred to Clement as a good contrapuntist known for his church music, but other writers were more dismissive. Hoffmann (1830), who must have known the music from the Breslau manuscripts and occasional performances, established the image of Clement as a composer with neither inspiration nor craftsmanship, an opinion probably inherited from J.I. Schnabel, of whom Hoffmann was a disciple. Guckel concluded that Clement showed a natural feeling for melody in his early works, but that he lacked a thorough grounding in music theory and a secure grasp of formal structure. His early strophic cantatas *Ist das dein Grab* and *Kommt ihr verstockten Sünden* (both in Guckel) are attractive, and show the influence of the Italian operatic style that Clement perhaps came into contact with through Antonio Bioni's troupe, which was active in Breslau between 1725 and 1734. Numerous 18th-century copies (some in Clement's hand) of operatic music underlayed with sacred texts exist in the cathedral library, reflecting a practice popular in Breslau which was criticized in the *Allgemeine musikalische Zeitung* of February 1801.

Clement's creativity diminished during the 1770s, and most of the works he used for church services were his own earlier compositions. A 'Letter from Breslau' ('Briefe über Breslau', *AMZ*, Feb 1804) reproached him for favouring his own music and fostering a conservative repertory. In the 1780s he probably became quite inactive and the state of the cathedral music was so poor that the minister Graf von Hoym, in a letter addressed to the chapter on 30 August 1792, recommended a certain Kirie to replace him. The chapter, however, had promised the post to Clement's son Karl, and were in any case preoccupied with the consequences of the great fire of 1791. It was not until 1804, more than ten years after Clement's death, that they appointed a new Kapellmeister, Joseph Ignaz Schnabel.

Clement married Maria Agnes Mentzel on 7 November 1731, and nine children are known from church documents. Two sons, Johann Nepomuk (*b* 1739) and Karl (1743–1805), were professional musicians. The first worked as a music teacher in Vienna. Karl conducted public concerts in Breslau and was later active, under the name of Clementi, as a violinist in Stuttgart (1790) and Kassel (1792) and from 1794 as music director and actor at the court theatre in Karlsruhe, where he died as a pensioned Kapelldirektor.

ADAM NEUER/DARIUZ SOKOŁOWSKI

Clementi. English firm of instrument makers and music publishers. MUZIO CLEMENTI had invested in the London firm of Longman & Broderip probably from the early 1790s and, following its bankruptcy in 1798, he and John Longman entered immediately into a fresh partnership with Frederick Augustus Hyde, Frederick William Collard, Josiah Banger and David Davis. The new firm of Longman, Clementi & Co. continued in business at Longman & Broderip's former premises in Cheapside from October 1798 to June 1800 when Longman left to set up on his own. The firm then became known as Clementi, Banger, Hyde, Collard & Davis, or often simply Clementi & Co. On 20 March 1807 a fire reputedly caused £40,000 worth of damage at the firm's new Tottenham Court Road premises, added in 1806. The firm was subsequently known as Clementi, Banger, Collard, Davis & Collard (from August 1810), Clementi, Collard, Davis & Collard (1819), and Clementi, Collard & Collard (1822). Clementi died in 1832 and the firm then continued as COLLARD & COLLARD; the music publishing side was taken over by Thomas E. Purday about 1834.

The Clementi firm did a great trade in the manufacture of pianos, and though F.W. Collard was the main active partner, Clementi held a controlling interest (about 40%) in the firm and his name was doubtless a considerable asset in their promotion; at times he took an active part in the business, arranging the purchase of high-quality strings from Dietz. Clementi's travels of 1802–10 were undertaken largely to develop European markets for his firm's products. The pianists Cramer and Field were similarly employed to demonstrate Clementi pianos to prospective customers; John Field made a considerable reputation for his own playing and for Clementi pianos in St Petersburg.

Longman, Clementi & Co. square pianos closely resemble those made in the last few years of Longman & Broderip; they both have the name on a Battersea enamel plaque, 'OA' stamped inside the case on the left (meaning not known; discontinued *c*1815) and a compass of five and a half octaves. Clementi introduced the six-octave square piano *c*1810; this instrument had 15 additional notes striking up through a slot at the back of the soundboard, instead of the usual ten. Nameboards, which are never dated, change from the early painted floral swags to the later cartouche with musical instruments depicted above the name of the firm; in the 1820s some nameboards were made with an elegant brass inlay.

Clementi tried to keep up with the style of the day without remodelling the basic layout of his square pianos until JAMES STEWART, the firm's foreman, patented in 1827 his revolutionary stringing method, using paired strings formed of one continuous length of wire, sharing the same hitch-pin. William Frederick Collard was a specialist in tone production. In 1821 he patented the 'harmonic swell', a device whereby an extra undamped length of string produces a rich but clear sound with high-pitched sympathetic vibrations; because the resonances are well above the normal playing pitch of the instrument, there is no muddiness of tone. No upright pianos with a harmonic swell survive, but it is present in an 1822 grand (no.17626) which has a slightly stronger case than Broadwood's instruments, but a more lightly barred soundboard. The swell also appears in a square piano of *c*1822 (no.13791/17877).Many woodwind instruments are stamped Clementi & Co. though it is uncertain to what extent the firm produced them. Charles Nicholson's improved flutes, for example, were marketed by the Clementi firm, but made by Thomas Prowse the elder. Clementi & Co. invented a self-acting piano with a horizontal cylinder put into motion by a steel spring and with adjustable speed; it was made from 1820 to 1825 and could be combined with normal playing on the keyboard.

The firm published much new piano music by Clementi, Kalkbrenner, Steibelt and other virtuosos of the day as well as reprinting many items from Longman & Broderip's plates. Other notable publications included Morley's *Canzonets and Madrigals for Three and Four Voices* (1801), Haydn's *The Seasons* (1813) and a number of works by Beethoven. Clementi himself made agreements directly with Beethoven, as well as with Breitkopf & Härtel, for the English rights of works which included the string quartets opp.59 and 74, the Violin Concerto, the Fifth Piano Concerto and the Choral Fantasy, as well as songs and piano works. In several cases the English editions were the first to appear, and often contain significant minor variants compared with the continental ones.

MARGARET CRANMER, PETER WARD JONES

Clementi, Aldo (*b* Catania, Sicily, 25 May 1925). Italian composer. Aldo Clementi was brought up in a family of committed amateur musicians. His grandfather had been assistant to Theodore Billroth, the Viennese surgeon and friend of Brahms. When his assistant returned to Sicily to marry, Billroth extracted from him a promise that his children would study music. Accordingly, Clementi's father became a dedicated amateur violinist, who brought up his son in constant intimacy with the music of Schubert, Schumann and Mendelssohn (Brahms himself joined Clementi's pantheon a little later). But although Aldo Clementi proved a gifted pianist as a child, he played by ear, and did not learn to read music until he was 13: even then, the passage from music as sound, heard and played, to music as notation proved arduous. During his later teens, he did the rounds of Catania's more cultured salons as a promising performer. Although his father did not view music as a plausible profession, and saw to it that his son enrolled in the Faculty of Literature and Philosophy at Catania University, he nevertheless allowed Clementi to begin technical studies with Gianni Buccèri, a retired conductor and composer, in 1941. But the fortunes of war brought more stimulating contact. A Catanian by birth, Alfredo Sangiorgi had studied with Schoenberg in Vienna in the early 1920s and was teaching at the Bolzano Conservatory when it was forced to close due to bombardment during World War II. On leave in his native

city, he was able to open Clementi's mind to a remarkable range of recent music. In 1949 Clementi moved to Rome to pursue further studies at the conservatory there, but dissatisfied with the tuition that he was receiving, instead travelled north to Bolzano to resume study with Sangiorgi. There he was introduced to Petrassi, who agreed to admit him to his advanced course at the Rome Conservatory, where Clementi studied from 1952 to 1954. A rigorous and demanding teacher, Petrassi insisted that of each of his students find their own voice: Clementi, deeply susceptible to the abstract craftmanship both of Stravinsky and of Petrassi himself, found this as yet a problematic challenge.

It was at this time that Clementi began to develop a sense of potential affinity between music and the densely textured abstract painting that flourished in the United States and Europe during the 1940s and 50s. In Rome in 1949, he had frequented Perilli's studio, and subsequently those of Dorazio and Sterpini, but without as yet being able to envisage a musical analogue. A first glimpse of how he should meet Petrassi's challenge was offered by his trip to the Darmstadt summer school in 1955. There he met Bruno Maderna and Luigi Nono who became the major inspirations behind his rapid and radical exploration of the post-Webernian aesthetic. He returned every summer until 1962, fascinated by the vertiginous changes in musical thought characteristic of Darmstadt during those years. His perspectives on the construction of musical material were further altered when, having moved to Milan to work with Maderna, he was able, between 1956 and 1962, to follow the work being pursued there in the newly established Studio di Fonologia Musicale.

The calculation, by means of post-Webernian matrices the use of which he had learnt from Maderna, of dense agglomerations of material reached a first high-point in the two *ideogrammi* of 1959 (the titles of which echo those used by Perilli). Like other works of this period, these rigorous explorations of the proliferation of musical cells were worked out on graph paper, and then transcribed into conventional notation. But by 1961 Clementi felt acutely the need to step beyond post-Webernian serialism, and found the catalyst in his profound admiration for the more radical 'informal' painters: Pollock, Fautrier, Tàpies and Tobey. Although he returned to Darmstadt in that year as one of a small group of students exploring, through Stockhausen's special composition course, the concept of moment form, he was already moving towards technical solutions that would yield the complex sound aggregates that were to become his hallmark. It was with *Informel 1*, *2* and *3* (1961–3) – echoing the *art informel* painters of the late 1950s – that these aggregates first reached definitive form. Each work is made up of a rotating mass of superposed canonic voices, sometimes real, sometimes virtual (with an individual line being etched out by the interaction of several canonic voices), and so dense as to obliterate any aural grasp of individual melodic gesture or significant intervallic relations. Each of these constructions had no logical beginning or end: it was implicitly eternal. Clementi has often compared them to the mobiles of Jackson Pollock. The quiet, implacable rotation of such sound-objects could be aurally explored by allowing chance processes to 'rub out' part of the material for a while, as in the *informels* and *varianti* series. But Clementi felt compelled to step beyond what he would sardonically refer to as the 'orgiastic' rarifications and condensations that resulted, into an aural world devoid of ebbs and flows. The series of *reticoli*, inspired particularly by the 'optic aformal' of Dorazio, in consequence abolished dynamic differentiation to produce a fastidious, mimalist continuum. All of these works were based upon dodecaphonic materials, upon a calculated saturation of the chromatic pitch continuum. But an extraordinary change in poetic impact overtook Clementi's work when, from *B.A.C.H.* (1970) onwards he decided to apply these advanced techniques to the household gods of his childhood. Fragments of the tonal, traditionally expressive repertory from which he had moved so far, and to which it was self-deluding and anachronistic to aspire to return, were now subjected to the same magmatic anihilation to which he had previously subjected the Webernian, interval-obsessed clarity of dodecaphony. He had found a musical means of epitomizing the distance that separates us from the paradise lost of tonality, the bourgeois idyll of a contained, purposive world. And because he addressed himself to listeners as much in love with that lost world as himself, the momentary emergence of familiar, expressive melodic gesture from the aural magma is disconcertingly poignant.

The titles of some of his post-1971 works hint at the origins of their raw materials: *Berceuse* (1979), *Intermezzo* (1977), *. . .Im Himmelreich* (1994), etc.; others conceal them: *Madrigale* (1979) takes its material from a *morceau de salon* by Lyadov. However, the remarkable technical consistency of Clementi's output depends not upon the source of his borrowed fragments, but on the astonishing variety that this unvarying technique allowed him to achieve. This technique was grounded in his meticulous attention to different densities of texture, to daring and vivid mixed timbres, and – from *Intermezzo* (1977) – to differences in perception of the musical object that result from slowing down its rotation. Despite his experimental work in abstact theatre – *Collage* (1961) with visual materials from Perilli, and *Collage 4 (Jesu meine Freude)* (1979) – it was not easy to envisage how such techniques might find their way into the conventional opera house. Yet in *ES* (1980), Clementi found a dramaturgical proposition impeccably congruent with his technical concerns: three female characters locked into an endless cycle of phantasy about the eternally delayed appearance of the ideal lover. His more recent *Carillon* (1991–2) reactivates that dramatic theme around the fascinating, but passive hero of Hoffmansthal's *Der Schwierige*, thus complementing a meticulously planned abstract game of interferences between different types of musical material.

DAVID OSMOND-SMITH

Clementi [Clemens], **Karl** (*b* Breslau [now Wrocław], 1739; *d* Karlsruhe, 1805). German violinist, son of, JOHANN GEORG CLEMENT.

Clementi, Muzio [Clementi, Mutius Philippus Vincentius Franciscus Xaverius] (*b* Rome, 23 Jan 1752; *d* Evesham, Worcs., 10 March 1832). English composer, keyboard player and teacher, music publisher and piano manufacturer of Italian birth.

1. LIFE. The oldest of seven children of Nicolo Clementi (1720–89), a silversmith, and Magdalena, née Kaiser, Clementi began studies in music in Rome at a very early age; his teachers were Antonio Boroni (1738–92), an organist named Cordicelli, Giuseppi Santarelli (1710–90) and possibly Gaetano Carpani. In January 1766, at the age of 13, he secured the post of organist at his home church, S Lorenzo in Damaso. In that year, however, his playing attracted the attention of an English traveller, Peter Beckford (1740–1811), cousin of the novelist William Beckford (1760–1844) and nephew of William Beckford (1709–70), twice Lord Mayor of London. According to Peter Beckford's own forthright explanation, he 'bought Clementi of his father for seven years', and in

late 1766 or early 1767 brought him to his country estate of Steepleton Iwerne, just north of Blandford Forum in Dorset; here the young musician spent the next seven years in solitary study and practice at the harpsichord. His known compositions from the Rome and Dorset years, written before the age of 22, are few: an oratorio and possibly a mass (neither survives) and six keyboard sonatas.

It was apparently in 1774 that Clementi, freed from his obligations to Beckford, moved to London. His first known public appearances were as solo harpsichordist at benefit concerts for a singer (Bonpace) and a harpist (Jones) in spring 1775. In the ensuing four years his participation in London concert life was minimal. During part of this time he was 'conductor' (from the keyboard) at the King's Theatre, Haymarket. His name was seen in concert programmes with increasing frequency in 1779–80, no doubt partly owing to the popularity of his sonatas op.2, first published by Welcker in spring 1779. That Clementi was playing these pieces in public, particularly the 'octave lesson' op.2 no.2, is suggested by an entry in the satirical musical lexicon *ABC Dario Musico* (Bath, 1780):

> CLEMENTI. An Italian. Has composed some setts of lessons, which abound in passages so peculiar and difficult, that it is evident they must have been practised for years preceding their publication.
>
> We particularly allude to the succession of octaves with which he has crammed his lessons. Mr. C. executes these exceedingly well, and is a most brilliant performer.

In addition to the six keyboard sonatas (three with accompanying instruments) of op.2, nine more accompanied sonatas and three keyboard duets (opp.3 and 4) were published in 1779–80, as well as a set of variations on an Irish tune, *The Black Joke*, in 1777.

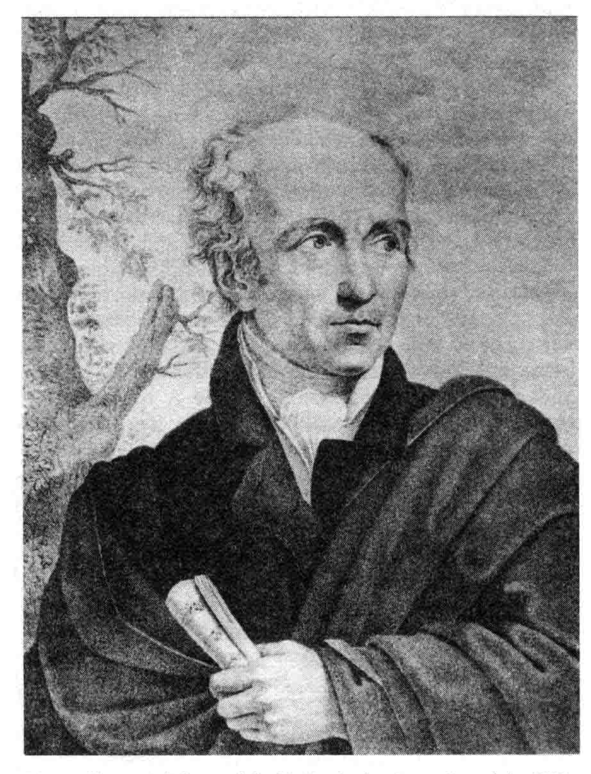
Encouraged by his London successes, Clementi embarked on a continental tour in summer 1780. A biographical sketch in the *Quarterly Musical Magazine and Review* of 1820, very likely supplied by the composer himself, describes his reception in Paris:

> In that city he was received with enthusiasm, and had the honour to play before the Queen, who bestowed upon him the most unqualified applause. The warmth of French praise, contrasted with the gentle and cool approbation given by the English, quite astonished the young musician, who used jocosely to remark, that he could scarcely believe himself to be the same man.

We have little evidence independent of this report bearing on Clementi's performance for Marie Antoinette in 1780. But there is ample documentation of his appearance before her brother, Joseph II, in Vienna on 24 December of the following year. This was the occasion of the famous piano contest with Mozart staged by the emperor for the amusement of his guests, the Grand Duke (later Tsar Paul I) and Duchess of Russia. Both Mozart and Clementi left accounts of the event (though Clementi's survives only through his pupil Ludwig Berger), and they are in substantial agreement: the two musicians were called upon to improvise and to perform selections from their own compositions; then at the Grand Duchess's request they played at sight sonatas of Paisiello, 'wretchedly written out', Mozart said, 'in his own hand'. It is not known what of his own works Mozart played, but Clementi later identified two of his compositions heard that evening, the Toccata op.11 and the Sonata op.24 no.2 (whose opening resembles Mozart's overture to *Die Zauberflöte*, written ten years later). On 12 January 1782 Mozart wrote to his father: 'Clementi plays well, as far as execution with the right hand goes. His greatest strength lies in his passages in 3rds. Apart from that, he has not a kreuzer's worth of taste or feeling – in short he is a mere mechanicus'. Later his opinions seemingly had hardened; on 7 June 1783 he declared: 'Clementi is a charlatan, like all Italians'. Sentiments such as these, publicized in Clementi's last years, surely contributed to the precipitous decline of his reputation, and have become a permanent part of the lore surrounding him. Clementi's impressions of Mozart's performance were rather different; according to Berger (*Caecilia*, x, 1829, p.238) he recalled: 'Until then I had never heard anyone play with such spirit and grace'.

After leaving Vienna in May 1782 Clementi travelled by way of Switzerland to Lyons, where he acquired several pupils, including Victoire Imbert-Colomés, daughter of a wealthy merchant there. Back in London in autumn 1783, he accepted the young J.B. Cramer as his pupil, and the following spring plunged into a full schedule of concerts as the regular keyboard soloist for the newly reorganized Hanover Square Concerts. At the height of the season, however, he abruptly departed once more for France. In Lyons he embarked on an elopement with the 18-year-old Mlle Imbert-Colomés, but her father put a stop to it and the disappointed pianist retired to Berne for solace and solitude. A letter to his father from Berne shows that Clementi was still there in August 1784. He may then have paid a visit to his family in Rome, but by May 1785 he was back in London, to remain there for many years. During this time of travel and turmoil (1780–85) Clementi produced some 26 new sonatas (opp.5–13) and various other compositions for keyboard; some of his most memorable music dates from this period.

From 1785 until 1802 Clementi remained in London and achieved great eminence first as a composer, performer and teacher, and later as a publisher and instrument manufacturer. Named 'principal composer and performer' at the Hanover Square Grand Professional Concerts (as they were now called) in 1786, he appeared as piano soloist in these programmes as well as in the rival series of La Mara-Salomon until 1790. During these years he also frequently performed in the annual round of benefit concerts – the beneficiary being the principal performer – and in the concertos presented between acts of oratorios at Covent Garden. Like nearly all solo keyboard players he invariably performed his own works, for the most part sonatas and keyboard concertos. In 1786–96 he also appeared regularly as conductor (from the keyboard) of his symphonies; only two of these earlier symphonies, published in 1787 as op.18, have survived. Clementi's last clearly documented solo performance in a public concert took place in May 1790, and after 1796 he also ceased for almost 20 years to conduct his symphonies in public. The concert seasons Haydn spent in England (1791–2 and 1794–5) unequivocally established the Londoners' preference for his music, and Clementi was one of several composers whose careers were jeopardized in a losing competition with the world-famous visitor.



Clementi was in great demand during this period as a piano teacher; according to Mrs Papendiek, an attendant at the court of George III, he once refused an application for tuition from the royal family itself. His pupils included members of many well-placed families in London who were willing to meet his reported fee of one guinea per lesson. He also gained fame as a teacher of 'professional'

students. Among them were J. B. Cramer, the organist Arthur Thomas Corfe, the violinist and pianist Benjamin Blake, Theresa Jansen, Benoit-Auguste Bertini and John Field. The small fortune he amassed during the 1790s he invested increasingly in music publishing and instrument making. Having suffered losses in the bankruptcy of Longman & Broderip in 1798, he took advantage of the situation to establish a new firm, Longman, Clementi & Co. With changes of name to accommodate the occasional coming and going of various partners, this company continued to operate at its Cheapside address (and, from 1806, at additional premises in Tottenham Court Road) until Clementi's retirement in 1830. (For further information on Clementi's publishing and piano-making activities *see* CLEMENTI). Though his increasingly vigorous commercial pursuits left much less time for composition after about 1796, he produced a considerable volume of music during this long stay in London; new publications include about 56 sonatas and sonatinas for keyboard (many with accompaniments), a number of variations, capriccios and other shorter keyboard works, two symphonies and the influential *Introduction to the Art of Playing on the Piano Forte* (1801). It is clear that a good many compositions from this period, including most of the symphonies brought to performance in London concerts, have been lost.

In 1802, at the age of 50, Clementi embarked on his third European tour, and remained abroad until 1810. This time he went as a representative of his firm, intent on cultivating markets for Clementi pianos and negotiating with composers and publishers for rights to new music. Incidentally, it seems, he also arranged for the publication of some of his own works on the Continent. Accompanying him during the first stage of his travels was his pupil John Field, who, according to generations of biographers of both composers, suffered harsh treatment at Clementi's hands; this purportedly included a kind of forced labour (demonstrating Clementi pianos to customers) and denial of proper clothing. These allegations derive from two much later sources: the necrology for Field in the *Allgemeine musikalische Zeitung* of 1837 and the autobiography of Spohr constructed by the composer around quotations from his diaries in the 1850s. Spohr's unfavourable comments occur not in the diaries dating from his contact with Clementi and Field but in the additions a half-century later; and the Field necrology was carelessly compiled from a variety of secondary sources. The graphic descriptions of Clementi's exploitation and maltreatment of Field are largely embroideries on sources that in themselves are suspect.

Owing to the vicissitudes of the Napoleonic wars, interrupted commerce and tragic personal affairs, Clementi's movements during these years were largely improvisatory. He travelled extensively in the German states, made two separate trips to Russia (1802–3 and 1806), two to Italy (1804–5 and 1807–8), and visited Vienna four times (1802, 1804, 1806–7, 1808–10). In September 1804 he married Caroline Lehmann of Berlin, then 19 years old, who died in childbirth the following year. During his travels Clementi acquired various new pupils, some of whom accompanied him: Carl Zeuner, Alexander Klengel, Ludwig Berger and Frédéric Kalkbrenner (who was later briefly the teacher of Chopin). A cardinal achievement of these years was the successful negotiation for rights to Beethoven's music. In April 1807 Clementi signed a contract with Beethoven for five major compositions: the Rasumovsky Quartets op.59, *Coriolan* Overture, the Fourth Symphony, the Fourth Piano Concerto and the Violin Concerto. Difficulties attended the dispatch of the music to London, and the payments made to Beethoven were long delayed; hence only the Violin Concerto was issued as a direct result of the contract. But the agreement became the basis for a continuing arrangement whereby Clementi & Co. issued in 1810–11 first editions of ten new works of Beethoven.

Back in London in 1810, Clementi resumed personal direction of his firm, in which he held a controlling interest. Despite a disastrous fire of 1807, the company flourished; a financial statement drawn up on 24 June 1811 showed a net value of about £112,000. Other sectors of Clementi's life flourished similarly. On 6 July 1811 he married an Englishwoman, Emma Gisborne, who according to Ignaz Moscheles was 'as moderate and placid as he is excitable and effervescent'. Clementi (now nearly 60) and his wife became the parents of two sons and two daughters. The respect he enjoyed in London in these years was shown in that he was named one of the six directors of the Philharmonic Society on its founding in 1813. That institution also provided an opportunity for the performance of his more recent, unpublished symphonies, and for his re-emergence as a public musician. Until 1824 he often appeared in Philharmonic concerts as a conductor from the keyboard, often in his own symphonies. On occasion he participated in other musical events, for example five concerts of a new series, the Concerts of Ancient and Modern Music, in 1824, when his works were heard in conjunction with those of an Italian precisely 40 years his junior, Rossini.

Muzio Clementi: lithograph by H. Cook after James Lonsdale, 1833

After 1810 Clementi made four further visits to the Continent, two of them extended. The purpose of these visits, for the most part, was to present his orchestral music to European audiences. In 1816–17 he presided over performances of his symphonies at the Concert Spirituel in Paris, and in 1822 he conducted three more at the Gewandhaus in Leipzig; these latter can be identified among the symphonies for which autograph fragments survive in the Library of Congress. But the aging composer's persistent efforts to make his mark as a symphonist were hardly a success. For after 1824 his works disappeared from the concert stage in England and elsewhere, forced out this time, in large part, by Beethoven's symphonies. As in his earliest days as a composer, Clementi was still at his best in keyboard music. His large-scale sonatas op.50, though probably nearly complete by 1805, appeared in 1821, and the three volumes of his *Gradus ad Parnassum* – a monumental compendium of his work from all periods – were published in 1817, 1819 and 1826.

In 1830 Clementi retired from his firm, and at about this time he and his family moved to Lichfield, Staffordshire. Soon after they moved once more, some distance to the south, to Evesham in Worcestershire. There Clementi drew up his will on 2 January 1832; on 10 March, after what was described as a brief illness, he died at the age of 80. His funeral on 29 March filled Westminster Abbey, and he was buried with great ceremony in the cloisters.

2. WORKS. 55 years elapsed between the appearance of Clementi's sonatas op.1 and his last publication of any consequence – *Gradus atl Parnassum*, iii. The diversities in his musical style are no less marked than the great span of his career would suggest. The keyboard works describe a spectrum extending from the simplest *galant* writing to the rhetorical passion of Romantic piano music – from something like Alberti to something approaching Chopin. Certain early and middle-period sonatas, especially those in minor keys (for example op.7 no.3, op.13 no.6 and op.34 no.2), have the dynamic extremes, propulsive figurations and octave melodies associated with the young Beethoven of a decade or so later. Clementi also showed an enduring fondness for uncompromising counterpoint, for two-part running figurations (indebted to Domenico Scarlatti and other Italian composers) and for various kinds of virtuoso passage-work. Most of these disparate elements of style were to some extent present in his music as early as 1780. Even within individual publications the variety in his early music is astonishing. The Sonata op.2 no.2, the 'octave lesson', abounds with scales in octaves and murky-bass pedal points. In the A major sonata (no.4) from the same collection there is a profusely decorated melodic style including ornaments in 3rds with chromatic altered notes – a remarkable foretaste, in 1779, of a 19th-century cliché (ex.1).

Ex.1 Sonata op.2 no.4, 1st movt

Opp.5 and 6, published in Paris when Clementi was there (*c*1780–81), show the composer's early preoccupation with Baroque counterpoint: between them these publications contain six tenacious (and somewhat laborious) fugues, seemingly modelled on the most chromatic idiom of J.S. Bach. It is probably no coincidence that the slow introductions to the first sonatas in each set show a remarkable escalation of linear writing and harmonic complexity. While indulging in such extreme quests for expressiveness, Clementi apparently also kept his 'virtuoso' style in good working order. The Toccata that he played in the contest with Mozart on Christmas Eve 1781 is a kind of double-3rds study. And parts of the sonatas opp.9 and 12 (1783 and 1784) still reflect an interest in brilliant passage-work for its own sake. Yet among the 12 sonatas (opp.7–10) Clementi composed during his first stay in Vienna (December 1781–May 1782) there are movements showing great advances in structural integrity and a successful assimilation of the widely divergent techniques of previous years. Two attractive examples are the nearly monothematic *moto perpetuo* finale of the G minor Sonata op.8 no.1 and the opening movement of op.10 no.1 in A. Most impressive as an entire composition, however, is surely the G minor Sonata op.7 no.3. Its first movement presents extremely diverse musical materials that nonetheless achieve a complex motivic unity on several levels. The rhetorical, harmonically pungent slow movement reflects the experiments of opp.5 and 6, and in the finale Clementi's famous octaves are put to good use in a movement of Haydnesque craft and wit.

All 12 of these 'Viennese' sonatas are in three movements (in his previous works the Italianate two-movement plan had predominated), and all are for solo keyboard; there is a fairly clear stylistic distinction in Clementi's earlier music between the slighter, more 'commercial' accompanied sonata and the more professional solo setting. The gains seen in opp. 10–12 are consolidated in op.13 (probably composed during Clementi's self-imposed exile from London in 1784); the F minor sonata of this set is one of his finest works. The tortuous, driving figuration of the two- and three-part texture in its first movement comprise a dramatic new adaptation of traditional Italian keyboard style. The second movement juxtaposes abrasive dissonances with expressive melodic writing, and in the finale there are remarkable prophecies of Beethoven's keyboard writing: a melody very similar to the contredanse tune used in the finale of the *Eroica* (and elsewhere in Beethoven) is fragmented by octave displacements and set against an active, oscillating, middle-register accompaniment (ex.2).

The music of Clementi's middle London years (1785–1802) does not seem to fulfil the promise of the sonatas from the early 1780s. His principal pursuit as a musician for nearly a dozen years after 1785 was the composition and performance of symphonies. The paltry two symphonies that survive from this period (op.18) sound curiously

Ex.2 Sonata op.13 no.6, 3rd movt

old-fashioned, and certainly not up to the standard of, say, Haydn's contemporaneous Paris symphonies. A single Piano Concerto in C, fortuitously preserved in a Viennese manuscript, is an estimable work, suggesting that the disappearance of the concertos is a greater loss than that of the symphonies. This concerto also survives in a somewhat rough transcription as a solo sonata (op.33 no.3, published in 1794). A rather peculiar physiognomy in several other middle-period sonatas suggests that at least parts of other lost concertos survive in this form: the first movements of op.23 no.3 (E♭) and op.25 no.1 (C), the entire Sonata in F op.24 and the Sonata op.34 no.1 – there is testimony (attributed to Berger) that this last in fact originated as a concerto.

There is a good bit more 'commercial' music in the later 1780s and 1790s: accompanied keyboard sonatas (only a few of Clementi's compositions in this genre, such as op.22, are of much substance), keyboard duets, two canzonettas for voice and keyboard, and two sets of waltzes for piano, tambourine and triangle (opp.38 and 39). The most significant music of this period is again to be found among the solo sonatas. Two sonatas of op.25 (1790), the second and sixth, in G and D, are stylistically consistent, satisfying pieces in an unmixed 'classic' idiom reminiscent of the Haydn sonatas published by Artaria ten years earlier (HXVI:35–9, 20). The first movement of the A major sonata op.33 (1794) is an even more sophisticated example, whose opening theme shows Clementi's growing fondness for subtle metrical ambiguity (ex.3). A similar style can be seen in reduced and distilled form in the Sonatinas op.36, originally published as a supplement to the *Introduction to the Art of Playing on the Piano Forte*; surely it is a tribute to the quality of these little pieces that after two centuries they still perform admirably the didactic function for which Clementi intended them.

A few compositions from 1785–1802 measure up to the expressive power of op.13 no.6. One is the F♯ minor sonata of op.25, whose running figurations and construction of phrases from tiny modules are reminiscent of Scarlatti. And bursts of double 3rds in the finale recall other proclivities of Clementi's earlier style. Yet these diverse older elements are successfully combined in a composition of stylistic consistency and great harmonic potency. The G minor sonata of op.34 is an even more impressive monument to Clementi's powers of stylistic synthesis. Its Largo opening is an abrasively dissonant chromatic fugato whose subject is adopted for the first material of the following Allegro; the return of this Largo at the beginning of the recapitulation (as in Beethoven's op.13 and op.31 no.2) invests it with an importance transcending the ordinary slow introduction, and throughout the composition informal contrapuntal writing first heard in the fugato mingles with idiomatic and thoroughly modern keyboard figurations. In each of the outer movements (both are of the sonata-allegro type) Clementi introduced two secondary tonalities, and overcame the special problems thus posed by means of intricate tonal and thematic relationships.

On the eve of his departure for Europe in 1802 Clementi published a set of three large-scale sonatas (op.40) that show clear new stylistic directions. They are technically demanding, experimental in form and seem quite at home in the new century. All three of these sonatas are notably long; all show multiple themes and extended stretches of passage-work only tenuously related to those themes, creating an effect of prolixity new to Clementi's music. Some of his old proclivities, to be sure, are still in evidence. In the G major piece (Clementi's only sonata with four genuinely independent movements), instead of a scherzo there is a group of severe two-part canons. Between them the sonatas in B minor and D offer three harmonically supercharged slow introductions of a type that recurs in his music from op.5 onwards, and the lavish melodic ornament in the Adagio of the G major sonata is a more extreme case of similar writing in op.2 no.4 (1779) and op.25 no.4 (1790). These sonatas, the first examples of Clementi's 'late' style, are representative of the most modern keyboard idiom of the period; they are much closer in almost every respect to the contemporary sonatas of Dussek, say, than to those of Beethoven.

During Clementi's *Wanderjahre* of 1802–10 he published virtually no new music. There is evidence, however, that during that period he worked on several symphonies, and in two letters of 1804 and 1805 he spoke of 'three new sonatas' that were nearly complete; the compositions in question are most likely the three sonatas op.50, not published until 1821. Op.50 is stylistically compatible with the sonatas of op.40, and may have been intended originally as a kind of sequel to them: op.40 was published with the notation 'book 1', and no book 2 was ever forthcoming. Best known and most rewarding of op.50 is the third sonata, in G minor, with the Metastasian subtitle *Didone abbandonata*. The opening themes of both Allegro movements are strongly reminiscent of Clementi's first sonata in this key, op.7 no.3. In the first movement fragmentation poses a constant threat as the music again and again plunges, as if from an excess of energy, into foreign tonalities. The finale steers a much simpler course,

Ex.3 Sonata op.33 no.1, 1st movt

showing a homogeneity of rhythmic motion and a stabilizing tendency to repeat cadence patterns – a time-honoured trait of Italian keyboard music that had not surfaced this clearly in Clementi's works since the F♯ minor sonata of op.25. The development section survives a tenacious canonic treatment of the first theme, and Clementi ended his last sonata in a most convincing fashion amid echoes of stylistic traits characteristic of his music since the 1780s.

As in the later 1780s, Clementi's chief musical preoccupation from about 1812 to 1824 was the composition of symphonies. None of these later symphonies was published during the composer's lifetime, and many are no doubt lost. But divided between the Library of Congress and the British Library are autographs of four symphonies, none of them complete, and several other independent movements and fragments of movements from this period (they are assigned the numbers WO32–6 in Tyson, 1967). Two of these works, WO32 in C and a version of WO33 in D, were 'reconstructed' and published by Alfredo Casella in the 1930s. More reliable versions of all four, together with a separate 'Minuetto pastorale' were later published by Pietro Spada (1975–8). The four surviving symphonies are all large-scale compositions written for a full orchestra including clarinets and three trombones. Clementi plainly saw the symphony as a suitable arena for the practice of his most 'learned' style; most of the fast movements have fugal or canonic sections, and the Andante of the 'Great National Symphony' (performed in 1824) even includes an imitative treatment of the first two phrases of *God Save the King* in retrograde.

Reviews of Clementi's symphonies in the London press were uniformly laudatory (opinion in Germany and France varied). But it gradually became all too clear that his music for orchestra would not outlive the composer, and in the 1820s Clementi began to direct his energies increasingly to the fulfilment of another longstanding ambition, the completion of the three-volume *Gradus ad Parnassum*. This collection of 100 pieces for keyboard, the end result of a process of composing, revising and assembling that extended over about 45 years, represents a kind of summary of the composer's career. It shows the full diversity of Clementi's keyboard music. In addition to straight pianistic exercises there are preludes and fugues (including revisions of the fugues from opp.5 and 6), canons, various sonata-like movements, 'character-pieces' of several kinds, and compositions with programmatic titles such as 'Scena patetica' (no.39), and 'Bizzarria' (no.95). More than half the individual pieces are explicitly arranged into tonally unified suites of three to six movements. Other successions of numbers suggest further grouping: there are, for example, frequent Scarlatti-like pairs with the same tonic. If the music in these volumes seems bent on exhausting all the possible varieties of keyboard figurations and textures, it also shows an underlying consistency. Much more than the vast majority of keyboard music produced in Clementi's time, these pieces tend towards polyphonic, linear writing. A three-to four-part setting in which melodic interest shifts from one part to another is almost a norm throughout the collection. Clementi's lifelong fascination with 'learned' procedures, quite apart from all his canons and fugues, continues to inform his style.

In his later years Clementi was given titles such as 'father of the pianoforte', 'father of the pianoforte sonata' and the like. If he was deserving of such names, it is not – as has often been stated – because he was the first or even one of the first to write music specifically for the piano. The claims for Clementi's priority as a piano composer have always rested on his op.2 sonatas. But it is now established that those sonatas were first published in 1779, not 1773 as previously thought. Moreover, the newspaper announcements clearly report that in all Clementi's public solo performances before summer 1780, apparently including performances of his op.2 sonatas, he played the harpsichord. Thus while J.C. Bach (and a few others) were heard on the piano increasingly often in London concerts from 1768 to the late 1770s, Clementi continued to play the older instrument. Hence his early 'virtuoso' style, with its bravura runs in 3rds and octaves, should properly be regarded as a harpsichord style. After 1780, however, his multiple careers as composer, performer, teacher, publisher and manufacturer all had to do with the piano, and his name and reputation became firmly attached to this instrument.

Clementi's influence on following generations of pianists and piano composers is hard to overestimate. Beethoven's earlier keyboard writing seems unmistakably indebted to his music of the 1780s and 1790s. Clementi was the principal teacher of several leading pianists of the 1820s and 1830s, and he had more informal contacts with many others during their formative years, for example Herz, Meyerbeer, Dussek and perhaps Hummel. His didactic works, especially the *Introduction to the Art of Playing on the Piano Forte*, the op.36 sonatinas and the *Gradus ad Parnassum*, became staples in the education of pianists at all levels. Thus in several ways he impressed his stamp on piano playing and writing from about 1790 until far into the 19th century. And increasing numbers of modern editions and recordings of his works have made 20th-century musicians and audiences aware once more of his virtues as a composer.

WORKS

for detailed information on sources, see Tyson (1967); opus numbers are those of the most authentic editions, as determined by Tyson; works without opus numbers are here identified by their numbers in Tyson's catalogue [wo]; for a collation of editions of Clementi's keyboard sonatas, see Grove5; the autographs of many works are later than their first publication; all works were published in London unless otherwise stated

Editions: *Muzio Clementi: Oeuvres complettes* (Leipzig, 1803–19/*R*) [O]
The London Pianoforte School, i–v, ed. N. Temperley (1984–7) [LPS]
Muzio Clementi: Opere sinfoniche complete, ed. P. Spada (Milan, 1975–8) [S]

KEYBOARD AND CHAMBER

op.	
1	6 Sonatas, E♭, G, B♭, F, A, E, hpd/pf, nos. 1–3 autograph *F-Pn*, all 6 (?1771/*R*1987 in LPS, i) [no.2 pubd with different 1st movt, no.3 with rev.]
WO2	The Black Joke with 21 Variations, G, pf/hpd (1777/*R*1987 in LPS, i) [partly re-used and rev. in op.1 bis no.3; substantially rev. as The Sprig of Shillelah (1823)]
1bis	5 Sonatas, F, B♭, G, A, a [actually a fugue], pf/hpd, Duo, B♭, 2 pf/hpd, autograph of Duo *US-Wc*, all (Paris, *c*1780–81/*R*1987 in LPS, i [5 Sonatas]); no.1 rev. 1807, autograph *Wc* [nos.2. 3, 4 use rev. material from op.1 and WO2] [Tyson: Oeuvre 1]
2	6 Sonatas, E♭, C, G, A, F, B♭, pf/hpd, nos.1, 3, 5 with fl/vn (1779/*R*1987 in LPS, i [nos.2, 4, 6], rev. 2/?*c*1790–95); nos.2, 4 rev. as opp.30 and 31; nos.2, 4, 6 rev. (Vienna, 1807); no.2 rev. (?*c*1818–19/*R*1985 in LPS, iv)
3	3 Duets, C, E♭, G, pf/hpd 4 hands, 3 Sonatas, F, B♭, C, pf/hpd, fl/vn (1779)

4 6 Sonatas, D, E♭, C, G, B♭, F, pf/hpd, vn/fl (1780)

5 3 Sonatas, B♭, F, E♭, pf/hpd, vn, 3 Fugues, B♭, F, b, hpd (Paris, *c*1780–81/*R*1987 in LPS, i [3 Fugues]); 3 Sonatas rev. 1807, *Wc**; 3 Fugues rev. in op.44

6 Duo, C, pf/hpd 4 hands, 2 Sonatas, E♭, E, pf/hpd, vn, 3 Fugues, c, C, e, hpd (Paris, *c*1780–81/*R*1987 in LPS, i [3 Fugues]); minuet of Sonata no.2 rev. ?1807, *Wc**; 3 Fugues rev. in op.44

7 3 Sonatas, E♭, C, g, hpd/pf (Vienna, 1782/*R*1987 in LPS, i)

8 3 Sonatas, g, E♭, B♭, pf/hpd (Lyons and Paris, 1782/*R*1987 in LPS, i)

9 3 Sonatas, B♭, C, E♭, hpd/pf (Vienna, 1783/*R*1987 in LPS, i)

10 3 Sonatas, A, D, B♭, hpd/pf (Vienna, 1783/*R*1987 in LPS, i); rev. after 1800, *GB-Lbl**

11 Sonata, E♭, pf, Toccata, B♭, hpd/pf, autograph of Sonata *D-Bsb*, both (1784/*R*1984 in LPS, ii, 2/1792); unauthorized 1st printing of Toccata (Paris, 1784); both rev. in O, vi

12 4 Sonatas, B♭, E♭, F, E♭, pf, Duet, B♭, 2 pf (1784/*R*1984 in LPS, ii [4 Sonatas], rev. 2/*c*1801–2)

13 6 Sonatas, G, C, E♭, B♭, F, f, pf, nos.1–3 with vn/fl (1785/*R*1984 in LPS, ii [nos.4–6]); nos.4–6 rev. ?1807, *US-Wc**

14 3 Duets, C, F, E♭, pf 4 hands (1786); nos.1, 2 rev. after 1815, *GB-Lbl**; no.3 rev. (*c*1815–16)

15 3 Sonatas, E♭, C, B♭, pf, vn (1786)

16 La chasse, D, hpd/pf (1786/*R*1984 in LPS, ii)

17 Capriccio, B♭, hpd/pf (1787/*R*1984 in LPS, ii, rev. 2/?*c*1801–2); rev. 1807, *US-Wc**

19 Musical Characteristics, or A Collection of Preludes and Cadences … Composed in the Style of Haydn, Kozeluch, Mozart, Sterkel, Vanhal and the Author, hpd/pf (1787/*R*1984 in LPS, ii); rev. 1807, *Wc**

20 Sonata, C, pf/hpd (1787/*R*1984 in LPS, iii), rev. as Sonata VI in O, vi

21 3 Sonatas, D, G, C, pf/hpd, fl, vc (1788); no.1 arr. pf 4 hands (?before 1802)

22 3 Sonatas, D, G, C [La chasse], pf/hpd, fl, vc (1788); no.3 arr. pf 4 hands (1789)

23 3 Sonatas, E♭, F, E♭, pf/hpd (1790/*R*1984 in LPS, iii); variations of no.3 rev. in op.43

24 2 Sonatas, F, B♭, hpd/pf in Storace's Collection of Original Harpsichord Music (1788–9/*R*1984 in LPS, iii); no.2 rev. as op.41 no.2 (Vienna, 1804) and as Sonata 1 in O, vi

WO3 Sonata, F, hpd/pf, *GB-Lbl**, pubd in D. Corri: A Select Collection of Choice Music for the Harpsichord or Piano-Forte, ii (*c*1789–90/*R*1984 in LPS, iii)

25 6 Pf Sonatas, C, G, B♭, A, f♯, D, inc. autograph of no.4 *Lbl*, all 6 (1790/*R*1984 in LPS, iii)

26 Sonata, F, pf/hpd (1791/*R*1984 in LPS, iii)

27 3 Sonatas, F, D, G, pf/hpd, vn, vc (1791)

28 3 Sonatas, C, E♭, G, pf/hpd, vn, vc (1792)

29 3 Sonatas, C, pf, vn, vc, G, D, both pf, fl, vc (1793)

WO5 5 Variations on a Minuet by Mr. Collick, F, pf (1793/*R*1984 in LPS, iii)

30 Sonata, C, pf/hpd, vn (1794); inc. autograph with rev. slow movt *US-Wc* [rev. of op.2 no.2]

31 Sonata, A, pf/hpd, fl (1794) [rev. of op.2 no.4]

32 3 Sonatas, F, D, C, pf, fl, vc (1793)

WO6 Sonata, C, pf, fl, vc, in Longman & Broderip's Collection of Music for the Grand and Small Piano Forte (1794); rev. *GB-Lbl**

33 3 Pf Sonatas, A, F, C (1794/*R*1984 in LPS, iii) [no.3 arr. from Pf Conc.]

34 2 Pf Sonatas, C, g, 2 Capriccios, A, F, pf (1795/*R*1984 in LPS, iii); Sonatas rev. (Vienna, n.d.); Capriccios rev. in O, vi

35 3 Sonatas, C, G, D [La chasse], pf, vn, vc (1796)

36 6 Progressive Pf Sonatinas, C, G, C, F, G, D (1797/*R*1984 in LPS, iii, rev. 5/*c*1813/*R*1985 in LPS, iv; rev. 6/*c*1820)

37 3 Pf Sonatas, C, G, D (1798/*R*1984 in LPS, iii)

38 12 Waltzes, pf, tambourine, triangle (1798); later arr. pf, fl (by 1823)

39 12 Waltzes, pf, tambourine, triangle (1800); later arr. pf, fl (by 1823)

40 3 Pf Sonatas, G, b, d-D (1802/*R*1984 in LPS, iii; Paris, 1802; Vienna, 1802)

WO8 Rondo, B♭, hpd/pf, *US-Wc** (Vienna, ?1802/*R*1984 in LPS, ii) [based on 2nd movt of op.2 no.5]

41 Sonata, E♭, hpd/pf (1804 [rev.]/*R*1984 in LPS, iii; Vienna, 1804, rev. 2/1804 and in O, vi) [rev. op.24 no.2 pubd with this sonata as op.41 no.2]

WO10 Arr. of 'Batti batti', pf, no.2 in Operatic Airs (1820/*R*1985 in LPS, iv; Leipzig, 1820; Paris, 1820)

46 Pf Sonata, B♭ (1820/*R*1985 in LPS, iv; Leipzig, 1820; Paris, 1820)

47 2 Capriccios, e, C, pf (1821/*R*1985 in LPS, iv; Leipzig, 1821; Paris, 1821)

48 Fantaisie with Variations on 'Au clair de la lune', c-C, pf (1821/*R*1985 in LPS, iv; Leipzig, 1821; Paris, 1821)

49 12 Monferrinas, pf, rough draft of no.4 *GB-Lbl*, autograph of no.9 *US-Wc*, all 12 (1821/*R*1985 in LPS, iv; Leipzig, 1821; Paris, 1821)

50 3 Pf Sonatas, A, d, g (Didone abbandonata) (1821; Leipzig, 1821; Paris, 1821)

WO11 Canon ad diapason, C, pf, rough autograph *GB-Lbl*, fair copy facs. in Apollo's Gift (1830/*R*1985 in LPS, iv)

WO12 ? The Plough Boy, with Variations, B♭, kbd (1788/*R*1984 in LPS, iii) [1st pubd anonymously]

WO13 Hpd Sonata, A♭, 1765, autograph *F-Pn*

WO14 Hpd Sonata, G, 1768, autograph *Pn* [with same 2nd movt as op.1 no.2]

WO15–20 6 Monferrinas, pf, *US-Wc**

WO21 Tarantella, a, pf, *Wc**

WO22 Allegro, E♭, pf, *Wc**

WO23 Finale, E♭, pf, inc. autograph *Wc*, autograph in B♭, *Wc*

WO24 Duettino no.1, C, 2 pf, *Wc** (complete), *GB-Lbl** (movts 2, 3)

WO25 Duettino no.2, G, 2 pf, inc. autograph *US-Wc*

WO26 Allegro, duettino, C, 2 pf, *Wc**

WO27 Allegro (Chasse), duettino, C, 2 pf, *Wc**

WO28 Allegro, duettino, C, 2 pf, *GB-Lbl**

WO29 Canon, B♭, 2 vn, va, 1821, *Lbl**, *US-NH**, *S-Smf**

WO30 Nonetto: Andante, E♭, fl, ob, cl, bn, hn, vn, va, vc, db, *GB-Lbl**

WO31 Nonetto: Allegro, E♭, fl, ob, cl, bn, hn, vn, va, vc, db, inc. autograph *US-Wc* [perhaps intended to follow WO30]

— Sonata: Allegro, variations, hpd/pf, *I-PLcon*, *Mc* (1st movt)

ORCHESTRAL

18 2 Syms., B♭, D, pts (1787), ed. R. Fasano (Milan, 1959–61)

— Pf Conc., C, MS copy, dated 1796, *A-Wgm* [arr. pf solo as op.33 no.3]

WO32 Sym. no.1, C, autograph movts and frags. *US-Wc*, completed and ed. A. Casella (Milan, 1938), S

WO33 Sym. no.2, D, autograph movts and frags. *Wc*, *GB-Lbl*, movts 2, 4 ed. A. Casella in Symphony in D (Milan, 1938), S

WO34 Sym. no.?3 (Great National Sym.), G, autograph movts and frags. *US-Wc*, S

WO35 Sym. no.4, D, autograph 1st movt *GB-Lbl*, sketches of later movts *US-Wc*, 1st movt ed. A. Casella in Symphony in D (Milan, 1938), S

WO36 Minuetto pastorale, D, *Wc**, ed. A. Casella as 3rd movt of Symphony in D (Milan, 1938), S

VOCAL

WO1 Martirio de' gloriosi Santi Giuliano e Celso (orat, A. Galli), Rome, 1764, lost, pubd lib *I-Vgc*

Clemm, Johann Gottlob. *See* KLEMM, JOHANN GOTTLOB.

Cleobury, Stephen (John) (*b* Bromley, 31 Dec 1948). English organist and conductor. He was a boy chorister at Worcester Cathedral, and received his university education as organ scholar of St John's College, Cambridge, where his teachers were George Guest, David Willcocks and Peter le Huray. He became sub-organist of Westminster Abbey in 1974, where he gave the first performance of *The Lion of Suffolk* by Malcolm Williamson at the memorial service for Benjamin Britten (1976). In 1979 he became the first Anglican to be appointed master of the music at Westminster Cathedral, and in 1982 he was appointed director of music at King's College, Cambridge, where he has commissioned a new Christmas carol each year for the Festival of Nine Lessons and Carols. Cleobury became conductor of the Cambridge University Musical Society in 1983. He has conducted the society in the first performances of *Hymn to the Senses* by Robin Holloway and *Canticum luminis* by Robert Saxton. He became principal conductor of the BBC Singers in 1995 and a visiting professor at the RCM the same year. Cleobury has made recordings of organ works by composers including Liszt and Howells, and with the King's College Choir has recorded music ranging from Tallis and Byrd through Rossini's *Petite messe solenelle* to works by Rachmaninoff, Stanford, Howells and Britten.

His brother Nicholas Cleobury (*b* Bromley, 23 June 1950) has conducted all the major British orchestras as well as working with the WNO and the ENO. He became director of the Britten Sinfonia in 1991.

IAN CARSON

Cleonides [Kleoneidēs]. Greek music theorist. He was the author of a primer of ancient Greek music theory, the *Introduction to Harmonics* (*Eisagōgē harmonikē*). Cleonides' name appears on only ten medieval manuscript

versions of the *Introduction*. Many manuscripts attribute the work to Euclid or Pappus, but the Pythagorean approach of these authors is incompatible with the Aristoxenian music theory assumed by the writer of the treatise. A few manuscripts ascribe the work to a certain 'Zosimus' or avoid attribution entirely. Based on internal evidence, the writing of the treatise can be dated only to some time during the period between the 3rd century BCE and the 4th century CE; however, a date after the 1st century BCE, when treatises with the word *eisagōgē* in their titles begin to appear, seems likely.

Cleonides' 800-word treatise offers the clearest introduction to the harmonic system synthesized by Aristoxenus (*c*300 BCE). After defining harmonics as 'the theoretical and practical science of the nature of harmony, harmony being that which is composed of both notes and intervals having some regular arrangement', the *Introduction* treats in sequence seven subdivisions of the science of harmonics – notes, intervals, genera, systems (scales), tones (*tonoi*), modulation and melodic composition. Written in peripatetic format, it features technical terms in series of definitions, lists and further subdivisions.

The Byzantine music theorist Manuel Bryennius (*c*1300) borrowed extensively from the treatise, and 40 extant manuscript copies dating from the 12th century to the 16th suggest that the *Introduction to Harmonics* was actively disseminated through the late medieval period well into the Renaissance. In 1497 Giorgio Vala published in Venice the first printed edition (with a Latin translation), and six other editions and translations were published before the 18th century.

JON SOLOMON

Clérambault. French family of composers and organists.

(1) Dominique Clérambault (*b* *c*1644; *d* Paris, 24 May 1704). Musician. He was one of a family line whose members had served the kings of France since the 15th century, in his case as one of the 24 *violons du roi* (from 1670–82). His accomplishments as a performer probably extended beyond those of a violinist only, for in a document of 1676 (from the Châtelet archives) he was also described as *maître joueur d'instruments à Paris*.

(2) Louis-Nicolas Clérambault (*b* Paris, 19 Dec 1676; *d* Paris, 26 Oct 1749). Organist and composer, son of (1) Dominique Clérambault.

1. LIFE. Louis-Nicolas showed precocious musical talents. He probably received his earliest training from his father, in violin and harpsichord playing. He studied the organ with André Raison; some indication of the pupil's regard for his teacher can be gauged from the warm words of the dedication to Raison which Clérambault placed at the head of his *Livre d'orgue*. His other teacher was Jean-Baptiste Moreau (1656–1733), with whom he studied composition and singing. In 1707 Clérambault was organist of the Grands-Augustins in Paris, but like his forebears he found service in the royal household. His first appointment in this capacity was as supervisor of the concerts arranged by Mme de Maintenon for Louis XIV in the last few years of the king's life; this was followed by an appointment as organist of the Maison Royale de Saint-Cyr, near Versailles, after the death of Nivers in 1714. He also took over Nivers' position at St Sulpice in Paris about the same time. Clérambault may have been assisting Nivers for some time before his death; in an archival document, according to Brossard, Clérambault used the title 'organiste de la maison royale de Saint-Louis à Saint-Cyr, et de l'église paroissiale Saint-Sulpice' six months before Nivers died. Founded in 1688 by Mme de Maintenon as a school for poor but well-born girls and run on strictly religious lines, Saint-Cyr provided some musical training for its pupils in order to elevate the standard of singing in the chapel. Clérambault's duties were mainly concerned with playing the organ for the special services during the year, and training the girls' voices from time to time. There were also occasions when the pupils took part in semi-dramatic performances. Racine's *Esther* (set to music by Moreau) was written specially for them, and in later years Clérambault was to provide them with his *L'idile de Saint-Cyr*. Some years later he relinquished his position at Saint-Cyr in favour of one of his sons (probably César-François-Nicolas), but owing to the lack of first names in the official documents relating to their work there, it is not known for certain when this change was made (Bert believed that it was as early as 1721). Nevertheless, Clérambault *le père*, as he was to become known, retained his association with Saint Cyr. On the death of Raison in 1719 Clérambault was named his successor at the Jacobins in rue St Jacques in Paris, an appointment which he accepted in addition to that at St Sulpice.

Louis-Nicolas Clérambault: engraving by Louis-Simon Lempereur after an anonymous portrait

His prestige remained high for the rest of his life. He was widely regarded as one of France's finest organists, while as a composer of French cantatas his reputation soared beyond all others. These works began appearing from 1710 and occupied his attention until a few years before his death. From his marriage to Marie-Marguerite Grulé (before 1709) there were seven children, of whom three survived infancy; they included two sons who inherited positions held by their illustrious father.

2. WORKS. The earliest published composition by Louis-Nicolas Clérambault appeared in Ballard's *Recueil d'airs sérieux et à boire* of 1697, the first of a handful of such works which he contributed to the series over some years. It is significant that one of them was an aria to Italian words, for Clérambault was among those composers caught up in the wave of italianism that swept over Paris at the turn of the century, and although his first major work, the *Livre de pièces de clavecin* (1704), remained wholly faithful to French tradition, his other compositions from this time show the unmistakable influence of the Italian school. This is particularly marked in his unpublished set of solo and trio sonatas for violin(s) and continuo, generally believed to have been composed in the early years of the century. Whereas their technical demands are fairly conservative in comparison with similar Italian works of the period, and even with some of those from the new French violin school, the music itself is clearly indebted to the sonata style of Corelli, particularly in the relentless passage-work and nimble bass lines of the fast movements. The slower ones are less overtly italianate. In another instrumental collection written at a slightly later date, the well-known *Livre d'orgue*, the Italian elements are more subtly absorbed into the expression of the two suites which comprise this volume. They are evident in the mellifluous counterpoint of the duo and trio movements (including a finely-turned fugue), in the cogent development of thematic ideas, and in the purposeful and often poignant flow of harmony. These techniques, however, are suffused with a delicacy of expression which, making much use of traditional keyboard ornamentation, betray the Frenchman.

It was in his cantatas that Clérambault's most fruitful union of French and Italian styles was achieved. The French cantata as a characteristic 18th-century form had been established only a few years before the appearance of Clérambault's first volume of *Cantates françoises à I. et II. voix avec simphonie et sans simphonie* (1710); in the cantatas of Morin, Bernier, Stuck and Campra were to be found the essentials of the form to which Clérambault gave the stamp of real individuality. His cantata *Orphée*, for high voice, violin, flute and continuo, in this first volume, shows what heights of eloquence could be reached when Gallic lyricism was infused with italianate warmth and brilliance, qualities which Clérambault was able to bring together in a wholly convincing and natural way, for like Rameau he absorbed the foreign techniques into a personal style. He published 25 cantatas, 20 of which are found in five volumes appearing from 1710 to 1726. As well as intense and dramatic cantatas like *Orphée*, *Le jaloux* and *Médée*, there are simple and charming ones like *L'Amour piqué par une abeille* and *La musette*; within each cantata there is also considerable variety.

As well as many motets for general use, his sacred music includes some easy motets for use at Saint-Cyr which, despite their calculated simplicity, still bear the marks of Clérambault's expressive imagination.

WORKS

printed works published in Paris

CANTATAS

Cantates françoises à I. et II. voix avec simphonie et sans simphonie (ed. D. Tunley, New York, 1990):

Livre 1 (1710): L'Amour piqué par une abeille, S, bc; Le jaloux, *haute-contre*, vn, bc; Orphée, S, vn, fl, bc; Poliphême, B, vn, fl, bc; Médée, S, vn, fl, bc; L'Amour et Baccus, S, B, bc

Livre 2 (1713): Alphée et Aréthuse, S, fl/viol, bc; Léandre et Héro, S, fl, vn, bc, viol obbl; La musette, S, musette/vn, bc; Pirâme et Tisbé, *haute-contre*, fl, vn, bc; Pigmalion, B, fl, vn, bc; Le triomphe de la paix, 2S, B, vn, bc

Livre 3 (1716): Apollon, S, fl/viol, vn, bc; Zéphire et Flore, S, fl/viol, bc; L'isle de Délos, S, vn, bc, ed. in RRMBE, xxvii (1978); La mort d'Hercule, B, vn, bc

Livre 4 (1720): L'Amour guéri par l'amour, S, fl, vn, bc; Apollon et Doris, S, *haute-contre*, vn, bc

Livre 5 (1726): Clitie, S, BC, viol obbl; Les forges de Vulcain, B, vn, fl, bc

Separate cants. (ed. D. Tunley, New York, 1990): Le bouclier de Minerve, S, vn, fl/viol, bc (1714); Abraham, S, bc (1715); La muse de l'Opéra, S, 2 vn, fl, ob, tpt, drums, bc, viol obbl (1716), ed. in RRMBE, xxvii (1978); Le soleil vainqueur des nuages, S, ob, fl, vn, bn, bc, viol obbl (1721); Les francs maşçons, B, unspecified obbl, bc (1743)

CHORAL

Motets, 1, 2vv, chorus, bc (org) (*c*1725)

Chants et motets à l'usage ... de St Louis à St Cyr. Tome premier ... par Mr Nivers ... mis en ordre et augmenté de quelques motets par Mr Clérambault, 1, 2vv, chorus, ?acc. org bc (1733)

Motets, 1, 2vv, chorus, à l'usage ... de St Louis à St Cyr ... par Mrs Nivers et Clérambault (1733)

5 vols. of motets, *F-Pn*

TeD à trois parties, 1701; Mag, 3vv, bc, 1704; Motet du st sacrement, 3vv, 1708; Hymne à St Louis, *c*1747; Sagesse éternelle; Prière pour le roy; Domine, 3vv, 2 vn; Domine, 4vv, insts; Motet, 1v, pour la ste vierge: all *Pn*

Divertissements: Le triomphe d'Iris, 1706, *Pn*; Le triomphe de la vertu (1723); Choeurs et intermèdes de L'idile de S. Cyr (1745); Divertissement sur la naissance du Sauveur du Monde, *Pn*

Le retour du printemps ou L'ouverture de la campagne (Durivet), Paris, 15 May 1748; lost, mentioned in *Mercure de France* (June 1748), 143ff

L'histoire de la femme adultère, orat, *Pn*

OTHER WORKS

8 airs in Ballard's Recueil d'airs sérieux et à boire (1697[2]–1704)

Premier livre de pièces de clavecin (1704)

Premier livre d'orgue contenant deux suites (*c*1710)

La Jeanette, rondo, hpd, in Marpurg's Clavierstücke (Berlin, 1762); possibly by César-François-Nicolas Clérambault

4 sonates, 3 simphonies, 1 and 2 vn, bc, *Pn*

Sacred contrafacta to works by Clérambault: Nouvelles poésies spirituelles et morales (1730–37); 8 sacred cants., *Pn*

(3) César-François-Nicolas Clérambault (bur. Paris, 30 Oct 1760). Organist and composer, son of (2) Louis-Nicolas Clérambault. It was probably this son who was known as Clérambault *le fils*, and if that is so he was the composer of the cantatas *La coquette* (Paris, 1731), *Le danger de la nuit* (Paris, *c*1732) and the *cantatille Erminie* (Paris, *c*1735), as well as a divertissement, *Le temple de Paphos*, performed at the Tuileries in one of Philidor's so-called Concerts Français in 1729. Settings of Racine's *Esther* and *Athalie* for performances in 1756 are attributed to him. He succeeded his father at Saint-Cyr, St Sulpice and at the Jacobins; there is reason to believe that he and his brother had previously helped their father at these establishments.

(4) Evrard Dominique Clérambault (bap. Paris, 23 Dec 1710; bur. Paris, 6 April 1790). Organist, brother of (3) César-François-Nicolas Clérambault. Almost nothing is known of this musician, who succeeded to the posts left vacant on the death of his brother. With his own death this dynasty of musicians came to an end.

Clerc, Charles-Nicolas le. *See* LE CLERC, CHARLES-NICOLAS.

Clerc, Jean-Pantaléon le. *See* LE CLERC, JEAN-PANTALÉON.

Clercx-Lejeune, Suzanne (*b* Houdeng-Aimeries, 7 June 1910; *d* Liège, 25 Sept 1985). Belgian musicologist. After studying in Italy and Germany, where her teachers included Besseler at Heidelberg, she took the doctorate at Liège in 1939 with a dissertation on the development of instrumental music in the Netherlands in the 18th century. From 1940 to 1949 she worked as a librarian at the Royal Conservatory in Brussels. In 1945 she became junior lecturer at Liège University, where she was successively appointed lecturer, reader and in 1966 professor until 1980. For several years she was a committee member of the Société Belge de Musicologie and a member of the editorial staff of the *Revue belge de musicologie*. She also served on the editorial committee of *Acta musicologica* (1957–71) and was chairman of *Les colloques de Wégimont*, the annual international congress for ethnomusicology that she founded in collaboration with Paul Collaer in 1954. In 1957 she founded, in collaboration with Jean Lejeune and Robert Wangermée, the Festival de Liège. She wrote extensively on 18th-century Belgian music, European music of the 16th century and the music of Liège in the 14th and 15th centuries. On these subjects she produced some excellent historical monographs and surveys, as well as detailed studies based on scientific and aesthetic musical analysis and archival research, all of which reflect her wide reading in music history.

GODELIEVE SPIESSENS

Clereau, Pierre (*fl* 1539–67, *d* before 11 January 1570). French composer active in Lorraine. Three chansons ascribed to him were printed in Lyons in 1539, but one of these, *Fortune allors que n'avois congnoissance*, was published in Paris in the same year attributed to Certon (RISM 1539[15]). No further music by Clereau is known until 1554 when the Parisian printer Nicolas Du Chemin published two volumes (one, dedicated to Claude de Guise/Lorraine, duke of Aumale, containing four masses, the other a Requiem mass and two motets), whose title-pages describe the composer as choirmaster at Toul. He had left this post by 1557, when Du Chemin printed another volume of his masses, but he still held a canonry at the collegiate church of St George's in Nancy until his death. A 'Pierre Florentin' organist who received a year's wages from the cathedral chapter of Toul in 1558 (see J. Brooks, p.157) may refer to Clereau. He continued to enjoy the patronage of the Guises, in particular that of the duke's younger brother René, Marquis d'Elbeuf, in 1559 when Le Roy & Ballard published two collections of his French and Italian songs. Both show a new literary discernment, reflecting perhaps the influence of Rémy Belleau, one of the Pléiade group of poets, who was also in René's service. As with other French composers of the late 16th century, Clereau's favourite poet was Ronsard

and augmented editions of his three-voice collection were especially entitled *Odes de Ronsard*. Clereau was unusual in that he often set only a single intermediary strophe of an extended ode. He also set poems (or extracts) by Tyard, Baïf, Belleau, Masures, Bembo, Tansillo and Ariosto. Although he composed only nine madrigals (as opposed to 59 chansons), they reflect the Italianism which was also in evidence in the new poetry of Du Bellay and the Pléiade. When Clereau set these new strophic pieces or sonnets he ensured clear declamation by using the treble-dominated homophonic idiom of the vaudeville or 'chanson en façon d'air' pioneered by Arcadelt, Certon, and Mornable under the twin influences of the metrical Huguenot psalm and the Neapolitan villanella. Clereau also used the homophonic style for his collection of *Cantiques spirituels* (Paris, 1567); these texts may have been compiled by Louis des Masures who Clereau may have met at Toul or Nancy while serving as secretary to Duke Charles III of Guise/Lorraine before his conversion to Protestantism in 1561. One of the canticles, *Dès ma jeunesse*, uses the melody of Psalm cxxix of the Genevan Psalter. However, he continued to prefer the imitative style for older quatrain texts or rustic chansons with folk-inspired poems and melodies which had been exploited by older northern composers such as Willaert and Crecquillon. The same style prevails in the five parody masses, all short works for four voices based on earlier motets by Certon, Maillard and Crecquillon.

WORKS

SACRED

Missae quatuor, 4vv (Paris, 1554); Missae 'Cantantibus organis', 'Cecilia virgo', 'Dum deambularet', 'In me transierunt' (Ky ed. P. Wagner, *Geschichte der Messe*, i, Leipzig, 1913/*R*)

Missae pro mortuis, cum duobus motetis, 4vv (Paris, 1554); Requiem mass ed. P. Wagner, *Geschichte der Messe*, i, 254

Missa, 4vv, ad imitationem missae Virginis Mariae condita (Paris, 1557) Cantiques spirituels, 4vv (Paris, 1567)

SECULAR

Premier livre de chansons tant françoises [23] qu'italiennes [5], 3vv (Paris, 1559, 2/1566 as Premier livre d'odes de Ronsard, 3vv, 3/1575 as Les odes de Pierre de Ronsard, 3vv, adds 16 extra French chansons; ed. in SCC, vii (1988); 4/1619 omits Italian pieces, adds two chansons

Dixiesme livre de chansons tant françoises [16] qu'italiennes [4] (Paris, 1559/*R* 1564); ed. in SCC, vii, 1988

8 chansons, 4vv, in 1539[20], 1557[12], 1570[9]; 3 (from 1539[20]) ed. in SCC, xxvi (1993)

FRANK DOBBINS

Clerici, Giovanni (*fl* 1646). Italian composer. Nothing is known of his life, but according to the dedication of his sole surviving publication, he either came from or worked in Como. His *Sacri concerti … con messa, litaniae della B.V. et Miserere*, op.3 (Milan, 1646) are for one to four voices and continuo and show a fondness for duet textures and emotional, non-liturgical texts.

ELIZABETH ROCHE

Clerici, Sebastiano. *See* CHERICI, SEBASTIANO.

Clerico, Paolo (*b* Parma, 10 Oct 1518; *d* after 1562). Italian composer. He published simultaneously two volumes entitled *Li madrigali a cinque voci* (Venice, 1562; both inc.). In his dedicatory letter he mentioned others of his works both sacred and secular, that he hoped to publish if the present ones proved acceptable; however, nothing more by him is known to have been printed. He signed the dedication from Mantua and apparently maintained close ties with members of the Gonzaga family, although there is no record of his serving them. He dedicated both books to Ercole Gonzaga, Cardinal of Mantua, and the second contains several madrigals in praise of him. Further connections with the Gonzaga family are indicated by the inclusion in the first book of a madrigal for the wedding of Guglielmo Gonzaga and Leonora d'Austria and by three madrigals in the second book (RISM 1562[15]) by Scipione Gonzaga, one of the leading literary figures of his time. The second book closes with a dialogue for seven voices on a text parodying Petrarch's canzone *Che debb'io far, che mi consigli Amore?*.

DAVID NUTTER

Clerk, Jeremiah. *See* CLARKE, JEREMIAH (i).

Clerk, Sir **John** (*b* Penicuik House, nr Edinburgh, 8 Nov 1676; *d* Penicuik, 4 Oct 1755). Scottish politician, composer and music patron. Born into a landed Scottish family, from 1694 to 1697 he studied law at Leiden University, where he probably had composition lessons with Jakob Kremberg. He then did a grand tour until 1700, visiting Vienna and settling for 15 months in Rome, where he had composition lessons with Corelli. On returning to Scotland he was caught up in public affairs, which led to his being one of the signatories of the Treaty of Union between Scotland and England in 1707. From the age of 26 onwards he seems to have had no time for serious composition: his main surviving musical works were all written by about 1703. He succeeded his father as second baronet of Penicuik in 1722. In later life the erstwhile composer contented himself with patronizing others' musical efforts; an important protégé was the writer Allan Ramsay (1686–1757), whose song-lyric *Wat ye wha I met yestreen* and ballad opera *The Gentle Shepherd* celebrate the Midlothian countryside around Clerk's estate.

Under Corelli's tutelage (on which he made interesting journal notes) Clerk blossomed into a composer with imagination and true potential, which in the event was unfulfilled. His best work is the cantata *Odo di mesto intorno*, which sustains a 25-minute span by sheer melodic power, despite its loose form. Corelli led the band at the first performance at the Duke of Bedford's Roman villa in 1698, a mark of the master's regard for his pupil. Also notable is the cantata *Leo Scotiae irritatus*, in praise of the struggling Scottish colony at Darien (now in Panama). The Latin text for this is by Herman Boerhaave (1668–1738), the illustrious Dutch physician and scientist whom Clerk met at Leiden and who became a lifelong friend.

WORKS

all in MS, at the Scottish Record Office, Edinburgh, unless otherwise stated

Dic mihi, saeve puer (cant.), S, 2 vn, bc, ?1697
Miserere mei Deus (cant.), S, 2 vn, va, bn, bc, ?1697
Eheu! quam diris hominis (cant., H. Boerhaave), S, 2 vn, bc, ?1698
Odo di mesto intorno (cant.), S, 2 vn, bc, 1698
Leo Scotiae irritatus (cant., Boerhaave), S, 2 vn, bc, ?1700
Sonata, G, vn, bc, ?1702, ed. D. Johnson (Edinburgh, 1990)
2 minuets, vn, ?1705

Plainte del Sigre Clerk, and 6 further movts (suite, g), vn, bc, *F-V*, doubtful

DAVID JOHNSON

Cléry [née Duverger; Duvergé], **Marie-Elizabeth** (*b* ? Paris, 1761; *d* after 1795). French harpist and composer. The conjectural birthdate assumes she was the 15-year-old 'Mlle Duv**' whose *air*, *Tout ce que je vois me rappelle*, was printed in the *Mercure de France* in 1776. As Mlle Duverger (or Duvergé) she sang and played the harp at the Concert Spirituel (1780–82), sometimes performing her own works. After her marriage (to Jean-Baptiste Cant-Hanet *dit* Cléry), she published three sonatas for harp accompanied by violin (op.1, 1785) as 'M[de] Cléry, née Duvergé', with the title *musicienne des concerts de la Reine*. Her husband was later famous as the *valet de chambre* assigned to the imprisoned Louis XVI during the French Revolution (1792). Cléry (and perhaps also his wife) went to Austria in 1795, where he entered the service of King Louis XVI's daughter, Marie-Thérèse-Charlotte.

WORKS

Tout ce que je vois me rappelle, air, S, hp, b ['by Mlle Duv**'], *Mercure de France* (June 1776), 62–7

BARBARA GARVEY JACKSON

Cless, Johann (*b* ?Hanau, nr Frankfurt; *fl* 1587). German composer. Since he called himself 'Hanoius' he may have been born at Hanau. He composed the choruses for Scaliger's Latin translation, *Aiax lorarius*, of Sophocles' *Ajax*, which was printed and performed at Strasbourg in 1587. The music (ed. A. Prüfer: *Über den ausserkirchlichen Kunstgesang in den evangelischen Schulen des 16. Jahrhunderts* Leipzig, 1890) is of considerable interest, notably the dance choruses and the eight-part chorus involving two solo voices.

INGRID SCHUBERT

Cleva, Fausto (Angelo) (*b* Trieste, 17 May 1902; *d* Athens, 6 Aug 1971). American conductor of Italian birth. He studied at the Trieste Conservatory and at the Verdi Conservatory in Milan, where he made his début conducting *La traviata* at the Teatro Carcano. Emigrating to the USA in 1920 (he became an American citizen in 1931), he met with immediate success, beginning a long association with the Metropolitan Opera the same year, first as chorus master and later as conductor: between 1950 and 1971 he conducted over 650 performances at the Metropolitan Opera alone. His work in New York was interspersed with periods of activity in Cincinnati, where he was musical director of the Summer Opera from 1934 to 1963, at the San Francisco Opera, where he conducted in the 1942–3 season and again between 1949 and 1955, and in Chicago, where, as artistic director of the Chicago Opera Company from 1944 to 1946, he played an important part in the postwar raising of the city's operatic standards. He made guest appearances with the San Antonio SO, Texas, with opera companies in Verona, Havana, Toronto, Montreal and Stockholm, and at the 1959 Edinburgh Festival, where he conducted the Swedish Royal Opera in *Rigoletto*. A widely admired operatic maestro in the familiar Italian mould, Cleva was made an honorary Commendatore by the Italian government.

BERNARD JACOBSON

Cleve, Halfdan (*b* Kongsberg, 5 Oct 1879; *d* Oslo, 6 April 1951). Norwegian composer and pianist. After initial instruction from his father, the organist Andreas Cleve, he studied in Oslo with Winther-Hjelm (1895–8) and in Berlin with X. and P. Scharwenka and with Oscar Raif (1899–1910). His début was in Berlin in 1902 when he played his First Piano Concerto with great success. In the following years he gave many concerts in Germany and the rest of Europe. He was also active as a teacher in Berlin until 1909, when he returned to Norway and settled in Oslo as a teacher of the piano and composition at the conservatory. He was the recipient of many honours, including a government stipend for life (awarded in 1939). Much of his work is late Romantic virtuoso piano music; the later pieces show a tendency to Regerian harmonic chromaticism.

WORKS

(*selective list*)

Pf concs.: no.1, A, op.3, 1902; no.2, b♭, op.6, 1904; no.3, E♭, op.9, 1906; no.4, a, op.12, 1910; no.5, c♯, op.20, 1916
Other orch: 3 Stücke, op.14, 1921
Chbr: Sonata, op.21, vn, pf, n.d.
Pf: 2 Etudes, E, F♯, op.17, n.d.; Sonata, op.19; many other pieces

HANS MAGNE GRAESVOLD/MARTIN ANDERSON

Cleve, Johannes de (*b* Kleve, 1528–9; *d* Augsburg, 15 July 1582). Netherlandish composer and singer. Earlier uncertainty about his place of birth – whether it was Flanders, Blois or Kleve – has now been resolved in favour of Kleve.

His *Cantiones seu harmoniae sacrae* (1579–80) is prefaced by laudatory poems in which he is called 'Clivensis', and among the works in the volumes is an elegy on the death of Duke Karl Friedrich of Kleve. 'De Cleve', however, appears to have been a common name, and the composer has proved difficult to identify in his earlier years. For example, a court musician called Cleve was referred to in the accounts of the Liebfrauenzunft at Bergen op Zoom in 1547. The presence of works by Johannes de Cleve in choirbooks dated 1549 of St Pieterskerk, Leiden, and in anthologies by Susato in 1553 would seem to indicate that he was living in the Netherlands in the mid-16th century. In March 1553 he became a singer in the Vienna Hofkapelle of the Emperor Ferdinand I. In 1559–60 he was again in the Netherlands, recruiting prospective singers for the Kapelle. He seems to have won international recognition by the 1550s: he was well represented in anthologies, and a two-volume set of his works was published at Augsburg in 1559. His numerous occasional motets, probably the product of imperial commissions, suggest that he was highly respected in the imperial chapel. After the death of the emperor in 1564 the chapel was disbanded, and Cleve took up the post of Kapellmeister at Graz to the emperor's son, Karl II of Styria. By 1568 he had tendered his resignation; he left Karl's service in 1570 and was succeeded by Annibale Padovano. He went to live in Vienna, as is clear from several musical encomia to the Habsburg family and from a letter of January 1576 to Johann Rasch at the Viennese monastery of Unsere liebe Frau zu den Schotten. From April 1579 until his death he lived at Augsburg where he wrote the preface to his *Cantiones seu harmoniae sacrae*. His name appears from 1580 in the records of the cathedral chapter, which also indicate that he taught the future cathedral Kapellmeister, Bernhard Klingenstein.

The unstable religious conditions of the time are reflected in Cleve's works, which show both Catholic and Protestant influences. His 20 cantus-firmus settings of Lutheran hymns in Andre Gigler's *Gesang Postill* and the arrangements of *Es wel uns Got genedig sein* which close his volume of motets of 1579–80 seem to indicate Protestant sympathies. On the other hand, his settings of the Proper for the court of Karl II (which was sympathetic to the Counter-Reformation) and his motets and parody masses show that he also adhered to Catholicism. His skilful use of cantus firmus, ostinato and *soggetto cavato* in his occasional motets shows that he was thoroughly conversant with the techniques of the Netherlanders. His later works contain expressive declamatory passages and occasional pungent chromaticism; earlier assessments of his works as conservative are thus not entirely valid.

WORKS

Cantiones sacrae, libri I et II, 4–6vv (Augsburg, 1559) [incl. some masses]; some ed. in Trésor musical, *musique profane*, i, ix, xii (Brussels, 1865–76), Trésor musical, *musique religieuse*, i, xii–xiv, xvi (Brussels, 1865–79); 3 masses ed. in MAM, i, xii, xviii (1949–68); 2 ed. in MAM, xxi–xxii (1970); 2 ed. in MMN, xi (1962); 1 ed. in DTÖ, xc (1954)

Cantiones seu harmoniae sacrae, 4–7, 10vv (Augsburg, 1579–80)

20 chorale settings, 4vv, in A. Gigler: Gesang Postill (Graz, 1569–74/*R*1950)

Motets, 4–8vv, 1553[8], 1553[10], 1555[12], 1558[4], 1568[1], 1568[2], 1568[3], 1568[6]

12 parody masses, *A-Gu*, *R*, *Wn*, *D-Rp*, *PL-WRu*, *SI-Lng* (other sources in Dunning)

Mass movements and fragments, *A-Gu* (see Federhofer, 1967)

ALBERT DUNNING

Cleveland. American city in Ohio. It was laid out by Moses Cleaveland in 1796 and incorporated in 1836, by which time singing schools and brass bands were flourishing and choral and instrumental groups, often sponsored by churches, were active. The second half of the 19th century witnessed tremendous growth. German influence was strong. Members of the Germania Musical Society settled in Cleveland after that ensemble disbanded in 1854. The Cleveland Gesangverein gave performances of opera with orchestra, including Flotow's *Alessandro Stradella* in 1858. Five Sängerfests were organized (1855, 1859, 1874, 1893, 1927). Many local musicians, including Reinhold Henninges (1836–1913) and Emil Ring (1863–1922), were of German or Austrian birth, while others born in the USA, such as Johann H. Beck (1856–1924), James Rogers (1857–1940) and Wilson Smith (1855–1929), studied in Germany. Ring and Beck conducted various orchestras in the early 1900s. Alfred Arthur (1844–1918) founded the Cleveland Vocal Society (1873–1902), directed early orchestral programmes at Brainard's Piano Ware Rooms (1872) and organized large May festivals (1880–86; 1895–7). Arthur also conducted opera, including his own *The Water Carrier*, for the May festival of 1876, at the luxurious 1600-seat Euclid Avenue Opera House (built 1875 and demolished in 1922). The Metropolitan Opera Company from New York visited Cleveland nearly every year from 1899 to 1986.

Early in the 20th century a series of concerts, bringing leading performers to the city, was organized by Adella Prentiss Hughes (1869–1950) through the Fortnightly Musical Club and the National Federation of Music Clubs. The Cleveland Museum of Art, opened in 1916, began to house musical events, and an organ was installed there in 1922. The Cleveland Orchestra (called in its first season Cleveland's SO) was founded largely through the efforts of Hughes and the Musical Arts Association (founded 1915); it gave its inaugural concert under Nicolai Sokoloff at Grays' Armory (cap. 5000) on 11 December 1918. Concerts were later presented in Masonic Auditorium (cap. 2238) until the orchestra moved to its permanent home, Severance Hall (cap. 2000), in 1931.

Subsequent conductors were Artur Rodzinski (1933–43), Erich Leinsdorf (1943–6), George Szell (1946–70), who enlarged the ensemble to 107 members and its season to a full year, Pierre Boulez (guest conductor, 1967–74), Louis Lane (associate conductor, 1956–73), Lorin Maazel (1972–82) and Christoph von Dohnányi (from 1984). Children's concerts were inaugurated in 1929. The first permanent Cleveland Orchestra Chorus, founded in 1955, reached an early high point during the tenure of Robert Shaw (active in Cleveland 1956–67). A children's chorus was formed in 1967, and in 1968 Blossom Music Center, the orchestra's nearby summer home in Cuyahoga Falls, was inaugurated.

Severance Hall has also been used for opera performances. In 1935 Rodzinski gave Shostakovich's *Lady Macbeth of the Mtsensk District* there, and Lake Erie Opera Theater, active during the 1960s, gave performances including 20th-century works. Lyric Opera Cleveland (autonomous since 1976) performs during the summer in Kulas Auditorium, and Opera Cleveland (founded 1976) is based in the State Theater (cap. 3100). Concerts are also held at the Cain Park Theatre (cap. 3000) in Cleveland Heights, and at the two halls in the Beck Center for the Arts: the Karl A. Mackey Auditorium (cap. 488) and the Studio Theater (cap. 83).

N. Coe Stewart (1837–1921), a disciple of Lowell Mason, became the city's first full-time supervisor of music in the public schools (1869–1907). By the early 20th century several music schools had been established: the Cleveland School of Music (1884), the West Side Musical College (*c*1900), the Hruby Conservatory of Music (1916) and the music department at Western Reserve College (founded 1826). The Cleveland Music School Settlement, now one of the largest community music schools in the country, was founded by Almeda Adams in 1912. The Cleveland Institute of Music was founded in 1920 with Ernest Bloch as head; David Cerone became director in 1985. The music department at Cleveland State University (founded 1964), the nearby Baldwin Wallace College and the Oberlin College Conservatory of Music make significant contributions. Cleveland State University has presented premières of operas by the local composers D. Bain Murray (*The Legend*, 1987; *Mary Queen of Scots*, 1991) and Edwin London (*The Death of Lincoln*, 1988).

Chamber ensembles include the Ohio Chamber Orchestra (founded 1972 under Dwight Oltman) and the Cleveland Chamber SO (1980), founded by Edwin London. Devoted entirely to new music, this ensemble had performed 135 premières by 1998, more than half of them commissioned works. The Cleveland Women's Orchestra (founded 1935 by Hyman Schandler) is among the oldest women's orchestras in the nation. Other important ensembles include the Suburban Symphony, the Cleveland PO, the Cleveland Singers, Cleveland Ballet, Cleveland Modern Dance Association and Apollo's Fire, a baroque orchestra founded in 1992.

The Holtkamp Organ Company is an outgrowth of the firm founded in Cleveland by Gottlieb Votteler in 1855. The King Musical Instrument Company, makers of brass instruments, began in 1893 as the H.N. White Company. *Brainard's (Western) Musical World* (1864–95), the periodical of S. Brainard's Sons publishing house and music store, chronicled musical events.

The various ethnic and specialized music associations include the Ciurlionis Ensemble (Lithuanian), the Cleveland Kiltie Band (Scottish), Glasbena Matica (Slovenian), the Hungarian Singing Society, the Irish Musicians Association of America (Michael Keating Branch), the Welsh gatherings of the Gymanfa Ganu and the Cleveland Messiah Chorus. The Harmonia Chopin Singing Society Club, founded in 1902, was the first Polish male chorus in Ohio. The oldest Czech singing society in the USA, the Lumir-Hlahol Tyl Singing Society, presented the Cleveland première of Smetana's *The Bartered Bride* in 1899. Children's organizations include the Zagreb Junior Tamburitzans. Ritchie Vadnal's Polka Kings and Frankie Yankovic's Polka Band are in demand.

Private organizations sponsoring concerts include the Music and Drama Club, the Lecture Recital Club, the Three Arts Club of Lakewood, founded in the 1920s, and the Fortnightly Musical Club, founded in 1894. An active Cleveland Chamber Music Society was organized in 1949.

The songwriter Ernest R. Ball was born in Cleveland, and Art Tatum frequently played in Cleveland jazz clubs during the early 1930s. The widespread popularity of rock and roll in the USA had its origins in Cleveland, introduced by the local disc jockeys Alan Freed and Leo Mintz in the early 1950s; it is fitting that the city should house the national Rock and Roll Hall of Fame, inaugurated in 1995.

The radio station WCLV broadcasts concerts by local ensembles including the Cleveland Orchestra. Classical music can also be heard on WKSU, allied with Kent State University in Ohio, and Cleveland State University's radio station, WCPN.

J.H. ALEXANDER

Cleveland, James L. (*b* Chicago, 5 Dec 1932; *d* Los Angeles, 9 Feb 1991). American gospel singer, composer and pianist. He started singing in Thomas A. Dorsey's choir at the Pilgrim Baptist Church in Chicago, and made his first solo appearance with it at the age of eight. He joined the Thorn Gospel Singers as a teenager, and remained with them for eight years. After his voice began to break, he strained to reach high notes, however, resulting in a throaty and gravelly quality that increased with the years. He began composing in his early teens and had his first great success, *Grace is sufficient*, at the age of 16. Between

1956 and 1960 he was a member of the Caravans, the Gospelaires, the Gospel Chimes and the Gospel All-Stars. During this period he was most prolific as a composer, writing as many as three songs a week; his best-known songs include *He's using me* (1955), *Walk on by faith* (1962) and *Lord, help me to hold out* (1973). In the mid-1960s he joined the Rev. Lawrence Roberts's Angelic Choir in Nutley, New Jersey, and made a number of successful recordings (*see* GOSPEL MUSIC, §II, 2(iii)). In *Peace, be still* (1963) Cleveland half croons, half preaches the verse, shifting to a musical sermon at the refrain; towards the end of the song the choir repeats a motif over which Cleveland extemporizes a number of variations. This style of performance is evident on all Cleveland's subsequent recordings. He issued more than 50 albums, was awarded six gold records and two Grammy awards and established the Gospel Music Workshop of America in August 1968. From 1971 until his death he served as pastor of the Cornerstone Institutional Baptist Church, Los Angeles.

HORACE CLARENCE BOYER

Cleveland Quartet. American string quartet. It was founded in 1968 at Marlboro, Vermont, by Donald Weilerstein, Peter Salaff, Martha Strongin Katz and Paul Katz, her husband. The ensemble made its début in 1969 and the same year became quartet-in-residence at the Cleveland Institute, taking up a similar post at the State University of New York, Buffalo, in 1971. There it gave annual performances of all Beethoven's quartets under the auspices of the Slee Beethoven Quartet Cycle bequest. In 1973 it toured East Germany and appeared at the Casals Festival, Puerto Rico, and the next year toured Europe and was resident quartet at the South Bank Summer Festival, London. The quartet joined the faculty of the Eastman School of Music, University of Rochester, in September 1976. Martha Strongin Katz was succeeded first by Atar Arad and then by James Dunham; but the most far-reaching change came in 1989, when William Preucil succeeded Weilerstein as leader. Under Preucil's leadership, which lasted until the ensemble disbanded in 1995, the quartet played with even greater beauty of tone, without any diminution of the intensity and technical facility which had first brought it acclaim. The Cleveland Quartet made many recordings under both leaders, including two cycles of the Beethoven Quartets, and gave the premières of works by John Harbison, John Corigliano and Tōru Takemitsu, among others.

TULLY POTTER

Clibano, Jacobus de (*fl* 1430–50). ?South Netherlandish composer. He is known for a Gloria–Credo pair and a matching Agnus Dei immediately preceding them in the same manuscript. Possibly also belonging to the cycle is a Sanctus elsewhere ascribed to SWEIKL. All four movements are similar in their part-ranges, their melodic material, their manner of using a gentle and largely homophonic triple metre, and in the inclusion of monophonic intonations in mensural notation. The contrary ascription of the Gloria to Binchois seems improbable in view of the unity of the cycle and the lack of other Binchois music in a similar style; however it does suggest an identification of the composer with the Jacobus de Clibano, succentor at St Donatian, Bruges, 1429–33, who held other positions and canonries in Bruges until 1449 (Strohm); he is presumably the same as Messire Jacke de Clibano who in 1449–51 was a canon of St Vincent, Soignies, where Binchois spent his last years. In 1443 Du Fay appointed Jacobus de Clibano to collect money on his behalf from the Borromei bank in Bruges (Lockwood). In the same year he was arraigned on a charge of procuring young girls (Strohm). He may also be the same composer as J. DE CLIMEN, who is not otherwise documented.

WORKS

possibly by Clibano; all for 3 voices

Gloria, *I-AO*, f.162*v* ascribed 'Jacobus de Clibano'; *TRmp* 92 ascribed 'Binchois'; ed. P. Kaye, *The Sacred Works of Gilles Binchois* (Oxford, 1992), no.54

Credo, *AO*, f.163*v* (paired with the preceding)

Sanctus Gustasti necis pocula, *AO*, f.159 (inc.); *D-Mbs* 14274 ascribed 'Sweikl'; *PL-Wn* 8054

Agnus Dei [on Agnus XVII], *I-AO*, f.162 ascribed 'Ja. de Clibano'; *TRcap* (Trent 93), no.1827*a* (1st section only, followed by both surviving sections of the Binchois Agnus XVII); ed. Strohm, ex.5

Fuga trium temporum, *F-Sm* 222 (destroyed) ascribed 'J. de Climeno' with a Tenor ascribed 'J. Cornelii'

DAVID FALLOWS

Clibano, Jheronimus de [Du Four, Jherome] (*b* 's-Hertogenbosch, *c*1459; *d* ?Spain, 26 March – 16 May 1503). South Netherlandish singer and composer, son of NYCASIUS DE CLIBANO. Like his brother Jan, he was a singer of the Illustre Lieve Vrouwe Broederschap (Confraternity of Our Lady) at St Jan in 's-Hertogenbosch from November 1484 until early in 1488. He was appointed succentor of St Donatian in Bruges on 20 April 1491, but did not take up the post until 1 December 1492. On 26 June 1493 he was found negligent and threatened with dismissal. During a short leave of absence in 1495, Jheronimus travelled back to 's-Hertogenbosch, where he sang several times with his former colleagues. On 16 August 1497 the canons of St Donatian relieved him of his duties. In 1499–1500 Jheronimus may have served as interim choirmaster at the church of Our Lady in Antwerp, replacing Jacob Obrecht. He also apparently spent some time at Chartres Cathedral. On 5 August 1500 he joined the chapel of Philip the Fair of Burgundy, but from 26 June until 1 November 1501 he may have been a cleric of the collegiate church of Our Lady in Bruges. Later that year he travelled with the duke to Spain; when the party was at Lyons on 25 March 1503, he was still alive. The only work that can be securely attributed to Jheronimus is the four-voice motet *Festi vitatem dedicationis* (in RISM

1505[2], ed. in SCMot, iii, 1991). The four-voice *Missa 'Et super nivem dealbabor'*, a cantus-firmus mass based on the chant *Asperges me*, is attributed 'De clibano' in its only source (*I-Rvat* C.S.51) and may therefore be by either Jheronimus or his father Nycasius.

STANLEY BOORMAN/ERIC JAS

Clibano, Nycasius [Nicasius, Casijn] **de** (*fl* 1457–97; *d* 's-Hertogenbosch, 9–14 Oct 1497). ?South Netherlandish singer and composer, father of JHERONIMUS DE CLIBANO. In 1457 he became a singer of the Illustre Lieve Vrouwe Broederschap (Confraternity of Our Lady) at St Jan in 's-Hertogenbosch; he served there for the rest of his life. He married in 1458–9, but when he became a sworn member of the confraternity in 1466–7 he was already designated *clericus*. In 1472–3 he read his first mass and from 1474–5 he served as chaplain to the confraternity. In the 1460s he journeyed to Antwerp and Cambrai to recruit new singers and was rewarded for copying and composing polyphony. He was appointed *sangmeester* in 1493–4, a position in which he was succeeded after his death by Matthaeus Pipelare. Another son of Clibano, Jan (not known as a composer), was a singer of the Marian confraternity from late 1506 until April 1516. The only work that can be securely attributed to Nycasius is a four-voice *Credo Vilayge* (in *CZ-HKm* II A 7; *D-Mbs* 3154; *I-Rvat* C.S.51, *TRmp* 89, *VEcap* 761; RISM 1505[1]; ed. in EDM, 1st ser., lxxx, 1987, pp.273–84), which must have been composed before 1475. The four-voice *Missa 'Et super nivem dealbabor'*, headed 'De clibano' in its only source (*I-Rvat* C.S.51), may be by either Nycasius or his son Jheronimus.

Cliburn, Van [Lavan, Harvey, jr] (*b* Shreveport, LA, 12 July 1934). American pianist. Until he was 17, when he went to Rosina Lhévinne at the Juilliard School of Music, New York, his only teacher was his mother, herself a Friedheim pupil. He made his recital début at four; at 13 won a competition in Texas, by then the family's home, which secured him an engagement with the Houston SO; and the following year played in Carnegie Hall as winner of the National Music Festival Award. His talent was consistently recognized: he won the Dealey Award and the Kosciuszko Foundation's Chopin prize in 1952, the Juilliard concerto competition in 1953 and Roeder Award in 1954 and, most important, the Leventritt Award later that year. But in spite of the prizes and occasional appearances with major orchestras, he was little known when he won the International Tchaikovsky Competition in Moscow in April 1958. It was six months after the launching of *Sputnik*, and the USA was ready for a victory in Russia, even that of a classical pianist; when Cliburn came home, he was welcomed by a New York ticker-tape parade.

In his early career Cliburn was admired for the completeness of his technical command and for his massive, unpercussive tone. Even more remarkable was his musical taste, which, although it could produce rather distant performances of Mozart and Beethoven, gave his playing of the Romantic repertory an extraordinary character of grandeur combined with both chastity and warmth, as his 1958 recordings of the Tchaikovsky B♭ minor and Rachmaninoff D minor concertos reveal. His live recording of Rachmaninoff's Second Sonata, in the rarely played 1913 version, is rapturous. From the mid-1960s it seemed that he could not cope with the loss of freshness caused by his relentlessly commercial career: his repertory was restricted; his playing, always guided primarily by intuition, took on affectations; and the sound itself became harsher. In 1964 he began to conduct, but this was not followed up. Following a prolonged sabbatical Cliburn has returned to the concert platform with only mixed success. In 1962 he established a Van Cliburn International Piano Competition in Fort Worth, Texas. (A. Chasins: *The Van Cliburn Legend*, New York, 1959)

MICHAEL STEINBERG/R

Clicquot. French family of organ builders.

(1) Robert Clicquot (*b* Reims, *c*1645; *d* Paris, 21 July 1719). He was introduced to organ building by his brother-in-law Etienne Enocq, who in 1654 married Jacquette Clicquot at Reims after he had rebuilt the organ of the cathedral (1647). Robert was called to Paris by Enocq to work on the organ of the chapel at Versailles, and was appointed 'facteur d'orgues du Roy', a post held by successive members of the family. After the death of Enocq (1682) and of his protector Colbert (1683), he worked mainly in the provinces where he built or rebuilt several large organs (St Jean-des-Vignes, Soissons, 1680–82; Rouen Cathedral, 1689–92 – there he was particularly praised by Jacques Boyvin). As partner of Alexandre Thierry, who was also the godfather of his son (3) Louis-Alexandre, Clicquot built the huge organ of the collegiate church at Saint Quentin. After Thierry's death (1699) Clicquot took his place as the leading organ builder in Paris. He built the organ of Blois Cathedral (1699–1704) and with the help of Julian Tribuot he built the definitive organ in the great chapel at Versailles (1710–11); the case of this instrument is still extant. He also worked on the organs of Laon Cathedral (1714), Saint Germain-en-Laye (1715) and the Palais des Tuileries (1719). As none of his organs survives it is impossible to judge his work today; but he was reputed to be the best French organ builder between 1700 and 1720.

(2) Jean Baptiste Clicquot (*b* Reims, 3 Nov 1678; *d* Paris, 16 March 1746). Son of (1) Robert Clicquot. He learnt organ building first with his father, then as a partner of Alexandre Thierry. As master, he worked in

the provinces (Laon, 1714), and specialized in building organ parts or pipes for other organ builders, including his brother.

(3) **Louis-Alexandre Clicquot** (*b* Paris, *c*1684; *d* Paris, 25 Jan 1760). Son of (1) Robert Clicquot. Like his father he was organ builder to the king. He always remained a modest workman and built small organs; those at Rozay-en-Brie (1730) and Houdan (1734), carefully restored, still exist. He undertook instruments for bigger buildings only when his son (4) François-Henri Clicquot could help him.

(4) **François-Henri Clicquot** (*b* Paris, 1732; *d* Paris, 24 May 1790). Son of (3) Louis-Alexandre Clicquot. As early as 1751 he helped his father with the maintenance or building of larger organs such as that at St Roch, Paris (ordered from his godfather, F.H. Lescloppe, and possibly planned by the French-German organ builder K.J. Riepp). This instrument, with four manuals and 35 stops, was completed by François-Henri himself; it was acknowledged as a masterpiece, and established his reputation. When his father died he soon took charge of the workshop. First he completed the organ of St Louis, Versailles, which won the praise of Louis XV. The number of instruments he maintained quickly increased. Like his father, he became accountant to the guild of instrument makers (1765). His work then consisted mainly of modernizing famous 17th-century instruments (notably Parisian organs, such as that of St Gervais), using parts of the old materials (wood pipes, cornets etc.) and building new front pipes, principals, mixtures and especially reeds. Around 1771 he used tin for all stops (St Thomas-d'Aquin; Ste-Chapelle, now in St Germain-l'Auxerrois), but later seems to have reverted in part to the use of lead. Nevertheless his descant Flûte and Echo flûte (instead of the classical Cornet), always of tin, are especially beautiful. His reed stops were always much praised, both the Bombardes and Trompettes and the Hautbois, which he said was his own invention; he often installed it free of charge. He also made use of the Bassoon, an innovation of his brother-in-law Adrien Lépin, though probably an import from Germany. He never removed the *pleins jeux* as did his pupil Dallery (the citation of St Nicolas-des-Champs, Paris, as an example of this procedure is a misinterpretation). The famous organ theorist Bédos de Celles praised him warmly in the preface to *L'art du facteur d'orgues* (1766–8), as did such renowned organists as Daquin, A.-L. Couperin, Balbastre, Séjan etc. Between 1770 and his death he overshadowed other Parisian organ builders and ventured into the provinces, especially in northern France and even in Normandy, the territory of his rival J.-B.N. Lefèvre. He remorselessly examined Lefèvre's work in Evreux Cathedral, describing it as an 'ouvrage saveté', and forbade him to work further on the maintenance and repair of this organ. The greatest instrument built by François-Henri Clicquot was that at St Sulpice, Paris (1781), where three manuals of the five had a range from *A′* to *e‴*; it had 64 stops, 22 of them reeds. Many old organs contain his original stops, but the best preserved of his instruments are at St Gervais, Paris (1768), St Nicolas-des-Champs, Paris (1773–7), Souvigny (1782) and Poitiers Cathedral (1787–90), this last being the one most nearly in original condition. Clicquot used it to illustrate a projected treatise (*Théorie pratique de la facture d'orgues*, facs. ed. J. Martinod, Kassel, 1969), which was unfinished at his death, and from which only carefully engraved diagrams of the reed stops are extant.

The work of François-Henri Clicquot represents the climax of the French classical organ-building tradition, the principles of which he maintained with sobriety and technical assurance. Nevertheless, he also did research on new specifications for the *plein jeu*, differing from the tradition of Bédos de Celles. During the 19th century he was the only classical French builder whose name lived on.

(5) **Claude François Clicquot** (*b* Paris, 1762; *d* Paris, 29 March 1801). Son of (4) François-Henri Clicquot. He was apprenticed by his father to several organ builders at the end of the 18th century (Dallery, Isnard, Micot etc.); eventually he succeeded his father and completed his unfulfilled contracts, as at Poitiers Cathedral (1790). During the first part of the Revolution he rebuilt some organs removed from suppressed churches, including St Eustache and St Jacques-du-Haut-Pas, Paris, and Soissons Cathedral; he repaired many others (e.g. St Merry, Paris). Soon he abandoned organ building for the purveying of Buonaparte's armies, as did his two brothers. The family Clicquot de Mentque derived from them.

PIERRE HARDOUIN

Clidat, France (*b* Nantes, 22 Nov 1932). French pianist. She studied with Lazare Levy at the Paris Conservatoire, where she received a *premier prix* in 1950. In 1956 she won sixth prize at the Liszt Competition in Budapest, and since that time has enjoyed an international career, primarily as a Liszt specialist. Her recordings include a comprehensive survey of Liszt's piano works, which she began in the late 1960s and for which she received a Grand Prix du Disque. In this repertory, as well as in recordings of concertos of Grieg and Rachmaninoff, her playing is marked by a striking combination of bravura, colour and freedom. She is also an active champion of the music of Satie, bringing to it much intimacy and humour. She has taught at the Ecole Normale de Musique in Paris, and was made a Chevalier des Arts et des Lettres in 1976 and a Chevalier de l'Ordre National du Mérite in 1987.

CHARLES TIMBRELL

Cliff, Jimmy [Chambers, James] (*b* Somerton, St James, 1948). Jamaican reggae singer. He moved to Kingston at the age of 13 and began to follow the city's mobile sound systems, hoping for a chance to sing. He made his first recording *Daisy got me crazy* for Count Boysie in 1962 and later that year had his first hit single with *Dearest Beverley* which was recorded for the producer Leslie Kong. In 1965 Cliff emigrated to Britain, settling in London. He formed a band which became a popular nightclub act in Europe. He recorded several singles for Island Records, trying to assume a more cosmopolitan

soul style. During this period he wrote *Many Rivers to Cross* (1968), an emotional ballad about privation and survival. After a six-month visit to Brazil, Cliff wrote the shining tribute to that country's mélange of race and colour, *Wonderful World, Beautiful People*, which became his first international success. In 1969 he recorded his protest song *Vietnam*, in which a mother reads a telegram informing her that her son has been killed; at the time Bob Dylan called it the best protest song of the era. Cliff performed the lead role in the film *The Harder they Come* (1972), a musical drama set in the Kingston slums that helped to bring Jamaican reggae to an international audience. His original compositions for the film, *You can get it if you really want, Sitting in Limbo* and the title song, established him as one of the leading stars of the reggae movement. His hard, clear, high voice and pop-inflected vocal style, as well as his Muslim faith, set him apart from the mainstream of Jamaican reggae singers who came to prominence in the 1970s. He continues to record and tour, particularly in Africa and Japan.

STEPHEN DAVIS

Cliffe, Frederic (*b* Lowmoor, nr Bradford, 2 May 1857; *d* London, 19 Nov 1931). English pianist, organist, composer and teacher. Cliffe's musical gifts were evident early in life: he was an accomplished pianist at the age of six and a church organist when he was 11; at 16 he was organist to the Bradford Festival Choral Society. In 1883, after studying at the National Training School of Music, he joined the piano teaching staff of the RCM, where his pupils included John Ireland and Arthur Benjamin. Three of Benjamin's operas were settings of librettos by Cliffe's son Cedric (1902–69). Frederic Cliffe also taught at the RAM and travelled extensively as a solo pianist, accompanist and examiner. He was organist to the 1886 Leeds Festival when Sullivan's *Golden Legend* was produced and Bach's B minor Mass was first performed in Leeds, Cliffe having arranged the organ part. In London he was organist to the Bach Choir (1888–94) and to several principal theatres. His compositions, including two symphonies and a violin concerto, were very highly esteemed early in his career, but he ceased composing after about 1905 and long outlived his reputation as a composer.

GUY WARRACK

Clifford, James (*b* Oxford, bap. 2 May 1622; *d* London, Sept 1698). English divine. He was a chorister of Magdalen College, Oxford, from 1632 until 1642. On 1 July 1661 he was appointed a minor canon of St Paul's Cathedral, London, and by 1682 had become senior cardinal. In 1663 he published a book of anthem texts entitled *The Divine Services and Anthems usually sung in His Majesties Chappell, and in all Cathedrals and Collegiate Choires in England and Ireland*, 'that the people may follow the Choire in their Devotions without any loss or mistake'. Evidently the book met a need, for a greatly expanded edition followed in 1664. Both editions include 'briefe Directions for the understanding of that part of the Divine Service performed with the Organ … on Sundays and Holydayes'; the second edition provided, in addition, not only the texts of many more anthems, but also a selection of chants for psalms and canticles. As evidence of the cathedral repertory and the way it expanded in the early years of the Restoration, the books are invaluable; likewise as a demonstration of the continuity of musical tradition despite a break of some 15 years following the suppression of choral services in 1644. A great deal of Elizabethan and Jacobean church music survived the destruction of the Civil War, and although the second edition refers to music by Restoration composers, many of the anthems that were added date from before 1644.

PETER LE HURAY/IAN SPINK

Clifford, Raoul. Pseudonym of KETÈLBEY, ALBERT W(ILLIAM).

Clifton, Arthur. *See* CORRI family, (4).

Climacus (from Gk. *klimax*: 'ladder'). In Western chant notations, a neume signifying three notes in descending order. It was often written as a *virga* (upright stroke) with *puncta* (dots) falling away to the right, a form known as *virga subbipunctis*. (For illustration *see* NOTATION, §III, 1(ii), Table 1; see also M. Huglo: 'Les noms des neumes et leur origine', *EG*, i, 1954, pp.53–67.)

DAVID HILEY

Climen, J. de (*fl c*1430). Composer. His name was recorded in the manuscript *F-Sm* 222 (now destroyed) as the composer of a two-voice canon. It is labelled 'Fuga trium temporum' in Coussemaker's copy of the manuscript. A 'J. Cornelius' added a tenor to this duo. Climen is possibly identifiable with JACOBUS DE CLIBANO, or otherwise with CLEMENT LIEBERT. (See also C. van den Borren: *Le manuscrit musical 222 C 22 de la Bibliothèque de Strasbourg*, Antwerp, 1924.)

TOM R. WARD

Cline, Patsy [Henley, Virginia Patterson] (*b* Winchester, VA, 8 Sept 1932; *d* Camden, TN, 5 March 1963). American country singer. By the age of 10 Cline was obsessed by country music and, according to her mother, 'never wanted anything so badly as to be a star on 'The Grand Ole Opry''. She left school at 15 and married Gerald Cline, who took her to Nashville, where radio work led to a recording contract. Several classics emerged from the period, among them *Three Cigarettes in an Ashtray* and *I've loved and lost again*. In 1957 she won a TV talent show with the song *Walkin' after Midnight*, which became her first hit and properly launched her career. She finally joined the Opry cast in 1960, the year she recorded what would be her most enduring song, *I fall to pieces*. It was producer Owen Bradley who perfected the Cline sound, adding strings, backing vocals and a touch of echo to enhance a voice that wrung the last drop of emotion from every lyric. Always well-controlled, her voice was mannered, but effectively so, and though her sound was unmistakably country she was able to enjoy success in the pop charts.

Cline's short life and career is emblematic of country music and, more than thirty years after her death in a plane crash, her influence is still felt: the work of Canadian singer and songwriter k d lang is one recent example. Cline recorded some 120 songs, leaving her indelible stamp on many that went on to become oft-revived country classics. Her posthumous hit *Sweet Dreams*, for example, has been covered by such diverse artists as Don Everly, Emmylou Harris and Elvis Costello. The song later gave its name to a film of Cline's life based on Nassour's biography. On the tenth anniversary of her death she was the first solo woman performer to be elected to the Country Music Hall of Fame.

LIZ THOMSON

Clinio [Clingher], **Teodoro** (*b* Venice; *d* Venice, 1602). Italian composer. He was a canon regular, a member of a Venetian order called the Lateranesi di S Salvador; he seems to have spent most of his working life at Treviso. He served the cathedral there as *maestro di cappella* during three periods, 1584–5, 1592–7 and from 1599 to about 1601. He probably did not leave Treviso, at any rate during the first gap in this service, since from 1586 to 1590 he was a chaplain at the monastery of S Parisio there. His two known publications appeared during his second period of employment at the cathedral. A manuscript source (in *I-Bc*; see *GaspariC*, ii, 202) suggests – if it is accepted that the composer referred to in it as 'D. Theodoro Clingher ... ven.' is in fact Clinio – that at some point he was in the service of Archduke Ferdinand of Austria. His surviving output is entirely sacred, and he is a true child of the Venetian school in that his music is predominantly for six or more voices and often polychoral. D'Alessi (music suppl., pp.35, 41) printed (presumably from manuscripts now destroyed) two pieces, *Adoramus te, Domine* and *O bone Jesu*, for eight voices split into two contrasting choirs. Both are thoroughly Venetian in style. *O bone Jesu* employs expressive harmony (e.g. an augmented chord outlining a progression to the flat side at the words 'In hora mortis' in the second choir), contrasting triple-time sections, varying speeds of choral exchange and a sonorous final tutti; *Adoramus te* is more florid, with longer passages for single choirs and a little syllabic imitation.

ANTHONY F. CARVER

Clinis. *See* CLIVIS.

Clinton, George (*b* Kannapolis, NC, 22 July 1941). American funk singer, songwriter and producer. He was leader of Funkadelic, Parliament and the P-Funk All-Stars. By the age of 11 his family had moved to Newark, New Jersey. When he was 14 he formed a doo wop group which he named the Parliaments after a popular American cigarette brand. The Parliaments recorded singles in the 1950s for the New York-based Hull and Flipp labels. During the 1960s they recorded in the vocal group mode of the Temptations: for Detroit's Golden World and Revilot labels. They had a hit in the summer of 1967, with *(I Wanna) Testify* (Revilot).

In 1969 Clinton lost the rights to the name 'The Parliaments' and consequently signed their backing instrumentalists to Westbound records, as Funkadelic. When he regained the rights in 1971 he signed the vocal group to Invictus records under the name Parliament. However, in reality the same musicians appeared on recordings made by both groups. Clinton continued this arrangement and signed a number of associated groups to a variety of labels. He wrote and produced for Bootsy's Rubber Band, Fred Wesley and the Horny Horns, the Brides of Funkenstein and Parlet among many others. In essence the Funk Mob, as the ever-growing retinue of musicians was informally known, performed on all the records by these groups. Among its members were Eddie Hazel (guitar) and Bernie Worrell (keyboards) and former JBs Bootsy Collins (bass guitar), Maceo Parker (alto saxophone) and Fred Wesley (trombone).

At first, Funkadelic, as their name suggests, were heavily influenced by developments in psychedelic music, as can be heard on the albums *Free your mind and your ass will follow* (Westbound, 1970) and *Maggot Brain* (Westbound, 1971), while Parliament continued to be a more overtly soul and then funk-influenced outfit. However, by the mid-1970s it became increasingly difficult to discern any notable difference in approach to the recordings released under either name. Collectively, Parliament/Funkadelic became the most important funk ensemble in the second half of the 1970s, recording such hits as 1976's *Tear the Roof off the Sucker (Give up the Funk)*, 1978's *Flash Light* and *One Nation Under a Groove* and 1979's *Aqua Boogie (A Psychoalphadiscobetabioaquadoloop)* and *(not just) Knee Deep*. As a solo artist, with many of the same musicians, Clinton had a number of hits in the 1980s, most notably *Atomic Dog* (1983) and *Do fries go with that shake* (1986).

From the 1970s until the 1990s Parliament/Funkadelic were legendary for three- to four-hour performances that often involved elaborate sets including the Mothership, a spaceship that was an integral part of a complex funk cosmology developed by Clinton over several albums. While their audience was primarily limited to African-Americans in the 1970s and early 1980s, Clinton's music was extensively sampled by rappers in the late 1980s and 1990s and consequently became increasingly venerated by a more widespread multiracial youth. Parliament and Funkadelic have had an immense influence on a host of subsequent funk bands, rap groups and alternative rock bands.

ROB BOWMAN

Clinton, George Arthur (*b* Newcastle upon Tyne, 16 Dec 1850; *d* London, 24 Oct 1913). English clarinettist. He was the son of Arthur Clinton, a bandmaster and clarinettist. At the age of 17 he was appointed to Queen Victoria's private band and moved with his family to London. He became a brilliant player, with a clear solid tone and an immaculate technique. His brother James (1852–97) was as good a player, but lacked ambition. George Clinton became principal clarinettist for the Philharmonic Society in 1873 and at the Crystal Palace in 1874. He appeared frequently as soloist in concertos by Mozart, Weber and Spohr, and in the 1890s formed the Clinton Wind Quintet with Frederick Griffith, William Malsch, Thomas Wotton and Friedrich Borsdorf. In 1900 he left the royal band and in the same year joined the staff of the RAM and of Kneller Hall. He also taught at Trinity College, London, from 1892 to 1912.

George Clinton first used a Barret system clarinet; later he added Boehm improvements to the lower joint and marketed instruments under the name Clinton-Boehm. He preferred ebonite to wood. James Clinton produced a Combination-Clarinet which could be changed from B♭ Philharmonic, through B♭ diapason normal to A Philharmonic pitch by lengthening all three joints; the mechanism was returned to B♭ Philharmonic pitch by means of a spring. A company was formed to promote it, with Arthur Sullivan as chairman. Although a patent was granted in 1898, after James's death, and instruments were made by Jacques Albert in both Albert and Boehm systems, it met with little success.

Cliquet-Pleyel [Cliquet], **Henri** (*b* Paris, 12 March 1894; *d* Paris, 9 May 1963). French composer. He studied composition with Gédalge and harmony with Koechlin at the Paris Conservatoire. Between the wars he was constantly active in the turbulent musical life of Paris, as a participant in the concerts of Les Six and as a member of the 'Ecole d'Arcueil'. His music of the 1920s, often vigorously polytonal and using elements of jazz, has undeniable interest, though in later years he turned towards a more mainstream neo-classical style.

RICHARD COOKE/JEREMY DRAKE

Cliquettes [tablettes] (Fr.). Medieval (and later) French term for CLAPPERS.

Clive [née Raftor], **Kitty** [Catherine] (*b* London, 15 Nov 1711; *d* Twickenham, 6 Dec 1785). Anglo-Irish soprano and actress. She received musical instruction from Henry Carey and in 1728 became a member of the Drury Lane company, until 1743, when she moved to Covent Garden for two unhappy seasons, returning to Drury Lane until her retirement from the stage in 1769. She sang in the first performance of Arne's *Alfred* at Cliveden in 1740 and in De Fesch's oratorio *Joseph* at Covent Garden in 1745. In 1733 she had married George Clive, a barrister, but the couple separated two years later. She had many literary friends, including Fielding, Johnson, Goldsmith, Garrick and Horace Walpole, on whose estate at Little Strawberry Hill she lived from about 1754. In character she was generous and loyal but quick tempered and sharp tongued.

Kitty Clive made her reputation in ballad opera. She enjoyed sensational success in Cibber's *Love in a Riddle, or Damon and Phillida* (1729), Coffey's *The Devil to Pay* (1731), and as Polly in *The Beggar's Opera* (1732), appearing for many years in these and similar pieces. She also sang in stage works of a more serious character, by Arne (including *Comus*, *Rosamond* and *The Judgment of Paris*), Lampe, Galliard and Boyce. She played many parts in Shakespeare and Restoration comedies, including specially composed songs, and sang regularly between acts, including music by Purcell and Handel, who composed songs for her and engaged her for his oratorio

Kitty Clive: mezzotint by Alexander van Haecken after Joseph van Haecken

season in 1743. He wrote the part of Dalila in *Samson* and an arioso in *Messiah* for her (compass *c′* to *a″*). She also sang in *L'Allegro*. She was a great comic actress, especially in what were called 'singing chambermaid' parts. She played 'country girls, romps, hoydens and dowdies, superannuated beauties, viragos and humourists', and was a brilliant mimic, of Italian opera singers in particular. According to Burney, 'her singing, which was intolerable when she meant it to be fine, in ballad farces and songs of humour was ... every thing it should be'.

WINTON DEAN

Clivis [clinis, clivus, flexa] (from Lat. *clivus*: 'slope'; Gk. *klinō*: 'I bend'). In western chant notation a neume signifying two notes, the second lower than the first. Its shape often resembles that of the oratorical circumflex accent, from which it is probably derived. (For illustration *see* NOTATIONS, §III, 1(ii), Table 1; see also M. Huglo: 'Les noms des neumes et leur origine', *EG*, i 1954, pp.53–67.)

DAVID HILEY

Cloche (Fr.). *See* BELL (i). The plural *cloches* in orchestral scores generally denotes TUBULAR BELLS or chimes and the diminutive *clochette* a HANDBELL. The term *cloches à vache* signifies COWBELLS.

Cloches (Fr.). *See* TUBULAR BELLS.

Cloches à vache (Fr.). *See* COWBELLS.

Clochette (Fr.). *See* HANDBELL.

Cloete, Johan(nes Nicolaas) (*b* Moorreesburg, Western Cape, 17 Nov 1957). South African composer. He studied at the universities of Cape Town (BMus 1980, MMus 1985) and Stellenbosch, Western Cape. His compositions are written in a wide range of genres, including sacred works (*Missa brevis I*, 1991; *Te Deum*, 1993; *White Mass*, 1993), chamber music (*Ritual*, 1981) and pieces commemorating Schubert's birth (*FRASCH 1–3*, 1996; *Doppelgänger*, 1996). He has also composed orchestral pieces (*Celebration*, 1986; *Festival*, 1988) and incidental music for Shakespearean productions staged in Cape Town. A strong vein of mysticism in Cloete's music gives his works a distinctive character despite their recognizable quotation of material by composers such as Tchaikovsky and Schubert. His fascination with the occult, the surreal and the other-worldly is balanced by a disciplined intellectualism, creating a style that is both intuitive and cerebral. Sacred works display an almost obsessive reprise of themes, while others (*FRASCH 1–3*, 1996; *SPOOK*, 1996–7) are full of melodic grace. Later compositions include an opera inspired by Antoine de St Exupéry's *Le Petit Prince* (1997–9), a story about a child whose world-view is a lesson to adults; its theme unites both threads of his compositional inspiration. He is the subject of the South African Broadcasting Corporation television documentary *Back to Moorreesburg* (1992). (CC, A. Botha)

Closing group. *See* SUBJECT GROUP.

Closson, Ernest (*b* Brussels, 10 Dec 1870; *d* Brussels, 21 Dec 1950). Belgian musicologist. He was self-educated in both music and musicology, and worked at the Museum of Musical Instruments at the Brussels Conservatory, first as assistant curator (1896–1924) and then in succession to Victor-Charles Mahillon, the museum's founder, as chief curator (1924–35). Concurrently he was professor of music history at the conservatories of Brussels (1912–35) and Mons (1917–35), and a regular music critic for *Indépendence belge* (1920–40).

Closson's enormous output of books and articles reflects an open, independent and receptive mind, yet without any touch of naivety; his boundless enthusiasm was tempered by a proper appreciation of the importance of supporting speculation by fact. This is evident, for instance, in the exhaustive documentation of his study of Beethoven's Flemish inheritance (1928). A preoccupation with Flemish or Belgian music informs many of his other writings (e.g. his monographs on César Franck, Lassus, Grétry and Gevaert), his anthology of popular Belgian songs (1905), and his monograph *Les noël wallons* (1909). Closson also wrote authoritatively on the basse danse; in his last years an abiding interest in organology culminated in a history of the piano (1944). Besides being an important popularizer of music in Belgium he was influential in securing the recognition of musicology as a serious academic discipline in Belgian universities, and in having it introduced as a degree course in 1931.

Clostre, Adrienne (*b* Thomery, 9 Oct 1921). French composer. She studied at the Paris Conservatoire, where her teachers included Yves Nat for piano, Messiaen for analysis and aesthetics, and Milhaud and Jean Rivier for composition. She was awarded the Prix de Rome for her cantata *La résurrection de Lazare* in 1949, since when she has dedicated herself exclusively to composition, winning the Grand Prix Musical de la Ville de Paris in 1955 and the Prix Florence Gould in 1976, as well as the Grand Prix de la Musique of the Société des Auteurs et Compositeurs Dramatiques in 1987.

Clostre has found her inspiration above all in extra-musical sources – visual and, more especially, literary – and composing for the theatre has naturally become her preferred medium. She has endeavoured to go beyond narrative to produce a kind of 'theatre of the soul', in which dramatic action is transcended in favour of a musical trans-figuration of the inner, metaphysical quest of the characters. Many of her librettos drawn on personal diaries and private letters. A technique essential to achieving the necessary sincerity of expression, and one already evident in *La résurrection de Lazare*, has been the gradual replacement of the normal vocal line by declamation and the spoken word; this development began to blossom in *Nietzsche* (1972–5) and found its culmination in *L'albatros* (1986–8).

Clostre's musical language, generally atonal but free from any rigid system, relies primarily on melody and rhythm; her formal structures of juxtaposed sequences favour a contrasting and ever-changing compositional style. Though her music is constantly evolving, there are nevertheless occasional moments of respite – in the form of chorales, where all the harmonic ideas are concentrated, as if to stop time momentarily. Clostre showed herself to be ahead of her time when in 1970 she introduced into her Oboe Concerto (1970) quarter-tones, multiphonics and multiple trills, instrumental techniques that were then barely known in France. Her latest works have tended towards an increasingly austere style.

WORKS
(*selective list*)

Stage: Le chant du cygne (chbr op, 1, A. Clostre, after A.P. Chekhov), 1960; Julien l'apostat (drame lyrique, 8 scenes, Clostre, after H. Ibsen), 1970; Nietzsche (action Musicale, 12 scenes, after F. Nietzsche), 1972–5; 5 scènes de la vie italienne (Clostre), 1980; Le secret (lecture musicale, S. Kierkegaard), 1981; Romans, 1983; L'albatros (action dramatique, 9 scenes, Clostre, after C.P. Baudelaire), 1986–8; Annapurna (action musicale, 7 scenes, Clostre, after M. Herzog), 1988

Principal publishers: Billaudot, Choudens, Editions Transatlantiques

FRANÇOISE ANDRIEUX

Clowes. English firm of printers. It was established in London in 1803 by William Clowes the elder (1779–1847) and achieved success by making accuracy, speed and quantity its chief goals; periodicals and official reports as well as books and catalogues (from 1820 produced by steam machinery) were an important part of its output. By 1843 it operated the largest printing works in the world, with 24 presses, its own type and stereotype foundries, and 2500 tonnes of stereo plates and 80,000 woodcuts in store. It executed major works for the Royal Academy of Arts, the Society for the Diffusion of Useful Knowledge, the Great Exhibition and the British Museum (*General Catalogue of Printed Books*, 1881–1900).

William Clowes's achievement in music printing rests on his advocacy of musical typography at a time when engraved-plate methods predominated. Aiming specifically for the increased efficiency and lower unit costs of type-printed music in large edition sizes, he effected real improvements in this method (better clarity, a more precise junction of staff lines), issuing as his pilot projects, for a variety of publishers, *The Harmonicon* (1823–33), the *Musical Library* (1834–7) and *Sacred Minstrelsy* (1834–5). These serial ventures broke new ground in the marketing of serious music and musical literature in England. The firm's most successful music publication has been *Hymns Ancient and Modern*, first brought out by Novello in 1861; taken over by Clowes in 1868, it reached a sale of more than 100 million copies by 1935. In 1999 they were contracted to typeset the second edition of *The New Grove Dictionary of Music and Musicians*.

LEANNE LANGLEY

Clozier, Christian (*b* Compiègne, 25 Aug 1945). French composer. He studied at the GRM in Paris, then joined with Alain Savouret to found Opus N., a group exploring improvisation associated with electro-acoustic processes. In 1970 he and Françoise Barrière created GMEB (Groupe de Musique Expérimentale de Bourges), with which he developed new techniques of diffusion and interpretation for electronic music ('le Gmebaphone' and 'les Antonymes'). In particular, these devices are based on the spatialization of acoustic sources, as is 'le Gmebogosse', a piece of equipment intended to make electro-acoustics accessible to children. In 1971 he and Françoise Barrière founded Synthèse, the International Festival of Electro-Acoustic Music at Bourges.

One of Clozier's most important compositions is *La Discordatura* (1970), a 'concrète-suite' derived from manipulated violin sounds, and he has realized several works of music theatre, including an 'opéra concret' *A vie* (1971).

WORKS
(selective list)

Spectacles musicaux: A vie (concret-op), 1971; Les saisons, 1972; Sonolourde, 1973; Jardin d'hiver, 1974; Le Tour de France par 2 enfants, 1978; Les accords d'Helsinki, 1980; Popov à Branly, 1982; Ainsi passant des siècles la longueur, surmontera la haulteur des estoiles, 1986; Cerfs, vous avez franchi l'espace millénaire, des ténèbres du roc aux caresses de l'air, 1987; Mon nom sous le soleil est France, j'amènerai la liberté, 1987; Chambord, et chaque pierre fée, se sent un poids nouveau qui vers l'azur délire, 1988; Une plainte inouïe appelle éblouissants les hauts murs d'or harmonieux d'un sanctuaire, 1988; Ouvrage pur d'une éternelle cause, le temps scintille et le songe est savoir, 1988; Semons l'homme et qu'il soit peuple, semons la France et qu'elle soit humanité, 1989; Et l'ombre passe d'une voile aux lisières du songe, 1991

JEAN-YVES BOSSEUR

Cluer, John (*b* ?London, late 17th century; *d* London, Oct 1728). English music printer and publisher. As early as 1715 he was active in London as a general printer whose production included ballads, chapbooks, labels and shopkeepers' signs. He soon turned to music printing and issued some of the best engraved music of his period. A considerable innovator, he experimented with new methods of printing both from engraved plates and from music types. Beginning with the printing of the *Suites de pièces pour le clavecin* in 1720, Cluer had business relations with Handel, publishing in score nine of his operas, the first being *Giulio Cesare* in 1724, which was issued in the unusual format of a large pocket-size volume. Both this and the later operas are remarkable for their finely engraved title-pages and frontispieces. Other notable publications issued by Cluer include the two volumes of *A Pocket Companion for Gentlemen and Ladies* (1724–5). These small engraved songbooks were published by subscription, and about 1000 copies of each volume were sold, the most successful venture of its kind for many years. Imitators soon followed Cluer's lead in this and other ideas such as issuing packs of playing-cards with a song printed on each card.

Cluer was associated with the bookseller Bezaleel Creake whose name appears in some of the imprints. Thomas Cobb was employed by Cluer as an engraver and, on his marriage to Cluer's widow Elizabeth in 1731, succeeded to the business. In 1736 the concern was purchased by Cobb's brother-in-law and associate, William Dicey of Northampton, for himself and for his son Cluer Dicey, who managed it until 1764.

FRANK KIDSON/WILLIAM C. SMITH/PETER WARD JONES, DAVID HUNTER

Cluj-Napoca. Town in Transylvanian Romania. It was known during Roman times as Napoca, and subsequently as Castrum Clus (12th century), Civitas (1337), Oraş (1407) and, under Austro-Hungarian rule, Klausenburg (Hung. Kolozsvár). The Romanian name Cluj was used from 1918, when Transylvania became part of Romania, until 1975, when the name Cluj-Napoca was officially adopted.

As the cultural centre of central Transylvania, Cluj, located on the Someşul Mic river, won European repute during the 16th century with its three faculties (1571) and the Heltai printing shop (1550), which published the collection of songs *Cronica* by Sebastyén Tinódi in 1554. During the 18th century Cluj had vaudeville and opera troupes (1792), renowned music teachers, some of whom came from as far away as Vienna or Budapest, and chamber music groups. In 1821 a theatre seating 1000 people was built; among works performed there were operas by Mozart, Rossini, Bellini and Verdi, as well as works by local composers, such as József Ruzitska (*Béla futása*, 1822) and Ödön Farkas (*Izvorul zînelor*, 1893, and *Ispăşitorul*, 1900). A music society founded in 1819 established a music school (a conservatory from 1837, the first in Hungary), which enriched the musical life of the town, and music printing, school music and performances by foreign musicians flourished in the 19th century. Among the virtuosos who visited Cluj were Liszt, Johann Strauss, Auer, Popper, Sarasate, Brahms, Joachim, Hans Richter, César Thomson and Ede Reményi; many Romanian musicians also appeared there, including Elisa Circa, Carl Filtsch, Ludwig Wiest, Matei Millo, Aron Bobescu and Mihail Pascaly.

During the 20th century musical activity expanded considerably with the foundation of the Romanian Opera House (1919), the Gheorghe Dima Conservatory (1919), the Cluj SO (1932), the Ardeal PO (1936–40), the Hungarian Opera (1948) and the State PO (1955). Among chamber groups are those of Károly Kollar, István Lakatos and Flor Brevimann, and the ensembles Ars Nova, Pro Camera and Capella Transilvanica. Other musical institutions are the Popular School of Music, the Music Lyceum (which has a fine children's choir), the High

School of Choreography, and numerous folk song and dance ensembles and choruses. The Scientific Research section of the Institute of Folklore and the Dacia Publishing House are in Cluj and it is the place of publication for the periodicals *Erdélyi zenevilág* ('Transylvanian musical world', 1907–14) and *Lucrări de muzicologie* (1965–).

Since 1968 the Toamna Muzicală Clujeană (Cluj-Napoca Autumn Festival), an international event, has taken place annually with the participation of leading orchestras (Dresden SO, Czech PO), choirs (Dresden Kreuzchor), conductors (János Ferencsik, Lawrence Foster, Václav Neumann) and soloists (Sviatoslav Richter, Virginia Zeani); the main purpose of the festival is the performance of new Romanian music. Among the many composers associated with Cluj in the 20th century are Dima, Negrea, Toduţă, Max Eisikovits, Ţăranu, Jarda and Bergel. European tours made by the Romanian Opera, the State PO, the Chamber Orchestra, Capella Transilvanica and Pro Camera have helped to establish the musical reputation of Cluj abroad. In 1990 the W.A. Mozart Music Society, which organizes exhibitions and musicology symposia, was founded by Laszló Ferenc.

VIOREL COSMA

Cluniac monks. In the Western Christian Church, an order of monks in a congregation affiliated to the abbey of Cluny in Burgundy. An offshoot of the Benedictines, this order was distinguished in the Middle Ages for the care it lavished on the performance of the liturgy.

1. History. 2. Cluniac manuscripts of Mass chants. 3. Cluniac manuscripts of Office chants. 4. General features of Cluniac chant.

1. History. Cluny was founded by William III, Duke of Aquitaine and Count of Auvergne, as a house of 12 monks directly under the protection of the pope; William placed it under the authority of Berno, abbot of Gigny and Baume, on 2 September 909. From this time until the mid-12th century, daughter Cluniac foundations were established, first in Burgundy and Auvergne, then in northern France and England, and finally in northern Italy and the Holy Roman Empire (see maps 47 and 48 in J. Martin: *Atlas zur Kirchengeschichte*, Freiburg, 1970, 2/1987). Most of these were near principal routes of communication, especially those leading to Santiago de Compostela. Five of the early abbots of Cluny were particularly responsible for the high reputation of the congregation, Odo (927–42; *see* Odo, §1), Mayeul (964–94), Odilo of Mercoeur (994–1048), Hugh of Semur (1049–1109) and Peter the Venerable (1122–57).

At the heart of Cluniac spirituality lay the solemn celebration of the monastic Divine Office and conventual Mass in buildings designed to reflect the splendour of God: three churches, each greater than the last, were supposedly built in succession at Cluny, the last of which, with proportions similar to those of S Pietro in Rome, permitted large-scale processions (see Conant). Two capitals in the choir of this third church – those closest to the high altar – bore representations of the eight Gregorian modes on their four faces (Chailley, 1985).

The monastic rules of Cluny played an important part in the history of Cluniac liturgy and served as the basis for other monastic rules in Italy and Germany. The *Statuta* of Peter the Venerable (1132) did not supersede earlier customs: besides additions and minor modifications, they served in part to eliminate liturgical inconsistencies and to ratify the adoption at Cluny of customs already in force in the monasteries of the congregation. Peter the Venerable also wrote the text for a special Office for the feast of the Transfiguration (6 August; ed. Leclercq, 1946); this was adopted in a number of other monasteries because of its devotional quality. Some proses and other texts composed by Peter in honour of the Virgin Mary did not achieve the same popularity; they are comparable to similar contemporary works by Abelard and, especially, Nicholas of Montiéramey, the secretary of St Bernard.

2. Cluniac manuscripts of Mass chants. The surviving liturgical manuscripts from Cluny represent a tiny proportion of an important collection: its scope is known from old catalogues (see Wilmart, 1914, 2075–83), archival documents, and records of the chapters-general of the order. (Wilmart, *op. cit*, 2083ff, discussed chiefly the lectionaries, homiliaries and missals from Cluny; on the manuscripts containing music, see Ferreira, 1997.) The liturgical books from Cluny were copied with Franco-Burgundian neumatic notation; this was not imposed on dependent monasteries, but was nevertheless used in those houses populated by French monks, as seen in the early 11th-century breviary-missal *I-Rc* 1907, from S Salvatore del Monte Amiata, near Siena (*see* Sources, ms, §II, 1; on the notation, see Hourlier, 1951, and Ferreira, 1997). Some dependent monasteries also retained distinctive local melodies: the gradual of St Martial de Limoges (*F-Pn* lat.1132), though copied after that abbey had become affiliated to Cluny in 1062, retained its diastematic Aquitanian notation and its distinctive series of melodies for the communions, with Gospel texts for Lent, although it adopted the Cluniac series of alleluia verses for Sundays in summer.

Another gradual with diastematic Aquitanian notation (*B-Br* II 3823, formerly Fétis 1172), once thought to have originated at Cluny, was compiled in the Clermont diocese (perhaps at the priory of Souvigny) in the early 12th century for the monastery of Sauxillanges (in Auvergne), where several additions were made to the kyriale and the proses (see Huglo, 1957). The oldest known gradual from Cluny itself is *F-Pn* lat.1087, dating from the last third of the 11th century (*see* Sources, ms, §II, 1); its notation includes modified neumes which correspond to the microtonal inflections recorded in the Dijon Tonary, *F-MOf* H 159. This gradual contains long melismas (*sequentiae*) associated at the end with the alleluias which, according to the *Consuetudines cluniacenses*, were sung at Cluny on Easter Day (*see* Gallican chant, §4; and see Hiley, 1993).

Other sources for the study of the Cluniac gradual are those from the following monasteries: Lewes (*GB-Cfm* 369, a late 13th-century noted missal and breviary; cf Leroquais, 1935, with eight facs. pls.; and Holder, 1985); Nogent le Rotrou (*F-LM* 23, an 11th-century missal, partly written at Cluny, with some neumes; cf Garand,

1976) and, additionally, Anchin (*F-DOU* 90, 12th century; cf *Le graduel romain*, ii, Solesmes, 1957, p.47); and St Maur des Fossés or Glanfeuil (*F-Pn* lat.12584, an 11th-century gradual, ff.127–209; tonary and antiphoner, ff.216*v* ff; cf M. Huglo: *Les tonaires: inventaire, analyse, comparaison*, Paris, 1971; and Renaudin, 1972). The latest source for the study of the additional Cluniac alleluias and proses is the Cluniac missal printed in 1493 in an edition of 3000 copies.

3. Cluniac manuscripts of Office chants. With regard to recent scholarship, the basic source for comparing the Office chants of Cluny with those of its affiliated monasteries has been a very fine 11th-century summer breviary with neumes (*F-Pn* lat.12601), brought to the monastery of St Taurin l'Echelle in Picardy and there supplemented with Lorraine staff notation; though formerly thought to have come from Cluny, this breviary is now considered to have originated in Lihons-en-Sangterre (see Ferreira, 1997). Another, much later noted breviary (copied and decorated at Cluny in the late 13th century) was donated in 1317 to the priory of St Victor-sur-Rhins, near Roanne, where it still survives (see Davril, 1983). Part of another noted breviary (summer *Sanctorale*), written at Cluny for a parish church, is now kept at Solesmes (see Blanchard, 1947).

Noted sources of Office chants from monasteries affiliated to Cluny often differ from the *Ordo cluniacensis* in important respects, notably in the Office for Christmas, All Saints and, above all, Easter, for which Cluny prescribed an Office of 12 lessons and 12 responsories rather than the abridged Office of three responsories sung in secular churches (see Huglo, 1951). The following list shows the provenance of the sources in alphabetical order:

Anchin: *F-DOU* 156, breviary (?without notation), second half of the 13th century (Leroquais, 1934, ii, 63)

Corbie: *F-AM* 115, noted choir breviary, 12th century, postdates the Cluniac reform at Corbie (Leroquais, 1934, i, 17–20)

?Italy: *D-B* theol. lat.q°377, 11th-century winter breviary with neumes (Leroquais, 1934, v, 340–41)

Lewes: *GB-Cfm* 369 (see §2 above)

Marchiennes: *F-DOU* 134, early 12th-century breviary (?with Lorraine notation); 137, 13th century; 138, second half of the 13th century; 142, 14th century: 137, 138 and 142 lack musical notation (Leroquais, 1934, ii, 41–5)

Moissac: Paris, Institut Catholique MS 1, 13th century, and *F-TLm* 69, 14th century, are breviaries without music; the latter contains only the Proper of the Time; on the entry of Moissac to the Cluniac order, see J. Hourlier, *Annales du Midi*, lxxv (1963), 353–63

Nonantola: *I-Rc* 54, 11th–12th-century customary, antiphoner index and tonary (see M. Huglo: 'Un troisième témoin du "tonaire carolingien"', *AcM*, xl, 1968, 22–8; and *Les tonaires*, Paris, 1971, pp.41ff)

Occitania: *F-SO* Rés.28, processional, 15th century

Payerne: *CH-Fcu* L 46, breviary, second half of the 12th century (?without notation)

Pontefract or Wenlock: *GB-Lbl* Add.49363, breviary-missal (without music), *c*1300

S Salvatore del Monte Amiata: *I-Rc* 1907 (see §2 above)

St Martial de Limoges: *F-Pn* lat.783, 785, 14th-century breviaries with diastematic Aquitanian notation (Leroquais, 1934, ii, 446–7); *LG* 4, 15th-century breviary without notation; *Pn* lat.743, 11th century, lat.1085, 11th–13th century, and lat.1253 seem to predate the Cluniac reform, introduced with some difficulty at St Martial in 1062

St Martin des Champs: no surviving breviary; *F-Pn* lat.17716, second half of the 12th century, contains literary writings, responsories and proses composed by Peter the Venerable, found also in a Douai manuscript (see Wilmart, 1939)

St Maur des Fossés: *F-Pn* lat.12584, ff.216*v* ff, 11th-century antiphoner with neumes (see §2 above); *Pn* lat.12044, 12th-century antiphoner with staff notation (*see* Sources, ms, §II, 1; and see Renaudin, 1972; and Steiner, 1987)

St Vivant de Vergy: *E-MO* 36, 14th-century noted breviary (see A. Olivar: *Els MSS litúrgics de la biblioteca de Montserrat*, Montserrat, 1969, pp.23–5)

4. General features of Cluniac chant. The noted manuscripts described above show that very few tropes and proses were adopted at Cluny, that musical composition was uncommon there, and that organum was cultivated only at some of the affiliated monasteries such as St Maur des Fossés and St Martial de Limoges. The Cluniac desire for perfection was directed rather towards the polished execution of the Divine Office and Mass, and it was this that aroused the admiration of visitors such as St Peter Damian in 1063 (*PL*, cxlv, 380). It would seem that Cluny, while not forbidding tropes, found them of no great interest except where they were of great antiquity, such as those in the Christmas Office, the *Fabricae mundi*, and those of the Agnus Dei (see Gy, 1990; and Hiley, 1990). Proses were mostly of French origin, but by virtue of its location Cluny was also able to draw on the repertories of both Aquitaine and (occasionally) Germany.

The music for the Mass exhibits a strong northern French imprint and is relatively austere and conservative. A few melodies were sung with characteristic Cluniac variants; other presumably characteristic features disappeared or were circumscribed during the 12th century under the impact of the Guidonian staff (see Ferreira, 1997). The music for the Office awaits a thorough comparative analysis (for invitatory tones and Marian antiphons, see Steiner, 1987 and 1993). The choice of responsory texts (see studies by Hesbert, 1975 and 1979, and Gy, 1997), though clearly identifiable as Cluniac, nevertheless reveals a closeness to the liturgical mainstream; it contrasts with the selection typical of St Denis and Corbie (before the Cluniac reform) and also with that of the monasteries associated with William of Volpiano. According to the data presented in the Corpus Antiphonalium Officii, Marmoutier and Montier-la-Celle stand midway between Cluny and the northern French tradition.

The Cluniac Office, like that of the entire Western Church at this period, was admittedly overburdened with many Offices of minor importance, such as the *Trina oratio*, a relic of the Carolingian reform, the little Office

of the Virgin Mary, of which the elements appear in the Cluny gradual (*F-Pn* lat.1087, f.115*v*), Offices of the Dead almost daily; and so on. But the heart of the worship was always the object of profound interest and concern on the part of the abbots and the chapters-general; although they lacked the means of unifying the liturgy, and the power of application later developed by the Cistercians and the mendicant orders of Franciscans and Dominicans, they transmitted, throughout the Middle Ages, the tradition of music and liturgy built up between the Carolingian Renaissance and the beginning of the 10th century.

MICHEL HUGLO/MANUEL PEDRO FERREIRA

Cluster. A group of adjacent notes sounding simultaneously. Keyboard instruments are particularly suited to their performance, since they may readily be played with the fist, palm or forearm. Clusters were probably first used by Cowell in *The Tides of Manaunaun* for piano

(1912), though Bartók seems to have made the innovation independently. Notable studies in cluster playing include Stockhausen's *Klavierstück XI* and Ligeti's *Volumina* for organ. Orchestral clusters have become commonplace since the mid-1950s.

See also NOTATION, §III, 4(ii)

Clutsam, George Howard (*b* Sydney, 26 Sept 1866; *d* London, 17 Nov 1951). British pianist and composer of Australian birth. He came to London in 1889 after touring as a pianist in Asia and Australasia and appeared as an accompanist in England before concentrating on composition. He also wrote music criticism for *The Observer* from 1908 to 1918 and later was vice chairman of the Performing Right Society. Until about 1914 his compositions were not aimed at a wide commercial audience: orchestral works were performed by major London orchestras and four operas were staged, including *King Harlequin* which was produced in Berlin. The watershed between his serious and light music was his collaboration with the composer Bath and the lyricist Basil Hood in a patriotic operetta, *Young England*, produced in Birmingham in 1916, before transferring to Daly's and then Drury Lane in London. This was the first of several musicals both original and using music, though not exclusively so, by others, like the popular *Lilac Time* (from Schubert), first performed in England in 1922, and *The Damask Rose* (from Chopin). He composed music to accompany silent films and wrote over 150 songs, many (like *Ma Curly Headed Babby*) owing much to the American Deep South, which was also a source of inspiration for some light orchestral compositions. Both in his orchestral works and especially the longer vocal pieces he drew on other stimuli: the suite *Green Lanes of England*, for example, was an essay in the Eric Coates manner. He composed widely for the piano and arranged vocal numbers for it from his lighter stage productions. He also published under the pseudonyms Paul Aubry, Robert Harrington, H.S. Iseledon, Georges Latour and Ch.G. Mustal. His work is discussed in P.L. Scowcroft: *British Light Music: a Personal Gallery of Twentieth Century Composers* (London, 1997).

WORKS
(*selective list*)

unless otherwise stated, all theatres in London
all works published under the name of Clutsam

STAGE

The Queen's Jester (op), 1904; A Summer Night (op, 1, Clutsam), His Majesty's, 23 July 1910 [after story from the *Heptameron*]; After a Thousand Years (op, 1), Tivoli, 1912; König Harlekin (music masque, 4, R. Lothar), Berlin, Kurfürstenoper, 8 Nov 1912 (1911); The Little Duchess (musical play, 2, R. Courtneidge, B. Davis and P. Greenbank), Glasgow, King's, 25 Dec 1922: Lilac Time (musical play), Lyric, 22 Dec 1922 [after H. Berté: Das Dreimäderlhaus; see also Blossom Time]; The Damask Rose (musical play, C. Courtneidge and R. Courtneidge), Manchester, Opera House, 18 March 1929 [after Chopin]; Barbara, or The Broken Sixpence (light op), 1932; Lavender (musical comedy, 2, R. Courtneidge, R. Hobson, M. Lytton, H.C. Sargent and C. West), Manchester, Prince's, 24 Dec 1930 [addl material by Hobson and G. Posford]; Blossom Time (operetta, R. Ackland, Clutsam, J. Drinkwater, H. Purcell), Stoll, 13 Oct 1942 [after film, 1934, from Lilac Time]; The Pool (fantastic melodrama), 191?

Collaborations: Young England (operetta, B. Hood), Birmingham, Prince of Wales, 20 Nov 1916, with H. Bath; Back to Blighty (musical burlesque, G. Blow and D. Hoard), Oxford Theatre, Sept 1916, with P. Braham and H.E. Haines; Gabrielle (musical comedy), Glasgow, King's, 1921, with A. Joyce

INSTRUMENTAL

Orch: Carnival Scenes, 1895; Comedy Ov, 1906; The Blessed Damosel, int, 1906; The Green Lanes of England, suite, (1920); Kopak; Three Plantation Sketches

Music for silent films, music for films incl. Heart's Desire, 1937

Many pieces and arrs. for pf

VOCAL

Choral: The Quest of Rapunzel (J.H. Macnair), cant, S,C,T, chorus, orch (1909); partsongs

*c*150 songs, folksong arrs., American songs, ballads incl. The Hesperides (R. Herrick), cycle of songs (1904); Songs from the Turkish Hills (after Abd-Ul-Mejíd), cycle of 12 songs (1904); Ma Curly Headed Babby (1897); I Wander the Woods (1902); My Rose of Lorraine (1912)

PHILIP L. SCOWCROFT

Cluytens, André (*b* Antwerp, 26 March 1905; *d* Paris, 3 June 1967). French conductor of Belgian birth. He studied at the Antwerp Royal Conservatory, winning a prize for piano playing at 16, and became a répétiteur at the Théâtre Royal, Antwerp, where his father was principal conductor. His own début took place there in 1927 in Bizet's *Les pêcheurs de perles* and he then became a resident conductor. In 1932 he was appointed musical director at the Toulouse opera house, and from 1935 he conducted opera at Lyons, Bordeaux and Vichy, as well as extending his concert experience. After settling in Paris he became musical director at the Opéra-Comique in 1947, and succeeded Charles Münch as conductor of the Paris Conservatoire Orchestra from 1949.

In 1955 Cluytens became the first French conductor at Bayreuth, in *Tannhäuser*; he returned there in several later years. He also conducted Wagner more widely, including the *Ring* and *Parsifal* at La Scala. His American début came in 1956 on a tour with the Vienna PO, and his British début in 1958 when he replaced the indisposed Klemperer at a London concert with the Philharmonia Orchestra. From 1959 Cluytens was under regular contract at the Vienna Staatsoper and he was chief conductor at the Belgian National Orchestra from 1960 to his death. His reputation was acquired mainly from assured performances of the Viennese Classics and the French and Russian Romantics, though they sometimes lacked a truly distinctive character. He gave the premières of works by many French composers, including Milhand, Jolivet, Messiaen and Françaix. Among his discs are the complete Beethoven symphonies, several operas, including *Pelléas et Mélisande*, *Faust* and *Mireille* (Gounod); *Carmen* and *Les pêcheurs de perles*, and choral works by Berlioz and Fauré.

NOËL GOODWIN

Cluzeau-Mortet, Luis (*b* Montevideo, 16 Nov 1889; *d* Montevideo, 28 Sept 1957). Uruguayan composer, viola player and pianist. He began music studies with his grandfather, Paul Faget, and completed them with María Visca, who instructed him in string instruments. From 1914 to 1930 he played the viola with the Asociación Uruguaya de Música de Cámara while also giving numerous piano recitals. He was first violist in OSSODRE (the Uruguay RSO) from its foundation in 1931 until his retirement in 1946. In 1938 he gave concerts of his works in various English cities, also visiting Paris.

Cluzeau-Mortet's creative career fell into three distinct periods. The first, a youthful phase beginning in 1910,

found him writing music of a marked Romantic-Impressionist character. The second and aesthetically the most important period was nationalist in spirit. Almost half his total works being to this period, the piano and vocal works being considered his masterpieces. *Pericón*, 1918 (one of the *Primeras piezas criollas* for piano), first performed in Montevideo by Artur Rubinstein, and *Canto de chingolo* for voice and piano (1924), recorded by RCA Victor in 1930, are his best and most representative works. Of the other works of this period, *Rancherío* (1940) won a Uruguayan radio competition. In the third period, which occupied the last decade of his life, he was influenced by the new trends in European music. His output comprises almost 200 works, of which little more than a tenth has been published.

WORKS
(*selective list*)

Orch: Llanuras, 1932; Soledad campestre, 1936; Rancherío, 1940; Sinfonía Artigas, 1951

Vocal: Paysages tristes, song cycle, 2 bks, 1914; Lloraban las campanas, v, pf, 1914; Tríptico primaveral, 3 songs, 1923; Canto de chingolo, v, pf, 1924; Tríptico criollo, 3 songs, 1930; 60 more songs

Pf: Suite de valses, 2 vols., 1914; 13 Preludes, 1914–16; 8 Primeras piezas criollas, 1916–24; Nuestra tierra, 2 bks, 1943–7; 48 more pieces

1 ballet, incid music, chbr music, choral music, gui works

Coach horn. A straight-built type of POST HORN.

Coasters, the. American rhythm and blues vocal group. Its members included the black musicians Carl Gardner (*b* Tyler, TX, 29 April 1928), Cornel Gunter (*b* Los Angeles, 14 Nov 1938; *d* Las Vegas, NV, 26 Feb 1990), Billy Guy (*b* Attasca, TX, 20 June 1936) and Bobby Nunn (*b* Birmingham, AL, 1925; *d* 5 Nov 1986). Guided by Leiber and Stoller, the Coasters made some of the wittiest recordings of the rock and roll era. Originally known as the Robins, the group made *Riot in Cell Block no.9* in 1954. This track set the pattern for later three-minute cartoon-style dramas in which each member of the group adopted an individual character, and was followed by two evocations of life south of the border, *Smokey Joe's Café* and *Down in Mexico*. The group's greatest successes came between 1956 and 1957 when Leiber and Stoller wrote a sequence of comic songs portraying scenes of teenage life. *Charlie Brown* and *Yakety Yak* featured Gunter's gravelly bass and honking saxophone solos by King Curtis; other successes included *Along Came Jones*, *Little Egypt*, *Poison Ivy*, *Shoppin' for Clothes*, *Searchin'* and *I'm a Hog for You*. The Coasters had a significant influence on English beat groups of the early 1960s, and the Hollies and the Rolling Stones were among those to record versions of the Coasters' hits. For further information see B. Millar: *The Coasters* (London, 1974).

DAVE LAING

Coates, Albert (*b* St Petersburg, 11/23 April 1882; *d* Milnerton, nr Cape Town, 11 Dec 1953). English conductor and composer. The son of English parents, he was educated as a scientist at Liverpool University and returned to Russia to enter his father's business. Music had a stronger pull than commerce, however, and in 1902 he entered the Leipzig Conservatory to study the cello and piano, but became most influenced by Nikisch's conducting classes. Coates was engaged as répétiteur at the Leipzig Opera under Nikisch, then went as conductor successively to Elberfeld (1906–8), Dresden (as assistant to Schuch) and Mannheim. An invitation to conduct *Siegfried* at St Petersburg in 1911 led to his appointment as principal conductor at the Mariinsky Theatre there for five years and brought him into close contact with leading Russian musicians, particularly Skryabin, of whose music he was a consistent and notable champion. His London début was with the LSO in 1910, and he first appeared at Covent Garden in 1914 in *Tristan und Isolde*, and in performances of the *Ring* shared with Nikisch.

Leaving Russia in 1919 Coates became a regular conductor with the LSO in London, giving his first six concerts without fee in order to help the orchestra. In this capacity in 1920 he conducted the first performance of the revised *London Symphony* by Vaughan Williams, the first complete performance of Holst's *The Planets* and the première of Bax's Symphony no.1 (1922); he later introduced to Britain the Third Piano Concerto by Prokofiev and the Fourth by Rachmaninoff, each with its composer as soloist. He began making the first of his many gramophone records with the LSO in 1920, and took a leading part in the Leeds festivals of 1922 and 1925, at the second of these conducting the première of Holst's *Choral Symphony*. Frequent appearances at Covent Garden in Beecham's opera seasons were interspersed with touring as a guest conductor with most of the world's leading orchestras, and after his American début in 1920 he was musical director of the Rochester PO, New York, 1923–5. His predilection was for colourful and Romantic works or music of heroic breadth, corresponding to his own imposing physique. He settled in South Africa in 1946 as conductor of the Cape Town Municipal Orchestra. Among the best of his recordings are a 1930 Rachmaninoff Third Piano Concerto with Horowitz, and Wagner extracts with Melchior, Leider and Schorr.

Coates's compositions are technically proficient rather than imaginative. They include a symphonic poem in memory of Nikisch, *The Eagle* (1925), and two operas: *Samuel Pepys*, produced at Munich in 1929, and *Pickwick*, staged at Covent Garden in 1936 as the main novelty of a season by the short-lived British Music Drama Opera Company, for which Coates was chiefly responsible in association with Vladimir Rosing. Although unsuccessful in the theatre, *Pickwick* had the distinction of being the first opera to be shown on television, several scenes from it being included in the BBC's newly opened service in November 1936, in advance of the Covent Garden première that month.

MICHAEL KENNEDY

Coates, Edith (Mary) (*b* Lincoln, 31 May 1908; *d* Worthing, 7 Jan 1983). English mezzo-soprano. She studied at Trinity College of Music, London. In 1924 she joined the Old Vic opera chorus and was soon singing small roles. When the company moved to Sadler's Wells in 1931 she became its leading mezzo-soprano, singing in the first English performances of *The Snow Maiden* (as Lel') and *The Tale of Tsar Saltan*, both in 1933, and appearing as Eboli in 1938. In 1945 she created Auntie in *Peter Grimes*. Having made her Covent Garden début in 1937 she became a member of the company in 1947, remaining until 1967. Though not invariably successful in dramatic parts like Azucena, Fricka, Amneris and Carmen, she had striking acting ability and stage presence. She created roles in *The Olympians* (1949) and *Gloriana* (1953) and sang the Countess in the first production in English of *The Queen of Spades* (1950). In 1966 she created Grandma in Grace Williams's *The Parlour* for the WNO. She was made an OBE in 1977.

HAROLD ROSENTHAL/R

Coates, Eric (*b* Hucknall, 27 Aug 1886; *d* Chichester, 23 Dec 1957). English viola player and composer. He studied violin with Georg Ellenberger and harmony with Ralph Horner, but changed to the viola, for which he found a greater demand in Nottingham. Entering the RAM in 1906, he expected viola to be his main study and was indeed placed with Tertis, but the principal, Sir Alexander Mackenzie, had admired his submitted songs and allocated him to Corder for composition. Coates rapidly came to the forefront of viola players, playing for the Beecham SO and Wood's Queen's Hall Orchestra, of which he was principal viola 1912–19. Chronic neuritis plagued him and in 1919, after Wood dismissed him, he never played again.

His composing reputation had been made early by such songs as *Stonecracker John* (1909) and by Wood's performance of the *Miniature Suite* at the 1911 Proms. Thereafter he produced a steady stream of orchestral suites, phantasies, marches and waltzes together with some 160 songs, the last march being completed in 1956. His songs include settings of poems by his wife, Phyllis Black.

Coates was a founder-member and director of the Performing Right Society, and from an early stage was influenced by the needs of recording and radio. Works such as the march *Knightsbridge*, from the suite *London (London Everyday)*, the valse-serenade *By the Sleepy Lagoon* and the march *Calling All Workers* became signature tunes of radio programmes. His success derived from his recognition of, and adjustment to, new trends. Thus, while his early music showed responses to Sullivan and German, it soon reflected features of Elgar and Richard Strauss. Then, as an enthusiastic dancer, he absorbed the 1920s syncopated band styles. He derived the superb orchestration and presentation of his scores from early rigorous training and from hearing the orchestra from the inside as a viola player. His music reflects, and perhaps even defines, the 1920s and 30s.

WORKS

(*selective list*)

ORCHESTRAL

The Seven Dwarfs (ballet), 1930 [from A. Charlot: Revue, 1930]
The Enchanted Garden (after a scenario by P. Black), tone poem, 1938 [incorporating material from The Seven Dwarfs]
The Merrymakers, ov., 1923
Saxo-Rhapsody, a sax, orch, 1936
2 Sym. Rhapsodies, 1933 [on songs: 1 I Pitch my Lonely Caravan at Night; 2 Birdsongs at Eventide, I Heard you Singing]
Sym. Rhapsody [on R. Rodgers: With a Song in my Heart]
Suites: Miniatures Suite, 1911; From the Countryside, 1914; Summer Days, 1919; Joyous Youth, 1921; Four Ways, 1927; 1930; From Meadow to Mayfair, 1931; The Jester at the Wedding, ballet suite, 1932; London (London Everyday), 1932; The Three Men, 1935; London Again, 1936; Springtime, 1937; Four Centuries, 1941; The Three Elizabeths, 1944
Phantasies: The Selfish Giant, 1925; The Three Bears, 1926; Cinderella, 1929
Marches: London Bridge, 1934; The Seven Seas, 1937; Calling All Workers, 1940; Over to You, 1941; London Calling, 1942; The Eighth Army, 1942; Salute the Soldier, 1944; TV March, 1946; Music Everywhere, 1948; Holborn, 1950; Rhodesia, 1952; Men of Trent, military band, 1953; The Dambusters, 1954; Sound and Vision, 1955; High Flight (1956); South Wales and the West, reissue of The Seven Seas (1957)
Waltzes: Woodnymphs, valsette, 1917; By the Sleepy Lagoon, valse-serenade, 1930; Dancing Nights, concert valse, 1931; Sweet Seventeen, 1934; The Forgotten Waltz, 1936; Footlights, 1937
Many other works incl. interludes and romances

GEOFFREY SELF

Coates, Gloria (*b* Wausau, WI, 10 Oct 1938). American composer. She experimented with musical sounds early, winning a composition prize at the age of 12. In 1952 she met Alexander Tcherepnin with whom she studied both at the Mozarteum (1962) and privately, and who was to remain her mentor. She studied at Louisiana State University and Columbia (with Luening and Beeson), receiving degrees in singing and composition, and in theatre and art; she was also awarded a masters degree in composition and musicology. Coates was initially active as a singer, actor and painter as well as composer; in 1969 she moved to Munich and concentrated on composition. She produced the German-American Contemporary Concerts in Munich (1971–83), and wrote programmes for the West German Radio Cologne. She gave masterclasses at the University of Wisconsin-Madison and in 1975 founded the music division of the university's International Programs in Munich. She has also lectured widely. Awards include a UNESCO grant, the Norlin-Hewitt

Award and the American Biographical Institute's Commemorative Medal of Honor.

Her activities in other art forms have been absorbed in her music, which has an original expressivity as well as a visual content. By 1962 she had developed a method of composing using microtones diagonally; this became a characteristic of her mature style used in Symphony no.1 (1973), a highlight of the 1978 Warsaw Autumn. In her music there is a strong awareness of form, and this acts as a balancing force to her experiments in sound. Her use of microintervals and her sound contours do not serve to break down tonal centres, rather they function as something archaic, harking back to pre-tonality. Coates has also experimented with vocal multiphonics, which she demonstrated in Darmstadt in 1972.

DETLEF GOJOWY

Coates, John (*b* Girlington, Yorks., 29 June 1865; *d* Northwood, Middlesex, 16 Aug 1941). English tenor. While engaged in business he sang as a baritone for the Carl Rosa Company in Manchester and Liverpool. In 1893 he took lessons in London from William Shakespeare, who pronounced his voice a tenor, but he appeared as a baritone at the Savoy Theatre in Sullivan's *Utopia Limited* and then toured the USA in it. There followed regular work in musical comedy in London and the provinces, and a second American tour.

He then retired to study the tenor repertory. He appeared at the Globe Theatre in *The Gay Pretenders* and at Covent Garden as Claudio in the first performance of Stanford's *Much Ado about Nothing*. The turning-point in his career came when, at 37, he was launched as a tenor at the Three Choirs Festival (Worcester, 1902) as Elgar's Gerontius. From then Coates was recognized as a master in whatever he touched – Siegfried, Tristan, Lohengrin (in Germany, and with the Beecham and Moody-Manners companies), Elgar's *The Apostles* and *The Kingdom* (first and later performances) and the traditional oratorios. His recitals covered lieder, French songs, Elizabethan and Tudor music; in addition he was a champion of contemporary English songs.

For Coates, vocal problems seemed not to exist. Perhaps the quality of voice did not flatter, and lacked opulence to some extent; but it was capable of astonishing variety of colour and was pointed directly and with intensity at the listener. His art was an ineffaceable memory by reason of his outstanding musical intelligence and subtlety, and his poetic and inventive imagination. His vision of the piano's essence in lieder has rarely been equalled by other singers and made those who accompanied him his grateful debtors. Coates was an aristocrat among singers and one of the most distinguished English tenors of the century.

GERALD MOORE

Cobaleda, Alonso Tomé (*b* Medina del Campo, 1683; *d* Zamora, 29 Aug 1731). Spanish composer. He started his musical training as a child at the school of Zamora Cathedral's precentor Diego del Val, where he was a pupil of Juan García de Salazar. While still at school, he competed unsuccessfully for the post of *Magisterio de capilla* at the Medina del Campo chapel in 1700 and León Cathedral in 1702. Following a hard-fought competition, he was appointed *maestro de capilla* of Zamora Cathedral in 1710. When the economic crisis was at its worst at Zamora Cathedral, he sought better fortune at other cathedrals, competing unsuccessfully for the post of *magisterio* at Salamanca in 1718 and Sigüenza in 1725.

In Cobaleda's music the influence of García de Salazar is marked, particularly in the early works. The works in Latin follow the polychoral style of the time, with prominent use of counterpoint and occasional use of obbligato instruments. The Spanish works, however, show Cobaleda as the likely consolidator of the Italian style at Zamora Cathedral.

PABLO L. RODRÍGUEZ

Cobb [Cob], **James** (*d* 20 July 1697). English composer. He became a tenor member of the Chapel Royal in 1660 and sang at the coronations of Charles II, James II and William and Mary. Three songs by him are in Playford's *Choyce Ayres* (RISM 1679[7]) and a verse anthem, *Let God arise*, by 'Cob' is in a number of post-Restoration sources (*GB-Mp, Ob, Och, Ojc, WRch*).

PETER LE HURAY/ANDREW ASHBEE

Cobb, John (*fl* 1630–50). English church musician and composer. He was elected a Gentleman of the Chapel Royal in 1638, probably replacing John Tomkins; in the *Choice Psalmes* of Henry and William Lawes (1648), to which he added an elegy in memory of William Lawes, he was described as 'organist of the Chapel' and a 'fellow-servant' of William Lawes. He is listed in John Playford's *A Musicall Banquet* (London, 1651) as a teacher of organ and virginals. In his will of 13 January 1644 Archbishop Laud left '£50, my organ that is at Croydon, my harp, my chest of viols, and the harpsico in the parlour at Lambeth' to Cobb. This suggests he was Laud's musician, possibly related to Laud's trusted servant Richard Cobb. Cobb evidently moved in the circle of the Lawes brothers, Walter Porter and John Wilson. The Chapel Royal books of anthem texts (*GB-Ob* Rawl. Poet.23, *c*1635, and *Lbl* Harl.6346, late 17th century) are the main record of his activity as a composer of church music. His secular music comprises ayres, catches and canons and some instrumental music, the principal sources being Hilton's *Catch that Catch Can* (London, 1652) and Playford's third book of *Select Ayres and Dialogues* (London, 1659). The catch *Smiths are good fellows* was particularly popular.

PETER LE HURAY/ANDREW ASHBEE

Cobbett, Walter Willson (*b* Blackheath, London, 11 July 1847; *d* London, 22 Jan 1937). English amateur violinist, patron and lexicographer. Cobbett's efforts in the field of chamber music were important to the development of the English musical renaissance and to the cultivation and appreciation of chamber music in Britain; he is noted in particular for editing *Cobbett's Cyclopedic Survey of Chamber Music* (2 vols., London, 1929–30; rev. 2/1963 by C. Mason). In an autobiographical article, 'The Chamber Music Life', published in this encyclopedia, he related how he studied the violin with Joseph Dando, received a Guadagnini violin from his father and was fired with a lifelong enthusiasm for chamber music after hearing Joachim play at St James's Hall. From that time he played chamber music regularly at home, and also led several amateur orchestras, including the Strolling Players Orchestral Society. He became a connoisseur of violins and delighted in lending instruments from his fine collection to suitable players.

Cobbett was a highly successful businessman, the founder and chairman of the Scandinavia Belting Company. It was once said of him that he devoted to commerce the little time he could spare from music (*Grove5*). Most of his chamber music patronage took place after his retirement at the age of 60. He used his money to patronize composers, performers, societies and publications; and his musical understanding enabled him to distribute his funds with discretion. In association with the Worshipful Company of Musicians (of which he became Master in 1928) he established a prize for a 'phantasy' string quartet in 1905. This was won by William Hurlstone, and Frank Bridge won the succeeding prize for a piano trio in 1907. There followed numerous other awards for such 'phantasies', a name Cobbett chose as a modern analogue of the Elizabethan viol fancies, in which a single movement includes a number of sections in different rhythms – or as Stanford defined the genre, a condensation of the three or four movements of a sonata into a single movement of moderate dimensions. Among other winners were Armstrong Gibbs, Herbert Howells, John Ireland and J.B. McEwen. Cobbett set up prizes for composition and performance at the RAM and the RCM in the 1920s; and, also with the Worshipful Company of Musicians, he established in 1924 a medal for services to chamber music. The first award was to T.F. Dunhill for his book on chamber music and the second to the patron Elizabeth Sprague Coolidge.

Cobbett's patronage of chamber music also included the establishment, at his own expense, of a Free Library of Chamber Music, in conjunction with the Society of Women Musicians, and the promotion of occasional competitions (from 1918) for British-made violins. In 1934 he founded the Chamber Music Association (with a gift of £1000) to foster chamber music activity.

Between 1913 and 1916 Cobbett edited *Chamber Music*, a bimonthly supplement to the *Music Student* periodical, and in the mid-1920s began work on his wide-ranging *Cyclopedic Survey*, for which, according to an obituary, he bore some of the cost (£4000). The encyclopedia embraces articles on composers and their chamber music, performers, activities and ensembles in different countries, as well as entries on broad topics such as broadcasting, gramophone recordings, interpretation and temperament. Contributors included Tovey, Arnold Dolmetsch, Henry Prunières, Marc Pincherle, d'Indy, Egon Wellesz, E.S.J. van der Straeten and Wilhelm Altmann. In spite of a highly idiosyncratic editorial style and some inconsistency in the level of coverage between volumes, the *Cyclopedic Survey* represents an important lexicographical achievement and remains a vital historical document of British attitudes towards chamber music in the inter-war years.

FRANK HOWES, CHRISTINA BASHFORD

Cobbold [Cobhold, Cobold], **William** (bap. Norwich, 5 Jan 1560; *d* Beccles, Suffolk, 7 Nov 1639). English composer and organist. He was organist at Norwich Cathedral from at least 25 March 1595 until between 1609 and 1612 when William Inglott apparently returned to the post, which he had formerly held. Cobbold continued to be paid as a singing-man, but appeared together with Inglott as organist in a document of 1620. In his will (4 August 1637) Cobbold bequeathed 20s to his colleagues in the cathedral choir and 1s each to the two organ-blowers. A request to be buried in the cathedral apparently went unheeded, for his tomb is in Beccles parish church: his date of death is derived from the epitaph (quoted in Shaw: *The Succession of Organists* (Oxford, 1991), pp. 200–01).

Cobbold favoured the regular English style and native genre of the consort song, but managed to produce a madrigal, *With wreathes of rose and laurel*, for *The Triumphes of Oriana* (RISM 1601[16]) – he must have known Thomas Morley from the latter's Norwich days. Cobbold's surviving instrumental music consists of a cantus-firmus piece and the curiously named voluntary, *Anome*. He contributed five four-voice settings to East's *Whole Booke of Psalmes* (1592[7]), one of which (Psalm xviii) survives slightly 'improved', perhaps by Ravenscroft, in the latter's version of the psalter (1621[11]). Cobbold's five-part consort songs, including an elegy (*For death of her*) for Mary Gascoigne who died on 19 July 1588, survive in manuscript (*Gb-Lbl* Add.18936–9, lacking the quintus part). An anonymous *Crye of London* at the head of the main group of his songs in these partbooks might also be by Cobbold; it is modelled on Weelkes's setting which precedes it there. The most curious of his works is a quodlibet based on recurring statements of *The Leaves be Green* (the so-called *Browning*), to which have been set various ironical statements reflecting the title of the piece, *New Fashions*. Interspersed, and sometimes superimposed, are other songs and ballads, including *Greensleeves*, *Peg of Ramsey*, *The shaking of the sheets*, *The three ravens*, *The Venetian galliard*, *Staines morris*, and *Robin Hood and Little John*.

PHILIP BRETT

Cobelli, Giuseppina (*b* Maderno, Lake Garda, 1 Aug 1898; *d* Barbarano, nr Salò, 10 Aug 1948). Italian soprano. She studied in Bologna and Hamburg, making her début at Piacenza in 1924 as La Gioconda. After a season in the Netherlands, she was engaged by La Scala, making her début as Sieglinde (1925). Her roles included Isolde, Kundry, Fedora, Eboli, Margherita, Minnie and Adriana Lecouvreur, in which part she gave her last Scala performance in 1942. She created Silvana in Respighi's *La fiamma* (1934, Rome) and in 1937 sang Octavia (*L'incoronazione di Poppea*) at the Maggio Musicale in Florence. A beautiful woman with a highly individual voice and dramatic temperament, she had a special affinity for *verismo* heroines. She made only two recordings, each of which explains why she was so much admired at La Scala.

HAROLD ROSENTHAL/ALAN BLYTH

Coberg, Johann Anton (*b* Rotenburg an der Fulda, nr Kassel, 1650; *d* Berlin, 1708). German organist, harpsichordist, violinist and composer. He went at an early age to Hanover, where he studied music with Johann Georg Gumbrecht and N.A. Strungk and took up a post as organist at the Johanniskirche. After playing the theorbo and violin with the Hofkapelle in the 1670s, he was appointed court organist in 1681. Being proficient in languages and knowledgeable not only in the field of music, Coberg quickly became established as one of the leading court musicians. Agostino Steffani specially recommended him to Duke Ernst August who chose Coberg as music teacher to his family. Princess Sophie Charlotte, eventually Queen of Prussia, was one of his pupils; later she invited him to Berlin to continue with her tuition. He died during a visit to the Prussian court and was buried in Berlin. His estate, which included at least two theoretical writings (*Regeln vom Generalbass* and *Kurzgefasste Übung in den Dissonanzen*) and a great number of keyboard pieces and sacred vocal works, went to his nephew Heinert who was Kantor in Minden, but it appears to be lost.

DOROTHEA SCHRÖDER

Cobham, Billy [William] (*b* Panama, 16 May 1948). American drummer. When Cobham was three his family relocated to New York, where he later studied at the High School of Music and Art. In the late 1960s he played with Billy Taylor and Horace Silver and was an active session musician. From 1969 to 1971 he played with the early jazz-rock band Dreams, formed with Randy and Mike Brecker, and recorded with Miles Davis. In 1971 he joined fellow Davis sideman John McLaughlin in his Mahavishnu Orchestra whose fiercely influential sound confirmed Cobham's position at the forefront of contemporary style. Since the mid-1970s Cobham has

been active as bandleader, studio sideman and teacher and by 1998 was leading his own band in another collaboration with Randy Brecker.

Cobham's style, as the majority of his music, is a fusion of jazz with rock. Rock elements include his use of huge double-bass drum kits, the predominance of the matched grip over traditional, and his approach to swing tunes of time-keeping spliced with definite fills as opposed to the more tumbling jazz feels of Elvin Jones or Jack DeJohnette. Jazz is displayed in a vocabulary firmly rooted in jazz tradition and his cultivation of phrasing the melodic line around the kit. The heavily syncopated hook at the end of the head of 'Red Baron' from his own *Spectrum* (1973, Atl.), and the blazing introductory theme on *Awakening* from Mahavishnu's *The Inner Mounting Flame* (1971, Col.), see Cobham plotting the tune about the kit, creating moments of unison within the whole. He has a meticulous technique with exemplary control of dynamic balance and precision with real feeling. The 9/8 funk opening from 'Vital Transformations' on *The Inner Mounting Flame* is a furious example. Pursuing the most natural approach to the drum kit, Cobham pioneered the open-handed method, an ambidextrous technique where crossing arms to lead with a strong hand becomes obsolete.

GEORGE DOUBLE

Cobla (i). Provençal word used in the extant medieval treatises on Provençal poetry generally to mean 'stanza'. As such it became part of many technical terms in descriptions of stanzaic form and rhyme patterns. In present-day studies of medieval poetry, authors have retained this medieval terminology primarily when discussing the various ways in which rhyming patterns in the stanzas of a given poem are linked together. Thus the term *coblas unisonans* is used to designate the scheme in which all stanzas of a given poem have not only the same rhyming pattern but also the same rhyming sounds. In *coblas singulars* each stanza has its own rhyming sounds, but the rhyming pattern is likely to be the same for all stanzas. In *coblas doblas* all stanzas have the same rhyming pattern and in addition two consecutive stanzas have the same rhyming sounds; while alternate stanzas have the same rhyming sounds in *coblas alternadas*. In *coblas capcaudadas* the last rhyming sound, or perhaps even the entire last rhyming word, occurs also as the first rhyming sound or word of the next stanza. In *coblas retrogradadas* stanzas are paired but the rhyming pattern is reversed. In the treatises many more systems of linking rhyme patterns are discussed, but in practice the above are most frequently found. As far as can be determined from the surviving music, these ways of linking rhyme schemes had no influence upon the form of the music.

The term is also used to describe a short, almost epigrammatic poem consisting of one stanza only; these are sometimes referred to collectively as *coblas esparsas* ('scattered stanzas'). The mid-13th-century troubadour Bertran Carbonel of Marseille was the chief exponent of this genre. In one of his *coblas* he memorably likened a poem without music to a mill without water; nevertheless, no music survives to any of them.

Cobla (ii). A band, originally made up of *flabiol*, *tamboret*, *tenora* and *tiple* and to which a double bass and brass instruments may be added, that accompanies dances such as the Catalan *sardana*. *See* SPAIN, §II.

Coblenz. *See* KOBLENZ.

Cobos (Almaraz), Luis de los (*b* Valladolid, 20 April 1927). Spanish composer and conductor. He took the PhD in law at the Universities of Valladolid and Madrid, and studied music with Markevich at the Mozarteum in Salzburg (1952–3), Eugène Bigot at the Paris Conservatoire (1952–4) and Swarowsky at the Vienna Music Academy (1958); his other teachers included Ansermet, Paumgartner, Sawallisch and Dmitry Shostakovich. He worked for various United Nations organizations (1954–84) and from 1969–92 was professor of law at the University of Geneva.

His first major work, the symphonic poem *La Tierra de Alvargonzález*, based on the romance by Antonio Machado, was performed for the first time in Valladolid (1951). In 1958 he composed the *Concierto español* for cello and orchestra, highly praised by Casals and Pierre Fournier and composed the *Concierto de la resurrección* for the latter in 1981. He has written many songs to poems by Antonio and Manuel Machado, Juan Ramón Jiménez, Federico García Lorca and Rafael Alberti; these were performed at a concert organized by the Valladolid Town Council in 1996, where the *Oración paralela-Requiem* (baritone, choir and orchestra) and *Miserere* (*a cappella* choir) also received their first performances. Named Academician of the Royal Fine Arts Academy of Valladolid, the latter paid homage to him in 1997 with a first performance of his String Quartet no.4. In 1998 the Symphony 'Cursus vitae' (in memory of Ataulfo Argenta) had its first performance in Valladolid. His music is varied in its instrumentation and is harmonically daring without rejecting tonality.

WORKS

STAGE AND VOCAL

Stage: La gloria de Don Ramiro (op, after E. Larreta), 1974–5; Mariana Pineda (op, after F. García Lorca), 1982; La pasión de Gregorio (op, after F. Kafka: *Die Verwandlung*), 1983; Winnie-the-Pooh (ballet, after A.A. Milne), 1992; The Incantation of Desire (op), 1994

JUAN BAUTISTA VARELA DE VEGA

Cocchi, Claudio (*b* Genoa; *d* after 1631). Italian composer and musician. He was a minorite and worked, it would appear, for the Franciscan order, in a series of musical posts that took him to three countries, apparently during a short space of time; in 1628 the order awarded him the diploma of *magister musices*. In 1626 he was a chaplain and musician (and shortly afterwards perhaps *maestro di cappella*: see below) to the music-loving Cardinal Franz Dietrichstein, Bishop of Olomouc and Governor of Moravia, who fostered the Italian style and employed several Italian musicians. From 1627 to 1630 Cocchi was *maestro di cappella* of Trieste Cathedral and also superintendent of the friars minor there. He was *maestro* of S Francesco, Milan, in 1632, when, in the dedication of his op.10, he mentioned that he had worked in a similar capacity not only at Trieste but at Olomouc too and also at S Severino Marche, at Avignon and at the Sacro Convento, Assisi (also in 1632); it is unclear whether he was at these last three places entirely between 1630 and 1632 or before 1626 as well. He was a member of an academy as 'Accademico Arrischiato detto l'Allegro'. If his op.10 is correctly designated, at least seven volumes of music by him must be lost. Those that survive, consisting wholly of music in the concertato style, are *Armonici concentus ... stilo moderno* (Venice, 1626), *Messe concertate* (Venice, 1627), both for five voices and organ, and *Ghirlanda sacra de salmi concertati ... 'libro secondo* op.10, for four voices and continuo (Milan, 1632), which also includes an *Ave maris stella*.

GIUSEPPE VECCHI

Cocchi, Gioacchino (*b* ?Naples, 1712; *d* Venice, 11 Sept 1796). Italian composer. Since he is invariably identified as a Neapolitan in the librettos, it is improbable that he was born at Padua, as Gerber stated. Annotations in a manuscript in Vienna (*A-Wn* 19083) suggest that he studied with Giovanni Veneziano, perhaps at the Conservatorio di S Maria di Loreto in Naples. In his earliest surviving libretto (*La Matilde*, 1739) he is styled 'maestro di cappella della principessa di Belmonte', a designation not found later. Between 1739 and 1750 he established himself in both Naples and Rome as a composer of serious and comic operas. At about this time he married the Florentine soprano Elisabetta Giani (*c*1720–86), whose brief career as an *opera buffa* singer in Naples included an appearance in Cocchi's own *I due fratelli beffati* in 1746. The greatest success of Cocchi's career, *La maestra* (Naples, 1747), dates from this period; it was performed widely, undergoing, as was then the rule, radical changes of content and title along the way. As *La scaltra governatrice* it became the only three-act comic opera to be performed by the Bambini troupe during the Querelle des Bouffons (Paris, 1752–4).

A visit to Venice in 1749–50 resulted in Cocchi's appointment as *magister et moderator chori* at the Ospedale degli Incurabili, in which capacity he composed numerous solo motets and several oratorios. He continued as an opera composer both in Venice and on the mainland, but did not enjoy another international success like that of *La maestra*. Goldoni furnished him with four librettos, one of them, *La mascherata* (1750), among the librettist's best, but none held the stage for long. Still, his reputation at this time was considerable, and in 1755 he was commissioned to compose the inaugural opera for the prestigious new Teatro S Benedetto in Venice. It was during these years that Cocchi gave lessons 'in the theatre style' to Andrea Lucchesi, the future Kapellmeister in Bonn.

In 1757 Cocchi went to the Haymarket Theatre, London, as opera composer and music director; during the next five seasons he supervised the production of *opere serie*, composed several operas himself and contributed to pasticcios. Burney had few kind words for these productions, particularly for two comic operas from the very end of Cocchi's tenure: they evidently paled next to Galuppi's, then all the rage. After being replaced at the Haymarket by J.C. Bach in 1762, Cocchi remained in London for about ten more years. Much in demand as a teacher, he published several collections of instructional works, both vocal and instrumental. For some years he directed the subscription concerts organized by Mrs Cornelys at Carlisle House, Soho Square; here the Mozarts met him in 1764 or 1765.

About 1772 Cocchi, now well off, returned to Venice. He did not, as has been alleged, resume his post at the Incurabili. That was held by Galuppi until the hospital's reorganization in 1776, when the musical staff was dismissed. The choir, however, continued its concerts, and Cocchi still wrote for it in 1784. He presumably composed a Requiem Mass for his wife in 1786 as requested in her will, and there is a manuscript *Dixit Dominus* (*A-Wn* 19084) dated 1788. An inscription marks the place in the church of S Giovanni Grisostomo where he and his wife lie buried, close by the theatre where he made his Venetian début.

Judging from *Le matti per amore* (Venice, 1754), the only complete opera manuscript published in a modern edition, Cocchi had an easy command of his resources, both vocal and instrumental. His comic manner is sprightly, characterized by a Neapolitan penchant for short reiterated phrases and Lombard rhythms. His serious arias in the same opera attain an elevated style without being memorable melodically.

According to the dedication of his op.63, Cocchi aspired to 'quella naturalezza e facilità che caratterizza il vero', a classical ideal he shared with the progressive composers of his generation. It is probable, as Burney

supposed, that his inspiration ran dry in his later years; yet Burney's strictures seem excessive, and a juster estimate of Cocchi's music will surely emerge from a closer acquaintance with his earlier works.

PIERO WEISS

Cocchiata (It.: 'carriage-ride'). A nocturnal serenade from horse-drawn carriages (a *cocchio* was a kind of carriage used in Florence from the 16th century); also, the poetry

set to music for such a serenade, such as the *Cocchiata delli Accademici Rugginosi fatta il dì 20 di agosto 1628* (Florence, 1628). The cocchiata was in use in Florence at least throughout the first half of the 17th century. Its music consisted of monodies, polyphonic madrigals and perhaps instrumental pieces.

Coccia, Carlo (*b* Naples, 14 April 1782; *d* Novara, 13 April 1873). Italian composer. The son of a violinist in the S Carlo orchestra in Naples, he showed an early disposition for music and at the age of ten was admitted to the S Maria de Loreto Conservatory, where his teachers included Saverio Valente (singing) and Fedele Fenaroli (counterpoint). After leaving, he continued his studies with Paisiello, who procured for him the post of piano accompanist to the private concerts of Joseph Bonaparte, King of Naples (1806–8). His first opera, *Il matrimonio per lettera di cambio* (1807, Rome), failed; but, encouraged by Paisiello, his persistence was rewarded with the success of *Il poeta fortunato* (1808, Florence).

During the next decade he produced 20 operas, mostly for the smaller theatres of Venice, where he entered into unequal competition with the young Rossini; and it was not until after the latter's departure for Naples that he won general acclaim with *Clotilde* (1815, Venice). A *semiseria* opera in the traditional Neapolitan style, it has something of the melancholy sweetness of Paisiello and was much praised for its treatment of the chorus as an active participant in the drama. Coccia's subsequent attempts to come to terms with Rossinian floridity met with little success, and in 1820 he accepted an invitation to Lisbon as composer and musical director at the S Carlos theatre. There he produced four operas (all well received), and a cantata, *O genio lusitano* (1821), part of which served as a hymn for the country's constitutional revolution, though his own lack of political commitment had already been attested by two cantatas, one for the birth of the Napoleonic King of Rome (1811, Treviso), the other for the entry of the allied armies into Paris (1814, Padua).

From Portugal he proceeded to London in 1824 to occupy a similar post at the King's Theatre. His appointment as professor of singing and harmony at the newly founded RAM brought him into contact with the German classics, his study of which bore fruit in the opera *Maria Stuart, regina de Scozia* (1827), composed for Giuditta Pasta. Based, like Donizetti's *Maria Stuarda*, on Schiller's play, it adheres far more closely to the original and is thus clogged with a superabundance of characters, which makes for a slow dramatic pace and an unwieldy overall structure; so that while *The Harmonicon* extolled the 'undeviating correctness' of Coccia's new manner, 'and his inflexible determination to suit his music to the words', the audience remained unimpressed and the opera failed to travel.

Returning to Italy in 1828, he persevered in his aim to graft Germanic subtlety of harmony on to the prevailing post-Rossinian style. Again the critics were respectful and the public stayed away. He did, however, gain a genuine triumph with *Caterina de Guisa* (1833, Milan; revised 1836, Turin), aided by a finely paced libretto by Felice Romani. In this opera, his first since *Clotilde* to circulate abroad, Coccia shows a Donizettian ingenuity in blending the traditional forms into a personal synthesis. Orchestral transitions between scenes, each distinguished by unexpected touches of harmony and scoring, are a special feature. A duet with female chorus for the heroine and her youthful admirer (a mezzo role) achieves a long melodic groundswell worthy of Bellini.

But it was a solitary moment of glory. In 1835 Bellini wondered at Coccia's ability to secure commissions, since there was 'nothing left in his brain'. After the failure of *Il lago delle fate* (1841, Turin) he gave up operatic composition to devote himself to church music.

In 1836 Coccia was nominated director of the new singing school of the Accademia Filharmonica, Turin, passing thence to Novara, where he succeeded Mercadante as *maestro di cappella* at the church of S Gaudenzio. He was sufficiently eminent to be invited to contribute a 'Lachrymosa' to the collaborative requiem mass for Rossini set up at Verdi's instigation in 1868. Here his idiom could be described as 'sophisticated Donizetti': an unaccompanied men's chorus with the flavour of a Neapolitan popular song followed by a 'learned' fugue for full choir, its counterpoint diluted by homophonic sequences. Active till the last, he died on the eve of his 91st birthday.

Coccia was an accomplished musician, who throughout his theatrical career managed to keep abreast of contemporary trends, giving scrupulous attention to detail, often at the expense of the whole. A lack of true melodic individuality laid him open to frequent charges of plagiarism (mostly unmerited). Of his copious output *Caterina de Guisa* has been revived with some success.

JULIAN BUDDEN (text),
DENNIS LIBBY, SIMON MAGUIRE (work-list, bibliography)

Coccia, Maria Rosa (*b* Rome, 4 June 1759; *d* Rome, ? Nov 1833). Italian composer. As a child, Coccia exhibited precocious musical talent; among her early compositions are the oratorio *Daniello nel lago dei leoni* and a setting of Metastasio's *L'isola disabitata*, both composed in 1772. Her teachers included Sante Pesci, *maestro di cappella* of the Basilica Liberiana, with whom she studied counterpoint. In 1774 examiners from the Congregazione di Santa Cecilia gave her the title *maestra di cappella*; in 1779 Bologna's Accademia Filarmonica awarded her the same title. She also was admitted to Rome's Accademia de' Forti. In 1780, Francesco Capalti, *maestro di cappella* of Narni Cathedral, publicly attacked Coccia's examination composition. Michele Mallio defended her in his *Elogio storico della signora Maria Rosa Coccia romana* (Rome, 1780), which contained letters of support from Metastasio, Carlo Broschi (Farinelli) and Giovanni Battista Martini. Little is known of her adult life, although her subsidy request in 1832 described a life devoted to 'composing and teaching'.

Coccia's inventiveness lies within the confines of 18th-century form and style. While most of her extant works are examples of her skill at choral composition, the cantata *Il trionfo d'Enea* demonstrates her able handling of recitative, aria and orchestral writing.

WORKS

Daniello nel lago dei leoni, orat in two parts, Rome, Chiesa Nuova, 1772, lost, text, *I-Rsc*
L'isola disabitata (P. Metastasio), 1772, lost
Hic vir despiciens mundum, fugue, 4vv, Rome, 1774 (examination piece for Congregazione di S Cecilia, and Accademia Filarmonica, Bologna)
Magnificat, S, A, SATB, org, 1774
Dixit Dominus, 8vv, org, 1775 (may be same as Dixit Dominus, 8vv, vn, va, ob, fl, hn)
Il trionfo d'Enea, cant in two parts, S, S, A, T, vn, va, hn, tpt, ob, bn, bc, ?1779
Arsinoe, cant, 4vv, orch, 1783
Confitebor, S, S, SATB, org, n.d.
'Qualche lagrime spargete' from Semiramide, lost?
Salve Regina, 2vv, org, n.d.
Veni Creator Spiritus, 4vv, org, n.d.
4 psalms, lost

DENISE GALLO

Coccini, Giacomo. *See* GOZZINI, GIACOMO.

Cocciola [Gocciolo], **Giovanni Battista** (*b* Vercelli; *fl* *c*1610–20). Italian composer, active in Poland. Gerber stated that he was director of music to the Polish nobleman Lew Sapieha, chancellor of Lithuania, and that he was 'a famous composer'. If this judgment is true it must have derived from at least two lost volumes of sacred music that Cocciola is known to have produced in the early 17th century. One contained an eight-part mass and at least one motet and was published at Venice (in 1612 according to Gerber and Schaal). The other was *Concentus harmonici ecclesiastici* for two to five voices; when in 1619 Michael Praetorius mentioned motets by Cocciola for up

to five voices he may have had this volume in mind. In it the composer is said to have hailed from Vercelli.

Until the discovery in 1957 of the Pelplin Organ Tablature only two complete pieces by Cocciola were known, both three-part motets. The Pelplin tablature, compiled during the 1620s, includes 30 sacred vocal pieces by him. The first volume contains eight for two voices, seven for three and one for four, all of which probably came from the lost *Concentus harmonici ecclesiastici*. The origins of the remaining 14 pieces, which are in the fourth and fifth volumes, are unknown. They are all for eight voices in two choirs, and one or two may thus have been published in the *Messa moti*. Like so much music of the period, Cocciola's works display both traditional and progressive features. Osostowicz-Sutkowska (1970) has identified the late Renaissance elements evident in the eight-part motets (though some are very instrumental in conception) as well as the Baroque elements found in the pieces for few voices with continuo, which are typical of the concertato style. Together with Zieleński, some of whose works are very similar in character to his, Cocciola was a pioneer in Poland of this new style and of the sacred concerto in particular.

WORKS

Messa moti, 8vv (Venice, ?1612); lost, listed in *Indice* and Schaal, mentioned in Gerber

Concentus harmonici ecclesiastici, 2–5vv, bc (org); lost, Antwerp edn of 1625 or earlier cited in *JoãoIL*, see *GöhlerV*

2 motets, 3vv, bc, 1615[13], 1627[1]

30 sacred pieces: 16 for 2–4vv, *PL-PE* Pelplin Organ Tablature, i (?copied from Concentus), facs. in AMP, ii (1964), 16–36, 68f, 214f; 14 for 8vv, *PE* Pelplin Organ Tablature, iv, v, facs. in AMP, iii (1965), 190ff, vi (1965), 120ff: thematic incipits in Sutkowski and Osostowicz-Sutkowska

6 b pts (3 identical to those in Pelplin Organ Tablature), *c*1620–30, *PL-Kj* 40063 formerly in *D-Bsb*

Cõceyção, Diego da. *See* CONCEIÇÃO, DIEGO DA.

Cochereau, Jacques (*b* *c*1680; *d* Paris, 17 July 1734). French singer and composer. Fétis, Walther and Gerber all gave his date of death incorrectly as 5 May 1722. From 1702 to 1718 he played many of the leading *haute-contre* roles at the Académie Royale, including Idamante in Campra's *Idomenée* (1712), Jason in J.-F. Salomon's *Medée* (1713) and Léandre in Mouret's *Les fêtes de Thalie* (1714). In May 1703 he entered into a contract in which he promised, in return for a large sum of money, that he would continue to execute all the operatic roles required of him and would not leave without permission. From at least 1716 until his resignation in spring 1733 he held the post of *ordinaire de la musique du Roi*, frequently taking part in concerts at Versailles. According to Fétis, he was in the service of the Prince de Conti, but that is unsubstantiated in other sources. He gave singing and harpsichord lessons to the daughters of the Duke of Orléans at the abbey of Chelles, and according to Benoit, the self-styled 'abbess', Louise-Adelaïde, was rumoured to have become his mistress. His principal compositions were three volumes of *airs sérieux et à boire*: they are light, tuneful and Italianate in style, ranging from simple dance-like pieces to more complex dialogues like miniature cantatas.

□

Cochereau, Pierre (*b* St Mandé, Val-de-Marne, 9 July 1924; *d* Lyons, 6 March 1984). French organist and composer. He had piano lessons with Marguerite Long, and then studied at the Paris Conservatoire with Jean Gallon and Duruflé (harmony), Dufourcq (music history), Aubin (composition), Dupré (organ) and Noël Gallon (counterpoint and fugue), winning four *premiers prix*. He was organist at St Roch, Paris, 1942–54, and in 1955 became organist of Notre Dame. From 1950 to 1956 he was director of the Le Mans Conservatoire, and from 1961 to 1980 was director of the Nice Conservatoire; in 1979 he was involved in the creation of the Conservatoire National Supérior de Musique in Lyons, which he directed until his death. As a recitalist Cochereau toured western Europe, the USSR, Australia and the USA. In France he gave many concerts in small villages on his own portable organ, bringing the standard repertory to new audiences. But his speciality was improvisation, especially on large instruments; the numerous recordings of his improvisations at Notre Dame show his mastery of the genres of the symphony, variations and the toccata. Cochereau's facility in improvisation is reflected in his few compositions, which include a symphony, two organ concertos, piano and chamber music; in the third variation of his set *Ma jeunesse a une fin* the performer is directed to improvise in the pattern established in the first three bars, above the pedal theme.

Cochlaeus [Dobneck, Wendelstein], **Johannes** (*b* Wendelstein, 10 Jan 1479; *d* Breslau, 10 Jan 1552). German theologian, historian, humanist, music theorist and pedagogue. After studies with Heinrich Grieninger in Nuremberg, Cochlaeus entered the University of Cologne in 1504. A year later he had already gained the baccalaureate

degree and in 1507 the MA. During these years his first treatise, *Musica*, was printed in three editions. He also became the music teacher of Heinrich Glarean, who, greatly admiring him, later included in his *Dodecachordon* three pedagogical compositions from his *Musica*. In 1510 on the recommendation of Willibald Pirckheimer, he became the rector of St Lorenz school in Nuremberg. There he organized a humanistically orientated curriculum and wrote the *Tetrachordum musices* (1511), his most valuable music treatise. In 1517 he earned a doctorate in theology at Ferrara and was ordained to the priesthood in Rome. In succeeding years he acquired a reputation as a fierce and unremitting opponent of Lutheranism and Calvinism. In an encounter with Luther at Worms in 1521, he challenged the reformer and tried to persuade him to recant, but failed. Cochlaeus held church positions in various cities, including Dresden (1528–35), Meissen (1535–9) and Breslau (1545–52). He was buried in Breslau Cathedral.

His musical significance rests primarily on *Tetrachordum musices*, written as a textbook for the schoolboys of St Lorenz. Its dialogue format and clear, concise organization made it a very popular treatise that quickly went through seven editions. It is based on the *Musica* of 1507, a university textbook whose three sections (not four, as is sometimes stated) were enlarged by Cochlaeus into four parts: book 1 on the elements of music and musical instruments; book 2 on plainsong and solmization; book 3 on modes; and book 4 on mensural music and counterpoint. Cochlaeus cited many early authorities, such as Aristotle, Jerome, Richard of St Victor, Isadore, Guido of Arezzo and Jean Gerson. But contemporary theorists are not acknowledged, although he relied heavily on them, particularly Franchinus Gaffurius, Adam von Fulda, and Wollick and Schanppecher in their *Opus aureum*. For example, the seven hexachord exercises and the modal *differentiae* in *Tetrachordum musices* come from *Opus aureum*, and three of the counterpoint examples are identical with those in Gaffurius's *Practica musice* (1496).

The particular value of *Tetrachordum musices* consists in Cochlaeus's own contributions, which include four-voice examples of psalmody, settings of hymns and classical poetry, and chapters on musical instruments. As an aid in teaching psalm tones he composed pieces in plainsong notation in chordal style, with the psalm tone melody either in the tenor or the discant. Influenced by Tritonius's *Melopoiae* (1507) he applied the same procedure to hymns and classical odes, but he put the complete text in the discant. Many kinds of instruments are discussed, and frequently they are identified by both Latin and German names. Cochlaeus played the harp, the favourite instrument of musical humanists. His choir at St Lorenz church was frequently joined by Johann Neuschel, the renowned player and maker of brass instruments.

WRITINGS

for non-musical works see Spahn, pp.341–72

Musica (n.p., *c*1504) [in *A-Wn*; the treatise consists of 15 folios; plainsong notes are hand drawn on printed staves; anon. in source]; (n.p., enlarged 2/*c*1505) [in *D-LEu*; anon. in source; repr. ed. H. Riemann, *MMg*, xxix (1897), 147; xxx (1898), 1]; (Cologne, 3/1507; abridged 4/1515) [The 1507 edn, consisting of 28 folios, is the most complete version; it consists of 3 parts: 1 on plainsong, 2 on mensural music, 3 on composition and counterpoint.]

CLEMENT A. MILLER/R

Cochran, Sir **C(harles) B(lake)** (*b* Lindfield, 25 Sept 1872; *d* London, 31 Jan 1951). English theatrical producer. He first worked as an actor in America, then became a manager and producer. He brought Houdini to London and was associated with the presentation of boxing, wrestling, rodeo and circus. He twice produced Max Reinhardt's religious epic, *Das Mirakel* (1911 and 1932), for which he commissioned a score from Engelbert Humperdinck. Cochran's true métier was West End revue; whereas Charlot tended to discover talent and make revue stars, Cochran often presented them in a grander style. Noël Coward wrote, composed and starred in Cochran's *This Year of Grace* (1928), which Cochran produced at the London Pavilion, where he staged many successful revues. He later moved towards the creation of an English style of musical comedy when the appeal of the revue dwindled.

Cochran frequently interpolated Broadway hits into his shows, and Rodgers and Hart (*Evergreen*, 1930) and Cole Porter (*Nymph Errant*, 1933) created scores especially for him. He also produced Coward's *Bitter Sweet* (1929) and successfully imported from Broadway Kern's *The Cat and the Fiddle* (1932) and *Music in the Air* (1933), and Porter's *Anything Goes* (1935). His shows were essentially glamorous vehicles for star performers, a style epitomized by Alice Delysia, Jessie Matthews, Evelyn Laye, Yvonne Printemps, Gertrude Lawrence and Coward. Towards the end of his life his association with A.P. Herbert and Vivan Ellis produced a trio of English hit musicals: *Big Ben* (1946), *Bless the Bride* (1947) and *Tough at the Top* (1949). He was knighted in 1948, and his career was celebrated in the revue *Cockie!* (1973).

ROBERT HOWIE

Cochran, Eddie [Cochrane, Edward] (*b* Oklahoma City, OK, 3 Oct 1938; *d* Chippenham, 17 April 1960). American rock and roll singer, songwriter and guitarist. He began his career as a country-music singer in the mid-1950s, at which time he was living in Los Angeles and working with Hank Cochran (unrelated), who later became a leading writer of country songs in Nashville. *Sittin' in the Balcony*, his first single, was released in 1956, but it was not until 1958 that he had his first success, with *Summertime Blues*; this song became an anthem for disaffected teenagers, and the hit songs that

followed it, such as *C'mon everybody* (1958) and *Somethin' Else* (1959), helped further to define the experience of young people in the 1950s. Cochran's virile tenor was the key element in the success of these songs, but he is best known for the primitive intensity of his guitar playing; he employed techniques and produced a sound that are normally associated only with much later rock musicians, and that influenced players such as Pete Townshend and new-wave performers. Cochran appeared in the film *The Girl can't Help it* (1956), in which he sang the song *20 Flight Rock*. He achieved his greatest popularity in the UK, where he died in a car accident while on tour.

JOHN MORTHLAND

Cock, Symon (*b* Antwerp, 1489; *d* Antwerp, 17 Aug 1562). South Netherlandish printer. Although active as a printer in Antwerp for more than 40 years, he did not become a member of the Guild of St Luke until 1557, towards the end of his life. In his long and prolific career (more than 170 books) he printed prognostications, ordinances, theology and devotional books, and a number of English heretical texts, printed clandestinely. On 15 September 1539 he received a six-year privilege for printing psalters with music, the first privilege to print music in the Low Countries. On 28 September of the same year he printed the first Dutch metrical psalter, *Een devoot ende profitelijck boecxken* (ed. D.F. Scheurleer, The Hague, 1889, 2/1977). This was followed, in 1540, by his *Souterliedekens* – Psalter Songs – which became immensely popular, being reprinted several times by Cock, and later by printers in both the southern and the northern Netherlands. These two publications were printed by double impression, the staves in red and the text and music in black, but with different music notation. The first used a small Roman neume typeface on a four-line staff; CHRISTOFFEL VAN RUREMUND had earlier used this music type for his liturgical books. The second employed diamond-shaped notation on a five-line staff, the first instance of diamond-headed notes in Low Countries printing (apart from a few earlier woodblock examples). In 1559 Cock printed a further edition of *Souterliedekens*, on this occasion using the single impression music type of Willem van Vissenaken.

SUSAN BAIN

Cocks, Robert (*b* 1798; *d* London, 7 April 1887). English music publisher. He established his own firm in London in 1823. In 1868 he took his two sons Arthur and Stroud into partnership and retired in 1881, but at his death his grandson Robert M. Cocks became the proprietor and continued until his retirement in 1898 when a sale of stock took place; AUGENER purchased the goodwill and lease, and retained the name of the firm until 1904.

Cocks was much involved in concert management at the outset of his career and had a long association with the Hanover Square Rooms. He employed resident foreign musicians to compile and edit music. Some 16,000 works were published by the firm, including Bach's keyboard works edited by Czerny, Beethoven's quartets, and works by Czerny himself, Rode and Spohr, in addition to the waltzes of Johann Strauss and Lanner and contemporary English music. A number of methods and books on music included translations of important foreign treatises. A short-lived periodical, *Cocks's Musical Miscellany* (1850–53), contained original notices of Beethoven by Czerny. As music sellers the firm enjoyed aristocratic patronage, including that of Queen Victoria and Emperor Napoleon III. It also managed a large circulating music library and was among the first to exploit the Victorian ballad, though it soon lost this business by a reluctance to adopt the new royalty system.

W.H. HUSK, FRANK KIDSON/PETER WARD JONES

Coclico, Adrianus Petit (*b* Flanders, 1499/1500; *d* Copenhagen, after Sept 1562). South Netherlandish composer. The inscription 'AETAT: LII' on a woodcut of Coclico made in 1552 is the only indication of the year of his birth; he described himself as being of Flemish origin. The first reference to him is in the register of Wittenberg University for September 1545. Various assertions of his own that he had previously served with the English and French kings and the pope, and in high ecclesiastical positions, as well as his claim (in the *Compendium musices*) to have been a pupil of Josquin Des Prez, cannot be established as fact. (They were made when he sent compositions to local princelings to support his petitions for a post.)

Brought up originally in the Catholic faith, Coclico became a Protestant, and this apparently resulted in his leaving his Flemish homeland for Germany. In 1547 he spoke of having been in prison for the sake of his religion; he was released through the mediation of an influential personage so that he could go to the University of Wittenberg (in 1545), where he taught music privately to a group of students. Early in 1546 he applied unsuccessfully for the chair of music in Wittenberg, presenting the Elector of Saxony with a composition, now lost, upon a text by Melanchthon. During these years the composer married, but his wife left him soon afterwards. His application to the consistory for the dissolution of the marriage was refused. He then made his way to Frankfurt an der Oder, where he founded a society of musicians within the circle of the humanist Jodocus Willich. His extremely unfavourable financial position forced him to leave Frankfurt in 1547 and set out for Stettin, apparently without waiting for the dissolution of his marriage promised him by the elector, Joachim II. In Stettin, too,

he was unsuccessful in gaining a local post. In September of the same year he matriculated at Königsberg University and was taken soon afterwards into the Duke of Prussia's chapel. By November he was already in conflict with Lutheran theologians over doctrine, and the dispute was arbitrated by the duke. The result is not known, but, as the chief of the petitioners, Staphylos, was replaced during the following year by Osiander, Coclico was able to retain his post. He attended Osiander's lectures and became an adherent of his mystical doctrine of justification by faith, but he guarded against taking sides in subsequent controversies. In 1550 he had to leave Prussia because his housekeeper bore him a son. This liaison apparently had the approval of the duke, for his chancellor acted as godfather at the child's baptism, but the dissolution of Coclico's marriage was not possible under prevailing laws.

Towards the end of 1550 Coclico travelled alone to Nuremberg where for a few months he enjoyed the hospitality of his countryman, the publisher Johann Berg. Here he composed the collection of motets *Consolationes piae: musica reservata* and the treatise *Compendium musices*, both of which were published by Berg in 1552. The town of Nuremberg subsidized the publication of these and, for a few months, supported the running of a school which specialized in teaching music, French and Italian. It may have been Coclico's influence that resulted in the subsequent publication by Berg & Neuber of so much music by composers of the Low Countries and France. After about six months the subsidies for the school were discontinued, and all trace of Coclico is lost until 1555, when he appeared in Schwerin. There he apparently made no headway either as an independent musician or as a composer. He was appointed to a post in the chapel of Duke Johann Albrecht I of Mecklenburg at Wismar where he directed the choirboys. His exorbitant salary demands, however, prevented him from being given a permanent position as Kantor. Finally he went to Copenhagen where he found a suitable post as singer and musician first at the court of King Christian III and then with Marcellus Amersfortius. The death of his wife at that time enabled him to marry an inhabitant of Wismar called Ilsebe, who survived him. In September 1562 his name appears for the last time in the court account books and presumably he died not long afterwards.

The woodcut reproduced in the *Compendium musices* and in the motet collection *Consolationes piae* is probably the original of the portrait in the Civico Museo in Bologna. Whether the bearded dwarf depicted among the musicians of Queen Mary of Hungary in Brussels is Coclico, as has been surmised, cannot be confirmed.

The motet collection, *Consolationes piae* of 1552, is of particular interest because the words *musica reservata* appear in the title. In the preface of the *Compendium musices*, too, Coclico wrote that he had written the treatise 'to bring to light once more that kind of music which is usually termed *reservata*'. This statement suggests that MUSICA RESERVATA (i) relates to an earlier type of music which had disappeared from general musical awareness by 1552; this is contrary to other descriptions of the concept, which characterize it as 'new'. The 41 motets in *Consolationes piae*, which should have furnished the key to the explanation are disappointing with their parallel motion, crude harmonies and lack of melodic sensibility. The pictorial interpretations of the text are plentiful, yet, at the same time, devices associated with certain words often appear when the text does not require them. The frequency and nature of Coclico's word-painting are in any case too conventional to be of any use in determining the true nature of *musica reservata*.

ALBERT DUNNING

Côco. A Brazilian folkdance found especially in the north and north-east. It shows elements of African and Amerindian origins; *umbigada* (touching of the couple's navels) occurs occasionally (*see* BRAZIL, §II, 4(i)). The singing accompanying the dance is always responsorial; the soloist, known as the *tirador de côco*, uses song texts in the form of quatrains, DÉCIMAS or six-line verses. The *côco* is commonly accompanied by hand-clapping or by a drum and a rattle. In northern states such as Paraíba and Rio Grande do Norte it is danced by men and women in a circle with a solo dancer and singer in the middle. Different types of song may be associated with the dance, in which case its designation generally refers to that song type, as in the *côco-de-embolada* or *côco-de-décima*.

GERARD BÉHAGUE

Cocteau, (Clément Eugène) Jean (Maurice) (*b* Maisons-Laffitte, Paris, 5 July 1889; *d* Milly-la-Forêt, Seine-et-Oise, 11 Oct 1963). French writer, film maker, designer and aesthetic activist. His associations with musicians began when the Ballets Russes made their first visit to Paris in 1909; for them he worked on *Le dieu bleu*, in the oriental style that had made their reputation. The success of *The Rite of Spring* shifted his attention: he dedicated his verse collection *Le potomak* (1913–14) to Stravinsky,

and there was a brief attempt at collaboration. Another dramatic project, a circus presentation of *A Midsummer Night's Dream*, also foundered, but he seized from the wreckage one of its intended composers, Satie, and planned a ballet that would realize some of the ideas from the two failed schemes. Yet *Parade*, as finally produced, owed little to him: his text was scrapped, and the visual aspects of the ballet were in the hands of Picasso. His response was characteristic: in *Le coq et l'arlequin* (1918) he defended *Parade* as if it were fully his own conception.

By this time Cocteau was directing and promoting a group of young composers, eventually known as LES SIX, for whom *Le coq et l'arlequin* formed a manifesto, demanding that music be anti-Romantic and untaintedly French, and that it gear itself to popular art and modernity. In *Les mariés de la tour Eiffel*, for which five of Les Six wrote short pieces, he at last produced a work in which his words were heard from the stage, and a work that embodied the principles of *Le coq et l'arlequin*, including its flippancy. Other stage pieces with individual members of the group followed throughout the 1920s, but Cocteau was becoming more attached to the straight theatre. It was the plain, direct quality of his compressed translation of *Antigone* that persuaded Stravinsky to approach him for the text of *Oedipus rex*. Once again he found his contribution reduced almost to nothing, for two rewritings were required, the text was cut, and it was translated into Latin. All that was left was the vernacular narration, whose alienating effect supported Stravinsky's distanced, liturgical treatment of the myth. Cocteau was able to present his quite different view – elaborately symbolic and with updated characters – in *La machine infernale* (1932–4). For a revival of *Oedipus rex* in Paris in 1952 he acted as producer and designer, and he also designed his three ballets of the 1950s. Cocteau was wide-ranging in both the media and the styles which he pursued, and suggested something of his magicianly function in a line from *Les mariés*: 'Since these mysteries escape me, I will pretend to be their organizer'.

WORKS SET TO MUSIC

DRAMATIC WORKS

Le dieu bleu (ballet, 1910–12, collab. F. de Madrazo): music by Hahn, Paris, 1912: withdrawn by Cocteau
David (projected ballet, 1914): music to have been by Stravinsky
Le songe d'une nuit d'été (projected spectacle, after W. Shakespeare, 1915): music to have been by Ravel, Satie, Schmitt, Stravinsky and Varèse; only Satie's Cinq grimaces composed
Parade (ballet, 1916–17): music by Satie, Paris, 1917
Le boeuf sur le toit ou 'The Nothing Doing Bar' (ballet, 1920): music by Milhaud, Paris, 1920
Paul et Virginie (opéra comique, 1920, collab. Radiguet): music to have been by Satie
Les mariés de la tour Eiffel (play-ballet, 1920–21): music by Auric, Honegger, Milhaud, Poulenc and Tailleferre, Paris, 1921
Le gendarme incompris (play, 1921, collab. Radiguet): music by Poulenc, Paris, 1921
Antigone (play, after Sophocles, 1922): music by Honegger, Paris, 1922; op by Honegger, 1924–7, Brussels, 1927
Roméo et Juliette (play, after Shakespeare, 1924): music by Désormière, after Eng. folksongs, Paris, 1924
Le train bleu (ballet, 1924): music by Milhaud, Paris, 1924
Les enfants terribles (play, 1925): dance op by Glass, 1996
Oedipus rex (op-orat, after Sophocles, 1926–7, Lat. trans. J. Daniélou): music by Stravinsky, Paris, 1927
Le pauvre matelot (op, 1927): music by Milhaud, Paris, 1927
La voix humaine (play, 1929): op by Poulenc, 1958, Paris, 1959
Le sang d'un poète (film, 1930): music by Auric
Renaud et Armide (play, 1941): music by Poulenc, 1962
L'éternel retour (film, 1943): music by Auric
La belle et la bête (film, 1945): music by Auric; screenplay set by Glass to be sung with film, 1994
L'aigle à deux têtes (film, 1947): music by Auric
Les parents terribles (film, 1948): music by Auric
Orphée (film, 1949): music by Auric
Phèdre (ballet, 1950): music by Auric, Paris, 1950
La dame à la licorne (ballet, 1952–3): music by Chailley, after 16th-century sources, Munich, 1953
Le poète et sa muse (ballet, 1959): music by Menotti, Spoleto, 1959

CONCERT WORKS

Larger pieces: Durey: Le printemps au fond de la mer, S, 10 wind, 1920; Milhaud: Caramel mou, 1v, jazz ens, 1921; Markevich: Cantate, 1930; Thiriet: La précaution inutile ou Oedipe roi, speaking chorus, orch, 1940–41 [text from play Oedipe roi, 1925]; Schmitt: 3 trios, female vv, 1941; Poulenc: La dame de Monte Carlo, S, orch, 1961; Claoué: Patmos, orat, 1962
Songs: Auric: 8 poèmes, 1919; Milhaud: 3 poèmes, 1920; Poulenc: Cocardes (1920); M. Jacob: 6 poèmes, 1922; R.H. Myers: Une danseuse (1923); Cliquet-Pleyel: Tombeau de Socrate, Narcisse, Don Juan (1924); Honegger: 6 poésies, 1924; Wiener: 2 poèmes (1924); Ferroud: Odile, Chanson de pharynx (1925); Milhaud: Pièce de circonstance, 10 ex HC (1926); Delage: Sobre las olas (1927); Durey: Chansons basques (1927); Milhaud: Enfantines (1928); Delannoy: M'entendez-vous ainsi? (1929); Poulenc: Toréador (1933); Sauguet: Chansons de marins (1933)

PAUL GRIFFITHS

Cocx, Jan (*b* East Flanders, ? *c*1630; *d* Antwerp, 24 Nov 1678). Flemish composer and priest. On 17 September 1639 he possibly became a chorister at St Baaf Cathedral, Ghent. He can probably be identified with the choirmaster of the same name who was at Dendermonde before 1652. In 1666 he temporarily replaced the choirmaster at St Baaf, and on 16 October that year he was appointed, and on 9 November installed, as choirmaster of Antwerp Cathedral; he had in fact carried out the duties of this post since 15 March together with his predecessor Gaspar Boest (who died on 30 September). On 7 May 1667 he was given an ecclesiastical benefice at the altar of the Holy Cross. A 'missa musicalis' dedicated to the cathedral chapter in 1670 was probably composed by him. In his

will of 1671 he left his compositions and his Ruckers harpsichord to his brother Michiel, a pastor at St Pauwels-Waas.

Cocx's only surviving music is *Ferculum musicum dei, deiparaeque virginis ac sanctorum laudibus conditum, coctum et excogitatum* (Antwerp, 1673), which contains polyphonic motets with instrumental accompaniment. It is possible that the eight partbooks and the motet for three voices and three instruments that are listed under his name in inventories of St Jacobskerk, Antwerp (1677), St Michielskerk, Ghent (1730–42), and St Walburga, Oudenaarde (1734), can be traced back to this collection.

GODELIEVE SPIESSENS

Coda (It.: 'tail'). The last part of a piece or melody, the implication being of some addition being made to a standard form or design. In simple strophic song, for instance, the coda would be an addition to the melody appearing only after the last verse (or possibly after certain specific verses out of a large number). In fugue the term refers to anything occurring after the last complete entry of the subject has been heard. In a minuet (scherzo) and trio movement the coda is anything added to the conclusion of the final minuet (scherzo) statement (e.g. Beethoven, Piano Sonata in C op.2 no.3, Scherzo, bars 105 to the end).

The most important use of the term 'coda' is in sonata form, where it refers to anything occurring after the end of the recapitulation (but not to an expansion within the recapitulation before its original CODETTA or closing is reached, as in Mozart's 'Prague' Symphony K504 , first movement, bars 270–77 (cf 123–4) and 288–96 (cf 135–6)). Beethoven is usually said to have been the first 'to develop' the coda as an important section of a sonata form movement. Some of his codas are indeed very long owing to his love of dramatic excursions away from the home key, necessitating weighty passages to restore it. In the first movement of the 'Eroica' Symphony the sudden excursions to D♭ and C (bars 557–72) and the references to the E minor episode from the development (bars 581–95) produce a coda of 141 bars (from bar 551 to the end), and a whole series of interruptions in the last movement of the Eighth Symphony produce a coda of 236 bars (from bar 267 to the end), so long as to have misled some writers into speaking of a 'double recapitulation'. After Beethoven the coda became a more or less permanent feature of sonata form, thus in a sense making the term a misnomer.

See also SONATA FORM, §3(iv).

ROGER BULLIVANT/JAMES WEBSTER

Codax [Codaz], **Martin** (*fl c*1240–70). Galician *jongleur*. Six of the seven songs attributed to him survive with music in the Vindel Manuscript, a single folded leaf probably written in the late 13th century, found in 1913 by the Madrid bookseller Pedro Vindel and since 1977 at the Pierpont Morgan Library in New York (M979). The texts, in Galician-Portuguese, survive without music in two manuscripts copied in Italy in the 16th century. The songs belong to the poetic genre *cantiga de amigo*. This kind of cantiga was composed and possibly sung by a man but was supposed to convey the feelings and thoughts of a young woman longing for her absent lover. The poets tended to use an archaic technique known as parallelism, which called for the presentation of the same idea twice in successive stanzas, the second time with a change of word at the line-ends (codas). The stanzas were short and were generally followed by a refrain; the refrain was not meant to be choral, and may have been freely rendered by the singer. Set in Vigo on the west coast of Spain, near the Portuguese border, Codax's songs seem to belong together as a cycle; their structural and rhetorical features lend further support to this view, to which most scholars have subscribed. The music, however, shows no trace of modal ordering. In the Vindel Manuscript the melodies were copied by two different scribes. The quasi-mensural character of the musical notation (use of semibreve, breve and long, and of semibreve-semibreve ligatures), which nonetheless displays some typically Iberian traits, allows us to see at least two styles of rhythmic notation; that corresponding to the first scribe has been described as rhapsodic, with a juxtaposition of rhythmic patterns and melodic formulae (also found elsewhere) resulting in an irregular alternation of shorts and longs. The music is closely tied to the structural features of the poem: the regular strophic accents, the internal strophic contrast marked by the coda, and the opposition between strophe and refrain are enhanced by melodic features. The songs tend to be in *AA′B* form, use a small compass (typically a major 6th) and move mostly by step; the articulation of the text is syllabic or neumatic, melismas including generally no more than four notes (seven being the maximum). In spite of a distinctive, rhetorically expressive character which sets the music apart from other surviving courtly music of the time, it relates to Gregorian psalmody and shares some formulaic vocabulary with the religious *Cantigas de Santa María*. Apart from seven *cantigas de amor* by the Portuguese King Dom Dinis and the Marian *cantigas*, these are the only Galician-Portuguese lyrics from the Middle Ages to survive with their melodies.

MANUEL PEDRO FERREIRA

Codecasa, Teresa. *See* SAPORITI, TERESA.

Codetta (It.: 'little tail'). A brief coda. The word is often used to describe any short conclusion to a movement or piece. English speakers also apply the term to music in

two additional, more specific ways, in FUGUE and SONATA FORM.

In fugue, 'codetta' is used to designate the brief segment of free counterpoint that sometimes separates the first two thematic entries at the beginning of the exposition from the next one. This phenomenon occurs most commonly in four-voice fugues, where the exposition is often laid out according to the sequence subject–answer–codetta–subject–answer. Such a non-thematic segment may also be used, though more rarely, to separate any two entries in the exposition. The identification of a codetta depends to some extent on whether the composer has given the subject an unambiguous final note, something which is not always the case. Other terms that designate this phenomenon include 'episode' (not to be confused with the episodes that take place in the body of the fugue) and such generic works as 'link' and 'interlude'.

In sonata form 'codetta' refers to the material that concludes the exposition in the new key, after the presentation of the second thematic group. Most sonata form movements written in the 18th century have easily identifiable codettas, but as 19th-century composers experimented further with the form the distinctions between the principal sections began to be blurred. As a result, the idea of codetta in later sonata form movements become virtually obsolete as its presence or absence becomes almost impossible to determine.

PAUL WALKER

Codex Reina (*F-Pn* n.a.fr.6771). *See* SOURCES, MS, §VIII, 2 and SOURCES OF KEYBOARD MUSIC TO 1660, §2(i).

Codman, Stephen (*b* Norwich, *c*1796; *d* Quebec, 6 Oct 1852). Canadian organist of English birth. A pupil of Beckwith and Crotch, Codman went to Quebec in 1816 to become organist at the Anglican Cathedral of the Holy Trinity, a position he occupied until 1852. He also taught music. On 26 June 1834 Codman presided over a 'Grand Performance of Sacred Music' which featured 121 singers and 64 orchestral players, probably the largest group of performers assembled in Canada up to that time. Codman is the first musician in Canada known to have had any compositions published. His *The Fairy Song* and the canzonet *They are not all Sweet Nightingales* (London, *c*1827) were praised in the *Quarterly Musical Magazine and Review* in 1827 as 'the production of no ordinary mind'. *The Fairy Song* is reproduced in *The Canadian Musical Heritage*, iii. (*EMC2*).

HELMUT KALLMANN

Coelen, Lambert. *See* COOLEN, LAMBERT.

Coelestinette. *See* CELESTINETTE.

Coelho, Manuel Rodrigues. *See* RODRIGUES COELHO, MANUEL.

Coelho, Rui (*b* Alcácer do Sal, 3 March 1889; *d* Lisbon, 5 May 1986). Portuguese composer. He studied at the Lisbon Conservatory with Alexandre Rey Colaço (piano) and António Eduardo da Costa Ferreira and Tomás Borba (composition). Later he studied with Humperdinck in Berlin (1910–13) and with Vidal in Paris. In Portugal he often appeared as a pianist and a conductor, mainly performing his own works. He worked for Portuguese radio and was music critic for several Lisbon newspapers.

In spite of his contact with the European musical trends of the 1910s, Coelho made almost no use of 20th-century techniques. He composed in a nationalist manner, aiming (in his own words) 'to make known to the world the Portuguese spirit'. For that purpose he created (1934) the Acção Nacional de Ópera, a foundation for the promotion of Portuguese opera, which, however, performed only his own works. Coelho has often been inaccurately called the creator of Portuguese national opera. Nevertheless, he gave a strong impulse to dramatic genres and fostered a new interest in national subjects. In his operas Coelho used only Portuguese texts on national subjects, literary, historic and popular. He wrote the first Portuguese ballets of the 20th century, all of them on traditional subjects. In his orchestral works he portrayed some of the greatest events of Portuguese history and described the Portuguese landscape. Coelho's activities and music were also strongly connected with the political life of the period. As a result, his music was performed less often after 1974. Nowadays his operas are no longer performed, but the ballets and the orchestral works, full of popular themes, are still played.

WORKS

Ops (first performed in Lisbon, Teatro de S Carlos, unless otherwise stated): O serão da infanta (A.L. Vieira), 1913; Crisfal (écloga, 1, Vieira), 1919, perf. 1920; Auto do berço (1, A.C. Oliveira), 1920; Rosas de todo o ano (1, J. Dantas), 1921; Belkiss (3, E. de Castro), 1923, 9 June 1928; Inês de Castro (3, A. Ferreira and A. Patrício), 15 Jan 1927; Cavaleiro das mãos irresistíveis (1, Castro), 1927; Freira de Beja (1, R. Chianca), 1927; Entre giestas (3, C. Selvagem), Lisbon, Coliseu, 1929; Tá-mar (3, A. Cortês), Lisbon, 1936; Bocage (opereta), Lisbon, Eden, 1937; Dom João IV (3, S. Tavares), 1 Dec 1940; A feira (G. Vicente), 1942, perf. 1943; A rosa de papel (1, Coelho, after A.S. Rita), 18 Dec 1947; Auto da barca do inferno (1, Coelho, after Vicente), 1950; Inês Pereira (3, G. Saviotti, after Vicente), 5 April 1952; O vestido de noiva (1, C. Oulmont), 4 Jan 1959; Auto da alma (1, Coelho, after Vicente), Queluz, Palácio, 1960; Orfeu em Lisboa (3, Coelho), 1964–6; A bela dama sem pecado (parábola, 1, Oulmont), 1969; Auto da barca da glória (Vicente), 1970; O rouxinol cativo; Soror Mariana (1, Dantas)

Ballets: Princesa dos sapatos de ferro, 1912; História da carochinha, 1916; O sonho da princesa na rosa, 1916; Bailado do encantamento, 1917; O sonho da pobrezinha, 1921; Bailado africano, 1930; Feira (choreographic poem), 1930; Rainha santa, 1930; Dança do Douro, 1940; Danças de Trás-os-Montes, 1940; Chula, 1940; Inês de Castro, 1940; Os noivos, 1940; Passatempo, 1940; Dom Sebastião, 1943; Arraial da ribeira, 1951; Dança dos pescadores

INSTRUMENTAL

Syms.: Sinfonia camoneana no.1, 1912; Sinfonia camoneana no.2, 1917; Pequena sinfonia no.1, 1928; Pequena sinfonia no.2, 1932; Sym. no.1, 1939; Sinfonia camoneana no.3, 1948; Sinfonia camoneana no.4, 1951; Sym. no.2, 1955; Sym. no.3, 1956; Sinfonia camoneana no.5 'São Paulo', 1957; Sinfonia henriquina, prólogo, 1966; Sinfonia de além-mar, 1969

Other orch: 4 'Portuguese' Suites, 1925, 1927, 1928, 1956; Nun'Álvares, sym. poem, 1922; Alcácer, sym. poem, 1925; Égloga, 1926; Rainha santa, sym. poem, 1926; Rondó alentejano, 1926; Abertura comemorativa da chegada dos portugueses à Índia, 1928; Prelúdio rústico, 1929; Suite, str, 1930; Dança portuguesa, 1932; 4 danças portuguesas, 1932; Cenas bíblicas, 1933; Rapsódia portuguesa no.1, 1934; Passeios de estio, suite, 1935; Fantasia portuguesa, vn, orch, 1935; Rondel alentejano, 1938; Pf Conc. no.1, 1939; Rapsódia portuguesa no.2, 1942; Noites nas ruas da Mouraria, pf, orch, 1943; Jardim quimérico, 1946; Pf Conc. no.2, 1948; Peninsulares, 1949; Egypcienne, vn, orch, 1950; Nas planícies do Alentejo, 1950; Rapsódia de Águeda, 1953; História trágico-marítima, 1954; Alentejo, 1954; Retábulo português, 1960; Rapsódia de Lisboa, 1961; O castelo de Lisboa, sym. poem, 1962; Calendário, 1963; Viagens na minha terra, 4 suites, 1964–7

Chbr and solo inst: Sonata no.1, vn, pf, 1910; Bouquet, suite, pf, 1911; Largo, 2 va, 2 vc, pf, 1911; Pf Trio, 1916; Sonata no.2, vn, pf, 1923; Pf Sonatina, 1932; Album da juventude portuguesa, pf,

JOSÉ CARLOS PICOTO

Coelho Neto, Marcos (*b* Villa Rica [now Ouro Prêto], 1763; *d* Villa Rica, 22 Oct 1823). Brazilian composer, conductor and french horn player, active in the province of Minas Gerais. His father (1746–1806), of the same name, was also a horn player, composer and conductor. Both were members of the Villa Rica Brotherhood of São José dos Homens Pardos (St Joseph's served the many mulattos in the city); the brotherhood's records show that the father was a member from 22 August 1761 to his death (21 August 1806), and the son from 12 June 1780 to his death. The latter's activities in the brotherhood primarily included conducting at important festive occasions, from 1808 to 1815 according to extant documentation.

A hymn *Maria mater gratiae* (1787) has been attributed to Coelho Neto by Curt Lange, but it is impossible to determine whether this and ten other works attributed to 'Coelho Neto' were by the father or the son. A short work for mixed chorus, strings and horns, the hymn combines effectively late Baroque and Classical stylistic traits and expression. The other works include a Credo, several *ladainhas* (litanies) (one ed. R. Duprat in *Música do Brasil colonial*, São Paulo and Ouro Prêto, 1994) and masses.

GERARD BÉHAGUE

Coelison. *See* SOSTENENTE PIANO, §3.

Coenen. Dutch family of musicians.

(1) **Louis** [Ludovicus] **Coenen** (i) (*b* Breda, 29 April 1797; *d* Rotterdam, 12 March 1873). Violinist, violin maker, organ builder and organist. He settled in Rotterdam about 1823.

Besides those discussed individually below he had two sons, both pianists and composers: Henri [Hendricus Cornelis Johannes] (*b* Rotterdam, 30 April 1841; *d* Amsterdam, 27 Oct 1877) and Anton Josephus (*b* Rotterdam, 14 Dec 1845; *d* Batavia [now Jakarta], 1876).

(2) **Frans** [Franciscus Hendricus] **Coenen** (*b* Rotterdam, 26 Dec 1826; *d* Leiden, 24 Jan 1904). Violinist and composer, son of (1) Louis Coenen. He made his first public appearance as a violinist in 1838. After studying with B. Molique in Stuttgart (1840–42) and H. Vieuxtemps in Brussels (1842–3), he became a violin teacher in Rotterdam. In 1848 he made an extensive American tour with the pianist H. Herz, whom he met in New York. During the following two years he also gave recitals in Mexico, Venezuela and Cuba. He left Europe again for a longer tour of South America (1851–4) with the Dutch pianist Ernst Lübeck.

In 1854 he finally returned to the Netherlands and settled in Amsterdam. From 1856 he led Van Bree's string quartet which performed works almost unknown in the Netherlands at the time, including Beethoven's op.130. He also led the orchestras Caecilia and Felix Meritis. He was on the board of the Maatschappij tot Bevordering der Toonkunst (1862) and managed the Vereeniging voor Nederlandsche Muziekgeschiedenis (1868–98). In 1871 he took over the leadership of two choral societies, the Amstels Mannenkoor and the Vereeniging tot Beoefening van Oude Muziek; the latter specialized in Renaissance music and first performed in 1873. He was director of the music school of Amsterdam from 1877 (from 1884, the conservatory) until his retirement in 1895.

Coenen's composing career began early with a mass setting for chorus and orchestra (1840). His sacred and secular choruses are homophonic, conservative in style and much indebted to Mendelssohn. Most of his other works are virtuoso or salon pieces and arrangements for violin with piano accompaniment. Very popular in their day were his South American salon mazurkas.

(3) **Louis** [Ludovicus Antonius] **Coenen (ii)** (*b* Rotterdam, 26 June 1834; *d* New York, 1900). Organist and teacher, son of (1) Louis Coenen. He moved to the USA in 1858, becoming a teacher and organist in Springfield, Massachusetts.

(4) **Willem** [Wilhelmus Antonius] **Coenen** (*b* Rotterdam, 17 Nov 1836; *d* Lugano, 18 March 1918). Pianist and composer, son of (1) Louis Coenen. He lived in Paramaribo, travelled as a pianist throughout America, and from 1862 was piano teacher at the GSM in London. His compositions include songs and lyrical and virtuoso piano pieces.

(5) **Louis Coenen (iii)** (*b* Amsterdam, 24 March 1856; *d* Amsterdam, 31 Jan 1904). Pianist, teacher and composer, son of (2) Frans Coenen. He studied music with his father and then at the Hochschule für Musik in Berlin (1874–6) under E. Rudorff and W. Bargiel. He continued his study of the piano under Liszt, travelling with him in 1876 to Budapest and Weimar, and his study of composition under Volkmann. From 1877 to 1895 he lived in Paris; he then returned to Amsterdam, where he became a piano teacher at the conservatory. His compositions include a sonata in E♭ for piano (four hands).

JAN TEN BOKUM

Coenen, Johannes Meinardus (*b* The Hague, 28 Jan 1824; *d* Amsterdam, 9 Jan 1899). Dutch conductor, composer and bassoonist. After studying at the royal music school in The Hague, he was bassoonist (1840–42) in the court orchestra of King Willem II and gave solo recitals until 1851, when he was appointed conductor at the Dutch theatre of van Lier, Amsterdam. In 1856 he became conductor at the municipal theatre. He achieved his greatest fame when he succeeded van Bree as conductor of the Felix Meritis orchestra (1857–65) and as conductor of the newly created orchestra of the Paleis voor Volksvlijt (1865–95). In 1868 he was appointed conductor of the Schutterij (civil militia), for which he composed numerous pieces and arrangements.

His compositions are in a largely homophonic style most reminiscent of Mendelssohn and Gade; they include several cantatas, two symphonies, including the symphony in B minor (Mainz, 1865), an overture *Floris V*, two unpublished operas, an orchestration of Verdi's *Otello*, some 50 ballets, concertos and many vocal and piano works. Among his chamber music is a quintet for wind instruments in A major (Amsterdam, 1990).

His brother, Cornelis (*b* The Hague, 19 March 1838; *d* Arnhem, 15 March 1913), toured Germany and France as a young violinist. Between 1860 and 1892 he conducted the Schutterij and also founded a symphony orchestra, which later became the Utrechts City Orchestra. From 1892 he was a conductor and violin teacher in Nijmegen. His compositions include unpublished cantatas and chamber and piano music; the piano works show the influence of Brahms.

JAN TEN BOKUM

Coerne, Louis (Adolphe) (*b* Newark, NJ, 27 Feb 1870; *d* Boston, MA, 11 Sept 1922). American conductor and composer. He studied the violin with Franz Kneisel and composition at Harvard University with J.K. Paine (1888–90); from 1890 to 1893 he studied the organ and composition in Munich with Joseph Rheinberger. After holding various church and conducting appointments in Buffalo, New York and Columbus, Ohio, he returned to Germany, where he lived from 1899 to 1902 and completed Rheinberger's unfinished Mass in A minor. From 1903 to 1904 he taught at Smith College and at Harvard, where he wrote his dissertation, *The Evolution of Modern Orchestration* (1908/*R*), and received the first PhD in music given by an American university (1905).

Coerne visited Germany again from 1905 to 1907. His opera *Zenobia* (op.66) was produced in Bremen in 1905; it was the first American opera to be heard in Germany and the only one of his stage works to be produced. His score combines elements of traditional operatic spectacle with Wagnerian leitmotif technique. His last posts included those of music director at Troy, New York (1907–9), director of the conservatory at Olivet (Michigan) College (1909–10), director of the school of music at the University of Wisconsin (1910–15) and professor at Connecticut College for Women, New London (1915–22). Some 300 of his more than 500 works were published. His manuscripts are in the Boston Public Library.

WORKS

(*selective list*)

Stage: Evadne (ballet), op.15; A Woman of Marblehead (op, 2), op.40, unpubd; Zenobia (op, 3, O. Stein), op.66; Sakuntala (melodrama, after Kalidasa), op.67; Jungfer Königin (The Maiden Queen) (operetta), op.69, unpubd; The Bells of Beaujolais (operetta), unpubd; incid music

Orch: Fantasy, A, op.5; Conc.-Ov., D, op.7; Suite, d, op.10, str; Conc., E, op.12, hn, str, hp, org; Hiawatha, sym. poem, op.18; Jubilee March, E♭, op.20, military band; Ov., op.36; Tone-Picture, op.39; Romantic Conc., g, op.51, vn, orch; Tone Poem, op.59; Dedication Ode, op.82; On Mountain-Crests, op.127

Vocal: Beloved America, patriotic hymn, op.41, male vv, orch; Festival Cant., op.45, solo vv, chorus and/or orch; Festival Morning and Communion Services, A, opp.46–7; Talitha cumi (sacred cant.), op.50, solo vv, chorus, str, hp, org; Mass, d, op.53, 6vv, org ad lib; Until the Day Break (sacred cant.), op.124, solo vv, chorus, pf/orch; A Song of Victory (patriotic cant.), op.125, solo vv, chorus, pf/orch; Skipper Ireson's Ride (cant.), op.131, Bar, chorus, pf/orch; The Landing of the Pilgrims (cant.), op.135, Bar, chorus, pf/orch; The Man of Galilee (cant.), op.141, solo vv, chorus, org; many songs, anthems, choruses and partsongs

RICHARD ALDRICH (with STEPHEN LEDBETTER)/R

Coeuroy, André [Bélime, Jean] (*b* Dijon, 24 Feb 1891; *d* Chaumont, Haute-Marne, 8 Nov 1976). French critic and writer on music. He studied at the lycée and the conservatory in Dijon, and then in Paris at the Lycée Louis-le-Grand and the Ecole Normale Supérieure (1911–14) where he showed exceptional ability in philology and linguistics and took his degree in German. He also had harmony and counterpoint lessons in Leipzig with Max Reger (1910) and studied philology at Munich University (1912–13). In 1920 he founded the *Revue musicale* with Henry Prunières; he was its editor-in-chief until 1937. During this time he also founded and directed the series La Musique Moderne and Les Maîtres de la Musique Ancienne et Moderne and worked as a music critic for daily newspapers as well as many French and foreign music journals. He was secretary-general of the International Society for Intellectual Cooperation and director of its music section (1929–39); he also lectured at Harvard University (1930–31) and in Europe (1930–40). In his writings he stressed the relevance of connections between music studies and philology; he was an early supporter of Les Six and of Varèse, and a sponsor of Jeune France. He also published many translations, mainly from German (notably Fontane, Goethe, Heine, E.T.A. Hoffmann and Sieburg).

YVONNE TIÉNOT/JEAN GRIBENSKI

Coferati, Matteo (*b* Florence, 8 July 1638; *d* Florence, 16 Jan 1703). Italian composer, teacher, music editor, theorist, organist and singer. He spent his entire life as a priest in Florence. On 1 August 1663 he was appointed chaplain at the cathedral, S Maria del Fiore, where he was also active as an organist and singer. He was particularly admired as a teacher, and it was this above all that determined the nature of his publications; the numerous reprints particularly of *Il cantore addottrinato* and *Scolare addottrinato* bear witness to the popularity of his methods. In these two manuals he sought to establish rules for the effective composition and performance of church music, contributing, according to his contemporaries, to the codification of the 'true rule of ecclesiastical singing'. However, he is better remembered for his *Corona di sacre canzoni* and *Colletta di laude spirituali*, which have great importance for the final phase in the history of the *laude spirituali*. The two volumes, which solved the problem of a lack of books of *laudi* for Florentine congregations, contain about 140 melodies, ranging from the lightest popular tunes to highly sophisticated art melodies, to which Coferati fitted sacred texts (for incipits of the contents of the two volumes see d'Ancona and Alaleona respectively). For all their characteristic simplicity, Coferati's collections of *laudi* display great variety of tempo, rhythm and progression, evidence of the mixed, folk provenance of the material. The great value of his work therefore lies in the reconstructions carried out on a legacy of traditional music, transmitted orally for more than two centuries. Without Coferati, many of the melodies, including instrumental dances, vocal pieces and dance songs, which date from the 15th and 16th centuries, might never have survived.

WORKS

Corona di sacre canzoni, o laude spirituali di più divoti autori (Florence, 1675[4])
Colletta di laude spirituali . . . per aggiungersi al libro intitolato Corona di sacre canzoni (Florence, 1706)
Officium defunctorum cum suo cantu et psalmi poenitentiales cum Litaniis, precibus, et orationibus (Florence, 1727)

THEORETICAL WORKS

Il cantore addottrinato, ovvero regole del canto corale (Florence, 1682)
Manuale degli invitatorj co' suoi salmi da cantarsi nelle ore canoniche (Florence, 1691)
Scolare addottrinato nelle regole più necessarie del canto fermo, estratte dal Cantore (Florence, 1726)

ARGIA BERTINI/GIULIA ANNA ROMANA VENEZIANO

Coffey, Charles (*b* Ireland, late 17th century; *d* London, 13 May 1745). Irish playwright and librettist. He appears to have been treated with some consideration by theatre managers, and frequently had a benefit. His fifth ballad opera, *The Devil to Pay* (ed. A.H. Scouten and L. Hughes, *Ten English Farces*, Austin, 1948), failed in its full-length form (Drury Lane, 6 August 1731) because the audience thought Lady Loverule's gluttonous chaplain was in bad taste, but when cut to a one-act afterpiece it was, after *The Beggar's Opera*, the most successful ballad opera of the century. The music was arranged by SEEDO, and in Nell Jobson, the surly cobbler's wife, Mrs Kitty Clive found her favourite role. The plot tells how bad-tempered Lady Loverule and sweet-tempered Nell are suddenly exchanged in their marital beds by the magic powers of a 'doctor', who is furious at being refused lodging late at night in both their houses. Collaborating with John Mottley, Coffey based his libretto on *The Devil of a Wife* (1686) by Thomas Jevon, who in turn may have been helped by Thomas Shadwell. This ballad opera was transformed into many genres: an influential German Singspiel by J.C. Standfuss, *Der Teufel ist Los* (1752); a French *opéra comique* by François Philidor, *Le Diable à Quatre* (1756); a ballet by Adolphe Adam (1845); and an English opera by Michael Balfe, *The Devil's In It* (1852).

Of Coffey's eight ballad operas (most of which are published in facsimile in W.H. Rubsamen: *The Ballad Opera*, New York, 1974, iii, x, xi, xv, xxii) the following were published with their tunes: *The Beggar's Wedding* (Little Theatre, Haymarket, 29 May 1729; earlier in Dublin); *The Female Parson* (Little Theatre, Haymarket, 27 April 1730); *The Boarding School* (Drury Lane, 29 January 1733); and *The Merry Cobler* (Drury Lane, 6 May 1735). The last was an unsuccessful sequel to *The Devil to Pay*.

ROGER FISKE/LINDA TROOST

Cogan [Coogan], **Philip** (*b* ?Cork, *c*1748; *d* Dublin, 3 Feb 1833). Irish composer, pianist and organist. Nothing is known of his youth beyond the fact that he was a member of the choir of St Finbarr's Cathedral in Cork, first as a choirboy, later as a lay vicar. In 1772 he appears to have moved to Dublin, where he was appointed a stipendiary in the choir of Christ Church Cathedral, a post he soon resigned. In 1780 he was appointed organist at St Patrick's Cathedral, and held this post until 1810. During this period he frequently appeared in the theatre, directing operatic music from the keyboard or as a solo organist or pianist at instrumental concerts. He was consequently reprimanded for neglecting his duties at the cathedral. His obituary in *Freeman's Journal* (8 February 1833) stated that 'from his extreme natural taste and great knowledge of thorough-bass, counterpoint and composition he obtained his degree of music doctor'. There is

however no trace of his name in the records of the University of Dublin and, though he was usually referred to as 'Dr Cogan', most of his publications are ascribed to 'Mr Cogan'.

He acquired a distinguished reputation as a keyboard player, composer and teacher; his pupils included Michael Kelly, W.M.Y. Rooke and Thomas Moore. Kelly described his execution as 'astonishing' and referred to him as 'an hospitable worthy fellow highly esteemed by all his connexions'. Numerous contemporary comments refer to his skill in fugal extemporization, and the dedications of his works to patrons and friends such as the Duchess of Leinster, Mrs La Touche (of the wealthy banking family who supported many musical enterprises) and others indicate that he was accepted in Dublin society as a cultured and distinguished man. He was a founder-member of the Irish Musical Fund Society (an organization for the relief of distressed musicians) and was vice-president when it was incorporated by Act of the Irish Parliament in 1794. He performed regularly at the annual commemoration of Handel, organized as a benefit for this society, drawing such adulatory comments from the critics as 'he is so long known not only to be the first performer but the greatest composer in this kingdom' (*Freeman's Journal*, 21–3 May 1789).

Cogan's earliest composition seems to have been incidental music for the pantomime *The Rape of Proserpine* (Dublin, 9 February 1776), followed by the comic opera *The Ruling Passion* (English Opera House, 1778). He also collaborated with Stevenson in providing music for *The Contract* (Smock Alley Theatre, 1782) in which 'the adapted airs are some of the most admired Compositions of Giordani &c' (*Hibernian Journal*, 8–10 May 1782). None of Cogan's stage music is extant, though some of his published songs may have been composed for the theatre. He was at his best as a composer for the keyboard, and the gradual transition throughout his works from harpsichord style to a full realization of the sonority of the piano is marked with the assured writing of an experienced and expert executant. Features of his style are short, fragmentary phrases and a love of ornaments, and his best works, which include the piano concerto op.6 and the piano sonatas opp.7 and 8, exhibit quite daring harmonies for his time. His music was widely published and sold throughout the United Kingdom, and compares well with that of many better-known composers of the period. Many of the variations on airs and dances popular during this time were incorporated as movements in his sonatas.

WORKS

STAGE

music lost

The Rape of Proserpine (pantomime), Dublin, 9 Feb 1776

The Ruling Passion (comic op, L. McNally), Dublin, English Opera House, 24 Feb 1778

The Contract (comic op, R. Houlton), Dublin, Smock Alley, 14 May 1782, collab. J. Stevenson, T. Giordani and Laurent; as The Double Stratagem, Dublin, English Opera House, 1784

INSTRUMENTAL

Edition: *Complete Works for Piano Solo by Philip Cogan*, ed. E. Barry, LPS, viii (1984)

op.

BRIAN BOYDELL

Cog rattle. A term used in the Hornbostel-Sachs classification, as an alternative to 'scraped wheels', for a cog wheel; it is mounted on an axle which serves as handle, and sounded by a tongue fixed in a frame which is free to turn on the handle and which strikes the teeth of the wheel successively when the rattle is whirled. Such instruments, besides being used (for example) by crowds at football matches, have been used by night watchmen, in church ceremonial at Easter time and in certain Eastern Orthodox monasteries. *See* RATCHET and SCRAPER.

□

Cohan, George M(ichael) (*b* Providence, RI, 3/4 July 1878; *d* New York, 5 Nov 1942). American songwriter, performer and producer. From boyhood he toured in New England and the Midwest with his parents and sister in an act called the Four Cohans, which by 1900 had become one of the leading performances on the vaudeville circuit. He played violin in the pit orchestra when he was nine and began writing sketches for the family act when he was 11 and songs when he was 13. During the 1890s he assumed a swaggering walk, brash speech and rapid delivery, forming an image of a song-and-dance man that later became archetypal. In 1901 he extended his vaudeville sketch *The Governor's Son* into a full-length musical show, and in 1903 did the same with *Running for Office*: both were moderately successful items in the family's repertory.

Cohan's first original musical comedy was *Little Johnny Jones* (1904), for which he wrote the book, lyrics and music, and in which he took the leading part. The fast-moving plot was a vehicle for elaborately choreographed dances, flag-waving parades and songs that included

George M. Cohan: commemorative postage-stamp, designed by Jim Sharpe and issued by the US Postal Service, 3 July 1978

'Yankee Doodle Boy' and 'Give my regards to Broadway'. In contrast with contemporary Broadway operetta the subject matter and characters were American, the speech vernacular, and the songwriting direct and easily memorable. He continued to write and, sometimes, to appear in musical comedies until the 1920s. Although the limited range of expression of these works restricted the inroads they made into the current vogue for operetta and, later, spectacular revue, they helped greatly to establish the taste for an essentially American style of musical comedy that was taken up most notably by Jerome Kern.

From 1904 to 1920 Cohan was in partnership with Sam H. Harris, producing musical comedies, revues and straight plays by Cohan as well as occasionally by other writers. They also formed their own publishing company and acquired interests in several theatres in New York. The partnership ended when Cohan opposed the ultimately successful unionization of actors, but Cohan continued to produce alone. As an actor he also gave distinguished performances in Eugene O'Neill's *Ah, Wilderness!* (1934) and the political satire *I'd Rather be Right* (1937) by Rodgers and Hart.

Cohan wrote more than 500 songs, of which *Over there* (1917) was the most popular morale song for two world wars. It is for this and a few other spirited, slangy and patriotic songs that he is chiefly remembered, helped by the film *Yankee Doodle Dandy* (1942) and the Broadway musical *George M!* (1968), which were based on his life and used many of his songs. Cohan was an untrained musician, who professed only to write songs in the standard format of introduction, two verses and chorus, with simple harmonies and undemanding vocal range. However, his significance in bringing vaudeville elements into the mainstream musical theatre to establish the essentially American brand of fast-moving musical comedy was profound.

WORKS

Musicals and revues; words by Cohan; all dates are those of first New York performance

The Governor's Son, Savoy, 25 Feb 1901
Running for Office, 14th Street, 27 April 1903; rev. as The Honeymooners, Aerial Gardens, 3 June 1907

RONALD BYRNSIDE/ANDREW LAMB

Cohen, Albert (*b* New York, 16 Nov 1929). American musicologist. He studied the violin at the Juilliard School under Ronald Murat, then enrolled at New York University, where he worked with Curt Sachs and Gustave Reese. He received the PhD in 1959 with a dissertation on the development of the 17th-century instrumental fantasia. After teaching theory and musicology at the University of Michigan (1960–70), he was appointed professor of music at SUNY in 1970. In 1973 he was appointed professor of music at Stanford University and was department chairman from 1973 to 1987.

Cohen specializes in the music and theory of the 17th and early 18th centuries, particularly in France. He has combined his scholarly interest in the performing practice of this period with performances on the violin and viol, both as a soloist and with chamber groups. His studies of French documents and treatises from the second half of the 17th century have resulted in a number of articles and translations of theoretical writings which explore not only the general concepts of music at that time but also such areas as vocal ornamentation in the *air de cour*.

PAULA MORGAN

Cohen, Arnaldo (*b* Rio de Janeiro, 22 April 1948). Brazilian pianist of Russian-Jewish extraction. He studied with Jacques Klein (a student of William Kapell) in Rio de Janeiro and later with Bruno Seidlhofer and Dieter Weber in Vienna. In 1972 he won first prize in the Busoni International Competition and made his début at the Wigmore Hall, London. Wary of instant acclaim, however, he declined Deutsche Grammophon's offer of a contract and in 1976 returned to Brazil, where he gave concerts and taught maths and physics. A decisive change of direction came in 1981, when he replaced Martha Argerich at a concert in the Netherlands; his success in Bach's First Partita, Chopin's Four Ballades and Prokofiev's Seventh Sonata prompted his return to Europe. Cohen's distinctive elegance and dynamism create their own ambience, especially in the music of Liszt, several of whose works, including the rarely heard *Grande fantaisie sur Les Huguenots*, he has recorded to acclaim. From 1988 to 1992 he performed with the Amadeus Piano Trio, and in 1992 he was appointed a fellow at the RNCM.

BRYCE MORRISON

Cohen, Harriet (*b* London, 2 Dec 1895; *d* London, 13 Nov 1967). English pianist. She studied at the RAM (1912–17) and at the Matthay School, where she also taught. Small hands limited her repertory, but she quickly made a reputation as a Bach player and as a persuasive advocate for the English music of her time. She played at the Salzburg Contemporary Music Festival in 1924, at the Coolidge Festival, Chicago, in 1930 and gave the first performance of Vaughan Williams's Concerto, dedicated to her, in 1933. She injured her right hand in 1948 and played one-handed until 1951; but her injury was never completely cured and in 1960 she reluctantly retired. She was made a CBE in 1938, a Freeman of the City of London in 1954, and received many honours from other countries. The Harriet Cohen International Music Prizes were founded by Bax and others in 1951.

Cohen was chosen by Elgar to record his Piano Quintet, and she made many first recordings of music by Bax, her intimate friend, most of whose piano works, including a left-hand Concertante, were composed for her. In 1932 twelve leading British composers published transcriptions in *A Bach Book for Harriet Cohen*. She herself published some Bach transcriptions and a small book on interpretation, *Music's Handmaid* (London, 1936, 2/1950), while her memoirs, *A Bundle of Time* (London, 1969), are valuable for letters from friends eminent in all walks of life.

FRANK DAWES

Cohen, Joel (Israel) (*b* Providence, RI, 23 May 1942). American conductor and lutenist. After studying composition and musicology at Brown University and Harvard University, he worked with Nadia Boulanger on theory and composition (1965–7). Returning to the USA, in 1968 he became director of the Boston Camerata, formed in 1954. Under Cohen's direction the instrumental ensemble was augmented by a chamber chorus so that its repertory could embrace a wider variety of medieval, Renaissance and Baroque works. Since 1975 the Camerata has regularly offered workshops in the USA and France, and has made a number of recordings. Cohen is also active in France, as a producer of early music programmes on television and radio as well as conductor and continuo lutenist at major music festivals. An imaginative and resourceful musician, Cohen has lectured at universities and conservatories in the USA on the performance of early music.

WRITINGS

Reprise: the Extraordinary Revival of Early Music (Boston, 1985)

HOWARD SCHOTT

Cohen, Leonard (Norman) (*b* Montreal, 21 Sept 1934). Canadian singer-songwriter, poet and novelist. Born into a middle-class family, he grew up steeped in Jewish tradition and lore. Having studied at McGill University, he began reading poetry in jazz clubs in the 1950s. Cohen's writing developed significantly in the 1960s, first in London and then on the Greek island of Hydra. During this period he produced both poetry and the novel *Beautiful Losers* (Toronto, 1961). Despite acclaim and a growing following, he could not make a living and, inspired by Bob Dylan, he turned to song, moving to New York. There he met Judy Collins who included Cohen's *Suzanne* on her album *In My Life* (Elek., 1966); it was the first of many Cohen songs to be included in her repertory. The following year she introduced him at his first major concert and in late 1968 he released his first album, *Songs of Leonard Cohen*, on Columbia records. Like his second, *Songs from a Room* (Col., 1969), it was more successful in the UK than the US. Both enhanced his reputation as a poet, and *Selected Poems 1956–8* (Toronto, 1968) found an international audience. Unlike Dylan, the first angry young man of the jukebox, Cohen did not rage against the status quo. Rather, his literary and formal poems accepted that life was sordid and that love, random and never possessive, offered transcendence.

In the years since he has pursued both careers. His singing style – a hypnotic monotone – has remained unchanged but he has experimented musically, even collaborating with Phil Spector on *Death of a Ladies' Man* (Col., 1977). In 1994 he was named Songwriter of the Year at Canada's Juno Awards.

LIZ THOMSON

Cohen, Raymond (Hyman) (*b* Manchester, 27 July 1919). English violinist. He had his first lessons from his father (he is no relation of Louis Cohen) and then entered the RMCM, winning the Brodsky Scholarship at 14. The following year he joined the Hallé Orchestra as its youngest ever member. In 1939 he played three concertos with that orchestra in one programme and in 1945 he won the first Carl Flesch Contest. His repertory of Classical, Romantic and modern concertos was large. He also played sonatas, first with Franz Reizenstein and, from 1958, with his wife, Anthya Rael. He gave the first performance of Rubbra's Second Sonata with the composer. He led the RPO from 1959 to 1965. He produced a crisp, brilliant tone from his 1703 Stradivari.

WATSON FORBES/R

Cohen, Robert (*b* London, 15 June 1959). English cellist. He studied with William Pleeth from 1969 to 1976, and also with Jacqueline du Pré, Navarra and Rostropovich. He won the Suggia Prize five times (1967–71), and in 1980 won the UNESCO International Competition. He made his concerto début at the age of 12 at the Royal Festival Hall, and his recital début at the Wigmore Hall in 1976. In 1978 he was invited to the Tanglewood Festival, where he was awarded the Piatigorsky Prize. Cohen made recital débuts in New York, Los Angeles and Washington, DC, in 1979, and that year toured the USA and Europe. He has subsequently appeared as a soloist with major orchestras and conductors, and in recitals with Peter Donohoe and Elizabeth Burley. He played Schubert's String Quintet with the Amadeus Quartet in Berlin and London, and also recorded the work with them; his other recordings include the Bach suites, and the Elgar Concerto with the LSO under Norman Del Mar, for which he was awarded a silver disc. Cohen plays with faultless technique, a sonorous tone and musical integrity. He gives masterclasses internationally, and in 1996 was appointed visiting professor at the RAM. He plays a David Tecchler cello of 1723, the 'ex-Roser'.

MARGARET CAMPBELL

Cohn, Arthur (*b* Philadelphia, PA, 6 Nov 1910; *d* New York, 15 Feb 1998). American composer, conductor and writer on music. He studied at the Combs Conservatory of Music, Philadelphia, and the University of Pennsylvania before entering the Juilliard Graduate School, where he studied the violin with Sascha Jacobinoff and composition with Rubin Goldmark. As a violinist he founded the Dorian Quartet and the Stringart Quartet, ensembles specializing in contemporary music, in the 1930s. From 1934 to 1952 he was director of the Fleisher Music Collection at the Free Library of Philadelphia, also serving as head of the library's music division (1946–52). He was executive director of the Settlement School, Philadelphia (1952–6), and head of the Symphonic and Foreign Departments at Mills Music, New York (1956-66), before becoming director of 'serious music' at MCA Music, New York (1966–72). In 1972 he took up the same post at Carl Fischer, retaining it until his death. For many years he was conductor of the Haddonfield (New Jersey) SO.

In addition to his active career on radio and television, Cohn lectured widely in the USA, especially at the Berkshire Music Center. He was critic for the *American Record Guide, Musical Courier*, and the *Rochester Times-Union*. He received 20 ASCAP awards (1962 to 1982) and a Letter of Distinction (1994) from the AMC in recognition of his work promoting contemporary music. His works show a natural grasp of instrumentation, expressive lyricism and a colourful sense of harmony.

JAMES G. ROY, JR./R

Coignet, Horace (*b* Lyons, 13 May 1735; *d* Lyons, 29 Aug 1821). French amateur violinist, singer and composer. He was active in Lyons as a pattern-designer and dealer in embroidered goods, as an official clerk and as musical director of the city (from 1794 or 1795). After the Revolution he became music instructor to the Duchesse d'Aumont in Paris (at the same time serving as corresponding member of the Lyons Academy), and later returned to Lyons, where he served on the directorial board of the conservatory. He was known as a gifted violinist, and composed harpsichord pieces, romances, a set of *Trois duos concertants de violon et fugues* (Paris, n.d.), a revolutionary hymn for the Rousseau celebrations at Lyons (14 October 1794) and some theatrical music (including an *opéra comique*, *Le médecin de l'amour*, and an overture to La Harpe's *Mélanie*). His only extant music, however, is that for which he is most famous, the instrumental interludes to Rousseau's melodrama *Pygmalion*. These were composed in 1770, shortly after Coignet had met Rousseau in Lyons and impressed him with the score to his *Le médecin de l'amour*. The work was premièred privately in Lyons in May of that same year; it was an instantaneous success, and soon became known throughout Europe. Coignet, in a letter to the *Mercure de France* (January 1771), protested against the widespread attribution of the score to Rousseau, and claimed that of the 26 *ritournelles* he was responsible for all but two – the Andante of the overture and the following piece depicting the sculptor's completion of the statue. Coignet's score was very popular during the first years of the long, successful history of this work. It was retained by popular demand for the first public performance in Paris (Comédie-Française, 30 October 1775), despite the conductor Baudron's attempts to rewrite the score himself. But the music was replaced in performances outside France (by Benda, Asplmayr, Cimador and others), and by 1780 the Comédie-Française was presenting the piece with new music by Baudron. Later attempts to show the unauthenticity of Coignet's music, and to establish a second setting wholly by Rousseau (see Istel), have been largely discredited. Coignet's own account of his relations with Rousseau was published posthumously in 1822.

ROGER J.V. COTTE

Coin, Christophe (*b* Caen, 26 Jan 1958). French cellist, viol player and conductor. He studied music in Caen and the cello under André Navarra in Paris, where he won a *premier prix* at the Conservatoire in 1974. He continued his studies with Nikolaus Harnoncourt in Vienna and Jordi Savall in Basle. He has played with the Vienna Concentus Musicus, Hesperion XX and the Academy of Ancient Music, and founded his own group, Ensemble Mosaïques, in 1984. It was dissolved in 1985, when he invited the leaders of its string section to form the Quatuor Mosaïques. In 1991 Coin was appointed musical director of the Ensemble Baroque de Limoges. His fine technique and insight into music of the Baroque and Classical periods have made a significant contribution to the revival of interest in historically aware performance practice in France. His recordings include acclaimed performances of Haydn string quartets with the Quatuor Mosaïques, concertos and sonatas by Vivaldi, the cello concertos of Haydn and Schumann, and, as director, cantatas by Bach, French vocal music of the 17th and 18th centuries and Nerba's zarzuela *Viento es la dicha de Amor*.

NICHOLAS ANDERSON

Coipeau, Charles. *See* DASSOUCY, CHARLES.

Colachon. *See* MANDORA; not to be confused with COLASCIONE.

Colaço Osorio-Swaab, Reine (*b* Amsterdam, 16 Jan 1881; *d* Amsterdam, 14 April 1971). Dutch composer. She began composing after the death of her husband in 1923. She studied with Henk Badings and later often consulted him. In the 1920s and 30s she wrote many songs, setting poems by Jacques Perk, Paul Verlaine, R.M. Rilke and Stefan George. She was much attracted to the religious philosopher Martin Buber, translating into Dutch his *De legende van de Baalsjèm* (1927). In 1947 she wrote her first work for narrator and instrumental accompaniment, *De tocht door de hemelen*, based on a text by Buber. The 1950s saw nine more works including a narrator, mainly settings of biblical texts. In 1939 she began writing chamber music for various instruments. *Monument* (1944), six coplas for soprano and piano, was written to commemorate the death of her son at Dachau in 1944. Although she retained classical forms, such as the sonata and suite form, her style is predominantly atonal, often sharply dissonant and angular. At the same time she was adept at placing short, Impressionistic, pentatonic passages in these atonal works. An example is the *Dramatische ouverture* (1953), which is based on an ABA′ form and closes with an epilogue for flute solo. *Vier korte stukken* for flute and piano (1958) is neo-classical in the titles of its movements (prelude, minuet, and air and gigue), but is again basically atonal.

WORKS
(*selective list*)

Works with nar: De tocht door de hemelen [The Journey through the Heavens] (M. Buber), nar, pf, 1947; Ezechiël 37 (Bible), nar, hp, 1948; Genezing van den blinde [Healing of the Blind Man] (Bible: *John* ix), nar, orch, 1950; Jesaja 60 (Bible), nar, orch, 1950; Jesaja 40 (Bible), nar, pf, 1951; Laat de luiken geloken zijn [Let the Shutters be Closed] (J.H. Leopold), nar, pf, 1951; Johannes 10 (Bible), nar, pf, 1953

HELEN METZELAAR

Colaianni [Cola Ianno], **Giuseppe** (*b* Bari; *fl* 16th century–early 17th century). Italian composer. A pupil of Stefano Felis, he was *maestro di cappella* of Bari Cathedral in 1603 when he published at Venice his *Primo libro de madrigali a cinque voci*. Two of these madrigals were included in an anthology (RISM 1616[10]), and are very attractive. The two-part ricercare by him (1686[5]) may be the piece which, according to Gerber (*Lexikon*), appeared in Giovanni de Antiquis's *Primo libro a due voci* (Venice, 1585), of which there is now no trace.

COLIN TIMMS

Colart le Boutellier (*fl* 1240–60). French trouvère. His period of activity may be dated by reference to the trouvères with whom he was associated. The coat of arms in *F-Pn* fr.12615 suggests that he was a member of the Boutillier family belonging to the lesser nobility of Arras; since these arms are lacking in *F-Pn* fr.844, however, it is more probable that he belonged to one of the Arras bourgeois families of the same name. Whether Robert le Boutellier, judge of a jeu-parti between Gillebert de Berneville and Thomas Herier, was a relative of Colart is unknown. Colart exchanged his jeu-parti (*Guillaume, trop est perdus*) with Guillaume li Vinier, probably the Maître Guillaume to whom he dedicated *Aucunes gens m'ont mout repris* and *Quant voi le tens del tout renouveler*. *Ne puis laissier* was sent to Jehan Bretel, and *Je n'ai pas droite* to Phelippot Verdière. *Je ne sai tant merci crier* is dedicated to Jehan de Nuevile who in turn sent a song (R.962) to Colart. Other trouvères who apparently dedicated works to Colart include Gillebert de Berneville, Henri Amion and Guibert Kaukesel.

Among the 13 chansons by Colart, six are isometric; four more are primarily so, but end with one or two lines of different lengths. *J'avoie lessié*, *Li beaus tens* and *Ne puis laissier* are more complex in construction. He employed bar form consistently, and often drew material from the *pedes* in the cauda. In the jeu-parti the second phrase is presented in no less than six modifications including two with changed cadences. Most melodies display a strong sense of tonal centre and reveal Colart's preference for G modes. Many are moderately florid and irregular in rhythmic construction. None survives in mensural notation. In *Amours et bone esperance* the regular patterns of ligature disposition suggest the possibility of second mode for large portions. There are similar though weaker hints in the construction of *Ce qu'on aprent en enfance*.

THEODORE KARP

Colascione. A long-necked lute deriving from the Middle Eastern ṬANBŪR, which was absorbed into Italian popular music beginning in Naples around the middle of the 16th century and from thence spread to other European countries. It is characterized by a small body and a long,

1. *Colascione player: drawing by Pietro Longhi, pen and brown ink, mid-18th century*

narrow neck with 16 to 24 frets, usually carrying two or three strings of metal or gut which are plucked with a plectrum. Early descriptions and illustrations are given by Mersenne (1636–7), Kircher (1650) and Bonanni (1776); a Turkish provenance is often adduced. Bonanni wrote that 'it has either two or three very long strings, and the very small body produces a raucous sound'. According to Mersenne, the strings of the bichord were tuned a 5th apart; for the three-string colascione he gave the re-entrant tuning *c′–c″–g″*. According to Mersenne's drawing (fig.2) the frets were not arranged chromatically.

2. *Colascione, with the pitches to which its strings should be tuned: woodcut from Mersenne's 'Harmonie universelle' (1636–7)*

Surviving instruments – the earliest is dated 1535 – are of varying dimensions, from a total length of 56·5 cm to 190 cm (see Fryklund). The smaller type, tuned an octave higher and referred to as *colasciontino*, was often played in duet with the colascione or the guitar, and in this fashion the instrument was introduced into northern Europe by two pairs of touring brothers, Colla and Merchi. A manuscript with six Sonatas for *colasciontino* by Domenico Colla is preserved in Dresden (*D-Dl*). While visiting Naples (1770), Burney noted both forms of colascione accompanying voices, together with a violin or mandolin. He described a vivid style of playing, with fast-moving passage-work and surprising skills in modulation.

An impression of an improvisational style over a drone bass is rendered in a piece entitled *Colascione* in *Libro IV d'intavolatura di chitarrone* (1640) by G.G. Kapsperger, and in two 17th-century works for keyboard ('Colascione', MS, *I-Rvat* Chigi Q.IV.28, f.41; 'A colascione', MS, *P-BRp* 964, f.228) described by Silbiger (1980).

Considerable confusion has been caused by the use of the terms *Calichon*, *Gallichon* etc. by 18th-century German writers for the newly developed six-course instrument also known as MANDORA, which was by then in common use as a continuo and solo instrument. Although Mersenne translates *colascione* as *colachon*, the two instruments should be clearly distinguished. When the Colla brothers were touring Europe in the 1760s and 70s, the *colascione* and *colasciontino* were regarded as novelties, quite unrelated to German colichons and mandoras.

DIETER KIRSCH

Colasse, Pascal. *See* COLLASSE, PASCAL.

Colautti, Arturo (*b* Zara, 9 Oct 1851; *d* Rome, 9 Nov 1914). Italian writer and librettist. His later works praise the Irredentist movement which urged Italy's intervention against Austria in World War I due to territorial disputes on the north-east border. In the sphere of music theatre, Colautti supplied opera librettos with an essentially naturalistic flavour for a variety of composers; the most

successful were *Fedora* (Giordano, 1898) and *Adriana Lecouvreur* (Cilea, 1902). His poems were also set, by F.P. Tosti.

RAFFAELE POZZI

Colbran, Isabella [Isabel] **(Angela)** (*b* Madrid, 2 Feb 1785; *d* Castenaso, Bologna, 7 Oct 1845). Spanish soprano. After study with Francisco Pareja, Marinelli and Crescentini, she made her concert début in Paris (1801) and her stage début in Spain (1806), and the following year came to Italy, where she sang at Bologna; a contemporary account (quoted in Weinstock) gave her compass then as almost three octaves, from *g* to *e‴*. In 1808–9 she sang in the premières of Giuseppe Nicolini's *Coriolano*, Vincenzo Federici's *Ifigenia* and Vincenzo Lavigna's *Orcamo* at La Scala, Milan, and in 1811 she was engaged for Naples by the impresario Barbaia, whose mistress she became; she remained there for over a decade. A highly dramatic singer who excelled in tragedy, especially in Spontini's *La vestale* and Mayr's *Medea in Corinto*, she strongly influenced the operas that Rossini composed for Naples. *Elisabetta, regina d'Inghilterra* (1815), *Otello* (1816), *Armida* (1817), *Mosè in Egitto*, *Ricciardo e Zoraide* (1818), *Ermione*, *La donna del lago* (1819), *Maometto II* (1820) and *Zelmira* (1822) all contained parts written to display her special vocal and dramatic gifts. Colbran and Rossini, who had lived together for some years, were married at Castenaso on 15 March 1822, on their way to Vienna. *Semiramide*, the final opera that he composed for her, was produced at La Fenice, Venice, in 1823. The following year she accompanied Rossini to London and, after a disastrous appearance as Zelmira, retired from the stage. By then, her voice was in decline and her intonation had grown insecure; in her prime, from 1807 to about 1820, she was greatly admired in Italy for the brilliance and power of her voice and the command of her stage presence. In 1836 she was legally separated from the composer, but continued to live with Rossini's father until her death. She composed four volumes of songs.

ELIZABETH FORBES

Colding-Jørgensen, Henrik (*b* Århus, 21 March 1944). Danish composer. He studied at Copenhagen University with Riis (singing) and with Maegaard and Thybo (theory) and at the Copenhagen Conservatory with Aksel Andersen (organ), graduating in 1967 as an organist and teacher. In addition he took composition lessons with Holmboe (1964–5). Part of his creative activity has been in connection with his work as a church musician (since 1975 he has worked as an organist and choirmaster) and as a teacher at the Odense Conservatory. More important, however, are the concert works in which he has followed Holmboe and, to a certain extent, Stravinsky in developing a thoroughly structured, non-serial music. The germ of a work may be expanded in many different ways, sometimes serving as the basis for quotation.

JENS BRINCKER

Cole, Benjamin (*fl* London, 1740–60). English engraver. Several engravers of this name flourished in England during the 18th century, though probably only one worked at music. His first work appears in Walsh's publication of J.F. Lampe's *Songs and Duetto's in ... The Dragon of Wantley* (1738) and music from the same composer's *Margery* (1740). His most important work was for the *British Melody, or The Musical Magazine*, published in 15 (probably fortnightly) instalments from February 1738. It reappeared as a set, published by Cole, in 1739. This was the first of the many rivals and successors to Bickham's *The Musical Entertainer*. Cole's work is of a very high standard, though less flexible and imaginative than Bickham's; the latter twice referred disparagingly to Cole in his second volume. As was customary, Cole continued to reissue separate plates for several years. He also engraved the music plates for *The New Universal Magazine* (1751–9), a number of which he published separately as *Orpheus Britannicus* (1760).

A few of the large number of non-musical engravings signed 'B. Cole' are certainly by him, including a series in the *Gentleman's Magazine* (1755–61, and possibly as late as 1772): he may have been the engraver of a frontispiece to Tans'ur's *Works* (1748). He is probably not the engraver of a view of Leeds (1724; cited in *Grove5* and Kidson) which can be assigned to Cole of Oxford. The Benjamin Cole who was the author of *The Ancient Hunting Notes of England* (*c*1725) is probably not the engraver.

STANLEY BOORMAN

Cole, Hugo (*b* London, 6 July 1917; *d* London, 2 March 1995). English composer and critic. He was educated at Winchester and King's College, Cambridge, where he read natural sciences. Already an accomplished cellist, he entered the Royal College of Music in 1944 to study the instrument with Ivor James as well as harmony with Morris and composition with Howells. He played freelance in various London orchestras and also studied with Boulanger in Paris. From 1964 he combined the role of composer with that of music critic for *The Guardian*, where his notices were distinguished not only by their authority, derived from a long all-round experience of music-making, but also by their engaging intellectual vivacity.

Cole's music has something of the same quality as his criticism. It is fresh, never short of good ideas and, if limited in expressive and structural scope, never pretentious. The clarity of his writing, its uncomplicated rhythms, and the general familiarity of his idiom – basically neo-classical and recognizably English in spite of the echoes of Copland – have made him a particularly successful composer of operas and other pieces for young and amateur performers. His *Sounds and Signs* (London, 1974) is a discriminating study of modern notation; he also published *The Changing Face of Music* (London, 1978) and *Malcolm Arnold: an Introduction to his Music* (London, 1989).

GERALD LARNER

Cole, John (bap. Tewkesbury, 24 June 1774; *d* Baltimore, 17 Aug 1855). American composer, tunebook compiler and publisher of English birth. He moved to the USA with his family in 1785 and settled in Baltimore. Cole's reputed attendance there at singing schools conducted by Andrew Law, Thomas Atwill and Ishmael Spicer during the years 1789–92 has not been verified. In the preface to *The Devotional Harmony* (1814), he wrote of his training: 'The authour has never had what is called a musical education … he is a self taught genius, scarcely able to finger his own compositions on a keyed instrument'. He nevertheless seems at one time to have held the post of organist and choirmaster of St Paul's Episcopal Church in Baltimore.

Cole's career as a compiler of sacred tunebooks spanned almost half a century; he produced nearly 30 different collections, from *Sacred Harmony* (1799), adapted to the Methodist hymnbook, to *Laudate Dominum* (1846), for the Protestant Episcopal Church. He became involved in the printing trade as early as 1802 and published and printed several of these works himself, as well as composing some of the pieces that appeared in them. During the war of 1812 he served in the Maryland military, apparently acting as leader of a militia band in which he played clarinet. He taught at at least one singing school in Baltimore in 1819. In 1822 he opened a music shop, and from then until 1839 worked as a publisher, specializing in secular sheet music, of which, by the late 1820s, he was Baltimore's leading purveyor.

RICHARD CRAWFORD

Cole, Maggie (*b* Nyack, NY, 20 March 1952). American harpsichordist and fortepianist. She studied the piano with Jho Waxman in Nyack and Louis Hildebrand in Geneva and the harpsichord with Miriam Duncan in Wisconsin and, after her move to the UK in 1974, with Mary Potts, Jill Severs and Kenneth Gilbert. As well as performing as a soloist, specializing in the music of Bach, Scarlatti and the French *clavecinistes*, she has appeared with many of the leading early music chamber ensembles and orchestras. She has also championed 20th-century works for the harpsichord by Falla, Poulenc, Gerhard, Dutilleux, Ligeti and others. Cole's performances reveal an effective blend of thoughtful preparation, controlled rhythmic vitality and linear clarity. Her recordings include Bach's Goldberg Variations, sonatas by Scarlatti and Soler, and Poulenc's *Concert champêtre*.

NICHOLAS ANDERSON

Cole, Nat 'King' [Coles, Nathaniel Adams] (*b* Montgomery, AL, 17 March 1917; *d* Santa Monica, CA, 15 Feb 1965). American popular singer and jazz pianist. His family moved to Chicago when he was four, and by the age of 12 he was playing the organ and singing in the church where his father was pastor. Cole left Chicago in 1936 to lead a band in a revival of Eubie Blake's revue *Shuffle Along*. The following year he formed a trio in Los Angeles with Oscar Moore (guitar) and Wesley Prince (double bass). The group's instrumentation proved influential: Art Tatum adopted a similar trio format in 1943, as did Oscar Peterson and Ahmad Jamal during the early 1950s. Cole retained his trio (with some changes of personnel) until 1951.

Among Cole's jazz recordings were four masterpieces in 1942 with Lester Young; *Indiana*, *Body and Soul*, *I can't get started* and *Tea for Two* (all 1942, Philo) document Cole's impeccable jazz credentials. The King Cole Trio sometimes sang in unison on their early recordings, but in 1943 Cole had a national hit with his solo song *Straighten up and fly right* (Cap.). His immaculate diction and liquid vocal style made his recordings accessible to white audiences and launched his career as a popular singer. From this point he gradually appeared less often with his trio, though from 1944 to 1946 he gave concerts and recorded with Jazz at the Philharmonic. He was one of the first black jazz artists to have his own weekly radio show (1948–9).

His hit recording *The Christmas Song* (1946, Cap.) was the first of his solo vocal recordings to be accompanied by a studio orchestra, and marked the start of his rise as an internationally acclaimed popular singer, with a smooth and mellifluous style that was both emotive and

sophisticated. Further successes included his versions of *Nature Boy*, which became a no.1 hit in the USA, and *Mona Lisa*, which featured an arrangement by Nelson Riddle; he later recorded with arrangements by Gordon Jenkins and Billy May. In 1956–7 he had a weekly show as a soloist on American television and until 1965 toured widely, performing in supper clubs, theatres and concert halls. He also appeared in several films including *From Here to Eternity* (1953), and *St Louis Blues* (1958), in which he portrayed W.C. Handy.

His daughter Natalie Cole (*b* Los Angeles, 6 Feb 1950) is a leading pop singer. From her first release, *This will be* (1975), she has achieved several US no.1 hits, in both pop and soul styles. Her album *Everlasting* (Manhattan, 1987) yielded the hit singles 'Pink Cadillac', 'I Live for your Love' and 'Jump Start', while for the album *Unforgettable ... With Love* (Elek., 1991) she reworked one of her father's most famous recordings, 'Unforgettable', as a duet between them both, subsequently winning Grammy awards for Best Album and Best Song.

BILL DOBBINS, RICHARD WANG/R

Cole, Orlando (Timothy) (*b* Philadelphia, 16 Aug 1908). American cellist. He studied with Felix Salmond at the Curtis Institute in Philadelphia from 1925 to 1932, making his New York début in 1929 while still a student. He was a founder-member of the Curtis String Quartet, with whom he played from 1930 to 1980; in 1935, the quartet gave a series of concerts in London in honour of King George V's Silver Jubilee. Cole's London solo recital début was at the Aeolian Hall in 1936. He was appointed to the faculty of the Curtis Institute in 1938, serving for many years as Salmond's assistant, and in 1943 was one of the founders of the New School of Music in Philadelphia. He also gave masterclasses in the USA, Europe and the Far East. Cole took part in the première of Barber's Cello Sonata in New York in 1932, and with the Curtis gave the first US performance of Barber's String Quartet in Philadelphia in 1937; the quartet also gave the première of Barber's *Dover Beach* (1933) and made a recording with the composer as solo singer. His playing was rich and mellow in tone and innately musical. He played a Domenico Montagnana cello, the 'Sleeping Beauty', dated 1739 and previously owned by Piatigorsky. (*CampbellGC*)

MARGARET CAMPBELL

Cole, (Frances) Ulric (*b* New York, 9 Sept 1905; *d* Bridgeport, CT, 21 May 1992). American composer, teacher and editor. She studied with Homer Grunn in Los Angeles. In 1922 she toured the midwestern Chautauqua circuit as a pianist. She studied composition with Goetschius (1922–3), Rubin Goldmark (1924–7, with fellowships from the Juilliard Graduate School) and Boulanger (1927); piano with Boyle and Lhévinne. Dissatisfied with teaching and with the reception of her music, she worked on the editorial staff of *Time* magazine from 1945 until 1952. Later she travelled widely, living for several years on Tahiti and Vanuatu.

Her elegant music, which uses the pandiatonic harmonic vocabulary of its time, is marked by its neo-classical, symmetrical form and its rhythmic forcefulness. The Piano Quintet and the Violin Sonata no.1 both won awards from the Society for the Publication of American Music. Her orchestral works have been performed by the symphony orchestras of Cincinnati, Rochester, Scranton and Sydney.

CATHERINE PARSONS SMITH

Cole, William (*b* Witnesham, Suffolk, 2 Nov 1737; *d* Colchester, 10 May 1824). English composer. He was the son of a dissenting farmer and may have been educated at the Green Sleeve School, attached to the Tacket Street Independent Church in Ipswich. In 1765 he became master of the Independent Charity School in Colchester and began to develop a land-surveying practice in the Colchester area. He also developed scientific interests, publishing *Observations and Conjectures on the Nature and Properties of Light, and on the Theory of Comets* (Colchester, 1777); his *Conversations in Algebra* (London, 1818) were 'designed for those who have not the advantage of a tutor, as well as for the use of students in schools'. His compositions were mainly a by-product of his activities as a psalmody teacher. He published: *The Psalmodists Exercise, or A Set of Psalm Tunes & Anthems* (Ipswich and London, 1766); an apparently lost sequel *Divine Hymns* (Colchester, 1775); *A Morning and Evening Service . . . together with Six Anthems in Score* (London, 1793) and *A View of Modern Psalmody* (Colchester and London, 1819). The last was 'an attempt to reform the practice of singing in the Worship of God' and is a valuable source of information about the performance of parish church music. An anthem by him was published as late as 1856 by E.J. Westrop in *The Antiphonal*. His only foray into secular music seems to have been *Peace, an Ode* (London, ?1803), a competent choral and orchestral setting in a sub-Handelian idiom of verse by the Suffolk rustic poet Robert Bloomfield.

JOHN BENSUSAN-BUTT, PETER HOLMAN

Colebault, Jacques. *See* JACQUET OF MANTUA.

Coleman [Colman], **Charles** (*d* London, bur. 8 July 1664). English composer, singer, lutenist and viol player, probably the father of EDWARD COLEMAN. The description of him as 'antient' in the burial records of St Andrew's, Holborn, suggests that he was born probably well before 1600. He sang Hymen in Robert White's masque *Cupid's Banishment*, given at Greenwich on 4 May 1617. At the funeral of James I in 1625 he was listed as one of the 'consorte' (lutes and voices), but the date of his original appointment is not known. He performed as both instrumentalist and singer in Shirley's masque *The Triumph of Peace* (1634) and provided music for *The King and Queen's Entertainment at Richmond* presented by the six-year-old Prince Charles on 12 September 1636.

He had a house at Richmond, where for a time John Hutchinson (whose music master he was) lived. According to Lucy Hutchinson:

> the man being a skilful composer in music, the King's musicians often met at his house to practise new airs and prepare them for the King; and divers of the gentlemen and ladies that were affected with music, came thither to hear; others that were not took that pretense to entertain themselves with the company.

Perhaps as a result of Colonel Hutchinson's influence with the parliamentarians, the committee appointed in 1651 to reform the University of Cambridge recommended Coleman for the MusD degree, which he took on 2 July that year. John Playford listed him in *A Musicall Banquet* (London, 1651) among London music teachers 'For the Voyce or Viole'. He wrote some of the instrumental music for Davenant's *First Dayes Entertainment at Rutland-House* (1656) and *The Siege of Rhodes* (1656). Coleman also contributed the musical entries to Edward Phillips's dictionary, *New World of English Words* (1658/*R*).

At the Restoration Coleman set Shirley's *Ode upon the Happy Return of King Charles II to his Languishing Nations*, dated 29 May 1660, the king's birthday and the day he entered London in triumph. In due course he was reappointed to the King's Musick as musician 'for the viall, among the lutes and voices' at a salary of £40 p.a. with £20 for strings and £16 2s. 6d. livery annually; he was succeeded in this place by his son Charles (bap. 27 Feb 1620; *d* 1694). On the death of Henry Lawes in 1662, Coleman was appointed 'composer in his Majesty's private music for voices'.

Coleman's songs are interesting and show more modern characteristics than those of Henry Lawes, especially with regard to tonality. (A good example is 'Wake my Adonis, do not die', from Cartwright's *The Lady Errant*, one of seven songs in MB, xxxiii, 1971.) His five- and six-part fantasies, which were never published, date from before 1625. The numerous instrumental airs in 2, 3 and 4 parts are mostly arranged in suites and reveal Coleman as one of the most prolific and capable contemporaries of John Jenkins, whose contrapuntal mastery and harmonic richness he lacked, though he was perhaps his equal in lighter genres.

IAN SPINK

Coleman, Cy [Kaufman, Seymour] (*b* New York, 14 June 1929). American composer and pianist. The son of Russian immigrants, he began to play the piano at the age of four, and performed recitals at the Steinway and Carnegie halls by seven. He studied counterpoint and orchestration at the New York College of Music and developed a serious interest in jazz, within a few years performing in New York nightclubs with his trio and starting a long recording career as a jazz pianist. A collaboration with the lyricist Joseph Allan McCarthy yielded several song hits between 1952 and 1956, including *Why try to change me now?*, *I'm gonna laugh you right out of my life* and *Tin Pan Alley*, the last of which appeared in Coleman's first Broadway venture, the revue *John Murray Anderson's Almanac* (1953). By the late 1950s he had produced an impressive list of song standards with lyricist Carolyn Leigh, which included *Witchcraft, I walk a little faster* and *The best is yet to come*. After failed auditions for *Gypsy* and *Skyscraper*, Coleman and Leigh were engaged to compose *Wildcat* (1960), their first Broadway score. A star vehicle for television comedienne Lucille Ball, it is now remembered primarily for the first of several striking Coleman marches in 6/8 metre, 'Hey, look me over'; later 6/8 marches include 'Pass me by' from the film *Father Goose* (1964) and the lesser-known 'One Brick at a Time' from *Barnum*. The second collaboration with Leigh, the satirical *Little Me* (1962), with a widely praised Coleman score and book by Neil Simon, starred another television comedian, Sid Caesar, in seven disparate roles. Although it closed after 257 performances on Broadway and failed in its revivals with the comedians James, Coco (1982) and Martin Short (1999), it proved popular in its London début with the comedian Bruce Forsyth (1964) and in revival with Russ Abbott (1984).

In 1966 Coleman joined veteran film and Broadway lyricist Dorothy Fields for *Sweet Charity*, adapted by Simon from Fellini's film about a prostitute, *Nights of Cabiria*. The show, which featured some of Coleman's most celebrated songs ('Big Spender' and 'If my friends could see me now') was a modest popular success and three years later became the only film version of a Coleman musical to date. A second collaboration with Fields followed with *Seesaw* (1973). After Fields's death in 1974, Coleman collaborated over the next 15 years with various librettists and lyricists, most notably with Michael Stewart for *I Love My Wife* (1977) and *Barnum* (1980), Betty Comden and Adolph Green for *On the Twentieth Century* (1978) and *The Will Rogers Follies* (1991), and Larry Gelbart and David Zippel for *City of*

Angels (1989). While none of these musicals was among the greatest popular successes of the time, only *On the Twentieth Century* ran for fewer than 850 performances.

I Love My Wife, a gentle satire of mate-swapping, featured self-consciously non-integrated songs and may be the first musical in which the orchestral players participated and commented on the proceedings. In *On the Twentieth Century* a fading producer-director's farcical attempt to sign his former lover, now a big star, to his next film, prompted Coleman to abandon his predilection for jazz and demonstrate his musical range with a strong classical score that verges on the operatic. After *Barnum*, a musical based on the career of the 19th-century showman and impresario, Coleman experienced a fallow period that culminated in the devastating failure, *Welcome to the Club*, which lasted only 12 performances in April 1989. Shortly thereafter, however, in one of Broadway's most remarkable creative comebacks, Coleman returned in December 1989 with *City of Angels*, a clever and original self-referential hybrid of classic detective films of the 1940s, with a period score, perhaps the finest of his career. In the next season the *Will Rogers Follies*, a musical revue based on the career of the famous political humourist, cowboy and showman, brought Coleman his second consecutive Tony Award. *The Life* (1997), a musical about the lives and frustrated hopes of prostitutes and their pimps on Times Square in the 1980s, earned critical accolades for the performers as well as praise for Coleman's score, which included 'The Oldest Profession' and 'My Body'.

WORKS
(*selective list*)

STAGE

unless otherwise stated, all are musicals and dates are those of first New York performance; where different, writers shown as (lyricist; book author)

Wildcat (C. Leigh; N.R. Nash), orchd R. Ginzler and S. Ramin, Alvin, 16 Dec 1960 [incl. Give a little whistle, Hey, look me over!, What takes my fancy, You've come home]

Little Me (Leigh; N. Simon, after P. Dennis), orchd R. Burns, Lunt-Fontanne, 17 Nov 1962 [incl. I've got your number, Little Me, The Other Side of the Tracks, Real Live Girl; addl material 1982, incl. Don't ask a lady, I wanna be yours]

Sweet Charity (Leigh; Simon, after F. Fellini, T. Pinelli and E. Flaiano: *Nights of Cabiria*), orchd Burns, Palace, 19 Jan 1966 [incl. Big Spender, If my friends could see me now, I'm a brass band, The Rhythm of Life, Where am I going?; film 1969, incl. My Personal Property]

Seesaw (D. Fields; M. Bennett, after W. Gibson: *Two for the Seesaw*), orchd L. Fallon, Uris, 18 Mar 1973 [incl. It's not where you start, Nobody does it like me, Poor Everybody Else, Seesaw]

I Love My Wife (M. Stewart, after L. Rego), orchd C. Coleman, Ethel Barrymore, 17 April 1977 [incl. Ev'rybody today is turning on, Hey there, good times, I love my wife, Someone Wonderful I Missed]

On the Twentieth Century (B. Comden and A. Green, after B. Hecht and C. MacArthur: Twentieth Century), orchd H. Kay, St James, 19 Feb 1978 [incl. Our Private World, She's a nut, Véronique]

Home Again, Home Again (B. Fried; R. Baker), American Shakespeare Theatre, Stratford, CT, 12 Mar 1979

Barnum (Stewart; M. Bramble), orchd Kay, St James, 20 April 1980 [incl. Bigger isn't better, The Colors of my Life, Come follow the band, There is a sucker born ev'ry minute]; film (television) 1986

13 Days to Broadway (Fried), 1983 [incl. You There in the Back Row]

Let 'em Rot (Coleman and A.E. Hotchner; Hotchner), orchd D. Katsaros, Coconut Grove Playhouse, FL, 16 Feb 1988; rev. as Welcome to the Club, Music Box, 13 April 1989 [incl. Piece of Cake, Rio, Southern Comfort]

City of Angels (D. Zippel; L. Gelbart), orchd B. Byers, Virginia Theater, 11 Dec 1989 [incl. Funny, With Every Breath I Take, You can always count on me, You're nothing without me)

The Will Rogers Follies (Comden and Green; P. Stone), orchd Byers, Palace, 1 May 1991 [incl. Favorite Son, I never met a man I didn't like, No man left for me]

The Life (I. Gasman; D. Newman, Gasman and Coleman), orchd D. Sebesky and H. Wheeler, Ethel Barrymore, 26 April 1997 [incl. My Body, The Oldest Profession]

Exactly Like You (Hotchner and Coleman; Hotchner), orchd Katsaros, Goodspeed-at-Chester/Norma Terris, Chester, NY, 7 May 1998

Contribs. to revue: John Murray Anderson's Almanac, 1953; Ziegfeld Follies of 1956 [incl. The lady is indisposed]; Demi-Dozen, 1958 [incl. You fascinate me so]; Medium Rare, 1960;

Straws in the Wind, 1975; Hellzapoppin'!, 1976

Incid. music: Compulsion (Leigh), 1957; Keep It in the Family (D. Fields), 1967

FILM AND TELEVISION

Film scores and songs, lyricist in parentheses: Father Goose (Leigh), 1964 [incl. Pass me by]; The Troublemaker, 1964; The Art of Love, 1965; The Heartbreak Kid, 1972; Blame It On Rio (S. Harnick), 1984 [incl. I must be doing something right]; Garbo Talks, 1984; Power, 1986; Family Business, 1989

Television specials for Shirley Maclaine: If They Could See Me Now, 1974; Gypsy In My Soul, 1976

OTHER SONGS

Why try to change me now (J.A. McCarthy), 1952; The Riviera (McCarthy), 1953; I'm gonna laugh you right out of my life (McCarthy), 1955; Isn't he adorable (McCarthy), 1956; A Moment of Madness (Leigh), 1957; Firefly (Leigh), 1958; It amazes me (Leigh), 1958; I walk a little faster (Leigh), 1958; You fascinate me so (Leigh), 1958; The best is yet to come (Leigh), 1959; The Rules of the Road (Leigh), 1961; Sweet Talk (F. Huddleston), 1964; Take a little walk (B. Greco), 1964; When In Rome (I do as the Romans do) (Leigh), 1964; On Second Thoughts (Coleman), 1965; Then was then and now is now (P. Lee), 1965

GEOFFREY BLOCK

Coleman, Edward (*b* London, bap. 27 April 1622; *d* Greenwich, 29 Aug 1669). English tenor and composer, probably the son of CHARLES COLEMAN. John Playford, in *A Musicall Banquet* (London, 1651), listed him among London music teachers 'For the Voyce or Viole', and he is named as the composer of the well-known 'The glories of our birth [blood] and state', from Shirley's *The Contention of Ajax and Ulysses* (?1653). In Davenant's opera *The Siege of Rhodes* (1656) he took the part of Alphonso, while his wife, Catherine, sang Ianthe and thus – it has been claimed – made theatrical history by being one of the first women to appear on the public stage in England.

At the Restoration, Coleman was admitted to the king's 'private musicke for voises' (19 June 1660), and he was one of the Gentlemen of the Chapel Royal at the king's coronation on 23 April 1661. Of his voice and character Pepys wrote (30 October 1665): 'Coleman's voice is quite spoiled, and when he begins to be drunk he is excellent company, but afterward troublesome and impertinent'. He also described him as 'a very rogue for women as any in the world' (23 December 1667), which made Pepys apprehensive about the attention Coleman paid his own wife. Of Catherine Coleman's voice he wrote that although she sang well 'her voice is decayed as to strength

but mighty sweet though soft' (31 October 1665). Some songs by Edward Coleman are in volumes of *Select [Musicall] Ayres and Dialogues* (RISM 1653[7]–1669[5]) and *The Musical Companion* (1667[6]–1673[4]); two are printed in a modern edition (MB, xxxiii, 1971). (*AshbeeR*, i, v, viii; *BDA*; *BDECM*; *SpinkES*)

IAN SPINK

Coleman, Ellen (*b* London, *c*1886; *d* London, 5 Feb 1973). English composer. She was privately educated and was composing sonatas at the age of 14; it was only in 1921 that she began to take composition lessons, studying with Collingwood. She travelled widely and formed lifelong friendships with such notable musicians as Backhaus, Chaliapin and Landowska, and mounted three concerts of her works at the Salle Pleyel-Chopin in Paris, in 1937–8, each of which was extensively reviewed; at the second, on 31 March 1938, attended by André Gide, Landowska introduced the music and Marcelle de Lacour was among the performers.

Of Coleman's two operas, *The Walled Garden*, in one act, was twice broadcast by the BBC. She also wrote two masses, one of which (1928) was performed at Fribourg Cathedral; chamber music, for a variety of instruments, including a pair of ondes martenot; and over 300 songs. The work that brought her greatest acknowledgment was the Cello Sonata in A minor, which was recorded, and published in London by Augener in 1937. Also published by Augener were *Swansong* (1935), a cycle of five songs to texts by Robert Nichols, and several piano pieces. Her *Poems and Pictures* for piano were published in Boston. Although Coleman's musical language, frequently based on 'white-note' modality, and the emotional range of her utterance may be rather constricted, her works often reveal a lyrical charm and captivating directness. Her archive is housed at City University, London, and some of her correspondence survives in the British Library.

RHIAN SAMUEL

Coleman, Michael (*b* Knockgrania, Killavil, Co. Sligo, Ireland, 1891; *d* New York, 4 Jan 1945). Irish fiddle player and stepdancer. Michael Coleman's fiddle playing belongs to the rich tradition of southern Sligo and adjoining parts of Roscommon and Mayo, particularly around Doocastle, Bunnanadden and Killavil. His father, James Coleman, a smallholder, played the flute at home and his elder brother Jim Coleman (*b* 1883) played the fiddle. Coleman began to play at five or six years old and was influenced by his brother as well as local fiddlers such as Kipeen Scanlan, Jamesy Gannon, Philip O'Beirne and John O'Dowd. He learnt to stepdance from the dancing teachers John Tuohy and Charlie Dolan (uncle of the famous fiddle player Jimmy Morrison).

Coleman tried to find work in the north of England in 1914 but later in the year sailed for New York. In 1917 he married an immigrant from Co. Monaghan and had one daughter. After a provincial vaudeville tour on the Keith Theatre circuit, Coleman returned to New York where his extensive recording career began. Advances in recording technology enabling the fiddle's tone to be faithfully captured on disc coincided in the late 1920s with the height of Coleman's playing. His performances of highly embellished melodies at dazzling tempos with faultless rhythm were widely disseminated. Coleman was not only a virtuoso player but produced spontaneous complex variations, particularly when playing reels.

Coleman's influence was huge. He enlarged the audience for Irish traditional music and affected its development in several ways. He instigated a pan-Irish fiddle style which found wide acceptance throughout Ireland and in Irish communities in the US and Canada; stylistic traits from the Sligo area became widespread through a host of imitators; and he initiated a process of musical cross-fertilization (elements of Sligo style became mixed with those of Clare and Donegal). In addition, he moved from the traditional context of playing for dancing to playing in concerts for a listening audience, prefiguring bands such as the Chieftains, the Bothy Band, De Danann and Planxty.

CAROLE PEGG

Coleman, Ornette (*b* Fort Worth, TX, 19 March 1930). American jazz alto saxophonist and composer.

1. Life. 2. Musical style.

1. Life. He began playing alto saxophone at the age of 14, and developed a style influenced predominantly by Charlie Parker. His early professional work with a variety of South-western rhythm and blues and carnival bands, however, seems to have been in a more traditional idiom. In 1948 he moved to New Orleans and worked mostly at non-musical jobs. By 1950 he had returned to Fort Worth, after which he went to Los Angeles with Pee Wee Crayton's rhythm and blues band. Wherever he tried to introduce some of his more personal and innovative ideas, he met with hostility, both from audiences and from musicians. While working as a lift operator in Los Angeles, he studied (on his own) harmony and theory textbooks, and gradually evolved a radically new concept and style, seemingly from a combination of musical intuition, born of South-western country blues and folk forms, and his misreadings – or highly personal interpretations – of the theoretical texts.

While working sporadically in some of the more obscure clubs in Los Angeles, Coleman eventually came to the attention of two double bass players – firstly Red Mitchell and later Percy Heath of the Modern Jazz Quartet. Coleman's first studio recording (for Contemporary in 1958) reveals that his style and sound were, in essence, fully formed at that time. At the instigation of John Lewis, Coleman (and his trumpet-playing partner Don Cherry) attended the Lenox (Massachusetts) School of Jazz in 1959. There followed engagements at the Five Spot in New York and recordings for Atlantic (1959) entitled *The Shape of Jazz to Come* (which included his compositions 'Lonely Woman' and 'Congeniality') and *Change of the Century* (with 'Ramblin' and 'Free'). These recordings, which occasioned worldwide controversy, revealed Coleman performing in a style freed from most of the conventions of modern jazz. His recording *Free Jazz* (Atl., 1960) for double jazz quartet, a 37-minute sustained collective improvisation, was undoubtedly the single most important influence on avant-garde jazz in the ensuing decade.

In 1962 Coleman retired temporarily from performing in public, primarily to teach himself trumpet and violin.

Ornette Coleman

His unorthodox treatment of these instruments on his return to public life in 1965 provoked even more controversy and led to numerous denunciations of his work by a number of influential black American jazz musicians, including Miles Davis and Charles Mingus. However, Coleman was well received in Europe during his first tour there in 1965, giving a major impetus to the burgeoning European avant-garde jazz movement. In the mid- and late 1960s he also became interested in extended, through-composed works for larger ensembles, and produced among other pieces *Forms and Sounds for Wind Quintet*(1965, recorded in England by the Virtuoso Ensemble, 1965, Pol.) and *Skies of America*, a 21-movement suite for symphony orchestra (1972, Col.).

By the early 1970s Coleman's influence had waned considerably, while John Coltrane's dominance of saxophone styles had correspondingly spread. As Coleman turned increasingly to more abstract and mechanical compositional techniques (as in *Skies of America*), his playing lost some of its earlier emotional intensity and rhythmic vitality. But a visit to Morocco in 1972 and the gradual influence (especially rhythmic) of certain rock, funk and fusion styles seemed to have revitalized his ensemble performances, a direction clearly discernible in Coleman's powerful electric band Prime Time founded in 1975. In the 1980s the group performed and recorded as a septet, with two guitarists, two bass guitarists and two drummers, all amplified, though in 1988 Coleman reverted to one drummer, his son Denardo. Prime Time's repertory draws on the various musical styles that have influenced Coleman (including Moroccan music, jazz-rock and free-jazz improvisation). Coleman's own playing, however, a fascinating and basically inimitable amalgam of blues and modal, atonal and microtonal music, remains unchanged.

The recording *Song X* (1985, Geffen) and a tour (1986), both made with Pat Metheny, brought Coleman and his music a degree of attention he had not enjoyed for some years. A film, *Ornette: Made in America*, directed by Shirley Clarke and compiled from footage made in the 1960s and the early 1980s, was released in 1984, and two concerts entitled 'Ornette Coleman Celebration' took place at the Weill Recital Hall at Carnegie Hall in 1987; the works performed were *Notes Talking*, for solo mandolin (1986), *The Sacred Mind of Johnny Dolphin*, for chamber ensemble (1984), *Time Design*, for amplified string quartet and electric drum set (1983), *Trinity*, for solo violin (1986) and *In Honor of NASA and Planetary Soloist*, for oboe, english horn, *mukhavīnā* and string quartet (1986). In 1987 Coleman recorded the double album *In All Languages* (Caravan of Dreams), one disc featuring a reunion of his free-jazz quartet and the other presenting Prime Time; several titles are performed by both ensembles, each interpreting Coleman's compositions in its own radically distinctive way. His *Skies of America* was performed in Poland and Germany by the Polish National Orchestra in December 1992 and his multimedia composition *Tone Dialing* received its world première in San Francisco in November 1994.

2. Musical style. Coleman's music is conceived essentially as an ensemble music; founded on traditional roots, it makes consistent use of spontaneous collective interplay at the most intimate and intricate levels. This accounts for its extraordinary unpredictability, freedom and flexibility. Coleman's improvisations are highly mobile in tonality, rhythmic continuity and form; they liberated the jazz solo from both an adherence to predetermined harmonic 'changes' and a subservience to melodic variation. They also abandon traditional chorus and phrase structure, reinterpreting jazz rhythm, beat and swing along freer, non-symmetrical lines. Although it appeared to many to be incoherent and atonal, Coleman's playing was (and remains) essentially modal in concept, rooted in older, simpler black folk idioms – in particular a raw blues feeling. His wailing saxophone sound (produced in his early years on a plastic instrument) is never far removed from the plaintive human voice of black-American musical folklore. This essentially lyric approach, best heard on 'Lonely Woman' (1959) and 'Sex Spy' (on the album *Soapsuds*, 1977, AH), is linked to his 'horizontal' concept of improvisation, a tendency explored earlier by such players as Lester Young and Miles Davis. Released from a strict adherence to harmonic functions and conventional form and phrase patterns, Coleman's solos are intrinsically linear, evolving in a sometimes fragmented musical discourse (ex.1). His improvisations at fast tempos are marked by flurries of notes, or gliding, swooping and at times bursting phrases, played with great intensity and conviction. Occasionally his work seems burdened by the overuse of sequential patterning. But it is the strength of conviction of his playing (especially when aided by like-minded colleagues such as Cherry, the double bass player Charlie Haden and the drummer Billy Higgins) that produces a sense of the inevitable in Coleman's art.

Technically Coleman plays as much 'from his fingers' as by ear, an approach frequently resulting in non-tempered intonation and unique tone-colours. These effects are even more noticeable in his less convincing performances on trumpet and violin, although even on

Ex.1 Coleman's second 'chorus' from *Congeniality* (1959, Atl.); transcr. G. Schuller

these instruments Coleman can sometimes produce compelling improvisations by sheer instinct and musical energy.

Since the 1980s Coleman has espoused a theory which he calls 'harmolodic'. It is apparently based on the reiteration in varied clefs and 'keys' of the same musical materials (lines, themes, melodies), thus producing a simplistic organum-like 'polyphony', principally in unrelieved parallel motion. It is not clear, however, how this theory functions in Coleman's own improvisatory style. He is also noted for his use of obscure, often contradictory, epigrams. Some observers see in these the 'philosophical' analogues to his musical theories and concepts. Similarly, his notation of his own compositions – of which he has written several hundred – is imprecise, gestural and in a sense graphic, leaving the performer free to give individual and differing interpretations. Coleman has opened up unprecedented musical vistas for jazz, the wider implications of which have not yet been fully explored – least of all by his many lesser imitators.

GUNTHER SCHULLER

Coleman, Steve (*b* Chicago, 20 Sept 1956). American jazz alto saxophonist and bandleader. While at school he briefly played the violin before switching to the alto saxophone. He recalled that later, during a period at Illinois Wesleyan University, Charlie Parker and the soul saxophonist Maceo Parker were strong influences, but it is clear from his recordings of the mid-1980s that fellow black jazz musician Ornette Coleman must also have figured prominently in the formation of his style. Coleman left Chicago in 1978, moving to New York. He worked in the orchestras of Thad Jones and Mel Lewis, Sam Rivers and Cecil Taylor, and also performed and recorded with David Murray, the singer Abbey Lincoln, Dave Holland (of whose group he was a member for several years in the mid- to late 1980s), Bob Brookmeyer, the trombonist Slide Hampton and others. Coleman formed his own group, Five Elements, in 1981 to present a new style that operated under the rubric M-BASE, a cooperative institution he co-founded around 1984. Concurrently from 1985 to 1991 he taught at Banff Centre for the Arts, Canada. In 1994 he formed a sextet, Renegade Way, touring Europe the following year. He also presented a series of grassroots workshops and concerts around Oakland, California in 1994 and in 1996 with his ensemble the Metrics. Early in 1996 he travelled to Matanzas, Cuba, to study the Yoruba tradition. He performed at the Havana Jazz Festival and recorded with musicians and dancers, including the group AfroCuba de Matanzas; the effort was preserved on film.

Working with Holland and as a leader, Coleman has been a leading exponent of the incorporation of odd metres into jazz in a manner that is far more sophisticated and subtle than were the pioneering efforts of Dave Brubeck in the 1950s and Don Ellis in the 1960s. Even more significant are his efforts with M-BASE and as a leader to create an amalgamation of free jazz, soul funk and hip hop as exemplified by *Curves of Life* (1995, RCA/Novus).

GARY W. KENNEDY, BARRY KERNFELD

Colenda. *See* KOLĘDA.

Coler, Martin. *See* KÖLER, MARTIN.

Coleridge-Taylor, Samuel [Taylor, Samuel Coleridge] (*b* London, 15 Aug 1875; *d* Croydon, 1 Sept 1912). English composer. He was the illegitimate child of Daniel Hugh Taylor, a doctor and native of Sierra Leone, and Alice Hare Martin, an Englishwoman. He grew up in Croydon with his mother after his father returned to Africa. It has been suggested that Samuel may have enjoyed support from a member of the Coleridge family (see Butterworth, 1989), but the evidence for this proposition is extremely slender. He studied the violin with Joseph Beckwith and singing in the choir of St George's Presbyterian Church from the age of ten. After his voice broke he sang alto in the parish choir of St Mary Magdalene, Addiscombe. In 1890 he entered the RCM as a violin student; his first important composition, a *Te Deum*, dates from this year. Novello published one of his anthems, *In thee, O Lord*, in 1891, and four more in 1892. That year he began to study composition with Stanford, and was awarded an open scholarship for composition at the college in March 1893. Frequent public performances of his music followed: a chamber concert in Croydon on 9 October 1893 included his Piano Quintet, part of his Clarinet Sonata, and three of his songs, with the composer at the piano, and between 1894 and 1897 some of his latest works were heard at the RCM, notably the Nonet, the Clarinet Quintet, *Five Fantasiestücke* for string quartet, the first three movements of the Symphony in A minor, and the

String Quartet in D minor. In 1895 and 1896 he won the Lesley Alexander composition prize. His contemporaries at the RCM included Dunhill, Vaughan Williams, Holst, Ireland and Bridge, although his closest peer relationship was forged with William Hurlstone.

He left the RCM in 1897, and in the following year received his first commission, from the Three Choirs Festival. He had received much help and advice from A.J. Jaeger, through whom his music became known to Elgar; it was Elgar who recommended Coleridge-Taylor for the festival commission, and the result, the Ballade in A minor for orchestra, was well received at its first performance. Two months later Stanford conducted the first performance of *Hiawatha's Wedding Feast* at the RCM. This cantata, on which the composer's fame now largely rests, soon became widely acclaimed in England and the USA; Jaeger even referred to it as 'the biggest success Novellos had since Elijah'. Many festival commissions followed, including the *Overture to The Song of Hiawatha*, *The Death of Minnehaha*, *Hiawatha's Departure*, and a number of cantatas, of which *A Tale of Old Japan* is perhaps the finest. None of these later works, however, was as enthusiastically received as *Hiawatha*. Coleridge-Taylor's other chief field of composition was incidental music, commissioned by Herbert Beerbohm Tree for His Majesty's Theatre; he provided music for four plays by Stephen Phillips (*Herod*, *Ulysses*, *Nero* and *Faust*), as well as for *Othello*and Alfred Noyes's *The Forest of Wild Thyme*.

In addition to composing, Coleridge-Taylor was an excellent conductor of catholic tastes and, according to Carl Stoeckel, was described in 1910 by New York orchestral players as the 'black Mahler'. He was permanent conductor of the Handel Society from 1904 until his death, of the Westmorland Festival from 1901 to 1904, and of many choral and orchestral societies. He also undertook much teaching in and around Croydon, and was appointed professor of composition at Trinity College of Music, London, in 1903, and at the GSM in 1910. He made three successful visits to the USA, in 1904 and 1906 at the invitation of the Coleridge-Taylor Choral Society, founded in Washington, DC, in 1901 for black singers, and in 1910 at the invitation of Carl Stoeckel for the Litchfield Festival, Connecticut. His early death from pneumonia seems to have been partly a result of overwork, and his passing was widely lamented.

As a student at the RCM, Coleridge-Taylor had exhibited extraordinary promise as a composer. The assured technique and stylistic panache of his chamber works drew praise from Stanford who, greatly admiring the Clarinet Quintet, showed it to Joachim. The Clarinet Quintet reveals the extent to which he had imbibed the Brahmsian core of Stanford's teaching, but the rhythmic vitality, harmonic colour and melodic invention (which betrays a strong modal character) confirm the influence of his idol Dvořák. These characteristics quickly found a natural affinity with the poetry of Longfellow, who was greatly popular at the time, and audiences were attracted to the novelty of his trochaic rhythms, not to mention the 'funny names' which the composer himself admitted first drew him to the *Song of Hiawatha*. The cult of the exotic was then at its height, and the romantic appeal of the Amerindian powerful. In Coleridge-Taylor it became entangled with his endeavour to express his African identity, which he did, following Dvořák's example, by modelling some of his works on negro subjects and melodies of the black and Amerindian peoples.

High public expectations following the huge success of *Hiawatha's Wedding Feast* led to the completion of the Longfellow trilogy, although *The Death of Minnehaha* and *Hiawatha's Departure* never achieved the same degree of renown. Indeed the failure of *The Blind Girl of Castél-Cuillé*, *Meg Blane* and particularly *The Atonement* suggested a conspicuous falling away of his creative powers in his late 20s. Later choral works, such as the 'Bon-Bon' Suite and *A Tale of Old Japan* signalled a recovery, but his one attempt at full-scale opera, *Thelma*, never came to fruition. Large-scale instrumental forms, handled with such assurance in his student chamber works, held less attraction for him in later years. He produced an extensively reworked concerto for the American violinist Maud Powell at the end of his life, but his most convincing essay was the *Symphonic Variations on an African Air*, which displays his considerable aptitude and partiality for variation form. Shorter orchestral works such as the Ballade in A minor and *The Song of Hiawatha* also evince a sense of breadth, but it is as a miniaturist, in the fine settings of Elizabeth Barrett Browning's sonnets *The Soul's Expression* or even more so in the province of light music, such as *The Forest of Wild Thyme* or *The Bamboula*, that he excelled.

Coleridge-Taylor saw it as his mission in life to help establish the dignity of the black man. He was greatly influenced by the black American poet P.L. Dunbar (some of whose poems he set), by the Fisk Jubilee Singers of Nashville, by W.E.B. Du Bois, Frederick Douglass, Booker T. Washington and others, whose works he studied zealously. After meeting Dunbar in 1897 his awareness of his heritage grew rapidly, leading to such works as the *African Romances* (1897), the operatic romance *Dream Lovers* (1898), the *African Suite* (1898) and *Toussaint l'ouverture* (1901), a musical illustration of the 18th-century slave who led the liberation of Haiti. Many musicians in the USA looked on him as a beneficent influence. H.T. Burleigh frequently sang for him in the USA and probably shared many of his ideas. He suffered many rebuffs on account of his colour and at one time contemplated emigrating to the USA. Above all, though, he was known as a man of great dignity and patience.

On 30 December 1899 Coleridge-Taylor married Jessie Walmisley, a fellow RCM student and a cousin of T.A. Walmisley. Their son Hiawatha (*b* Croydon, 15 Oct 1900; *d* London, 20 Jan 1980) and daughter Avril [Gwendolen] (*b* South Norwood, 8 March 1903; *d* 21 Dec 1998) followed musical careers, the former as a conductor of his father's ballet music in the staged performances of *Hiawatha*at the Albert Hall, the first of which took place on 19 May 1924, and the latter as a conductor and a composer of songs, partsongs, instrumental solos, orchestral arrangements and larger works, including a Piano Concerto in F minor, *Sussex Landscape*, *The Hills*, *To April*, *In Memoriam R.A.F.* and *Golden Wedding Ballet Suite* for orchestra, and *Wyndore*and *Historical Episode* for chorus and orchestra. She adopted the name Avril in place of Gwendolen, and has also written under pseudonyms.

WORKS

printed and published in London unless otherwise stated

MSS in GB-Lbl, Lcm, US-NYpm

QH – *London, Queen's Hall*

STAGE

op.
25 Dream Lovers (operatic romance, 1, P.L. Dunbar), 4 solo vv, 4vv, Croydon, Public Hall, 16 Dec 1898
26 The Gitanos (cantata-operetta, E. Oxenford), S, 2 Mez, 2 A, 3 female vv, pf, London, 1898 (1898)
47/1 Herod (incid music, S. Phillips), 1900, *US-Bp**, pf suite (1901): Processional, Breeze-Scene, Dance, Finale
49 Ulysses (incid music, Phillips), 1901–2, 2 songs, partsong, scena for vn, pf, pubd
62 Nero (incid music, Phillips), 1906, *US-Bp**, part pubd (1909): Prelude, 2 Entr'actes (unpubd) Intermezzo, Eastern Dance, Finale
70 Faust (incid music, Phillips), 1908, *US-Bp**, part pubd (1911–25): Dance of the Witches, The 4 Visions, Dance and Chant, 1 song
72 Thelma (grand op, 3), 1907–9, unpubd
74 The Forest of Wild Thyme (incid music, A. Noyes), 1910, part pubd: Scenes from an Imaginary Ballet, 3 Dream Dances, Intermezzo, Songs and partsongs, Christmas Overture
79 Othello (incid music, W. Shakespeare), 1910–11, *US-Bp**, orch suite (1909): Dance, Children's Intermezzo, Funeral March, The Willow Song, Military March
— St Agnes Eve (incid music), 1912, partial pf score ed. A. Lotter (1922): 3 Tableaux
— The Clown and the Columbine (melodrama after H.C. Andersen), reciter, vn, vc, pf, unpubd

CHORAL AND VOCAL

all with orchestra

some also published with piano accompaniment

7 Zara's Ear-Rings (Lockhart), rhapsody, solo v, 1895, unpubd
30 Scenes from 'The Song of Hiawatha' (cant., H.W. Longfellow): 1 Hiawatha's Wedding Feast, T, 4vv, London, RCM, 11 Nov 1898, *US-Bp*; 2 The Death of Minnehaha, S, Bar, 4vv, Hanley, 26 Oct 1899; 3 Overture, Norwich, 6 Oct 1899; 4 Hiawatha's Departure, S, T, Bar, 4vv, London, Albert Hall, 22 March 1900 [no. 1 incl. Onaway! awake, beloved; no.4 incl. Spring had come and Hiawatha's Vision: all 3 pubd separately]
42 The Soul's Expression (E.B. Browning), 4 sonnets, A, Hereford, 13 Sept 1900: The Soul's Expression, Tears, Grief, Comfort
43 The Blind Girl of Castél-Cuillé (cant., Longfellow), S, Bar, 4vv, Leeds, 9 Oct 1901, vs (1901)

Colette, Marie-Noël (*b* Cysoing, nr Lille, 8 Jan 1939). French musicologist. After studying at the Sorbonne, where she graduated in philosophy in 1966, she studied musical palaeography with J. Vezin, Solange Corbin and Michel Huglo. In 1967 she was appointed lecturer at the musicological seminars of Corbin (1967–73) and Lesure (from 1973) at the Ecole Pratique des Hautes Etudes, and in 1974 she submitted her dissertation, prepared under the supervision of Corbin, entitled *Le Processional de St-Hilaire-le-Grand à Poitiers (XVIe siècle)*. She began teaching musical palaeography at the Lyons Conservatoire in 1988, and in 1990 became a senior research lecturer at the Ecole Pratique des Hautes Etudes seminar on medieval musical palaeography. She was the first secretary-general (1988–91) and then chairman (1991–5) of the Société Française de Musicologie.

An encounter with Dom Cardine gave Colette the idea of an interpretation of Gregorian chant based on the rhythmical indications of 10th-century manuscripts. It was proposals that she first put forward in Corbin's seminars that led to her founding, with Anne-Marie Deschamps, the Ensemble Venance Fortunat in 1974. Alongside her work on palaeography she has undertaken research on interpretation with the singers Dominique Vellard (from the Ensemble Gilles Binchois) and Brigitte Lesne (from the Ensemble Discantus), and with the Centre de Musique Médiévale in Paris. Her work on the analysis of medieval music, which draws on manuscript sources and interpretation, is also connected with the modal discoveries of Jean Claire and the teaching of music in oral traditions. Her publications are chiefly on questions of the composition, and the oral and written tradition of medieval music.

JEAN GRIBENSKI

Coletti [Colletti], **Agostino Bonaventura** (*b* Lucca, *c*1675; *d* Venice, 1752). Italian composer. He was first an organist in Lucca. By 1669 he was in Venice, as testified by a letter to G.A. Perti (*I-Bc*) in which he asked to be admitted to the Bologna Accademia Filarmonica; further correspondence and the frontispiece of his op.1 show that he was accepted as a member. In 1703 he auditioned, unsuccessfully, for the post of *maestro di cappella* of Pistoia Cathedral. In Venice he was made third organist of S Marco on 9 December 1714, second organist on 21 May 1736 (with a salary of 200 ducats) as well as assistant *maestro di cappella*, and later first organist until his death. Beginning in 1699 Coletti composed four serenatas for political elections in Lucca, the Tasche. His operatic career began with *Paride in Ida*, given in Parma in 1696 and repeated in Venice at S Angelo in 1706. Two further operas were performed in Venice in 1707, *Ifiginia* and a revival of *Prassitele in Gnido*. His oratorio *Isacco figura del redentore*, given at the Oratorio di S Filippo Neri (S Maria della Fava) on 1 January 1741 in Venice, was repeated the same year at S Maria Corteorlandini, Lucca.

The 12 cantatas of Coletti's op.1 show a standard formal scheme: recitative and aria alternate, there are always three arias (usually in da capo form and beginning with a 'motto' phrase in imitation), and the vocal part often has *fioriture*. Coletti could handle both voice and continuo competently, and the music often reflects the spirit of the text; the style is dramatic (the direction 'Affettuoso' appears frequently), and there is much interplay between voice and continuo.

WORKS

Operas, music lost; libs in *I-Vnm*: Paride in Ida (F. Mazzari), Parma, Ducale, 1696, collab. C. Manza; Prassitele in Gnido (A. Aureli), Rovigo, Monfredini, 1700; Ifiginia (Aureli, after P. Riva), Venice, S Angelo, carn. 1707
Serenatas, all for Lucca, Tasche political elections, music lost: Bruto e Cassio (?C. Contarini), 11 Dec 1699; Muzio Scevola, 15 Dec 1723; Codro re d'Atene (N. de'Nobili and C. Bernardini), 11 Dec 1726; Timoleonte, cittadino di Corinto (S. Mansi and G.V. Bottini), 14 Dec 1729
Oratorios, music lost: L'Innocenza difesa in S. Giov. d'Iddio (D. Melani), Florence, S Maria dell'Umilità, 1704; Isacco figura del redentore (P. Metastasio), Venice, S Maria della Fava, 1 Jan 1741
Armonici tributi [12 cant.], S/A, bc, op.1 (Lucca, 1699)
Mass, 2vv, *Vnm*

CAROLYN GIANTURCO

Coletti, Filippo (*b* Anagni, 11 May 1811; *d* Anagni, 13 June 1894). Italian baritone. He studied at Real Collegio di Musica in Naples, making a successful début at the Teatro del Fondo (1834) in Rossini's *Il turco in Italia*. His talents attracted the attention of Laporte, impresario of Her Majesty's Theatre, London, who in 1840 engaged him to replace the popular favourite Tamburini, thereby provoking a riot vividly described by R.H. Barham in one of his *Ingoldsby Legends*. Returning defeated to Naples, Coletti created the roles of Lusignano in Donizetti's *Caterina Cornaro* (1844) and Gusmano in Verdi's *Alzira* (1845). The following year he was re-engaged at Her Majesty's by Laporte's successor, Lumley, where he played Francesco in Verdi's *I masnadieri*. For the next four seasons he remained the leading Italian baritone on the London stage, being especially admired as the Doge in Verdi's *I due Foscari*. It was for him that Verdi lowered the part of Germont in the definitive version of *La traviata*, in whose first performance he took part at the Teatro Benedetto, Venice (1854). His last creation of importance was the title role of Mercadante's *Pelagio* at the Teatro S Carlo, Naples (1857), given at a time when Verdi was seriously considering him for the name part of the *Re Lear* that he never wrote. Coletti retired from the stage in 1869; in 1880 he published a treatise, *La scuola di canto italiano*, in Rome. Although he undertook comic roles, it was as a 'baritono nobile' that Coletti excelled. Chorley praised him as 'an expressive, sound singer of the modern school'; to Carlyle he seemed 'a man of deep and ardent sensibility ... originally an almost poetic soul'.

HAROLD ROSENTHAL/JULIAN BUDDEN

Colgan [Colgon], **James** (*b* ?Dublin, *c*1710; *d* Dublin, 1772). Irish singer, composer and organist. Reputedly a fine bass singer, his name was frequently mentioned as a special attraction at Dublin concerts during the 1740s, though he was not, apparently, a soloist at the first performance of *Messiah*. He was a member of the choir of St Patrick's Cathedral, becoming a half vicar-choral in 1743, and full vicar in 1745, holding the post until his death. From 1740 to 1754 he was organist of St Peter's, Dublin. A few songs and a duet by Colgan survive in the Joly Collection (*IRL-Dn*).

BRIAN BOYDELL

Colgrass, Michael (Charles) (*b* Chicago, 22 April 1932). American composer and percussionist. He graduated from the University of Illinois (BMus 1956), and studied composition with Milhaud, Riegger and Foss, among others. The recipient of many grants, fellowships and commissions, he is particularly well known for his orchestral and percussion works. From 1956 to 1967 he was a freelance solo percussionist with various New York groups including the New York PO, Dizzy Gillespie's band, and the Columbia SO. In 1978 he won the Pulitzer

Prize for his percussion and orchestra piece *Déjà vu*. In 1974 he settled in Toronto.

Colgrass has an uncanny ability to write accessible music that simultaneously challenges the intellect and stirs the emotions. His highly personal compositional technique draws on a diversity of styles, reflecting his widespread interests, and involves a free-flowing mixture of tonal and atonal harmonic language. Early compositions of the 1950s and 60s follow strict serial techniques and reflect the influence of his teachers, most notably Riegger and Ben Weber. Colgrass broke with serialism in the mid-1960s with his orchestral piece *As Quiet As*. References to various jazz styles are found in many of his works, especially *Light Spirit* and *Déjà vu*. In later works, such as *Letter from Mozart* (1976) and *The Schubert Birds* (1989), Colgrass works out his fascination with paraphrase, employing music by composers of the 18th–20th centuries as a basis for thematic material, subjecting it to various permutations and distortions. His vocal music is defined by its verbal clarity, which is perhaps at its most effective in his music theatre pieces, such as *Virgil's Dream* (1967).

WORKS
(*selective list*)

Stage (texts by Colgrass): Virgil's Dream (music theatre, 1), 1967, Brighton, 1967; Nightingale Inc. (comic op, 1), 1971, Champaign, IL, 1975; Something's Gonna Happen (children's musical, 1), 1978, Toronto, 1978

Colijns, Jean-Baptiste. *See* COLYNS, JEAN-BAPTISTE.

Colin, Guilielmo. *See* GOLIN, GUILIELMO.

Colin, Pierre (*fl* 1538–72). French composer. He was Master of the Choirboys (*c*1539–61) and organist (1562–*c*1569) at St Lazare Cathedral in Autun; he was also active as a priest and chaplain there from 1539 to about 1572. In 1832 Fétis summarized some account books for the chapel of François I's daughters (*F-Pn* fr.7853) in which a Gilbert Colin, called Chamault, is listed as a clerk and chaplain from 1521 until his retirement in 1536. In the *Biographie universelle* Fétis confused this man with Pierre Colin – an identification not supported by the music publications, which name only Pierre Colin (or simply Colin), not Gilbert (or Pierre-Gilbert) Colin.

Most of Colin's 26 masses are parody works based on material from his own motets and psalms, as well as from motets by Richafort, Certon and others; some of the masses were recopied in manuscripts in Italy (*I-TVd* 19, *Bsp* A.XLVIII) and Spain (*E-Tc* 27). The ten *Magnificat* settings (of the even-numbered verses) use the plainsong formulae as their structural basis. Among his best works are the 36 motets, most of which are constructed in a series of overlapping points of imitation. In his early works duets contrast with chordal sections, whereas later pieces are characterized by a fuller, more continuous texture. Nevertheless they reflect Colin's concern with textual clarity. In the prologue to his *Liturgicon musicarum* he explained that he had constructed the music so that the text might be easily understood, for 'our souls are fed on the inmost part of the text'. Although poor Latin accentuation occasionally occurs, the declamation is generally successful because of Colin's subtle sense of timing, texture control and felicitous choice of melodic figures. Six of the eight chansons commonly attributed to him were printed by Attaingnant, who gave only the composer's surname; all are in a light, basically homophonic style, with some text-painting and imitative textures. Through his sacred works, Colin made a significant contribution to French music in the generation of composers after Josquin.

WORKS

SACRED

Liber octo missarum … moduli quos motettos usitatiori nomine vulgus vocat … parthenica cantica in laudem illibatae virginis conscripta (quae … Magnificat inscribuntur) octo sunt, singulaque proprio tono distinguuntur, 4–6vv (Lyons, 1542)

Liber tertius missae sex, 4vv (Venice, 1544)

Les 50 pseaulmes de David traduictz par Clement Marot … en chant non vulgaire; mais plus convenable aux instrumens, 4vv (Paris, 1550)

Liturgicon musicarum 12 missarum (Lyons, 1554 [lost], 2/1556)

Missa, ad imitationem moduli 'Confitemini', 4vv (Paris, 1556)

Missa, ad imitationem moduli 'In me transierunt', 4vv (Paris, 1556)

Missa, ad imitationem moduli 'Surgens Jesus', 4vv (Paris, 1556)

Modulorum (quos vulgo motecta vocant), liber I, 4–6vv (Paris, 1562)

Modulorum … liber II (Paris, 1562)

Les sept pseaumes penitentiaux de David, traduits en rithme françoise, par Clement Marot, 4vv (Paris, 1564)

Messe, 4vv (Venice, 1580)

2 masses, 1547[2]; Missa 'Salus nostra', 4vv, in Missae duodecim (Paris, 1554) [later repr. separately]; 2 masses repr. from earlier edns in 1590[2]

1 Magnificat, 1547[2]; 3 Magnificat settings, 1553[3] [2 repr. from Liber octo missarum]

15 motets, 1539[11], 1542[5], 1542[7], 1551[1], 1553[8], 1555[13], 1555[14]

SECULAR

7 chansons, 1538[12], 1541[5], 1543[7], 1545[12], 1549[19], 1550[12]; 1 in Le parangon des chansons, XIIe livre (Lyons, 1543) [unnamed; attrib. P. Colin in *Catalogue de la bibliothèque de F.J. Fétis* (Brussels, 1877)]: 2 ed. in PÄMw, xxiii (1899/*R*), 1 ed. in RRMR, xxxviii (1981)

Colini [Collini], **Filippo** (*b* Rome, 21 Oct 1811; *d* ? May 1863). Italian baritone. In both contemporary and modern sources he is sometimes confused with Virgilio Collini or Filippo Coletti. He studied with Camillo Angiolini at the Collegio Romano from 1819 to 1827, where he sang in the choir. His first concert appearance was in 1831. Early in 1835 he appeared at the opera house in Fabriano, and during the autumn made his début at the Teatro Valle, Rome. Thereafter he was engaged at major Italian theatres in Palermo (1838–41, 1852–4), Naples (1841–2, 1848, 1855–7), Genoa (1842–3, 1854–5), Milan (1844–5) and Rome (1844, 1845–6, 1848–9, 1849–50), among others, and in Paris and Vienna.

During his early career his repertory consisted mainly of works by Donizetti, especially *Torquato Tasso*; later he concentrated on Verdi's operas, in particular *Nabucco*, *Ernani* and *Luisa Miller*. He sang Luigi XIV in the première of Campana's *Luisa di Francia* (1844), Severo in Donizetti's *Poliuto* (1848) and Inquaro in Eugenio Terziani's *Alfredo* (1852), and he created roles in three Verdi operas: Giacomo in *Giovanna d'Arco* (1845), Rolando in *La battaglia di Legnano* (1849) and Stankar in *Stiffelio* (1850). The gracefulness, flexibility and delicacy of his high baritone voice is said to have compensated for his meagre interpretational abilities.

Colista, Lelio (*b* Rome, 13 Jan 1629; *d* Rome, 13 Oct 1680). Italian lutenist, guitarist and composer. His father was Pietro Colista from L'Aquila, who became an official in the Vatican Library and then *Riformatore* at Rome University. Nothing is known of Lelio's musical training. His father's high connections may have aided his rapid rise to fame; in 1650 Kircher described him (in *Musurgia universalis*) as 'verè Romanae Urbis Orpheus'. Under the patronage of the Chigi papacy, Colista quickly gained preferment, being listed in the *ruolo della famiglia* of Alexander VII from 1656, and in 1660 he succeeded to the lucrative sinecure of *Custode delle pittore* at the *Cappella Sistina*, a post he held until his death. He served at some of the main churches in Rome, notably for the lavish patronal festivals at S Luigi dei Francesi in 1658–9 and 1673–5. From 1660 he appeared annually for the series of Lenten Oratorios produced by the Arciconfraternità del SS Crocifisso at S Marcello. In 1661 and 1667 he was nominated as temporary *maestro di cappella* for these occasions, composing two oratorios (now lost). As a sign of singular appreciation for these duties his fee was augmented by a gift of a pair of gloves filled with donations from the audience. In 1664 he was among the entourage of 200 accompanying Cardinal Chigi on his unsuccessful diplomatic mission to the court of Louis XIV.

Colista was much in demand for the private gatherings of the aristocracy: Kircher describes a performance of one of his trio sonatas at an academy; and on 17 January 1661, at the chapel of the Spanish ambassador, Robert Southwell records that 'the theorbo man Lelio Colista played rare volenteryes'. He married Margarita Petrignani in 1669 and several of their children became musicians. During the Holy Year of 1675 he participated in 14 oratorios at S Giovanni dei Francesi, associating with the most illustrious musicians of the day – Pasquini, Bernabei, Melani, Stradella, Lonati, and his kinsman, Mannelli. On 3 February he formed part of the instrumental concertino and 'Il Bolognese' (Corelli) is listed in the concerto grosso. Colista's influence on the young Corelli is beyond doubt. Not only was Colista one of the most renowned musicians of his day, he was also an astute businessman who by clever financial transactions amassed a considerable fortune, enabling him to live in the Via del Corso, the most fashionable part of Rome, and maintain a retinue of servants.

Except for a few pieces printed as examples by Kircher, none of Colista's compositions was published during his lifetime. The surviving manuscripts present almost insuperable problems of dating and attribution. Priority should perhaps be given to sources of Roman provenance, which cast doubt on the authenticity of various English manuscripts that have been misascribed in modern editions. For example, the 'sonata' by 'the famous, Lelio Calista' quoted by Purcell in Playford's *Introduction to the Skill of Musick* (1694) is attributed to Lonati in the Italian sources; the dance suites in Trinity College, Dublin, are in fact from G.B. Vitali's op.4; and there is no evidence that the sonata headed 'N.N. Romano' in a Bolognese anthology of 1680 is by Colista.

Colista's output is mainly instrumental. In comparison with his younger contemporaries, Lonati and Stradella, his *Simfonie* appear technically undemanding, but several contain bass patterns for the improvisation of solos. Each composition comprises four to six movements often linked by thematic cross-reference. Apart from the elaborate fugal movements or *canzone*, these substantial compositions are notable for the large number of binary dances, an indication of the patent lack of success of papal strictures against 'profane' melodies in church.

WORKS

catalogue of MS and printed sources in Wessely-Kropik (1961), 113–18, of which nos.11, 20, 23, 34, 35 and 36 are by C.A. Lonati and others are questionable; to the list of MSS should be added I-MOe, Rvat, US-Cu

PETER ALLSOP

Colizzi [Collizzi], **Johann(es) Andreas** [Jean; Giovanni Andrea Kauchlitz] (*b* Grudim, Bohemia, ?*c*1740; *fl* 1765–*c*1790). Composer and keyboard player, possibly of Italian origin. He lived at Leiden from at least 1767, when a song anthology to which he contributed appeared, and married there in 1772. The interest implied by the title of his op.1 is also reflected in that of his opera (date and place of performance unknown). He is said to have been a keyboard virtuoso. In the 1770s he seems to have moved to The Hague, where he taught Princess Louise of Orange. His *Dissertatio philosophica de sono* (Leiden, 1774) is a short but erudite treatise.

□

Coll, Antonio Martín y. *See* MARTÍN Y COLL, ANTONIO.

Colla, Giuseppe (*b* Parma, 4 Aug 1731; *d* Parma, 16 March 1806). Italian composer. According to Pelicelli, he was born on 4 August 1739, though this is unlikely. After musical studies, probably in his native city (according to Della Porta), he launched his career in 1760 at Mannheim, contributing six arias to Jommelli's *Caio Fabrizio*. As a result he was invited to write an opera for the Teatro Ducale in Milan (*Adriano in Siria*, 1762). According to a letter he sent to Padre Martini (18 May 1764) he was due to leave for Genoa to compose an opera for that city, but there is no evidence that he did so. In an earlier letter to Martini (31 January 1760) he reported that he was giving harpsichord lessons at the court of Duke Ferdinand of Parma. He was appointed *maestro di cappella* there in January 1766 and from 1780 until his death was also director of the Teatro Ducale. He taught the duke and, after 1785, his son Prince Ludovico.

Colla had a long liaison with the celebrated soprano LUCREZIA AGUIARI, who sang his operas and little else in many northern Italian cities between 1769 and 1780. Despite some brilliant, demanding arias for her (and for a few other singers) much of his music is of average quality. The couple also visited Paris and London, where they appeared at the Pantheon Theatre during the 1775–7 seasons. Burney wrote that 'she sung hardly any other Music while she was here than her husband's, Signor Colla, which, though often good, was not of the original and varied cast which could supply the place of every other master, ancient and modern'. Burney's daughter Fanny described Colla as a 'tall, thin, spirited Italian full of fire & not wanting in Grimace' but also 'a mighty Reasoner' (letters of 1 and 2 March 1775).

Little of the sacred music that Fétis claimed Colla wrote can be found today. On the other hand, scenographic drawings in pen and acquarelle by the Galliari brothers for *Andromeda* (1771, Turin) and *Didone* (1773, Turin) have been discovered (in *GB-Lv*, *I-Ms*, *Tmc*, the Pinacoteca, Bologna, and the Pogliaghi Collection, near Varese; for illustration of *Didone* *see* OPERA SERIA, §3, fig.3). Most of his operas survive in scores copied for the library of King José of Portugal, now in the Palácio Nacional da Ajuda, Lisbon. Fétis cautioned that this composer should not be confused with another Giuseppe Colla of early 19th-century Milan, whose works Ricordi published. 23 autograph letters from Colla to Martini (dating from 1757 to 1783, and all but one sent from Parma) are preserved in the conservatory library in Bologna: Martini cites Colla in 12 extant letters to others.

SVEN HANSELL, REBECCA GREEN

Collaborative compositions. Musical compositions or sets of works written by two or more composers in collaboration. Works to be discussed under this heading do not include such genres as the operatic pasticcio, in which the component items were originally written for quite different occasions (*see* PASTICCIO). Nor do they include such works as Mozart's Requiem and Puccini's *Turandot*, which were left incomplete and later finished by another hand, or pieces such as the Bach–Gounod *Ave Maria* and the Bach–Busoni Chaconne, in which one composer has reworked the music of another at a much later date (*see* ARRANGEMENT).

Possibly the oldest type of collective work resulting from a collaboration between contemporaries is the anthology of self-contained pieces that together form a tribute to a patron or illustrious personage. The invention of music printing provided a stimulus to the writing of such anthologies, and the 16th century furnished several examples. One of them, entitled *Trionfo di musica* (RISM 1579[3]), brought together pieces written for the marriage between the Grand Duke Francesco de' Medici and Bianca Cappello. It opens with an *Epitalamio* consisting of a sonnet and a sestina, each strophe of which was set by a different composer (Andrea Gabrieli, Bellavere, Merulo, Donato, Orazio Vecchi and Tiburtio Massaino). A similar anthology, *Corona di dodici sonetti* (1586[10]), was written in honour of the grand duchess by 11 composers, including Palestrina and Marenzio, who are represented also in the better-known *Il trionfo di Dori* (1592[11]), prepared by a wealthy patron of music, Leonardo Sanudo, as a gift for his bride. It was with this publication as a model that Morley as editor and Thomas East as publisher issued *The Triumphes of Oriana* (1601[16]), a volume of madrigals in praise of Elizabeth I to which 23 English composers contributed. This in turn served as a model for *A Garland for the Queen*, a collection of partsongs by ten composers in celebration of the coronation of Elizabeth II in 1953.

The most important collaborative compositions of the 17th and 18th centuries were stage works, particularly masques and operas. Such collective works were quite common in England, where the pasticcio also flourished. In 1633 William Lawes and Simon Ives collaborated in composing the music for James Shirley's masque *The Triumph of Peace*; the Lawes brothers worked together on Davenant's masque *The Triumphs of the Prince d'Amour* (1636); and among English operas collectively composed were *The Siege of Rhodes* (1656, with music by Henry Lawes, Cooke, Locke, Charles Coleman and George Hudson) and *The Duenna* (1775), in which Thomas Linley, father and son, collaborated to produce a pastiche opera. It is worth pointing out that in these and most other collaborative ventures in music each composer was allotted his own share of the text; collective works in which the identity of the composer is submerged in the collaboration are rare.

Examples also exist of full-length Italian operas with each of the three acts written by a different composer. Such a collaboration might result from the need to produce an opera in a shorter time than usual, or merely from the whim of a Maecenas. Cardinal Pamphili's motive for entrusting his libretto *La Santa Genuinda* to three different composers in 1694 seems to have been to unite talents from Rome (G.L. Lulier), Naples (Alessandro Scarlatti) and Venice (C.F. Pollarolo). Such a venture could serve also to fan the flames of rivalry, as was the case with *Muzio Scevola* (1721) with music by Filippo Amadei, Giovanni Bononcini and Handel, though it seems unlikely that this opera was actually designed as a contest. The collaborative opera, like the pasticcio, fell into disfavour after about 1800; among the few 19th-century examples is the opera-ballet, *Mlada*, commissioned in 1872 from Borodin, Cui, Musorgsky and Rimsky-Korsakov. Like any other collaborative venture, a collective work depends for its completion on the goodwill and reliability of all concerned, and *Mlada* was not the only such work to remain unperformed. A similar fate befell the composite Requiem planned by Verdi in memory of Rossini. Verdi's own contribution, the 'Libera me', was written in 1868–9 and later used in his Requiem for Alessandro Manzoni (1874).

Just as the acts of an opera might be shared between different composers, so in the 19th century might the three or four movements of an instrumental work. Among the best-known examples of such collaboration is the violin sonata by Brahms, Schumann and Albert Dietrich, written in 1853 as a tribute to the violinist Joseph Joachim and known as the F–A–E Sonata after Joachim's motto, 'Frei aber einsam' ('Free but solitary'). That the use of a musical motto could reduce the danger of formal diffuseness inherent in such works was recognized in the string quartet that Rimsky-Korsakov, Lyadov, Borodin and Glazunov wrote for the publisher Belyayev in 1886. This is unified by a motto, B–La–F (= B♭–A–F), suggested by the name of the dedicatee. Other composite chamber works associated with Belyayev were the *Jour de fête* quartet by Lyadov, Glazunov and Rimsky-Korsakov (1887) and *Les vendredis*, a series of miscellaneous pieces by several composers.

Heterogeneity of style and method matters less in a set of variations, where the given theme invites variety of treatment while ensuring some measure of unity. Not surprisingly, therefore, variation form has been used quite frequently for collective compositions (*see* VARIATIONS, §§6, 7). An early and famous example is the set of variations on his own waltz theme that the Viennese publisher Anton Diabelli commissioned from about 50 of the leading musicians in Austria. Schubert and Liszt were among the contributors, and Beethoven responded with 33 variations that were published separately in 1823.

Other 19th-century variations sets include the well-known *Hexameron* (1837) by Liszt, Thalberg, Pixis, Herz, Czerny and Chopin on a theme from Bellini's *I puritani*. Glazunov, Lyadov, Rimsky-Korsakov and others wrote piano variations on a Russian folktune in 1900, and later 20th-century examples include the variations for voice and piano on *Cadet Roussel* by Bax, Bridge, Goossens and Ireland (1918). A rather more unusual collaboration resulted in the orchestral suite *Mont Juic* (1936–7), to which Lennox Berkeley and Britten each contributed two movements based on Catalan dance tunes.

MALCOLM BOYD

Collaer, Paul (*b* Boom, 8 June 1891; *d* Brussels, 10 Dec 1989). Belgian musicologist, pianist and conductor. As a prizewinner of Mechelen Conservatory, he began to appear as a pianist in 1911. In 1919 he obtained the doctorate in natural sciences at Brussels and became a professor at the Mechelen Atheneum. He founded the Pro Arte concerts at Brussels in 1921, with the principal intention of promoting the performance and appreciation of contemporary music. As director of the Flemish music service of Belgian Radio (1937–53) he was able to champion new music all the more effectively, though at the same time he also contributed to the rediscovery of figures such as Cavalieri, Cesti and Monteverdi. During World War I he applied himself to ethnomusicology and from 1953 was instrumental in organizing the annual international Colloques de Wégimont. He was also president of the scientific council of the International Institute for Comparative Music Studies in Berlin and was successful in obtaining support from UNESCO for the creation of the Department of Ethnomusicology at the Musée Royal de l'Afrique Centrale in Tervuren, near Brussels.

Many years of experience as an executant musician, personal contact with composers and his leading position in the radio organization combined to give Collaer a panoramic view of contemporary music which is reflected in his authoritative writings.

GODELIEVE SPIESSENS/SYLVIE JANSSENS

Collage. A term borrowed from the visual arts, where it refers to the act of pasting diverse objects, fragments or clippings on to a background, or to the work of art that results. Musical collage is the juxtaposition of multiple quotations, styles or textures so that each element maintains its individuality and the elements are perceived as excerpted from many sources and arranged together, rather than sharing common origins. Other words used for this effect include 'montage', 'assemblage' and 'bricolage'. The term 'collage' has been applied to music with a variety of meanings, mostly to describe 20th-century works that borrow musical material from multiple sources.

Collage is distinct from QUODLIBET, MEDLEY, POTPOURRI, CENTONIZATION and other traditional procedures in that the diverse elements do not fit smoothly together. The wit of a quodlibet derives in large part from the incongruity of hearing in smooth counterpoint or quick succession tunes that one would not have thought to link together, and the pleasure of a medley lies in the smooth joining of familiar melodies that seem to belong together. Elements in a collage often differ in key, timbre, texture, metre or tempo, and lack of fit is an important factor in preserving the individuality of each and conveying the impression of a diverse assemblage.

Rare precedents for collage can be found in music before 1900. The second movement of Biber's programmatic ensemble sonata *Battalia* (1673) represents soldiers before a battle by means of a quodlibet of eight folksongs in five different keys, which enter at different times and clash in casual dissonance. The Act 1 finale of Mozart's *Don Giovanni* (1787) has three onstage bands playing a minuet, contredanse and waltz simultaneously. Strauss suggested reminiscence in *Ein Heldenleben* (1897–8) by interweaving in counterpoint recollections of themes from his own works. Passages in Mahler's symphonies juxtapose references to folksongs, dances, marches and other popular genres, which some critics have described as collage. In each example, the combination of simultaneous yet distinct streams of music is used to suggest several simultaneous events, whether in real life, imagination or memory.

The first fully developed collages occur in a handful of works by Charles Ives (although he did not use the term). Typically, there is a primary musical layer, often based on borrowed material, to which are added fragments and variants of as many as two dozen other tunes, each linked to the primary layer or to each other through melodic or rhythmic resemblance, similarity of genre or character or extra-musical association. The effect resembles the involuntary leaps of memory or dreams, as one thought gives rise to another through association. It is perfectly suited to pieces based on remembered or imagined events, such as the barn dance in *Washington's Birthday* (*c*1915–17) and the public holiday celebration in *The Fourth of July* (*c*1914–18), the dream scenarios of *Putnam's Camp* (*c*1914–20, the second movement of *Three Places in New England*) and, in the Fourth Symphony, the second

movement (*c*1916–23) and the transcendent spiritual experience of the finale (*c*1915–24).

Although most of Ives's collages were first performed and published between 1927 and 1937, they remained without successors until the 1950s and 1960s, when they had become more widely known. By that time other influences were also in play, including dadaist mixtures of divergent styles or chance events, a rising interest in musical quotation and the new technology of tape recording. *Musique concrète* – composed by combining existing sounds on tape through splicing and dubbing (*see* ELECTRO-ACOUSTIC MUSIC) – is in its procedures an almost exact parallel to collage in the visual arts; when the sound sources include recorded music, as in Cage's *Imaginary Landscape no. 5* (1952) and Stockhausen's *Gesang der Jünglinge* (1955–6), the effect can be characterized as musical collage.

Bernd Alois Zimmermann composed several works that use collage, a term he did much to popularize. His opera *Die Soldaten* (1957–65) uses superimposed streams of music from diverse historical periods, quoting jazz, Bach chorales and Gregorian chant, to suggest the simultaneity of past, present and future. His orchestral *Musique pour les soupers du roi Ubu* (1962–6) is composed entirely of borrowed material, with familiar themes from Baroque and contemporary music appearing amid Renaissance dances. George Rochberg sought to convey 'the many-layered density of human existence' in *Contra mortem et tempus* and *Music for the Magic Theater* (both 1965) by juxtaposing his own music with material quoted or derived from earlier composers. Stockhausen sought to represent the coming together of all people in universal harmony by combining music from around the world in *Telemusik* (1966) and *Hymnen* (1966–7). But not all works from the 1960s and later that use borrowed material can be said to use collage; those that draw on relatively few sources, or carefully integrate the borrowed material into a new context, lack the sense of multiple disparate elements that characterizes collage (*see* BORROWING, §13).

The best known collage, and perhaps the most complex, is the third movement of Berio's *Sinfonia* (1968–9). Ironically, Berio resisted the term 'collage' for this work, preferring to describe the multiple quotations as markers for various points in the history of music. The movement presents the entire third movement of Mahler's Second Symphony, with some parts of the texture and several whole passages deleted or modified, and overlays it with direct or altered quotations from over 100 musical works across a wide range of epochs and styles from Bach to Boulez, Stockhausen, Globokar and Berio himself. Each quotation is associated with the Mahler work or with the texts that are spoken or sung over the music, resulting in a vast, dream-like network of interconnected literary and musical ideas. The main text is Samuel Beckett's *The Unnamable*, a first-person narrative of the time after death, suggesting that the movement represents a post-mortem stream-of-consciousness undergoing progressive decay.

While Ives and Berio used collage with programmatic implications, it has also been used to deconstruct traditional assumptions about music. Kagel's *Ludwig van* (1969–70) extracts individual lines from Beethoven's works and reassembles them in new temporal combinations, destroying their original syntax and raising questions about composition, authorship, style, expression, musical continuity and the musical work itself. Cage's *HPSCHD* (1967–9), composed in collaboration with Lejaren Hiller, includes a collage of fragments drawn from Mozart, Beethoven, Chopin, Schumann, Gottschalk, Busoni, Cage and Hiller and arranged for seven harpsichord soloists using chance operations; these seven solos are played simultaneously with tape music, coloured lights, slides and film to create a multimedia collective happening in which individual lines and personalities are subsumed. His *Europeras 1 & 2* (1987) combine, through chance procedures, elements from a wide variety of European operas performed by soloists without a conductor, resulting in an indeterminate collage that provides a witty commentary on the genre of opera by avoiding all intentional musical or dramatic effects.

Other composers to use collage include R. Murray Schafer, Arvo Pärt, Helmut Lachenmann, Frank Zappa, Laurie Anderson and John Zorn. Collage also appears in popular music, particularly since the advent of digital sampling. *Night of the Living Baseheads* (1988) by the rap group Public Enemy includes over 30 samples of music, speech or sounds, each of which adds to the song's message through the associations it evokes. Here, and in other songs, the many and rapid references to other music suggest the fast pace and competing voices of contemporary society.

J. PETER BURKHOLDER

Collan, Karl (*b* Iisalmi, 3 Jan 1828; *d* Helsinki, 12 Sept 1871). Finnish composer. He studied linguistics and literature at the University of Helsinki, collected and

published Finnish folksongs (*Valituita Suomalaisia Kansan-Lauluja*, 1854–5), wrote a dissertation on Serbian folk poetry (1860) and translated the Finnish national epic, the *Kalevala*, into Swedish (1864–8). He was lecturer in German at the University of Helsinki from 1859 to 1866, when he became the university's chief librarian. A self-taught composer, Collan published eight collections of songs with piano accompaniment (1847–71) and wrote some choruses and piano pieces. His favourite poets were Zachis Topelius (*Wasa marsch*, *Sylvias julvisa*) and J.L. Runeberg (*Fåfäng önskan*, *Torpflickan*); but several of his best songs, such as *Ihr Bildnis* (Heine), *Gruss* and *Waldeinsamkeit* (Eichendorff), are settings of German poets and recall Schubert's lieder in style. His songs have been published in Documenta Musicae Fennicae, xvi–xvii, Helsinki, 1976–9.

ILKKA ORAMO

Colla parte (It.: 'with the part'). An indication to play the same part as another (written-out) part, or to keep in tempo with another (flexibly performed) part. If the other part is vocal, the term *colla voce* (It.: 'with the voice') may be used.

Collard, Catherine (*b* Paris, 11 Aug 1947; *d* Paris, 9 Oct 1993). French pianist. She studied at the Paris Conservatoire, winning a *premier prix* in the class of Yvonne Lefébure in 1964 and completing her studies in the *cycle de perfectionnement* with Yvonne Loriod. She also received a *premier prix* in chamber music in the class of Jean Hubeau. In 1969 she won first prize in both the Debussy and the Messiaen competitions, and these were followed by prizes in the Busoni, Casella and Viotti competitions. She maintained an active international career as a soloist and chamber musician, often performing and recording with the violinist Régis Pasquier, the contralto Nathalie Stutzmann and the pianist Anne Queffélec. Her solo recordings include strong, poetic accounts of many works of Schumann, especially the F♯ minor Sonata and the *Davidsbündlertänze*, as well as numerous sonatas of Haydn, the complete preludes of Debussy and the *Archipel IV* of André Boucourechliev, which is dedicated to her.

CHARLES TIMBRELL

Collard, Edward [Edmond] (*fl* *c*1595–1599). English lutenist and composer. He was appointed one of the musicians for the lute, in place of John Johnson, on 4 June 1598, four years after Johnson's death. He appears to have received no salary until a warrant was issued on 7 June 1599 for 15 months' payment. No further entries appear in the Audit Office Declared Accounts, but whether Collard died or retired is not known. The dedication of a pavan to Anthony Mildmay before the latter was knighted in 1596 suggests that Collard had begun to compose some few years before the date of his appointment at court. His works, though few, are of a high quality. (For further discussion see J.M. Ward: *Music for Elizabethan Lutes*, Oxford, 1992)

DIANA POULTON

Collard, Jean-Philippe (*b* Mareuil-sur-Ay, 27 Jan 1948). French pianist. His early studies were in Epernay and then at the Paris Conservatoire, where he received a *premier prix* in the class of Aline van Barentzen in 1964. He then studied privately with Pierre Sancan and won the national competition of the Guilde française des artistes solistes (1968), the Georges Cziffra Competition (1970) and three prizes in the Marguerite Long-Jacques Thibaud Competition (1969). Since his Paris début in 1973 he has performed with all the world's major orchestras and recorded a vast repertory, including the complete solo works of Ravel, the major works of Fauré and all the concertos of Rachmaninoff, Saint-Saëns and Ravel. His natural but unobtrusive virtuosity and his refined sense of colour have made him an ideal interpreter of the French repertory as well as of much of Schumann. He is also a highly accomplished chamber musician and has performed and recorded regularly with the violinist Augustin Dumay and the cellist Fréderic Lodéon, as well as with the pianist Michel Béroff.

C. Timbrell: *French Pianism* (White Plains, NY, and London, 1992, 2/1999)

CHARLES TIMBRELL

Collard & Collard. English firm of piano makers. The firm was descended from the business established by James Longman in 1767, which changed partners over the years and became Longman & Broderip and later Clementi & Co.; the cumulative ink serial numbers in Collard & Collard square pianos continue Clementi's serial numbers. It was Frederick William Collard (bap. Wiveliscombe, 21 June 1772; *d* London, 31 Jan 1860) who directed the business as senior partner after Clementi's death in 1832. His brother William Frederick Collard (bap. Wiveliscombe, 25 Aug 1776; *d* Folkestone, 11 Oct 1866) – to whom Clementi had written from abroad: 'Now, young Collard, you have a good pair of ears, see that the tone is pure and true' – was a specialist in piano tone production. In 1821 he patented the 'harmonic swell' (*see* CLEMENTI). When W.F. Collard retired in 1842, F.W. Collard, then sole proprietor, took into partnership his two nephews Frederick William Collard (bap. 23 Feb 1795; *d* ?1879) and Charles Lukey Collard (bap. 12 Jan 1807; *d* Bournemouth, 9 Dec 1891). The younger F.W. Collard retired in 1859.

In 1851 the firm opened a new, almost circular (for maximum light), factory consisting of 22 sections, with a separate process taking place on each of the five floors. Materials were stored in the centre and work took place

round the perimeter. By this time the firm was second only to Broadwood in production, making about 1500 instruments a year. At the Great Exhibition of 1851 Collard exhibited a 'square semi-grand': a six-and-a-half-octave square piano with exactly the same action as a 'semi-grand' (a grand somewhat smaller than a concert instrument). Two 'microchordons' or small cottage pianos in pine and rosewood cases were displayed as examples of good workmanship at 'moderate' prices.

This was the beginning of a generation of prosperity for the firm. The factory was extended, and by 1896, when Collard absorbed the Kirkman piano business, it employed 500 skilled men. The firm, however, was slow to adopt the latest piano technology such as cast-iron frames, overstringing and the most advanced actions. In 1888 John Clementi Collard (1844–1918), son of C.L. Collard, attacked overstringing as an inferior acoustical system used by good makers 'only when they were compelled to do so by demand, which is limited'.

In 1929 the Chappell Piano Co. took over Collard and in 1971 production ceased. All Collard records were destroyed in a fire in 1964.

MARGARET CRANMER

Collasse [Colasse], **Pascal** [Paschal, Pasquier] (*b* Reims, bap. 22 Jan 1649; *d* Versailles, 17 July 1709). French composer. By 1651 his family had moved from Reims to Paris. He became a choirboy at St Paul and completed his education at the Collège de Navarre. In 1677 he succeeded Lallouette as J.-B. Lully (i)'s secretary and as *batteur de mesure* at the Paris Opéra, positions he kept for ten years. His main work for Lully was to compose the inner voices where Lully had supplied only soprano and bass parts for certain pieces in his operas. Lully's powerful support virtually guaranteed him a post at the royal chapel at the time of the 1683 competition for four *sous-maîtres* to replace Du Mont and Pierre Robert: Collasse, Minoret, Goupillet and M.-R. de Lalande were named, Collasse being given the quarter-year beginning in April. He remained at the chapel until 1704, when he was granted a 900-livre pension.

On 8 January 1685 Collasse followed Du Mont as *compositeur de la musique de la Chambre*; he shared this post with Lalande. In 1689 he married Blasine Berain, daughter of Jean Berain, Lully's stage designer. After the death of Michel Lambert in 1696, Collasse was appointed *maître de la musique de la Chambre* and *maître des pages*; he held the latter position until his death. He also continued to be associated with the Académie Royale de Musique as an opera composer, and in 1698 he was awarded a pension of 3000 livres.

Soon after Lully's death, his heirs embroiled Collasse in a lawsuit. He lost the 100-pistolet pension and dwelling willed him by Lully. Le Cerf de la Viéville reported that Collasse kept several of Lully's rejected *airs de violon* and that these and other pieces by Lully found their way into Collasse's own compositions (for example, the chorus 'Rangeons-nous' from the prologue to the *Ballet des saisons* is largely the chorus 'Rien n'est si doux' from Lully's *Ballet des muses* of 1666). In certain prefaces

Ex.1

Collasse acknowledged his debt to Lully (see *Ballet des saisons*, edns of 1695 and 1700, and *La naissance de Vénus*, edn of 1696), but he did not always specify which

music was Lully's and which was his own; this resulted in another attack from the Lully family, who accused him of plagiarism.

In 1690 Collasse received royal privileges to found opera companies in Bordeaux, Toulouse, Montpellier and Lille. Only Lille served his interest. When, in 1696, the building which served the company was destroyed by fire, rebuilding required 10,000 livres from Collasse, 6000 of which were provided by Louis XIV. These events took their toll, as did his inability to repeat the success of *Thétis et Pélée* (1689) in his later *tragédies lyriques*. Without offering evidence, Titon du Tillet (p.518) asserts that Collasse then forsook music to search for the philosopher's stone – a vain quest, which 'only ruined him and weakened his health'.

Years of musical indoctrination under Lully did little to help Collasse develop a musical language of his own and did much to insulate him from the Italian countercurrents that spread through Paris at the end of the *grand siècle*. His best work is *Thétis et Pélée*, which remained in the repertory for 76 years. In it he used the orchestra more imaginatively than did Lully. Act 2 includes a 100-bar 'tempête' that was probably the model for orchestral storms in Campra's *Tancrède* and *Idomenée* and in Marin Marais' *Alcyone*. Its exciting *tirades* for violins and bassoons penetrate both the chorus 'Quel bruit soudain' of scene vii and the ensuing scene for Neptune. The *Ballet des saisons* (1695) is one of the first stage ballets in which each act has its own subject. It was the immediate structural model for Campra's *opéra-ballet, L'Europe galante*, but unlike the characters of that work, its characters are exclusively mythological and allegorical.

Along with J.-N. Marchand (i), J.-B. Moreau and Lalande, Collasse set Racine's *Cantiques spirituels* for the young ladies of the Maison Royale at Saint-Cyr; his four settings include short *airs* (mostly binary), duets and trios, all interspersed with *symphonies* for flutes or recorders and violins, and four-part women's choruses. In spite of the number of performers called for in the score, Collasse states in his preface that the *Cantiques* 'may be sung throughout by a single voice, because the main melody ('le sujet') is always in the highest voice'. Most of Collasse's *grands motets* for the royal chapel are lost. The title-page of a manuscript of motets by Lalande (*F-Pn*), however, announces that three are by Collasse: they bear a strong resemblance to the motets of Lalande in their speech rhythms and independent orchestral parts, as may be seen in ex.1.

WORKS

STAGE

printed works published in Paris unless otherwise indicated, tragédies en musique have prologue and 5 acts

Achille et Polyxène (tragédie en musique, J.-G. de Campistron), Paris, Opéra, 7 Nov 1687 (1687) [ov., Act 1 by Lully]

Divertissement, ou Impromptu de livry (F.C. Dancourt), July 1688, *F-Pn*

Thétis et Pélée (tragédie en musique, B. le Bovier de Fontenelle), Paris, Opéra, 11 Jan 1689 (1689); rev. version, Opéra, 16 April 1708, with airs nouveaux (1708) by J.-B. Stuck and A. Campra

Sigalion, ou Le dieu du secret (ballet, after Latin tragedy: *Polymnestor*), Paris, Collège Louis-le-Grand, 17 Aug 1689, *Pn*

Amarillis (pastorale, J. Pic), composed 1689, *Pa*

Enée et Lavinie (tragédie en musique, Fontenelle), Paris, Opéra, 7 Nov 1690 (1690/*R*)

Ballet de Villeneuve St-Georges (ballet, 3 entrées, Banzy), Villeneuve St-Georges, 1 Sept 1692, *Pn*

Astrée et Céladon (tragédie en musique, prol., 3, J. de La Fontaine), Paris, Opéra, 25 Nov 1692, *Pn*

Ballet des saisons (opéra-ballet, prol., 4 entrées, Pic), Le printemps ou L'amour coquet, L'été ou L'amour constant et fidèle, L'automne ou L'amour paisible, L'hyver ou L'amour brutal, Paris, Opéra, 14, 15 or 18 Oct 1695, reduced score (1695, 2/1700)

Jason, ou La toison d'or (tragédie en musique, J.-B. Rousseau), Paris, Opéra, 6 Jan 1696, *Pa, Pn*

La naissance de Vénus ('opéra', prol., 5, Pic), Paris, Opéra, 1 May 1696, *Pn*, reduced score (1696), incl. some items by Lully

Canente, ou Picus et Canente (tragédie en musique, A.H. de Lamotte), Paris, Opéra, 4 Nov 1700, *Pn, Po*

L'Amour et l'Hymen (divertissement, prol., 8 scenes), private perf., 1701, for marriage of the Prince of Conti (according to Borrel)

Télémaque, ou Les fragmens des modernes (frag., prol., 5, Danchet) (extracts from ops by Campra, Collasse)

[Astrée, Enée et Lavinie, Canente] (Charpentier, Desmarets, Rebel), Paris, Opéra, 11 Nov 1704, *Pn*

Polyxène et Pyrrhus (tragédie en musique, J.-L.-I. de La Serre), Paris, Opéra, 21 Oct 1706 (1706)

Music in: Lully: Atys, Rennes, 1689

AIRS

Airs found in over a dozen collections printed in Paris, The Hague and Amsterdam between 1692 and 1755, including 1692[2], 1692[5-7], 1693[3], 1694[2-3], 1695[4] and 1696[1]

SACRED

[4] Cantiques spirituels tirez de l'Ecriture Sainte (Racine) (1695)

Motets et Elévations pour la Chapelle du Roy, quartiers d'avril, may et juin 1686 (Paris, 1686); incl. texts only of motets by Collasse, Robert and Lully

Motets de M. De La Lande, incl. Beatus vir, Lauda Jerusalem, Pange lingua by Collasse, *F-Pn*

Collect. A formal Christian prayer in a single sentence. It normally consists of five elements: invocation to God, relative or equivalent clause referring to an attribute or act of God, petition, purpose of petition, conclusion. In some collects the second or fourth element is omitted. The original conclusion 'per Christum Dominum nostrum' ('through Christ our Lord') was later often extended by a Trinitarian clause. In the Early Church a collect was used to sum up the individual petitions of the assembled congregation, and was not a prayer to gather together ('collect') the people for worship as has been stated in the past (see Capelle, Willis). It is the first variable prayer of the Mass, recited before the readings (*see* MASS, §I, Table 1). Views differ about the original reason for its position. Pope Leo I (440–61) makes reference to collects in his writings, and examples are to be found in the Leonine, Gelasian and other early Sacramentaries. The name derives from the Gallican Rite. Until the 10th century there was only one collect in the Roman Mass; elsewhere in the West there were more, but not normally exceeding seven. In the later Middle Ages there were usually up to three collects. There are other variable prayers during Mass with a similar structure: the Secret, said at the offertory, and the Post-Communion, but only their conclusions were audible in the medieval and Tridentine Mass.

Collects for the Mass are proper to the week (according to the season) or the day (according to the feast), or directed to a specific intention (e.g. peace). The principal collect at Mass for a specific day was also used in the Office, before the dismissal at the end of Matins, Lauds, Prime, Terce, Sext, None and Vespers. At Prime and Compline unchanging collects of the time (dawn and dusk) were recited. The reformed Roman Catholic liturgy, introduced after the Second Vatican Council (1962–5), makes similar use of collects, but only one is recited at Mass. In the medieval liturgy a Commemoration or Memorial often followed Lauds and Vespers; this observance normally consisted of *Benedictus* or *Magnificat* antiphon, versicle and response, and collect – effectively a truncated Office.

In the formation of the 16th-century English Book of Common Prayer Thomas Cranmer adapted collects from the Latin Rite and other sources. Most are proper to the week: there is only a small number of feast days. According to the rubrics, only one collect is said before the first reading at Holy Communion, except during Advent and Lent when after the first week there are two. The collect from the Holy Communion is also used at Matins and Evensong after the second group of versicles and responses, followed by two collects of the time. There are special collects for baptism, marriage, burial, etc. English composers have frequently selected texts of collects for anthems; over 70 settings survive from the period 1560–1640.

JOHN HARPER

Collectar (from Lat. *collectarium, liber collectarius, collectaneum*; *orationale*). A liturgical book for the priest or monk presiding at the celebration of the Office of the Western Church. It contained the prayers (collects) and short lessons (*capitula*) assigned to this officiant. *See* LITURGY AND LITURGICAL BOOKS, §II, 3(viii).

Collections, private. This article is a fundamental revision of Otto Albrecht's comprehensive listing in *Grove6* of collections of printed and manuscript music and letters of composers and musicians, libraries, books and theoretical works still in private hands. COLLECTIONS OF INSTRUMENTS and SOUND ARCHIVES are treated elsewhere. Albrecht's division into two sections has been retained, though the parts are retitled 'Current Collections' and 'Historical Collections'. The former records geographically collections in the process of formation and development, or which remain in the family of the original collector or have not yet reached permanent, public, institutional ownership. The second lists alphabetically collections since the late 15th century which have reached a final destination (as far as can be ascertained) or have now been dispersed. Political and market forces of the last 30 or so years of the 20th century have shown that it is not always an inexorable progress from the first to the second list and in some cases the reverse journey has been made. Bibliographical details are generally omitted in the second part; they may be found under the entry for the library where the collection is now located.

A definition of a private collection in the early 21st century is not easily made. The second half of the last century saw the rise of many private foundations, particularly in the USA and continental Europe, though not in the UK. This resulted in a number of collections which welcome public access, such as the Paul Sacher Stiftung, Basle, or the Bibliothèque Gustav Mahler, Paris, but which are actually privately owned, funded and directed and which for the greater part of their existence were formed as private collections. Some publishers' archives are also included, especially those, such as Novello's, which have been largely dispersed, are on deposit in libraries, or have left the publisher's premises. The archives held by the estates of composers, consisting almost exclusively of their own works (e.g. Bartók), are not deemed to be collections in the strictest sense.

The amassing of private music libraries dates from the Renaissance or even earlier, but the collecting of autograph manuscripts is a more recent phenomenon, a product of the Enlightenment, particularly in Germany where many important sources of music, such as those of the Bach family, are preserved. The rise of the manuscript dealer and auction houses in the 18th, 19th and 20th centuries has ensured a steady flow of books, printed music and manuscripts, letters, photographs and other memorabilia.

For a comprehensive list of private collections, see vol.28 (APPENDIX A).

College Music Society [CMS]. American organization established in 1957 to provide a forum for addressing interdisciplinary issues within music in higher education and for examining broader educational concerns. Membership is open to teachers of music in colleges, universities and conservatories in the USA and Canada. The society sponsors annual meetings with symposia and concerts and publishes a newsletter and a biannual journal, the *College Music Symposium*. Its other publications include a biennial *Directory of Music Faculties in Colleges and Universities, U.S. and Canada* (1967–), Monographs and Bibliographies in American Music (1974–), including volumes on Gershwin, Billings, Griffes, Arthur Foote and Gottschalk, and the series of monographs CMS Reports, which has addressed such issues as the status of women in music in higher education, racial and ethnic directions in American music, music in general studies and the undergraduate music curriculum.

RITA H. MEAD/R

College of Organists. London college founded in 1864 and renamed the Royal College of Organists in 1893; *see* LONDON, §VII, 4.

College of St Nicholas. College of the School of English Church Music (later the Royal School of Church Music) opened at Chiselhurst, Kent, in 1929; *see* LONDON, §VII, 4.

Collegium musicum. 'Collegium musicum' generally denotes an organized association of music lovers and amateur musicians that holds regular meetings for the performance of music. Collegia musica were characteristic of bourgeois musical life from the 16th century to the 18th; during that period they occupied a position between institutionalized church music and the music of the princely courts.

1. Terminology. 2. Germany. 3. Outside Germany. 4. Student collegia musica. 5. Later developments. 6. The 20th-century revival.

1. TERMINOLOGY. The term is found first in fairly small places, such as the university towns and free imperial cities of central Germany, which had no cathedral or court Kapelle. Despite its Latinate name, the collegium musicum became common only in the German-speaking countries, particularly Germany and German-speaking Switzerland, although it was also found in the Netherlands, occasionally in Bohemia and Sweden, and even, in the mid-18th century, in societies of pietist German emigrants to the USA, for example in Pennsylvania. There is a clear connection with Protestantism.

Unlike other kinds of middle-class, social music-making, for instance the *Kantorei*, for the performance of sacred music, or the 'convivium musicum', which combined musical performance with a convivial meal, the collegium musicum was not precisely defined in the 16th and early 17th centuries. The term may owe its adoption to its neutral and flexible nature. There was no standard type of collegium musicum; a diversity of forms existed, differing in the number and social standing of their members, the private or public character of the association, the part played by professional musicians, and its choice of repertory. The common characteristic was its origin in the society of the educated middle classes and its status as an amateur association. In spite of its variety of forms, certain lines can be traced in its development over the period of some 200 years in which it passed from private, domestic music-making to an institution open to the general public, and from musical performance by dilettantes to public recitals by amateur or professional musicians. During this period the repertory shifted in emphasis from domestic vocal music to concerts of instrumental music.

The trend towards greater professionalism in the second half of the 18th century gradually led to abandonment of the term in favour of 'concert', or 'academy'; by the 19th century the term suggested old-fashioned pedantry and was seen as merely a historical relic. After 1900, however, the rise of musicological studies led to a revival of both the term and the kind of association it denoted, particularly in view of historical awareness of the tradition of 18th-century student collegia musica. In this sense collegia musica are now to be found throughout the world, usually attached to universities and music colleges, and often specializing in the historical performance of early repertories.

Authentic information about historical collegia musica is often fragmentary, and has been preserved only by chance. In the absence of the disciplined organization necessary to a Kantorei, and unlike the 'convivium', which required regulated finances, these looser associations of amateurs needed no special statutes. There are, consequently, few documentary records of the foundation or dissolution of such societies. Most of the chronological data, based on references in archives, accounts in diaries, chronicles and biographies, and dedications by composers, merely provide evidence that such associations existed.

2. GERMANY. The earliest appearance of the term seems to be in M. Schmeizel's *Jenaische Stadt und Univ.-Chronik* of 1726 (ed. E. Devrient, Jena, 1906, p.26), which states

that in 1565 'a Cantorey society or collegium musicum . . . was famous and flourished'. The optional use of the term for the society's name is emphasized by a description five years later in which it is called a *societas musicalis*. There is similar terminological vagueness over a collegium musicum in Torgau to which the local Kantor, Michael Vogt, dedicated a printed collection of masses in 1568; this was also essentially a Kantorei, although the Latinized name seems to indicate that (unusually for a Kantorei) educated amateurs rather than school students performed polyphony. In other early occurrences of the term (in Wernigerode in 1588, Prague in 1616) the statutes indicate that the collegium musicum was actually a convivium musicum.

After the Thirty Years War, which brought cultural activities in many German towns to a standstill, increasing numbers of musical societies were founded among the bourgeoisie, almost exclusively described as collegia musica. In a few cases, because of local tradition, they were linked to earlier organizations with more resemblance to a Kantorei (as in Delitzsch in 1647) or a convivium (as in Weida in 1651), but in general they were a new type of association which devoted itself exclusively to the enjoyment of vocal and instrumental music. A collegium musicum of this kind would consist of a dozen or more members, most of them local dignitaries such as town councillors, lawyers, doctors and prosperous merchants. They met regularly at some neutral place or in their houses; members' guests interested in music were welcome. According to their abilities, the members attending meetings either made music themselves or listened to performances by musicians such as the local Kantor or the town musicians, who might be members of the society with special status or engaged for the occasion. Published works dedicated to such societies indicate the repertory. In the early period the music was mainly vocal, such as Andreas Hammerschmidt's *Motetae*, written for Görlitz (1649), Christoph Schultze's settings under the name of *Collegium musicum Delitii charitativum* (1647) and J.C. Horn's *Musikalische Tugend-und Jugend-Gedichte* for voices and instruments, written for Frankfurt (1678). Later the emphasis shifted to instrumental music, such as Nikolaus Hasse's *Delitiae musicae* (1656) for the students of Rostock, W.C. Briegel's *Musikalisches Tafel-Confect* (1672) for Frankfurt and J.P. Krieger's *Lustige Feldmusic* (1704) dedicated to the merchants' collegium musicum of Nuremberg. Besides these organizations, there are records of collegia musica in Memmingen (1655), Freiberg (1666), Ulm (1667), Hof (before 1684), Augsburg (after 1684) and Jena (1694). The private character of such societies is also evident from the fact that they often depended on the initiative of individuals and ceased their activities when those individuals moved elsewhere or died. Sometimes other societies were founded later; the local musical history of many towns at this period presents a series of such musical associations.

Besides this widespread form of private and sociable collegium musicum, there were associations of the same name that had rather different aims and larger ambitions. Mattheson (*Grundlage einer Ehrenpforte*, 1740, pp.397–8) mentions the activities of Matthias Weckmann in Hamburg: 'After his return [in 1660] two notable music-lovers joined him in founding a great collegium musicum . . . in the refectory of the cathedral. It united 50 persons, who all made their contribution. The best pieces from Venice, Rome, Vienna, Munich, Dresden etc. were performed'. Clearly this was a society with members who contributed to the holding of public concerts 'performed by various students, merchants, musicians and other praiseworthy lovers of this noble art' (J. Rist, 'Hornungsgespräche', *Monats-Unterredungen*, Hamburg, 1663). Students who were musical performers would certainly have been welcome as members of bourgeois collegia musica in other university towns. However, the type of student collegium musicum that was so significant for the later development of concert life did not develop fully until the 18th century. The aims pursued by collegia musica in grammar schools were mainly educational, 'so that this good school might have a permanent seminarium, from which a complete musical ensemble may be made up at any time for performance in *artibus solenibus*', as Kantor Knipping wrote in a petition to the Bremen town council (Arnheim, 1910–11, p.395). There were similar collegia musica at schools in Görlitz (*c*1668) and Freiberg (1672).

3. Outside Germany. In some Protestant areas outside the Holy Roman Empire, particularly where the Reformed Church rejected all forms of artificial music on religious grounds, the performance of sacred music fell to the bourgeois and patrician collegia musica. In German-speaking Reformed Switzerland the two oldest collegia musica in Zürich (the collegium 'zum Chorensaal' and the collegium 'ab dem Musiksaal', the former founded before 1613 and the latter around that date) concentrated chiefly on the singing of psalms and other sacred works in polyphonic settings considered too sensuous for divine service but still tolerated by the clergy in a private context as a means of diversion from even more sinful activities. After the founding of these two collegia musica, others with the same aims were formed in St Gallen (1620), Schaffhausen (1655), Berne (1674), Thun (before 1679) and Basle (1692). During the 18th century these collegia became concert societies. An outstanding example is the collegium musicum of Winterthur, founded in 1629 and still in existence as a Musikkollegium.

Circumstances in the Netherlands at the end of the 16th century were similar. Again, music-making in the bourgeoisie among a small circle of acquaintances, usually directed by a *phonascus*, compensated for the banning of polyphonic music from church. There are documentary records of a collegium musicum in Arnhem from 1591, and in 1597 Jan Tollius dedicated a volume of madrigals to the Amsterdamensium Musicorum Collegio Optime, which seems to have been the same ensemble as the one to which Sweelinck dedicated a collection of polyphonic settings of psalms. There is evidence of other early foundations in Leeuwarden (*c*1620), Nimwegen (1632) and Groningen (1638). The collegium musicum Ultrajectinum formed in Utrecht in 1631 by professional musicians and distinguished amateurs concentrated on instrumental music, it remained in existence without a break until the 19th century when it became the nucleus of what is now the Utrecht Symphony Orchestra.

Collegia were also founded in 18th-century America, as a result of the emigration in the 1730s of members of the Unitas Fratrum sect (the Moravian Church) protected by Count von Zinzendorf. By 1741 they were well established as settlers in Pennsylvania, where they formed a collegium musicum in 1744 in their first new settlement, Bethlehem. It was soon followed by the formation of

collegia musica in other settlements, particularly in what is today Winston-Salem in North Carolina. These were the point of departure for a tradition of musical performance that still subsists.

4. Student collegia musica. The presence of many young, musically educated people, coupled with the tendency (deriving from the practice of polyphony) for musicians to form groups, provided favourable conditions for the development of amateur musical ensembles in towns with colleges or universities. In this the university city of Leipzig was of particular importance. The titles of works printed in Leipzig such as Schein's vocal *Studenten-Schmauss* (1626) and Rosenmüller's instrumental *Studenten-Music* (1654) provide evidence of the early activities of anonymous student groups, which probably also included private citizens, and from the middle of the 17th century there are records of various collegia musica with student members directed by Adam Krieger (1657), Sebastian Knüpfer (1672), Johann Pezel (1673) and Johann Kuhnau (1688). Telemann, who studied in the law faculty at Leipzig University (1701–4), founded the Telemannische Collegium Musicum in 1702, which, according to his autobiography of 1718 (ed. W. Rackwitz, 1985, pp. 89–106), consisted 'entirely of students, up to 40 of them often meeting together' (p.96). The energetic Telemann, whose real interest was music rather than law, called on the members of his ensemble to perform polyphony at the Neue Kirche and to act as singers and instrumentalists at the Leipzig Opera. By his own account, their music-making could be heard 'with great pleasure'. J.F. Fasch founded a second collegium musicum in 1708 when he too was a student at Leipzig. The university itself had no formal links with these institutions; these were independent societies of talented young people who hoped to present themselves to the public as musicians. Such societies met in the large rooms of coffee-houses, which were open to the general public. No detailed descriptions are known as to the character of their performances, which has to be deduced from brief, occasional references. The concerts were not carefully rehearsed in the modern sense but involved singing or playing at sight to an audience, in line with normal musical practice at the time. The whole venture seems to have been a preliminary stage in the development of the kinds of commercial concert that were soon to be a feature of the musical life of such cities as Frankfurt or Hamburg but were not introduced to Leipzig until just before the middle of the 18th century. There is no suggestion in the sources that the audience paid to attend or that the musicians received fees; perhaps the coffee-house proprietor considered the increase in his custom deriving from the musical attractions sufficient recompense for the use of his rooms and any modest sum he may have paid the performers. The musicians themselves would have felt it more important to have the chance of presenting themselves as a skilled ensemble, one that could also provide music for the frequent and well-paid occasions calling for the performance of serenades and festive cantatas. The repertory contained concertante pieces and also included vocal works, with the solo and choral parts (including the treble parts) usually performed by the students. At the same time the collegia musica were institutions providing further training, and a springboard for a musical career, for talented students who were often following their university course only for form's sake. Mizler's comment about such students – 'in time, as is well known, they often become famous virtuosos' (*Musikalische Bibliothek*, 1736, p.34) – is confirmed by the number of illustrious musicians, such as Pisendel, Böhm, Heinichen, Stölzel and Graupner, who progressed towards a musical career through these Leipzig institutions. Both the Leipzig collegia musica proved stable enough to be maintained even after their founders had left the city, and they continued in existence until after 1750, although by then they were decreasing in importance. J.S. Bach's activities as director of the Telemannische Collegium Musicum (from 1729 to 1737, and again from 1739 to the early 1740s) are of particular interest. There is good documentary evidence for the performance by the collegium musicum of Bach's homage cantatas BWV213–215 and of other cantatas, now lost. It was probably at the so-called 'ordinary concerts', which in 1733 also introduced 'a new harpsichord of a kind never before heard here' (*Bach-Dokumente*, 1969, ii, 238), that Bach performed his concerto arrangements of this period for one or more harpsichords (BWV1052–8) with the help of his growing sons and his more advanced pupils. Conditions in Leipzig, which at one point even had three collegia musica flourishing at the same time, are not typical, but something similar occurred on a smaller scale in other university towns including Jena, Halle, Rostock, Helmstedt and Würzburg, and in Uppsala in Sweden.

5. Later developments. Telemann's career after he left Leipzig also illustrates the way in which ambitious musicians aimed to move from private to public performance. The collegium musicum of the Frauenstein Society that he 'set up' in 1713 in Frankfurt, where he was then working, was really the revival of a bourgeois musical association dating back to the 1670s. Its members had then listened to performances by professional musicians in their houses and probably made music themselves, 'partly . . . to revive their spirits, wearied by their official business, and partly to encourage the further growth of music by constant practice of that art' (Telemann ed. Rackwitz, 1985, p.83). When Telemann re-founded the organization, however, performances were opened to the general public, who came in particular to hear large-scale works such as his *Fünf Davidische Oratorien*, expressly dedicated to 'the great Collegio Musico of Franckfurth am Mayn'. Such works were mainly performed by the members of the town Kapelle, probably still with a few amateurs. Performances were given in churches or large halls and an entrance price was charged. The members of the collegium musicum now fulfilled the function of founders and patrons – an important step towards the evolution of commercial concerts.

This development was even more clearly marked with Telemann's move to Hamburg, where Weckmann's collegium musicum had begun a tradition of public concerts as early as 1660. After a long interim period following Weckmann's death in 1674, Telemann revived the custom immediately after taking up his appointment as musical director, as is clear from the text accompanying the cantata given on 7 December 1722 'on the opening of the weekly meetings of the collegium musicum under the direction of Telemann' (ibid., pp.119ff). To all intents and purposes the institution was now a concert society: the public could subscribe to a series of performances, and the ensemble was recruited from the ranks of paid town musicians. Descriptions of the programmes make

particular mention of large-scale works such as oratorios and festive music, and the participation of guest virtuosos.

Although the generation of Bach and Telemann seems to have retained the familiar name 'collegium musicum', from about 1720 the term 'concert' was increasingly used; it was felt to be more modern and probably also more professional. For a few decades the two terms appear side by side and seem to be of equal importance, but thereafter even private musical performances among the middle classes, which still continued, are called concerts. Local tradition sometimes dictated that court ensembles were also described as collegia musica in the 18th century, for instance at Köthen, as recorded in the payment made in 1718 to 'Capell Meister Bachen' for rehearsing the princely ensemble in his house (*Bach-Dokumente*, 1969, ii, p.70).

The formerly all-embracing term was now confined to academic musical bodies. Adlung (*Anleitung zu der musikalischen Gelahrheit*, 1758) applied it to university lectures on music. The term seems to have been used only in this restricted sense in the 19th century. In his *Aesthetisches Lexikon* (1839), Ignaz Jeitteles defined the term as an outmoded one, with a new shade of meaning: 'Collegium musicum was the name given in the past to the weekly meetings of musicians of the court ensemble, so that they might maintain their level of performance by rehearsing musical compositions they had already studied'.

6. THE 20TH-CENTURY REVIVAL. After 1900, the term collegium musicum was widely revived, although chiefly in a retrospective sense and clearly in relation to the Leipzig tradition (familiar through studies of Bach). In 1908, Hugo Riemann became director of a musiological institute at Leipzig University which he called 'collegium musicum'. His intention was to perform Baroque instrumental music, the subject of his research, with his own student ensemble, and to publish that music. His concerts were open to the public but drew their audiences largely from the academic community. Either as a result of his ideas or independently of them, similar groups were formed at other universities including Freiburg in Breisgau, Halle, Heidelberg, Jena and Marburg. Closely allied to the development of collegia was the influential organ revival (*Orgelbewegung*) of the early years of the century, associated in particular with the work of Riemann's pupil Wilibald Gurlitt at the collegium in Freiburg, where efforts were made to reproduce the sound of medieval and Renaissance music. At about the same time, the growing popularity of choral singing in German universities, influenced by the youth movement, led to the establishment of choirs that became associated with instrumentalists to form a 'collegium musicum vocale.' Such ensembles were often linked to musicological institutes. Gurlitt's group at Freiburg after World War I was particularly influential; it gave three concerts at Karlsruhe in 1922 and a week-long series in Hamburg in 1934, with ambitious programmes ranging from early chant and polyphony to chansons by Binchois and Du Fay, which were among the earliest performances of medieval music in Germany in modern times. The members, all from Gurlitt's seminar, used specially constructed replicas of medieval instruments; their example led eminent musicologists, among them Curt Sachs, Max Schneider and Friedrich Blume, to direct similar ventures with collegia at other universities.

These developments were arrested by World War II, but a vigorous revival of collegia musica began in 1950. At all German universities, including new foundations, small orchestras and choruses were established and described by the term 'collegium musicum instrumentale et vocale'. Although these were modelled on the ensembles of Telemann, Fasch and Bach, historical interest was now combined with a more general pleasure in music-making, and the repertory comprised not only early music but works by such contemporary composers as Hindemith and Bartók, in so far as amateurs were able to perform them. Several series of special publications sought to increase the repertory of suitable music, including one with the significant name Collegium Musicae Novae.

With the rise in student numbers in the 1970s, the collegia musica in both Germany and Switzerland also expanded in both their size and the capabilities of their members; the original small groups developed into large organizations, often integrated into general courses of university study, as institutes for musical practice, where students from all faculties met to form orchestras, chamber groups and choirs. In university towns of moderate size their influence came to extend into the musical life of the whole community. Experimental and early music, which call for special abilities generally beyond amateurs, are less frequently performed. These amateur student ensembles are very different from their historical predecessors in terms of repertory, but professional groups have increasingly assumed the name of collegium musicum or such adaptations as Collegium Musicum of Zürich, Collegium Vocale of Cologne, Collegium Vocale of Ghent and New Bach Collegium of Leipzig, to suggest their special familiarity with the repertory and the performing practices of the Baroque collegium musicum.

During the 1930s, the emigration of many distinguished musicologists and musicians to America, many of them refugees from Nazi Germany, encouraged the foundation of collegia musica as part of a general and characteristic interest in applied musicology. As in Germany, these were attached to universities and often specialized in early repertories. The most distinguished, the Yale Collegium Musicum, was established shortly after Paul Hindemith arrived to teach in the faculty in 1940. Its concerts, largely of medieval and Renaissance music, given under Hindemith's direction between 1945 and 1953, rapidly outgrew their didactic function and began to attract audiences from beyond the academic community. Together with Willi Apel's collegium at Harvard and Siegmund Levarie's at the University of Chicago, the Yale collegium served as a model for the many performing groups attached to universities in America and elsewhere in the ensuing decades. Encouraged by the growth of interest in earlier repertories during the 1970s, and stimulated by a concern with historically informed performance, the latter-day heirs to the term have as their primary purpose the ideals of Riemann and Gurlitt: to recreate the authentic voice of earlier music. As such they have been a major force in the training of musicians specializing in the performance of early repertories across the whole of Europe and the USA.

EMIL PLATEN/IAIN FENLON

Collegium Musicum Ultrajectinum. Ensemble active in UTRECHT from 1632 until the late 19th century, when it formed part of the Utrecht SO.

Collegium Vocale Ghent. Belgian choral ensemble. It was founded in 1969 by PHILIPPE HERREWEGHE, while he was still a medical student. Under his direction it has become recognized as one of the most disciplined and stylish choral groups. Throughout the 1970s and 80s it took part in the pioneering enterprise by Nikolaus Harnoncourt and Gustav Leonhardt of recording all of Bach's sacred cantatas. Although it specializes in Baroque repertory, it has also received critical acclaim for its performances of 19th-century music, notably by Mendelssohn, Berlioz, Schumann and Brahms.

NICHOLAS ANDERSON

Col legno (It.: 'with the wood'). A term in string playing meaning to set the strings of the instrument in motion with the wood of the bow rather than with the hair. *Col legno* gives a dry, staccato effect, the sound being relatively small. A distinction is made between tapping with the wood of the bow stick (*col legno battuto*; Ger. *geschlagen*) and drawing the wood across the string (*col legno tratto*; Ger. *gestrichen*). The resumption of normal bowing is indicated by *arco*. Although *col legno* was known in the 17th century (in the works of Tobias Hume, 1605, Farina, 1627, and Biber, *Battalia*, 1673), this effect was little exploited before the late 19th century, a notable example occurring as early as 1830 in the finale of Berlioz's *Symphonie fantastique*. Many 20th-century compositions require the use of *col legno*; the opening pages of Schoenberg's String Trio (op.45, 1946), for instance, call for *col legno battuto* in double stops in violin and cello; *col legno tratto* in double stops in the violin; *col legno tratto ponticello*, double stops in all parts (*ponticello*, as defined by Schoenberg, meaning to play so that the wood of the bow actually touches the bridge); and *col legno tratto ponticello*, double stops in violin and viola, also played tremolo.

DAVID D. BOYDEN

Colles, H(enry) [Harry] C(ope) (*b* Bridgnorth, Shropshire, 20 April 1879; *d* London, 4 March 1943). English music critic and writer on music. Eager to devote himself to music he left school at the age of 16 and entered the RCM, where he studied music history under Parry, the organ under Walter Alcock and counterpoint under Walford Davies; although ten years his junior, he struck up a lifelong friendship with Davies and wrote his biography in 1942. After three years, on the advice of Parratt, he entered for and won an organ scholarship at Worcester College, Oxford; he graduated in 1902. Henry Hadow, then dean of Worcester College, discovered in him exceptionally fine gifts of writing and keen judgment and advised him to turn his attention to criticism. In 1905 he became music critic of *The Academy* and assistant music critic of *The Times*, under J.A. Fuller Maitland, whom he succeeded as chief critic in 1911. He retained this post until his death. Although his work in it was necessarily anonymous, readers learnt not only to recognize it but also to admire and trust it for its admirable qualities of comprehensive taste, sure and fair judgment and above all, perhaps, for an unfailing tact and humanity that tempered even his severest strictures. He was probably unrivalled in the art of keeping his victims unaware of censure while making it perfectly plain to others, and in the equally difficult art of coming down heavily on some artistic offender without making him feel small as a person.

At the same time Colles pursued a career of active scholarship and teaching. For a time he taught at Cheltenham Ladies College and in 1919 accepted Hugh Allen's invitation to lecture on music history, analysis and interpretation at the RCM, where he became a member of the board of professors. He also joined the Associated Board of the Royal Schools of Music as an examiner. He was as deeply religious as he was musical, and these qualities found a joint outlet in the great and sometimes active interest he took in the Three Choirs Festival and in St Michael's College, Tenbury, of which he was a fellow and governor, and in his chairmanship of the Church

Music Society and of the School of English Church Music. His other positions included those of freeman of the Musicians' Company (1934) and Fellow of Worcester College, Oxford (1936). In 1923 he went to the USA as guest critic of the *New York Times* and in 1932 he received an honorary doctorate from Oxford University.

Colles's most substantial and enduring work is to be found in the third and fourth editions of *Grove's Dictionary* – the former an extensive revision – of which he was the editor, and in the seventh volume of the *Oxford History of Music*. The articles he provided for the dictionary indicate the wide range of his detached and critical sympathies, not only for composers whom he specially admired, such as Brahms, but also for composers, such as Wolf and Bruckner, to whom he felt less drawn, and in particular for all periods of English music from Byrd to Elgar.

ERIC BLOM/MALCOLM TURNER

Collet, Henri (*b* Paris, 5 Nov 1885; *d* Paris, 23 Nov 1951). French writer on music and composer. He studied piano at the Bordeaux Conservatoire and literature at the University, before taking composition lessons in Toulouse with Séverac, and in Spain with Pedrell, Olmeda and Falla, who became a close friend. During his long Spanish sojourns, which began in 1902, he collected many polyphonic chants and folk melodies from Castilian monastery archives. This research found its way into his numerous musicological books and articles, which included *Le mysticisme musical espagnol au XVIe siècle*, *L'essor de la musique espagnole au XXe siècle* and *Albéniz et Granados*. After completing his literature degree, he became professor at the Casa de Velasquez in Madrid and established close ties with Granados, Turina and Rodrigo.

On his return to Paris in 1913, he became a spokesman for Spanish music in France and an important voice for young French composers. His articles in *Comoedia* (16 and 23 January 1920), in which he launched the group of composers which he dubbed Les Six, has contributed to his fame as a music critic but overshadowed his work as a composer. His output includes over 150 works spanning various musical genres, which achieve a successful fusion of Spanish folk idioms with French simplicity and purity of texture. His assimilation of Castilian sources especially is evident in his use of colourful harmonies and driving rhythms.

WORKS
(*selective list*)

Dramatic: La cueva de Salamanca (intermède, 1, M. de Cervantes), 1923; Godefroy (bouffonnerie musicale, 1, G. Courteline), op.81, 1926; Clavelitos (ballet andalou, A. Bonifacio), op.87, 1928, Paris, Salle Pleyel, 5 April 1944; El baile de los enanos (ballet) 1929; Cervantes à Alger (comédie lyrique, 3, J. de la Nible and R. Thomas), 1930; Los toreros (ballet-pantomime, 1, 7 tableaux, F. Rosan), 1932, Paris, Avenue, 16 Feb 1933; Les trois tonadillas (intermède lyrique espagnol, 3 tableaux, after 17th-century texts), 1936, Paris, Salle Pleyel, 28 May 1944; La chèvre d'or (comédie lyrique, 7 tableaux, A. Birabeau, after P. Arêne), 1937, Nantes, Graslin, 25 Nov 1941; Font aux Cabres (musique de scène, 3, J. Cassou and J. Camp), 1938, Paris, Sarah Bernhardt, 7 Feb 1938; La gitanilla (opérette, 3, M. Boukai, after Cervantes), 1938; Mademoiselle Géranium (opérette, 1, P. Bass and F. Salomon), 1938; Les amants de Galice (pièce de théâtre, 12 tableaux, Camp, after L. de Vega), 1942, Paris, Sarah Bernhardt, 9 May 1942; Don José (opérette, 3, Camp and J. Raymond), 1951; Le fils de Don José (opérette, 2, 12 tableaux, Birabeau), 1951

Orch: Poème, op.30, vn, orch, 1912 [transcr. as Burgos, pf, in Recuerdos, bk 1]; La chevauchée des valses qui rient, chbr orch, 1914; Romeria, op.54, vn, chbr orch, 1920 [incorporates Poème, op.30]; Rapsodie castillane, op.73, va/vn, orch, 1924; Sardane, orch/chbr orch, *c*1931, transcr. high voice, orch/chbr orch, *c*1931; Concerto flamenco no.1, pf, orch, 1946; Concerto flamenco no.2, vn, orch, 1946; Symphonie de l'Alhambra, orch, 1947

Vocal: 5 poèmes de Francis Jammes, high voice, pf, *c*1909; 4 paysages (S. Austin), v, pf, 1920; Poema de un dia (6 mélodies castillanes), high voice, pf, 1920; 5 canciones populares castellanas, op.69, high voice, pf, 1923; 7 canciones populares de Burgos, op.80, v, pf, 1926; Inviolata Maria, op.88, 2 vv, org/pf, 1928, transcr., high voice, cl opt., org/pf, 1928; Missa brevis in Pentecoste (Et in Honorem), op.90, S, A, T, B, female vv, cl opt., hmn/org, str qt, 1928; La pena (M. Machado), A, fl, ob, pf/hp, str, 1933, arr. vn/vc, pf, *c*1932, arr. vn/vc, orch, *c*1933; Sur les sentiers du rêve (E.-E. Marliac), v, pf, 1945

JACINTHE HARBEC, NICOLE PAIEMENT

Collett, John (*b* *c*1735; *d* Edinburgh, 1775). English composer and violinist. He was probably the son of Richard or Thomas Collett, both of whom became members of the Society of Musicians in 1739. Richard, leader of the band at Vauxhall, was one of the 12 governors of the Society in 1739, but John Collett did not join until 5 June 1757, when he is listed as a violinist living in Queen Street, Golden Square.

Collett's earliest publication, *Six Solos* op.1 (1758) for violin and basso continuo, is written effectively for the solo instrument and shows that he must have been a highly accomplished player. His other major publication was a set of six symphonies, op.2 (1765). In his dedication to the Earl of Kelly, Collett describes himself as a 'young Adventurer'. The dedication reveals an association between Collett and Kelly, linking Collett to the music of Stamitz, with whom Kelly had studied in Mannheim. The symphonies demonstrate many of the Mannheim mannerisms, and indeed Collett was the only English composer of this period to follow Stamitz by making his op.2, no.5 a four-movement symphony, though he also allowed the two final movements to be considered as alternatives. He composed several songs for the pleasure gardens and in 1766 wrote the music for one of Garrick's pantomimes, *The Hermit, or Harlequin at Rhodes*.

In 1770 Collett moved to Scotland, first to Aberdeen, and in November 1771 to Edinburgh, where he found employment with the Edinburgh Musical Society. Some vocal works survive, including the substantial *Birthday Cantata for Andrew Crosbie* (1772). He died in 1775, apparently in arrears for his subscription to the Society of Musicians.

WORKS

STAGE

The Hermit, or Harlequin at Rhodes (pantomime), London, Drury Lane, 6 Jan 1766 (London, *c*1766); MS of ov. with different slow movt, *GB-Lbl*

Ov to Midas, London, Covent Garden, 22 Feb 1764; pubd in 6 Symphonies as op.2 no.3

OTHER VOCAL

Cants.: Birthday Cant. for Andrew Crosbie, S, vn, b, 1772, *En*; Ode on the Rivers of Scotland, *c*1772, lost

Kitty, *c*1765; Sparkling Champaigne, *c*1765; The Bird that Hears, *c*1766, *Ge*, *Gu*; Bacchus, *c*1767

OTHER INSTRUMENTAL

RICHARD PLATT

Colletti, Agostino Bonaventura. *See* COLETTI, AGOSTINO BONAVENTURA.

Collichon [Colichon], **Michel** (*fl* Paris, *c*1666–93). French string instrument maker. He was probably the son of Nicolas Collichon, who made lutes in the mid-17th century and had a shop on the pont St-Michel. In 1661 Nicolas, who held the title *Marchand de luths et instruments de musique ordinaire du Roi*, lived in the rue de la Harpe, where Michel Collichon had a shop from at least 1666 until 1676. Michel became well known as a luthier in Paris and his shop was frequented by many famous players. The viol player, composer and teacher Jean Rousseau conducted his business there; Machy and Sainte-Colombe visited the shop regularly.

Collichon's viols are among the earliest examples of fine 17th-century French craftsmanship. A bass viol by him was included in an inventory of instruments of another maker, Louis Guersan (25 January 1758), valued at 20 livres (the same value as viols by Bertrand and Barbey in the list). Six of Collichon's bass viols are extant, with dates from 1683 to 1693 (see Kessler for present locations). One, a seven-string instrument of 1693, is in Geneva; it is in original condition and has a string length of 72 cm. Another bass viol, of 1687, is in the Civico Museo degli Strumenti Musicali in the Castello Sforzesco, Milan. The Collichon instrument dating from about 1680 in the Germanisches Nationalmuseum, Nuremberg, may be the earliest French pardessus de viole; its string length is 30·9 cm.

MARY CYR

Collier, Marie (*b* Ballarat, 16 April 1927; *d* London, 7 Dec 1971). Australian soprano. She studied in Melbourne, making her début there in 1954 as Santuzza, then touring as Magda in *The Consul*. After further study in Milan and London, she joined the Covent Garden company in 1956, making her début as Musetta. Among the roles she sang there were Tosca, Aida, Butterfly, Liù, Elisabeth de Valois, Lisa (*Queen of Spades*), Manon Lescaut, Jenůfa, Chrysothemis (which she recorded for Solti) and Marie (*Wozzeck*). In 1962 she created the role of Hecuba in Tippett's *King Priam*, and the following year sang Katerina Izmaylova in the first British staging of Shostakovich's opera. In all, she sang 293 performances at the Royal Opera. At Sadler's Wells she sang Venus, Tosca, Concepcion (*L'heure espagnole*) and Kát'a. At the Metropolitan, New York, she created the role of Christine in Marvin David Levy's *Mourning Becomes Electra* (1967). She appeared in San Francisco as Minnie in *La fanciulla del West* (1965), Emilia Marty (1965) and the Woman in *Erwartung* (1968).

Collier gained wide publicity when in 1965 she took over Maria Callas's performances of *Tosca* at Covent Garden. Her vibrant, lustrous voice, flamboyant personality and acute instinct for drama were spectacularly displayed as Emilia Marty, Katerina Izmaylova and

Renata in Prokofiev's *The Fiery Angel*, which she sang for the New Opera Company of London in 1965.

ALAN BLYTH

Collin [Colin] **de Blamont, François** (*b* Versailles, 22 Nov 1690; *d* Versailles, 14 Feb 1760). French composer. He was first taught by his father, Nicolas Colin, *ordinaire de la musique du roi*. At 17 he was employed by the Duchess of Maine, participating briefly in her famous Nuits de Sceaux. An early cantata, *Circé*, so impressed Lalande that he agreed to teach the young composer, who years later wrote a moving tribute to this 'careful instruction' (printed as the *Avertissement* to Lalande's motets, ed. 1729). Collin was appointed *haute-contre* at the royal chapel in 1709. Friendship with Fagan, the intendant of finances, helped secure his position as *surintendant de la musique de la chambre* (19 November 1719) succeeding J.B. Lully *fils*. On Lalande's death he was appointed a *maître de musique de la chambre* (1 July 1726). With Destouches, Collin organized and composed music for private concerts at Versailles and Marly, some given for the king, others for the queen. In December 1750 Louis XV awarded him Letters of Nobility – an honour conferred upon only five composers. On 8 May 1751 he became Chevalier of the Order of St Michel.

Most of his music was composed for the stage. *Pièces d'occasion* celebrated royal births and marriages. More important, Collin and Fuzelier created the BALLET-HÉROÏQUE with their *Fêtes grecques et romaines* (1723) which they described as a ballet 'd'une espèce toute nouvelle'. The work was an immediate success and was revived up to 1770. Concerning the revival of 1733 the *Mercure* reported: 'never has a revival at the Opéra been more brilliant or applauded'. Neither the later *ballets-héroïques* nor the *pastorale-héroïque*, *Diane et Endymion* (1731), rivalled the success of the earlier work. Collin also composed cantatas and a book of motets which includes a *Te Deum* written for the consecration of Louis XV in 1726; it is closely modelled on the *Te Deum* of Lalande and like that work exists in two versions.

Collin's music conforms with the aesthetic of his time and place, which he supported late in life in *Essai sur les goûts anciens et modernes de la musique françoise* (1754), a polemic directed mainly against Rousseau. His stage music follows the tradition of *préramiste opéras-ballets* and divertissements. Although lacking Mouret's melodic grace, Collin had typical French sensitivity to instrumental colour, as can be seen in the Rondeau for two bassoons from *Le retour des Dieux* (scene iv); the *air* 'Je puis en liberté' (*Diane et Endymion*, 5, iii), scored for two flutes and soprano with a violin as 'bass'; and the Loure from *Diane et Endymion* (3, v) with independent parts for two bassoons, violins, oboe and flute. His cantatas draw equally on French and Italian sources. There are dramatic *symphonies* resembling those in French opera (the *tempête* from *Didon*, book 1, for example); while recitatives, like 'C'est ainsi' from the revised version of *Circé* (book 3), are French 'operatic' monologues with *tirades* for solo instruments. At the same time the da capo aria, now naturalized as 'ariette', is favoured, and there are *ritournelles* with the driving rhythms, melodic shapes and harmonic practices of the Italian concerto.

WORKS

printed works published in Paris unless otherwise stated

STAGE

Les fêtes grecques et romaines (ballet-héroïque, prol, 3 entrées, L. Fuzelier): Les jeux olympiques, Les bacchanales, Les saturnales, Paris, Opéra, 13 July 1723 (1723); Recueil des airs ajoutées aux Fêtes grecques et romaines (*c*1733); 4th entrée, La feste de Diane, 9 Feb 1734 (*c*1734)

Le retour des Dieux sur la terre (divertissement, prol, 5 scenes, A. Tannevot), 1725, Fontainebleau, Sept 1725 (1727) [for marriage of Louis XV]

Les présents des dieux (idylle héroïque, Pellegrin), 1727 [for birth of king's daughters]

JAMES R. ANTHONY

Collins, Anthony (Vincent Benedictus) (*b* Hastings, 3 Sept 1893; *d* Los Angeles, 11 Dec 1963). English conductor, viola player and composer. At the age of 17 he was engaged as a violist in the Hastings Municipal Orchestra; then, after four years in the army, he studied from 1920 the violin with Achille Rivarde and composition with Holst at the RCM. For ten years he led the viola sections of the London Symphony and Covent Garden orchestras, resigning in 1936 to devote his time to conducting and composition. Having gained experience as a conductor with the Carl Rosa and Sadler's Wells Opera companies, he made his London début with the LSO in 1938, conducting Elgar's First Symphony. The next year he went to the USA and settled in California, where he continued to conduct and also wrote film music. Revisiting Britain after World War II, he appeared with the LSO and other orchestras. A champion of British composers at his concerts both in the USA and in Britain, Collins recorded music by Bantock, Delius, Elgar, Vaughan Williams and Walton; his recordings of Sibelius's symphonies with the LSO in the 1950s were especially successful. His own compositions include two symphonies for strings, two violin concertos, four short operas (*Perseus and Andromeda*, *Catherine Parr*, *The Blue Harlequin* and *Kanawa*), a cantata, *The Lay of Rosabelle*, for baritone, chorus and orchestra, chamber music, songs, and suites, overtures and other light pieces for orchestra, among which *Vanity Fair* became very popular. His film scores (for *Victoria the Great* (1937), *Nurse Edith Cavell* (1939), *The Courtneys of Curzon Street* (1947) and *Odette* (1951) were well crafted and highly effective.

ELIZABETH FORBES

Collins, Edward (Joseph) (*b* Joliet, IL, 10 Nov 1886; *d* Chicago, 1 Dec 1951). American composer, pianist and conductor. He studied the piano at the Chicago Musical College with Ganz, and composition with Felix Borowski and Adolf Weidig. In 1906 he entered the Hochschule für Musik, Berlin, where he studied composition with Bruch and Humperdinck. He made his piano début in Berlin in 1912. Shortly thereafter he served as assistant conductor of the Century Opera, New York (1912–13) and as an assistant conductor at the Bayreuth Festival (1913–14). During World War I, he entertained troops by writing musicals and an operetta, *Who Can Tell?* (*c*1918). John Philip Sousa appointed him an Army bandmaster after the armistice. In 1919 he returned to Chicago, where he taught first at the Chicago Musical College and then, from 1933, at the American Conservatory. He was awarded the David Bispham Memorial Medal in 1939 for his Civil War opera *Daughter of the South*.

Collins's compositional style demonstrates meticulous craftsmanship combined with European Romanticism. The influence of Impressionism is evident in his occasional use of the whole-tone scale. The Second Piano Concerto and *Variations on an Irish Tune* (both 1931) elegantly juxtapose diatonicism and pentatonicism. Many large-scale works, such as the *Tragic Overture* (1923), employ traditional forms. The Second Piano Concerto, however, is essentially non-developmental, in the composer's words 'a large work "en miniature" ... condensed and episodic'. Particularly notable is Collins's rhythmic complexity. Additive metres appear in a number of works, including the *Tragic Overture*, *Allegro piacevole* (1935) and the Second Piano Concerto, as well as alternating bars of 3/4 and 5/8 (*Allegro piacevole*), and 5/8 and 7/8 (Third Piano Concerto, 1941). *Valse eccentrique* (1949), most likely his last composition, employs a chromaticism verging on atonality.

PHILLIP RAMEY

Collins, H(enry) B(ird) (*b* Ipswich, 13 June 1870; *d* Bromsgrove, 19 Jan 1941). English organist and music scholar. He was a Gilstrap scholar at the RCM, where he was taught the organ by Walter Parratt (1888–93; FRCO 1892, ARCM 1893) and then studied music at New College, Oxford (1893–5, BMus 1895). After serving as organist at St Margaret's, King's Lynn, he returned to London (having become a Roman Catholic) as organist of the Italian Church, Hatton Garden (1898–1915); he was then organist of the Birmingham Oratory until his death. He edited the quarterly *Music and Liturgy*

(1932–6), and for several years lectured on polyphony at the Oxford Summer School, and on Latin church music by early English composers at the universities of London and Birmingham.

Collins devoted nearly all his spare time to copying and collecting manuscripts of early church music in London (British Museum), Oxford, Cambridge, Tenbury and elsewhere, editing it initially for his own church and later for general use. His preference was exclusively for polyphonic music of the 15th and 16th centuries and he became the leading authority on its notation in English sources. After his edition of 15 offertories by Lassus was published in Düsseldorf (1911) English publishers began to bring out his work: this included editions of the Mass *O quam suavis* (*c*1500), the Old Hall Manuscript and almost 100 motets, offertories, antiphons, *Magnificat* settings and other pieces by such composers as Byrd, Clemens non Papa, Marenzio, Palestrina, Philips, Sheppard, Tallis, Taverner and Victoria. His unpublished transcriptions (about 2000 works by 170 composers) are housed at the Birmingham Oratory.

EDITIONS

Missa 'O quam suavis' for 5 voices, by an Anonymous English Composer, circa 1500 A.D., Plainsong and Mediaeval Music Society (Burnham, Bucks., 1927)

with A. Ramsbotham and A. Hughes: *The Old Hall Manuscript*, iii, Plainsong and Mediaeval Music Society (Burnham, Bucks., 1938)

A. Hughes: *Septuagesima* (London, 1959), 39, 42

ERIC BLOM/R

Collins, Judy [Judith] (Marjorie) (*b* Seattle, 1 May 1939). American singer-songwriter. At 13 she performed a Mozart piano concerto conducted by her teacher, Antonia Brico, and was encouraged to pursue a career in that direction. Instead she developed an interest in folk music and by 1959 was singing in the clubs of Boulder and Denver. She first attracted serious attention at the Gate of Horn, Chicago, and was soon performing in Greenwich Village, New York, centre of the folk scene. She released her first album in 1961, the traditional *Maid of Constant Sorrow* (Elek.), and made her Carnegie Hall début the following year. By her third album she had embraced the urban folk music of Pete Seeger and Dylan, while on *In My Life* (Elek., 1966) and *Wildflowers* (Elek., 1967) her collaborations with Joshua Rifkin marked a further stylistic change. She has drawn from a wide variety of sources including songs by Sondheim ('Send in the Clowns' on *Judith*, Elek., 1975), Joni Mitchell ('Both Sides Now' on *Wildflowers*) and Leonard Cohen ('Suzanne' on *In My Life* and 'Priests' on *Wildflowers*). Her own frequently audacious songwriting draws on all her influences and she places particular emphasis on the 'culture of the lyric'. Collins has also acted (in Joseph Papp's 1969 Central Park production of *Peer Gynt*) and in 1972–3 she directed an award-winning documentary about her former piano teacher, *Antonia: Portrait of a Woman*. She has remained politically and socially engaged, in recent years on behalf of the women's movement and for UNICEF.

LIZ THOMSON

Collins, Laura Sedgwick (*b* Poughkeepsie, NY, *c*1859; *d* New York, 1927). American composer, actress and singer. She received early instruction from her mother and later studied with W.H.B. Matthews, H.W. Madeaus Beale, Oscar Coon and Carl Bergstein. She graduated from the Lyceum School of Acting in New York, and was apparently the first American woman to study with Dvořák; he praised her compositions as 'real American music – creative, not imitative'. She wrote the words for many of her songs, which were widely performed by the baritone David Bispham and others. She composed several patriotic songs for special groups, including the Daughters of the Revolution of the Empire State and the National Peace Federation Convention. Her other compositions include more than 200 melodies for children, German folksong arrangements, incidental music for several plays, an operetta, a cantata and chamber works. On the New York stage she presented a one-woman show, *Sarah Tarbox, MA*, by Charles Barnard, in which she impersonated all 11 characters and performed her own songs; she also performed in Greek drama at Harvard College.

WORKS
(*selective list*)

Vocal: A Foolish Little Maiden (Boston, 1887); Graduates March, 1906; The Origin of the Rainbow (1908); My Easter Bonnet (New York, 1909); My Philosophy (New York, 1911); Sleepy Time (Boston, 1913); Making Love in the Choir (Mrs T.H. Whitney) (New York, 1914); Endymion, S, Bar, chbr ens; Ode to Beauty, solo vv and chorus

Incid music: Pierrot (A. Thompson); Pygmalion and Galatea (W.S. Gilbert); The Lotus Pool (E. DeKay); Jonathon (T. Ewing)

PAMELA FOX

Collins, Michael (John) (*b* Isleworth, 27 Jan 1962). Northern Ireland clarinettist. He studied at the RCM with David Hamilton and then with Thea King, and in 1978 won the BBC Young Musician of the Year Competition. In 1981 he became a member of the Nash Ensemble and the London Sinfonietta. He won the Concert Artists' Guild of New York Award in 1982, which led to an American début at Carnegie Hall the same year. In 1984 he made his début at the Promenade Concerts. From 1987 to 1995 he was principal clarinet with the Philharmonia Orchestra. Collins has given the first performances of concertos by John Adams, Richard Rodney Bennett and Edward Gregson. His recordings include the Mozart and Brahms quintets, with the Nash Ensemble, as well as 20th-century works. He taught at the RCM, 1985–95, and was subsequently appointed to the RAM.

Collins, Nicolas (Bernd) (*b* New York, 26 March 1954). American composer and performer. At Wesleyan University (BA 1976, MA 1979) he studied the music of Charles Ives, Indian *tablā*, and performance and composition with Alvin Lucier. From 1980 he worked in New York as a

consultant for recording studios while maintaining an active role as a performer and organizer of festivals in the city. He was visiting artistic director of the STEIM electro-acoustic music studio in Amsterdam (1992–5), and in 1994 became co-director of the American ensemble Barton Workshop; in 1997 he was appointed editor-in-chief of the *Leonardo Music Journal*.

Collins's early works, unsurprisingly for those of a Lucier protégé, use electronic feedback and computer circuitry. In New York he performed on a unique 'trombone-propelled signal processor' (with attachments to the mouthpiece), which enabled him to loop and modify sampled sounds and pan these to loudspeakers around the performance space. Other devices include a 'backwards electric guitar' – sending sound signals actually inside the instrument for electronic resonance – and a modified compact disc player which allows recordings to be altered during performance. The latter device is used to great effect in *Broken Light* (1991), where the material consists, in effect, of contorted strains of Baroque music. More inventive yet equally wry is his *It was a dark and stormy night* (1990), in which a series of nested narratives spoken by the soloist is paralleled by a self-referential musical process that gradually reveals the origin of the material – a looped musical sample. His magnum opus, *Truth in Clouds*, is an opera about a seance, during which voices are heard from all parts of the auditorium with the aid of a Ouija board-to-MIDI converter.

WORKS
(selective list)

Pea Soup, 1–12 pfmrs, elecs, 1975; Little Spiders, 2 cptr insts, 1981; Second State, elecs, 1981; Is she/he really going out with him/her/them, radios, tape, elecs, 1982; Killed in a bar when he was only 3, backwards elec gui, radio, toy drumming bears, 1982; A Clearing of Deadness at One Hoarse Pool, tape, elecs, 1983; A Letter from My Uncle, 1v, 3 backwards elec gui, radio, tape, elecs, 1984; Vaya con dios, tapes, sampler, elecs, 1984; Devil's Music, radio, samplers, 1985; Real Electronic Music, radio, trbn-propelled signal processor, 1986; Tobabo Fonio, tape, trbn-propelled signal processor, 1986; Devil from Milwaukee, accdn, ens, elecs, 1987; Like a Falling Stone, elec gui, cptr-controlled distortion, matrix, 1988; The Spark Heard 'round the World, tape, 1988; Bride of Devil's Music, 1v, radio, 1989; It was a dark and stormy night, 2vv, 8–16 insts, elecs, 1990; Broken Light, str qt, modified CD player, 1991

Sound without Picture, 6 works, 1993–8: Strange Heaven (D. Eddy, S. Tallman), 1v, trbn-propelled signal processor; Charlotte aux poires (Tallman), 1v, trbn-propelled processor, modified CD players, elecs; The Scent of Mimosa (D. McArdle), 1v, digital signal processing, video; Still Lives (V. Nabokov), 1v, modified CD player, opt. tpt; Sound for Picture (D. Wright), 1v, backwards elec gui, opt. tpt, elecs; Lightning strikes not once but twice (Collins), 1v, backwards elec gui, elecs

Imitation of Life, 4vv, pf, elecs, 1995; Shotgun, prep b fl, modified CD player, 1995; Between the Devil and the Deep Blue Sea, 1v, radio, 5 insts, 1996; Coro spezzato, 5 insts, modified CD player, 1996; Die Schatten, 16 winds, 2 perc, modified CD players, 1996; Venezia 1600, tpt/cornet, perc, elecs, 1996; Broken Choir, 7 insts, modified CD players, 1997; Still (After) Lives (Nabokov), 1v, wind, str, vib, 1997; Stormy Weather, str qt, backwards elec gui, 1997; Stormvaer, amp Hardanger fiddle, 1997; Sonnet 40, tpt, 1998; Truth in Clouds (chbr op and audio installation), small ens, elecs, audience participation, 1999

KYLE GANN

Collins, Peter (*b* London, 9 April 1941). English organ builder. He founded the firm of Peter Collins Ltd (1964) of Melton Mowbray. After an apprenticeship with Bishop & Son he trained with Rieger in Austria. On his return to Britain he introduced neo-classical organs built to the ideals of the *Orgelbewegung*, of which the instrument for the church of the Sacred Heart, Henley-on-Thames (1976), is a mature example. His designs of the 1980s reflected an increasing interest in historic pipe scales, tunings and winding systems (for example at St Oswald's, Durham, 1987). In 1989 the firm built a replica instrument based on the Strasbourg Silbermann style in St Saviour's, St Albans, for the International Organ Festival Society. The firm's work in the 1990s was stylistically diverse and included larger organs with a merging of Classical and Romantic timbres. They continued to use mechanical key actions but also employed electric stop actions and computerized registrational aids (for example at Greyfriars, Edinburgh, 1990). The firm has exported instruments to Europe, Australasia and East Asia. Collins has contributed articles to the *Journal of the British Institute of Organ Studies* and to *The Organbuilder*; his firm's work is discussed in J.P. Rowntree and J.F. Brennan: *The Classical Organ in Britain* (Oxford, 1975–93).

CHRISTOPHER KENT

Collins, Phil(ip David Charles) (*b* Chiswick, London, 31 Jan 1951). English rock singer, drummer and songwriter. He began drumming with Genesis in 1970, taking over the role of lead singer when Peter Gabriel left in 1975. He was instrumental in reorientating the band's style away from progressive rock towards a mainstream approach, partly through relating his own songwriting more strongly to personal experiences. His studied ordinariness is highly marketable but has formed grounds for criticism – *Another Day in Paradise*, concerning the plight of the homeless, was perceived as an empty gesture from a multi-millionaire. Beginning in 1981 he released a series of danceable bestselling albums, on which can be heard his characteristic big drum sound achieved (accidentally) by sending the signals from his kick and snare drums simultaneously through a noise gate and a compressor. These included *Face Value* (1981; featuring the hit *In the Air Tonight*), *Hello I must be going* (1982; including a cover of the Supremes' hit *You can't hurry love*), *No Jacket Required* (1985; with *Sussudio*), *... But Seriously* (1989, with *Another Day in Paradise*), *Both Sides* (1993) and *Dance into the light* (1997). He has also played the

drums for a number of well-known performers such as Adam and the Ants, Eric Clapton, John Martyn, and Robert Plant and Jimmy Page (at Live Aid) and on the Band Aid single *Do they know it's Christmas?*. He had been a child actor and later played the leading role in the film *Buster* (1988). He has also run a big band which backed Tony Bennett on tour in 1996. The same year Collins left Genesis.

ALLAN F. MOORE

Collins, Shirley (*b* Hastings, Sussex, 5 July 1935). English singer. Her early musical influences ranged from her grandmother's rural songs to recordings of Monteverdi, Jimmy Yancey and Thomas Tallis. During the 1950s, she was a member of Ewan MacColl's folk group, the Ramblers, and assisted Peter Kennedy and ALAN LOMAX in collecting traditional songs. After fieldwork with Lomax in the southern USA in 1959, Collins used the five-string banjo to accompany her singing. Her vocal style and repertory, however, gradually became more English, and her first recorded track *Dabbling in the Dew* appeared alongside traditional singers Bob Copper of the COPPER FAMILY and HARRY COX.

Collins's recorded output illustrates a career of musical innovation, fusion and experimentation. She made albums with the blues, jazz and Indian-influenced guitarist Davy Graham (1964), her sister Dolly Collins who played a replica 17th-century flute organ (1967), the Incredible String Band (1968), David Munrow's ensemble (1969), and Albion Country Band musicians (1971). Throughout the 1970s, Collins performed with ex-Fairport bassist Ashley Hutchings (her husband at that time) and, with the Albion Band, provided music for *The Passion* and *Lark Rise* at the National Theatre in London. Her final album, *For as Many as Will*, made in 1978 with Dolly Collins, returned to an earlier style.

Collins withdrew from public performance at the beginning of the 1980s. For over 20 years she had a substantial influence on the musical directions of the Folk Music Revival, pre-empting the fusions of contemporary 'world music'. Her unadorned vocals evoked an English country style so successfully that it was unclear to many whether she was a traditional or neo-traditional singer.

DAVE ARTHUR

Collinus, Matthaeus [Kalina z Chotěřiny, Matouš; Kolín z Chotěřiny, Matouš] (*b* Kouřim, 1516; *d* Prague, 4 June 1566). Czech humanist, poet and composer. He studied for ten years from 1530 at the University of Wittenberg, where he was a pupil of Melanchthon, with whom he afterwards retained friendly contact. He was a lecturer in Greek and Latin at Prague University from November 1541 to 1558, and during the same period he ran his own private classes in Latin. He was an Utraquist and a member of Jan Hodějovský's circle. He wrote Latin odes and hymns of a high moral tone and translated Hussite songs into Latin, but rarely wrote genuine song texts; the few melodies that he composed are unimportant. His published works concerning music include *Harmoniae univocae in odas Horatianas et in alia quaedam carminum genera* (Wittenberg, 1555), the first book of humanist odes by a Czech to be published with music.

JOHN CLAPHAM

Collis, Hainricus (*fl c*1450). ?Austrian composer. His two known works, a Gloria and a Sanctus, survive, with ascriptions, in Trent manuscripts 88 and 90 (*I-TRmp*). These two works may form part of a cyclic mass Ordinary, together with an anonymous Kyrie (*I-TRmp* 88, f.26*v*). Whereas the Gloria and Sanctus alternate between two- and three-voice textures, the Kyrie is for three voices throughout; all three works use the same clefs, mode cadence points and succession of mensurations (O–₵–O).

TOM R. WARD (with MARCO GOZZI)

Collum, Herbert (*b* Leipzig, 18 July 1914; *d* Dresden, 29 April 1982). German organist, harpsichordist and composer. At the Hochschule für Musik in Leipzig (1930–34) he studied the organ with Karl Straube and Günther Ramin, the piano with Adolf Martienssen and composition with Johann Nepomuk David. Having assisted Straube and Ramin at the Thomaskirche while still a student, he was appointed organist at the Kreuzkirche, Dresden, in 1934. The Collum Concerts (founded in 1935) and concerts given by the Collum Choir (founded in 1946) made major contributions to Dresden's musical life. A fine organ virtuoso, Collum was particularly noted for his performances of Bach and of modern works. His own music was related to that of Fortner, which was similarly derived from the Leipzig school, but after 1945 he used 12-note techniques in an individual manner. Much of his earlier music was lost in the 1945 bombing of Dresden. He was appointed professor of harpsichord at the Dresden Hochschule für Musik in 1964, and in 1973 he received the Arts Prize of the German Democratic Republic.

GERHARD WIENKE

Colman. English family of theatre managers and librettists.

(1) **Francis Colman** (*b* Tiverton, Devon, bap. 23 Aug 1687; *d* Pisa, 20 April 1733). Diplomat and opera lover. Through the influence of William Pulteney, his wife's brother-in-law and later Earl of Bath, he was appointed special envoy to Vienna in 1721. Three years later he was transferred to the court of the Grand Duke of Tuscany, at Florence, where he remained until his death. Letters to Handel and to Owen Swiney show that he helped re-engage Senesino for London in 1730. He adapted the libretto for Handel's *Arianna in Creta* (1734, London) and he is believed by some to be the author of the 'Opera Register' (*GB-Lbl*), a brief record of operatic performances in London, 1712–15 and occasionally to 1734.

(2) **George Colman** (i) ('the elder') (*b* Florence, bap. 18 April 1732; *d* Paddington, London, 14 Aug 1794). Playwright, librettist and theatre manager, son of (1) Francis Colman. Brought up under the guardianship of the Earl of Bath, who paid for his education in the law, he was more attracted to the theatre, and established himself as a writer in London. One of his best plays, *The Clandestine Marriage* (Drury Lane, 20 Feb 1766) co-written with David Garrick, later became the basis for Cimarosa's *Il matrimonio segreto* (1792). His works for Covent Garden, of which he was manager from 1767 to the spring of 1774, included the burletta *The Portrait* and the pantomime *Mother Shipton* (both 1770 with music by Samuel Arnold); he also adapted pieces for Arne in 1771–3. As manager of the Haymarket Theatre from 1777 he brought forward talented singers in many pieces with music written and adapted by Arnold.

(3) **George Colman** (ii) ('the younger') (*b* London, 21 Oct 1762; *d* London, 26 Oct 1836). Librettist, playwright and theatre manager, son of (2) George Colman (i). Though trained for the law, like his father he was drawn to the stage. His three-act comedy *Two to One* (1784) was the first of his several pieces to be set by Arnold; their *Inkle and Yarico* of 1787 became one of the most popular comic operas of the age. He increasingly took over the Haymarket Theatre management after his father's stroke in 1785, and collaborated with both Stephen Storace, adapting Godwin's novel *Caleb Williams* for Storace's *The Iron Chest* (1796), and Michael Kelly, notably on the popular *Blue Beard* (1798). He was Examiner of Plays (official censor for the London stage) from 1824.

Cologne (Ger. Köln). City in Germany. According to Tacitus, this settlement of the Ubii, a Roman garrison on the Rhine, was granted the rank of a colony (the Colonia Claudia Ara Agrippinensis) in 50 CE, at the request of the Empress Agrippina. About 400 Cologne became Frankish and a bishopric. Its economic development made it a centre of foreign trade, and it became a Hanseatic city in 1201. In 1288 the citizens asserted their independence from the archdiocese, and Cologne became a free imperial city in 1474. The Romanesque churches of the monasteries and religious foundations, with their many relics, and the Kathedrale für die Heiligen Drei Könige, much visited by pilgrims, left their mark on the culture of Cologne. A university was built in 1388. Cologne was occupied by the French in 1794 and became part of Prussia in 1815. The city expanded at the end of the 19th century, and as a centre of transport and industry it became the largest city in western Germany. Badly damaged in World War II, it was reconstructed during the 1950s and is now a modern, multicultural city with a population of over a million.

1. Before 1800. 2. 1800–1945: (i) Church music (ii) Music societies and secular music (iii) Instrument-making and music publishing (iv) Education (v) National Socialism. 3. Since 1945: (i) Concerts and opera (ii) Education (iii) Publishing.

1. BEFORE 1800. In the Middle Ages Roman Catholic chant was introduced into the Frankish choral tradition adopted by the churches and monasteries of Cologne, and the result was a special local tradition which retained its plainchant style until the end of the Middle Ages, even in Hufnagel notation. A large repertory of tropes, sequences and liturgical chant has come down to us. The cathedral library contains an anonymous treatise *De organo* written about 900. The city's historical archives own an early 11th-century manuscript of Boethius's treatise *De institutione musica* and a copy of *Musica enchiriadis* falsely attributed to Hucbald.

The most important centres of Catholic church music were the cathedral and the churches of St Gereon, St Kunibert and St Maria im Kapitol. The cathedral chapter received a considerable income from benefices granted by the nobility. Many bequests and endowments also contributed to the maintenance of church music: in 1454 Archbishop Dietrich von Mörs endowed a daily sung

mass in the Marienkapelle, and the patrician Johannes Hardenrath gave St Maria im Kapitol a similar endowment in 1466. Several endowments provided for music in St Gereon.

The music scholar Rudolf of St Trond (*c*1070–1138) was active in Cologne as Abbot of St Pantaleon, and the monk and prior Heinrich Eger von Kalkar, author of the plainchant treatise *Cantuagium* (1380), lived in the city in the second half of the 14th century. The theologians Rupert von Deutz, Albertus Magnus and his pupil Thomas Aquinas (in Cologne 1248–52) discussed music, among other subjects, in their writings.

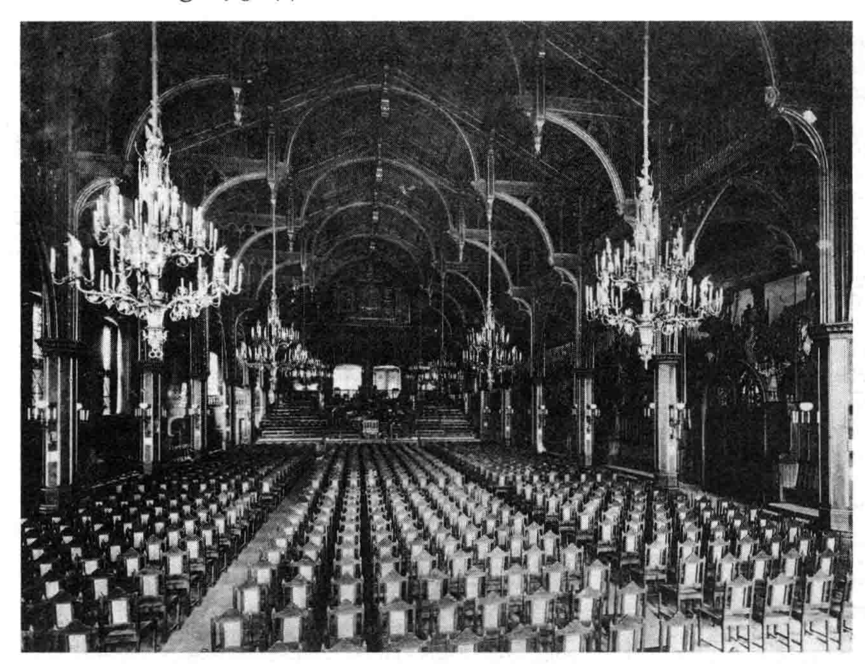
The name 'Tastegazze' in a document of 1232 for the street now known as the Himmelreichgässchen indicates that the making of keyboard instruments was flourishing by the 13th century. The records show the presence of major organ builders in Cologne from the 15th century onwards, including Liebing Sweys (in Cologne between 1440 and 1472 or 1473) and Hans Suys. Nikolaus Niehoff (*c*1525–*c*1604) built the organ of Cologne Cathedral with Arent Lampeler in 1569–73, and returned to Cologne in 1578. The first lute maker known to us by name is Conrayt Wijnsberg in 1483. The records mention eight lute makers in Cologne in the first half of the 16th century, including Claiss von Pommersbach, as well as keyboard instrument makers, including J.K. de Colonie.

The street name 'Platea joculatorum' (Minstrels' Alley) in 1231 suggests that minstrels played in Cologne at that time. Travelling minstrels performed for the patricians and the archbishop in the 15th century. By the 1370s minstrels and town musicians were among the civic employees, along with watchmen. After Cologne became a free imperial city in 1474 it was visited by famous court Kapellen; the emperor sometimes held court in the Gürzenich (city hall), which had been completed in 1447.

Heinrich von Quentel printed the *Opus aureum musicae* by Nikolaus Wollick in 1501, and in 1510 Arnt von Aich printed a songbook which probably contains the repertory of Friedrich of Hohenzollern, Bishop of Augsburg. Between 1593 and 1599 Gerhard Grevenbruch published church music by Jean de Castro. He also published lute books by Adrian Denss in 1594 and by Jean-Baptiste Besardus in 1603, as well as works by Cornelius de Burgh, Matthias Reymann, Ruggiero Giovannelli and Adriano Banchieri.

The teaching of music had begun at the university by 1398. About 1500 a school of theoretical music was established, promulgating the new humanist ideas in education.

The Gymnasium Tricoronatum was founded in 1551, and the school was a Jesuit establishment from 1557 onwards. No music was taught at first; in 1597 the regulations of the archdiocese of Cologne still stipulated that church music should be provided by the pupils of the chapter school and the parish schools. At this period, however, when the Counter-Reformation came to Cologne, the Tricoronatum had already acquired importance in the musical life of the city. Many hymn-books appeared, one with the Jesuit *Catholische Kirchengesäng* to texts by Friedrich von Spee (1591–1635) and others, published by Peter von Brachel in 1623. The melodies have been ascribed to Jacob Gippenbusch, choirmaster at the Tricoronatum. In 1642 Gippenbusch edited the *Psalteriolum harmonicum*, containing Latin and German hymns in four parts with basso continuo. The Jesuits contributed to musical theory and musical education with their *Seminarium musicum* (1696) and the Musikantenhaus. Theodor Eltz (1725–70), later the cathedral Kapellmeister, was trained here.



The cathedral organ was rebuilt by Jakob Schmidt in 1729–35. Balthasar König, first of a Cologne family of organ builders, became cathedral organ builder in 1745. Work on a new cathedral organ began in 1788; it was finished, by Engelbert Maass, only in 1820. Before 1700 the cathedral organist also conducted the Kapelle; the last to combine these duties was Kaspar Griefgens. Carl Rosier (1640–1725), a composer and violinist from Liège, was the first to hold the special appointment of cathedral Kapellmeister. Soon afterwards he was also appointed civic Ratskapellmeister. He composed many masses and motets, which were published in Cologne in 1667–8, and formed the cathedral Kapelle into an ensemble of 20 professional singers and instrumentalists (1725). As Ratskapellmeister he had four trumpeters available, which he could augment as required with string players from the churches and oboists from the city militia. Horns were introduced into the orchestra in 1739 and clarinets in 1748. From the 1730s the musical life of the city was enlivened by guest performances given by touring opera companies, particularly from Italy, which also recruited local musicians. In 1743 the Musikalische Gesellschaft (or Musikalische Akademie) was founded. Its orchestra consisted of amateurs, members of the cathedral Kapelle and musicians from the city militia; it performed in the guildhalls, and laid the foundations of the concert tradition characteristic of the city in the 19th century. From the 1760s onwards virtuoso concerts were given in Cologne. J.A. Schmittbauer held the post of cathedral Kapellmeister for only two years (1775–7), but he did much to promote concert-going in Cologne with his winter concerts at the Musikalische Akademie.

The French occupation of 1794 led to the dismissal of the city musicians. Church music lapsed as a result of secularization, and the cathedral Kapellmeister F.I. Kaa and his Kapelle were dismissed in 1805.

2. 1800–1945.

(i) Church music. Because of opposition to the Reformation by the cathedral chapter, the clergy and the university, Protestant church music had played no substantial part in the musical life of Cologne until the 19th century. Even the *Kölner Gesangbuch* of 1592 was only a reprint of the reformed *Herborner Gesangbuch*. The end of the French occupation saw the formation of several music societies to perform the great Passions and oratorios of the 18th century; for instance, the Singverein founded by Judge Ernst Verkenius, Marcus Dumont and Adolf Steinberger in 1820 concentrated on the oratorios of Handel. In the early 20th century Protestant church music, in particular liturgical hymns, flourished under F.W. Franke (1861–1932), a teacher at the conservatory and organist of the Gürzenich and the Christuskirche.

A cathedral Kapelle was reinstated in 1807, and in 1808 B.J. Mäurer (1757–1841) was appointed Kapellmeister. He was succeeded in 1826 by Carl Leibl (1784–1870), who continued the tradition of orchestrally accompanied church music. The Cecilian reforms met with little enthusiasm in Cologne; nevertheless, Cardinal Johannes von Geissel (1796–1864), a follower of the Cecilians, appointed the first of a series of Kapellmeister who supported reform. As a consequence the Kapelle was

Neuer Saal of the Gürzenich, Cologne, restored by Julius Raschdorff, reopened 1857

replaced in 1863 by a choir of men and boys. The 20th-century cathedral Kapellmeister were unable to recover their former dominant role in the musical life of Cologne.

(ii) Music societies and secular music. During the French occupation musical life continued mainly at private gatherings. Afterwards, the cathedral organist Mäurer founded the Verein der Dommusiken und Liebhaberkonzerte in 1808; Carl Leibl directed its concerts after 1826. With Ernst Verkenius, chairman of the new Städtischer Gesangverein from 1812 to 1829, Mäurer also founded the Quartett Verein. Another Musikalische Gesellschaft was founded in 1812, and the Singverein in 1820. These two societies were initially directed by J.J. Almenräder (1792–1867) and Carl Leibl respectively. Many musical societies were founded in the following decades, on the initiative of music lovers who were often patrons too. In 1827 the Musikalische Gesellschaft joined the Singverein to form the Concert-Gesellschaft, which held the concerts known as the Gürzenichkonzerte from 1857 onwards.

By the second half of the 19th century professional musicians again held the leading positions in the city's ensembles and musical societies. In 1840 rivalry for prestige with Düsseldorf, which had a flourishing musical life under its music director Mendelssohn, led to the revival of the position of city Kapellmeister in Cologne. However, the first occupant of the post, Conradin Kreutzer, left after only two years, unable to cope with the wrangling between the societies; it was only with the appointment of Ferdinand Hiller (1850–84) that anyone was successful in the long term.

In 1821 Cologne became part of the Niederrheinisches Musikfest, a festival which had existed since 1818 and was held in annual rotation with Düsseldorf, Elberfeld and Aachen. Mendelssohn directed Handel's *Samson* at this festival in 1835. The Männergesangverein of Cologne was formed in 1842 under the cathedral organist Franz Weber, and in 1846 it organized the first song festival of the German-Flemish Sängerbund. With the Rheinische Musikschule, founded in 1845, and the Concert-Gesellschaft, the Männergesangverein made Cologne a famous musical centre in Hiller's time. The orchestra of the Concert-Gesellschaft, known as the Cöllner Theater- und Gürzenich-Orchester, was renamed the Cölner Städtisches Orchester in 1888. In 1945 it became the Städtisches Gürzenich Orchester Köln, and in 1995 was renamed the Kölner Philharmoniker Addition el.

Operas and Singspiele were performed by touring companies in the second half of the 18th century and during the French occupation. The first permanent theatrical company was set up in 1822, and the theatre building erected in 1783 was leased out by the city council for periods of increasing length. Under E.S. Ringelhardt (1822–32), operas by Weber, Rossini and other composers were staged, and under Ferdinand Hiller (1850–84) Wagner's music dramas were performed with varying degrees of success. The Theater in der Glockengasse was built in 1872 and the Theater am Habsburger Ring was equipped for the opera company in 1902; it became the company's exclusive house from 1906. In 1904 the opera came under civic management. Its early musical directors were Otto Lohse (1904–11), Gustav Brecher (1911–16), Otto Klemperer (1917–24), Eugen Szenkar (1924–33) and Fritz Zaun (1929–39).

A company set up by Hiller in 1851 enlarged the Gürzenich to make it the civic concert hall; the work was completed in 1857 (see illustration). When the Messe was built in 1924, the Gürzenich was increasingly deprived of its function as a concert hall, and had to cede it entirely to the Festhalle in 1933. The city Kapellmeister after Kreutzer were: Heinrich Dorn (1843–8), Hiller (1850–84), Franz Wüllner (1884–1902) and Fritz Steinbach (1902–14). Hermann Abendroth was the first Generalmusikdirector.

After the end of the British occupation in January 1926, the first radio broadcast from Cologne was made. In November 1926 Westdeutsche Funkstunde moved from its temporary base in Münster to Cologne, and after 1927 it operated as Westdeutscher Rundfunk (WDR). The Grosses Orchester des Westdeutschen Rundfunks was

conducted by Wilhelm Buschkötter (1926–36); it was disbanded in 1940.

In 1921 Herbert Leyendecker founded the Gesellschaft für Neue Musik in Cologne. Influential figures in this society were Ernst Bücken, Willi Kahl, Georg L. Kinsky, Hermann Unger and Heinrich Lemacher. The director, Else Thalheimer, was expelled, as a Jew, from the Third Reich. In 1942 the society was revived as the Gesellschaft für Neue Musik im Gaukulturwerk Köln-Aachen under the chairmanship of Ernst Bücken, and adopted a 'moderate' approach to modernity.

A number of musicians in Cologne cultivated early music. Paul Grümmer, who taught the cello at the Staatliche Hochschule für Musik (1926–33), promoted the cause of the viola da gamba. The paper manufacturer Wilhelm Heyer had already built the Musikhistorisches Museum with an instrument-making workshop and a recital hall. In 1926, after Heyer's death, his collection was sold to Leipzig. Heyer's curator Georg L. Kinsky pursued the revival of early music with historical instruments as both scholar and performer. Kinsky was excluded from most musical activities from 1933 onwards, and in 1944 was forced to leave the city.

(iii) Instrument-making and music publishing. Between 1812 and 1848 the firm of L.A. Schröder made brass instruments. F.A. Schmidt (in Cologne 1846–73) took over Schröder's firm, and with his son L.A. Schmidt made it famous throughout the country. L.A. Schmidt's colleague Josef Monke started up an instrument-making business of his own in 1922, which is still run by the family. The Cologne violin maker Josef Bünnagel (1904–69) studied with Leo Aschauer in Mittenwald.

Michael Schloss published the *Rheinische Musikzeitung* (1850–53) and DuMont Schaubert published the *Niederrheinische Musikzeitung* (1853–67). The firm of Tischer & Jagenberg, founded by Gerhard Tischer in 1909, published the *Rheinische Musik- und Theaterzeitung*, and also works by contemporary Cologne composers. Tischer discredited himself by supporting the National Socialists. The firm of P.J. Tonger, founded in 1822 by A.J. Tonger, became the leading music-publishing house in Cologne.

(iv) Education. In 1919 the university, closed since 1794, was reopened at the instigation of the city's mayor, Konrad Adenauer. A department of musicology was set up in 1921, and in 1932 this became an institute; its first directors were Ernst Bücken (1921–32), Theodor Kroyer (1932–8) and K.G. Fellerer (1939–70). The Rheinische Musikschule was founded by Heinrich Dorn in 1845 and became a conservatory in 1850 under Hiller (1850–84). The directors who followed him were Wüllner (1884–1902), Fritz Steinbach (1903–14) and Abendroth (1914–25). In 1925 the Staatliche Hochschule für Musik was refounded, jointly directed by Abendroth and Walter Braunfels. Unlike the conservatory, it had departments for Catholic and Evangelical church music and a separate department for Schulmusik under E.J. Müller. The Rheinische Musikschule continued in existence as part of the Hochschule until 1962. The Nazis dismissed Braunfels in 1933, and Abendroth moved to Leipzig in 1934; they were succeeded by Karl Hasse (1935–45).

(v) National Socialism. Under the Weimar Republic musical life in Cologne was sustained largely by the patronage of wealthy bourgeois families, mostly Jewish. Many of them were expelled and their possessions appropriated after 1933. From 1933, too, dismissals *en masse* of musicians on political and racist grounds and interference with the repertory made the musical life of the city a cultural farce. After 1930 the Nazis agitated against Abendroth, although he remained loyal to the regime after 1933; all they achieved was his transfer to the Leipzig Gewandhaus in 1934. Under Gauleiter Josef Grohé and his commissioner of music Walter Trienes, musical activities had to conform to the party line. Hermann Unger became regional president of the Reichsmusikkammer, to which all non-Jewish professional musicians were obliged to belong. In 1939–40 civic concerts were moved to the Opera House and the Gürzenich, since the halls of the Messe had been requisitioned by the army. In 1941 the Messe became available again, but was destroyed by air raids in May 1942, as was the Wolkenburg, since 1936 a favourite place of rehearsal for the Gürzenich chorus and the Kölner Männergesangverein. The Gürzenich was destroyed in September 1943, after which concerts were divided between the opera house and the university's main auditorium. The opera house itself was so badly bombed in 1943–4 that it could be used only for rehearsals. Public musical life ceased altogether in the autumn of 1944.

3. Since 1945.

(i) Concerts and opera. From August 1945, concerts in the university auditorium were revived by public demand. Heinz Pauels re-established the civic orchestra in 1945; his successors as Gürzenich Kapellmeister have been Günter Wand (1946–75), Yuri Ahronovitch (1975–86), Marek Janowski (1986–91) and James Conlon (1991–). Music directors of the opera since 1945 have been Wand (1945–8), Richard Kraus (1948–55), Otto Ackermann (1955–8), Wolfgang Sawallisch (1960–63), Siegfried Köhler (1964), István Kertész (1964–73), John Pritchard (1973–88) and Conlon (1991–). The Gürzenich could not be used as a concert hall until 1955. At first the opera house could serve only for rehearsals and administrative offices; a new building was erected for the company in the Glockengasse and completed in 1957.

In 1945 the British military government set up a Cologne transmitter within the Nordwestdeutscher Rundfunk Hamburg network (NWDR). The Cologne radio station became independent in 1956 as Westdeutscher Rundfunk (WDR). Besides broadcasting light music it has maintained, since 1947, an orchestra which was shortly afterwards named the Kölner Rundfunk-Sinfonie Orchester (Cologne RSO). Regular conductors have been Christoph von Dohnányi (1964–9), Zdeněk Macal (1970–74), Hiroshi Wakasugi (1977–83), Gary Bertini (1983–91), Hans Vonk (1991–7) and Semyon Bychkov (1997-). In 1951 the WDR opened its own concert hall, used by the Cologne RSO until a new concert hall, the Philharmonie, was opened in 1986.

The Gesellschaft für Neue Musik, which had disbanded in 1945, was revived in 1946, on the initiative of Heinrich Lemacher, with a concert by the pianist Tiny Wirtz. Until its dissolution in 1971 most of its concerts were held jointly with the Hochschule. In 1951 WDR set up the Studio für Elektronische Musik, whose founding father and director (until 1962) was Herbert Eimert. After 1955 it became an international magnet for the avant garde. In 1963 Stockhausen became its director, succeeded in 1990 by York Höller. After his retirement in 1965, Eimert set up a Studio für Elektronische Musik at the Hochschule,

and taught a composition class there (1965–71). Leading figures associated with the Studio include Stockhausen, B.A. Zimmermann, Kagel and Henze. The Kölner Kurse für Neue Musik at the Rheinische Musikschule were directed by Stockhausen (1963–8) and then by Kagel (1969–75). Walter Zimmermann introduced avant-garde music from all over the world in his 'Beginner Studio' and the concert series Regenbogenkonzerte. Among the many ensembles specializing in new music are 'trial and error' (founded in 1970 by Bojidar Dimov), the Ensemble Köln (founded by Robert H.P. Platz and others in 1980) and the Thürmchen Ensemble (founded by Carola Bauckholt, C.J. Walter and Roland Kruttig in 1991). The Kölner Gesellschaft für Neue Musik was revived once more in 1981. Most of its performances are held in the Stadtgarten (1986–), run by the Initiative Kölner Jazz Haus, and in Hans-Martin Müller's LOFT (1989–).

Authentic performances of early music were at first chiefly the province of NWDR. It was here, in 1954, that Eduard Gröniger, with Paul Grümmer's pupil August Wenzinger, conceived the idea of the Cappella Coloniensis, an orchestra playing authentic instruments. Alfred Krings, head of the Volksmusik department of WDR (1968–76) and then chief departmental head of music (1976–87), founded the Collegium Aureum under the directorship of Franzjosef Maier. Maier was appointed to the Hochschule in 1959, and started a department of early music there. At the Musikwissenschaftliches Institut, Harald Kümmerling ran the Sertum Musicale from 1963 to 1972. After it closed, some of the Sertum members founded the Kölner Vocal Consort, while others founded the instrumental ensemble Odhecaton to perform music of the Middle Ages and the Renaissance. In the 1970s pupils of the pioneers came to the fore, and the violinist Reinhard Goebel, with his Musica Antiqua Köln (founded 1973), became their leading figure. The group Sequentia was formed in Basle in 1977 to specialize in music of the Middle Ages and Renaissance and moved to Cologne the same year. Maier's pupil Werner Ehrhardt and others founded the baroque orchestra Concerto Köln in 1985.

American soldiers played jazz in 1945 in officers' clubs and the Zirkus Williams building. Jazz in Cologne, relegated under the Third Reich to the status of dance music or replaced by folk music, developed as a culture of cellar bars and private clubs. In 1956 Harald Banter's band played jazz in the Gürzenich for the first time. In 1957 WDR engaged Kurt Edelhagen, who recruited musicians of international standing to his band. Some of them taught at the Hochschule from 1958, in the first course on jazz to feature in any German music college, and a full jazz course became available in 1981. In 1960 Campi built up the Clarke-Boland Big Band around Kenny Clarke and the Belgian arranger Francis Boland. Outstanding jazz performances were given from 1970 in Klaus Appelt's Subway, from 1986 in the Stadtgarten restaurant of the Initiative Kölner Jazz Haus, and from 1989 in the LOFT.

There are now over 300 societies for singers in Cologne; among the oldest choirs are the Kölner Männergesangverein (1842) and the choir of the Bach-Verein (1931). Other notable choirs are the amateur Kölner Kantorei, Kölner Kammerchor, Kartäuser Kantorei, Chorus Musicus Köln and Mülheimer Kantorei Köln, as well as the professional Cantus Cölln.

The so-called 'Kölschrock' developed in the 1970s out of the twin traditions of street musicians performing Cologne folk music and British-style beat bands such as the Black Beats and the Middle Ages. The first important Kölschrock group was the Zeltinger Band (1978). Bap (1979), formed around Wolfgang Niedecken, made Kölschrock popular far beyond the Cologne region.

(ii) Education. Under its postwar directors K.G. Fellerer (1939–70), Heinrich Hüschen (1970–83), K.W. Niemöller (1983–94) and Dietrich Kämper (1995–), the institute of musical sciences at the university expanded to include departments of ethnomusicology, acoustics and the history of Rhenish music. Among those connected with the institute have been the musicologists Georg L. Kinsky, Willi Kahl and Hans Schmidt, the ethnomusicologists Marius Schneider, Josef Kuckertz and Robert Günther, and Jobst Fricke, professor of acoustics from 1970 to 1995. The collegium musicum (1939) of the university regularly gives concerts, both in Cologne and abroad. The Händel Collegium Köln was established within the Collegium Musicum Vocale in 1982. The Archiv für Rheinische Musikgeschichte was founded at the institute in 1959 by K.G. Fellerer.

The Joseph Haydn-Institut was founded in 1955 by J.P. Larsen, Friedrich Blume and others. Under the direction of Larsen, then of Georg Feder (1960–90), Horst Walter (1993–6), Günter Thomas (1996–7), Marianne Helms (1997–8) and Armin Raab (1999–), it has been engaged in publishing the first complete critical edition of Haydn's works.

Braunfels was reappointed director of the Hochschule in 1945 and held the post until 1950, from 1947 jointly with Hans Mersmann. His successors have been Mersmann (to 1957), Heinz Schröter (1957–72), Siegfried Palm (1972–6), Franz Müller-Heuser (1976–97) and Werner Lehmann (1998–). The department for music teaching in schools offers an additional doctoral course of studies in musicology and music education. In 1972 the Hochschule merged with the conservatories of Aachen, Düsseldorf and Wuppertal to become the Staatliche Hochschule für Musik Rheinland. This joint college was dissolved in 1987. The present Hochschule für Musik Köln has departments in Aachen and Wuppertal, and the Institut für Bühnentanz in Cologne was affiliated to it in 1995.

The Rheinische Musikschule became an independent organization in 1962 and acquired a college of orchestral and operatic music, institutes for Evangelical and Catholic church music and a department for music teaching in schools. In 1972 the Musikschule transferred its vocational courses to the Hochschule and extended its courses in the basic field of musical education. The cathedral's Singschule (1978), a private primary school of the archdiocese, has had its own music school since 1989. The Initiative Kölner Jazz Haus (1978) started a Jazz Haus Schule which is open to the public. The Pädagogische Hochschule, now the education faculty of the university, trains music teachers for primary schools. The Institut für Musikalische Volkskunde moved to Cologne from Neuss in 1985.

There are four collections of musical instruments in Cologne: in the Kölnisches Stadtmuseum, the Rautenstrauch-Joest-Museum für Völkerkunde, the musicological institute of the university, and at WDR. WDR also

has a demonstration display with old instruments from its electronic music studio.

(iii) Publishing. The firm of P.J. Tonger remained the most famous music-publishing house in Cologne after 1945. Cologne journals reflected and influenced the musical spirit of times: Eimert and Stockhausen published their periodical *Die Reihe*, with Vienna Universal Edition, a forum for serial and electronic music. In 1971 Johannes Fritsch, Rolf Gehlhaar and David Johnson founded the first German composers' publishing house, the Feedback Studio Verlag, which by 1999 had published 200 titles by some 20 composers. Fritsch has been publishing the *Feedback Papers* since 1971. Since 1986 Thürmchen Verlag has been publishing mainly works by composers of the Thürmchen Ensemble. In 1991 the Rhenish music magazine *Fermate* moved its office from Münster to Cologne. Other important music publications in Cologne are Germany's leading early music journal, *Concerto*, *MusikTexte*, a forum for new music, and *JazzThing*.

ROBERT VON ZAHN

Cologne, Franco of. *See* FRANCO OF COLOGNE.

Colombani [Columbano], **Oratio** (*b* Verona, *c*1550; *d* after 1 April 1595). Italian composer. In his first publication, in 1579, it is stated that he had been a pupil of Costanzo Porta (presumably in Ravenna between 1567 and 1574) and was now *maestro di cappella* at Vercelli. Subsequent title-pages describe him as occupying similar positions at S Francesco, Milan (1584), Brescia (1584–5), S Maria Gloriosa dei Frari, Venice (1585–7) and Urbino Cathedral (18 May 1591 to 30 March 1592). From 26 May 1592 he was *maestro* of S Antonio, Padua: following one of the periodic dismissals of the cappella, towards the end of 1593, he was reinstated in the post on 23 February 1594 (along with eight singers and six instrumentalists) and held it until 1 April 1595, when it was decided to give it again to Porta. His works have not so far been studied in detail: in any case several survive only in incomplete form. His writing displays the disciplined contrapuntal approach characteristic of all who had studied with Porta, but also contains some melodic figuration and ornamentation anticipating stylistic traits that were to become common in early 17th-century music.

WORKS

SACRED

Harmonia super vespertinos omnium solemnitatem psalmos, 6vv (Venice, 1579)
5 cantiones, una cum Te Deum, 5vv (Brescia, 1580), inc.
Li dilettevoli Magnificat composti sopra li 8 toni, accommodati per cantar, et sonar in concerto, 9, 14vv (Venice, 1583)

Armonia super Davidicos vesperarum psalmos, cum 2 canticis Beatae et Immaculatae Mariae Virginis, 5vv (Milan and Brescia, 1584)
Completorium et cantiones vulgo nuncupatae: falsobordoni, 6 ordinibus distinctae, super 8 tonos decantandae, 5vv (Brescia, 1585)
Ad Vesperas Davidici modulationes in omnibus totius anni solemnitatibus . . . cum cantico BVM, 9vv (Venice, 1587)
Liber secundus sacrarum cantionum . . . una cum Laetaniis Immaculatae Virginis Mariae, 5–6, 9vv (Venice, 1592)
Ad Completorium, psalmi duplices primi, cum antiphonis solitis BVM, 8–9vv (Venice, 1593)
Completorium perfectum, 4vv (Venice, 1599)
Sacred works in 1590[5], 1590[7], 1592[3]

SECULAR

Il primo libro de' madrigali, 5vv (Venice, ?2/1587), lost, listed in *FétisB*
Libro secondo de' madrigali, 5vv (Venice, 1584, 2/1588)
La fausta selva . . . madrigali, libro I, 3vv (Venice, 1590), ?lost, listed in *EitnerQ*
Secular works in 1588[18], 1588[19], 1592[11], 1593[3], 1597[15], 1598[9]

LILIAN P. PRUETT

Colombani [Colombari], **Quirino** (*b* Correggio, nr Reggio nell'Emilia, 2nd half of the 17th century; *d* Rome, *c*1735). Italian composer and instrumentalist. He worked for Cardinal Ottoboni from 1692 to 1698 and from 1694 he held the post of *maestro di cappella* in Rome, but it is not known at which church (he is also cited as 'maestro' in the registers of the Società del Centesimo). In 1696 he was in the service of the Marquis of Ruspoli. He probably died of poisoning. Works by Colombani survive in both manuscript and print, and include several *melodrammi* for the Oratorio del Crocifisso, Rome, seven oratorios, a *Magnificat* for four voices, and cantatas for solo voice and basso continuo.

ANGELA LEPORE

Colombi [Colombo], **Giovanni Antonio** (*b* Ravenna; *fl* from before 1640 to 1647). Italian composer and organist. He was a minorite. In his publication of 1640 he stated that for some years he had been organist and *maestro di cappella* of S Tecla, Este, near Padua. He published at least four volumes of music, only the last two of which survive (the second of them incomplete): *Completorium cum antiphonis ac litaniis Beatae Mariae Virginis*, for five voices, op.3 (Venice, 1640), and *Syntaxis armonica in qua plures concentus*, for two to four voices and continuo, op.4 (Venice, 1647). His Compline setting for three voices and two violins is one of the earliest to make use of instruments.

ELIZABETH ROCHE

Colombi [Colombo], **Giovanni Bernardo** (*b* Venice; *fl* 1603–21). Italian composer and organist. From at least 1603 to 1621 he was organist and *maestro di cappella* of the collegiate church at Novellara, near Reggio nell'Emilia. Two books of madrigals by him survive: the first (Venice, 1603), for five voices, also includes two dialogues, for six and eight voices respectively; the second, op.4, consists of concertato madrigals for two to four voices and continuo (Venice, 1621). His sacred music comprises *Integra omnium solemnitatum vespertina psalmodia iuxta ritum S.R. Ecclesiae* for five voices and continuo, together with three other psalms (Venice, 1616), and five pieces published in anthologies (RISM 1612[2] and 1619[5]).

ELIZABETH ROCHE

Colombi, Giuseppe (*b* ?at or nr Modena, 1635; *d* Modena, 27 Sept 1694). Italian composer and violinist. He was employed by Francesco II, Duke of Modena, from 1671 as a violinist and from 1673 as director of instrumental music. In 1674 he was appointed assistant *maestro di cappella* at the court and from 1678, after G.M. Bononcini's death, *maestro* at the cathedral; he held both posts until his death. In his opp.1, 3 and 5, two or three dances tend to be grouped together, and often those *alla francese* or *per ballare* and *per camera* are differentiated. The term *sonata da camera* is used explicitly in the op.5 collection and the dances are somewhat extended. While six of the sonatas in op.4 are in three movements (fast–slow–fast), the structure of the others varies considerably. Most of the manuscript volumes in Modena contain groups of dances for violin and bass; two volumes of 'toccate' for solo violin and solo violone may represent teaching material. Complete manuscript copies of four printed collections also survive, as do manuscript versions of several sonatas from op.5.

WORKS

all published in Bologna

Sinfonie da camera, brandi, e corrente alla francese, 2 vn, va, bc, op.1 (1668)
La lira armonica: [12] sinfonie, 2 vn, bc (org), op.2 (1673)
Balletti, correnti, gighe, sarabande, 2 vn, bc (vle/spinet), op.3 (1674) [24 pieces]
[12] Sonate [da chiesa], 2 vn, bassetto va ad lib, bc, op.4 (1676)
[11] Sonate da camera, 2 vn, bc (vle/hpd), op.5 (1689)
In *I-MOe*: 25 MS vols. of inst music containing sonatas and dance movts, 1–2 vn, with and without bc, toccatas; 3 sonatas, vn, bc, scordatura, ciaccona, tromba, vn, in other anon. MSS; 4 cants., 1v, bc

Colombia, Republic of (Sp. República de Colombia). Country in South America. Formerly part of Nueva Granada, it is bordered to the north-west by Panama and the Caribbean, to the east by Venezuela and Brazil, to the south by Peru and Ecuador, and to the west by the Pacific Ocean. The region was colonized by the Spanish in the 16th century. The area that constitutes modern Colombia was established in the years following independence from Spain (1819).

I. Art music. II. Traditional music. III. Popular music.

I. Art music

1. Colonial period. 2. Republican period.

1. COLONIAL PERIOD. Nueva Granada (later Colombia), which became an autonomous viceroyalty in 1566, was musically one of the most active countries in South America during the colonial period. The coastal city of Cartagena de Indias was founded in 1533, and four years later its first musician, Juan Pérez Materano (*d* 1561), settled there. He was an organist, an expert in plainchant and the author of an unpublished treatise *Canto de órgano y canto llano*. Bogotá Cathedral was the chief

centre of sacred music. In 1599 Archbishop Bartolomé Lobo Guerrero came to Bogotá from Mexico and developed the music chapel; he installed a new cathedral organ and commissioned 32 richly illuminated parchment books of plainchant from Francisco de Páramo, a local scribe. With the materials transferred from Cartagena, the Bogotá Cathedral archives have the richest collection in the New World of 16th-century European polyphony and Baroque music. In addition to the originals of works by Guerrero, Victoria and Morales, the archives have numerous Spanish and Italian publications of the period 1582–1632 (Palestrina's hymns, Aguilera de Heredia's *Magnificat* settings etc.).

In May 1584 the cathedral appointed as *maestro de capilla* the greatest South American 16th-century composer, Gutierre Fernández Hidalgo, whose *Libro de coro* in the archives contains ten psalms, three *Salve regina* and nine *Magnificat* settings by him. He stayed in Bogotá only two years and later worked in Quito and Sucre (Bolivia). His predecessor at the cathedral had been the mestizo priest Gonzalo García Zorro (1548–1617), appointed in 1575, who eventually became a canon.

The two important musicians associated with Bogotá Cathedral during the 17th and early 18th centuries were José de Cascante, *maestro de capilla* from 1650 until his death in 1702, and Juan de Herrera. Cascante's extant compositions are mostly villancicos. Herrera, a native of Bogotá, was *maestro de capilla* from 1703 until his death in 1738; his numerous extant compositions, many incomplete, include masses, settings of psalms and Lamentations and villancicos, demonstrating a high level of musical sophistication. The cathedral archives also contain a number of interesting villancicos for solo voice and accompaniment written between 1709 and 1724 by Juan Ximenez, one of Herrera's assistants. Of approximately 25 cathedral musicians known to have been active during the latter part of the 18th century, Salvador Romero is the most noteworthy, as *maestro de capilla* and for his extant output which includes Latin compositions. During the last quarter of the century, however, cathedral musical life declined sharply. By 1781, for example, the two organs were no longer playable. The arrival in Bogotá (1791) of Archbishop Baltazar Martínez Compañón (*d* 1797), an eminent artist and intellectual and the former cantor of Lima Cathedral (1768–78), could have improved the situation greatly; however, his death precluded any significant change.

The state of music in the cathedral deteriorated throughout the 19th century; permanent singers became very difficult to find. Many musicians tended to neglect their duties and the qualifications of the *maestros de capilla* were doubtful in several instances. For example, Juan de Torres, appointed in 1826, wrote a *Misa de feria* (1827) in extremely simple monophony 'for those days in which there are no singers', and the cathedral archives contain a hymn to St Peter (1844) with the indication 'tempo de valse', and a Lamentations setting for Holy Week in 'aire de valse' by Manuel Rueda, *maestro de capilla* in 1860.

Secular music-making in the colony was scarce. Only for the late colonial period do we have a few historical references indicating the presence in Bogotá of a band of musicians of the Regiment of La Corona (in 1784), under the direction of a Pedro Carricarte; the establishment of an instrumental ensemble of four violins, two flutes, two clarinets and a bassoon, also directed by Carricarte; other amateur ensembles; the activities of a professional German musician named Zeiner or Steiner; and the arrival of the first pianoforte. The composition of secular music (vocal or instrumental), however, does not seem to have taken place.

2. Republican period. A new phase in 19th-century Colombian music was marked by the presentation and later the cultivation of European operatic and symphonic repertories and styles. The leading composers during the first half of the century were Juan Antonio de Velasco (*d* 1859), Nicolás Quevedo Rachadell (1803–74) and Henry Price (1819–63). Velasco concentrated on opera arrangements for piano and military band pieces, and wrote numerous patriotic songs during the wars of independence (1810–19). He also organized a series of concerts in Bogotá to promote the Viennese Classical composers. Quevedo, of Venezuelan birth, worked to establish a regular concert life in Bogotá. Price, born and educated in London, moved to Colombia in 1840: with Quevedo and others, he founded the Sociedad Filarmónica (1847) with its own music school. This was the first step towards the founding by his son J.W. Price of the Academia Nacional de Música (1882), which ultimately became the Conservatorio Nacional (1909). Henry Price wrote many solo songs, overtures and piano pieces, among which a *Valse al estilo del país* (1843) is a stylized *pasillo* (Colombian folkdance).

Among the many composers active during the latter part of the century the first true professionals were Julio Quevedo Arvelo (1829–97), and, above all, José María Ponce de León (1846–82), the author of the only two operas (*Ester*, 1874, and *Florinda*, 1880) produced in Bogotá in the 19th century. He was a pupil of Gounod and Thomas at the Paris Conservatoire, and in his operas and sacred works (Requiem Mass, 1880) closely adhered to current European models. Works such as *La hermosa sabana* and *Sinfonía sobre temas colombianos* (1881) show his early concern for musical nationalism within a prevailingly romantic vocabulary. He wrote several pieces based on such Colombian folkdances as the *bambuco*, *pasillo* and *torbellino*. But the fact that his music was considered incomprehensible in his own country indicates that even standard European styles of the mid-19th century had not effectively penetrated Colombia's musical life. During the first few decades of the 20th century this situation was improved by a surge of activity in music education.

Composers associated with the Academia and later the Conservatorio included Andrés Martínez Montoya (1869–1933), Santos Cifuentes (1870–1932) and Guillermo Uribe Holguín (1880–1971), the first director of the conservatory and the most influential composer of his generation. He was trained in Paris at the Schola Cantorum under d'Indy, and acquired real competence in the handling of composition techniques. His large output includes academic pieces but also many works incorporating national elements, such as his Second Symphony, *Tres danzas para orquesta* op.21 and *Suite típica* op.43. His most important followers in the nationalist school were Jesús Bermúdez Silva (1884–1969); Daniel Zamudio, a noted folklorist; José Rozo Contreras, who made effective use of Colombian folk music; and Antonio María Valencia, founder of the conservatory in his native city of Cali.

The Orquesta Sinfónica Nacional was established in 1936 with Guillermo Espinosa as its first director. Espinosa was the chief of the music division of the Pan-American Union in Washington from 1953, promoting Latin American music through various periodical publications and the Inter-American Music Festivals (from 1958).

Composers of the next generations developed an eclectic style. Carlos Posada Amador combined neo-Romanticism with subjective nationalism. Roberto Pineda-Duque has written sacred choral pieces, organ fugues, concertinos and sonatas within a neo-classical style, with occasional use of dodecaphonic techniques. Fabio González-Zuleta has been successful in handling the traditional larger symphonic forms. Luis Antonio Escobar, who studied at the Peabody Conservatory in Baltimore and at the Berlin Hochschule with Boris Blacher, altered his style from neo-classicism via post-Webern serialism to a nationalistic idiom. Blas Emilio Atehortúa appeared in the 1960s as one of the few younger Colombian composers who won international recognition; he studied under Ginastera at the Institute Torcuato di Tella, Buenos Aires, and developed a highly personal style, using some national thematic and rhythmic material within forms drawn from the most advanced techniques of composition. In addition to Atehortúa, another composer with a clearer affinity for experimental compositional techniques was Jesús Pinzón (*b* 1928). The first director of the Bogotá PO, he developed an experimental line of creative thought, to which he referred as 'sonoptic', based on aleatory processes and open form. He also attempted to integrate Indian music of the Colombian Amazon with the large Western symphonic and choral forms, as in his cantata *Goé Payarí* (1982) or *Bico anamo*, based on Huitoto legend. The Belgian-born Jacqueline Nova (1935–75) wrote a number of significant works for chamber music ensembles and orchestras, as well as combining acoustic instruments with electro-acoustic sounds. Younger composers who combine daring and highly experimental creativity with references to their own national cultural environment, include Francisco Zumaqué (*b* 1945), Euclides Barrera (*b* 1949), Eduardo Carrizosa (*b* 1953) and Luis Pulido (*b* 1958).

II. Traditional music

Colombia's cultural heritage is derived from three principal sources: Spanish, sub-Saharan African and Amerindian. The first Spanish settlement on the mainland of the Americas was on the Caribbean coast of Colombia, where the city Cartagena de Indias was Spain's principal military base in the New World and a major distribution point for slaves brought from Africa (*c*1 million passed through its port while this trade was in progress).

Colombia occupies the north-western part of the South American continent. The isthmus of Panama, jutting north-westerly from the coast of Colombia, divides the coast in two, the southern part facing the Pacific Ocean and the north-western part facing the Atlantic Ocean (Caribbean Sea). In the south of Colombia the Andes divide into three cordilleras (mountain ranges), the easternmost running north into Venezuela, the central and the western ending near the northern extremities of the country. East of the cordilleras the Llanos, a broad plain, extends north-east into Venezuela. The plain gradually slopes into the rainforest of the Amazon valley.

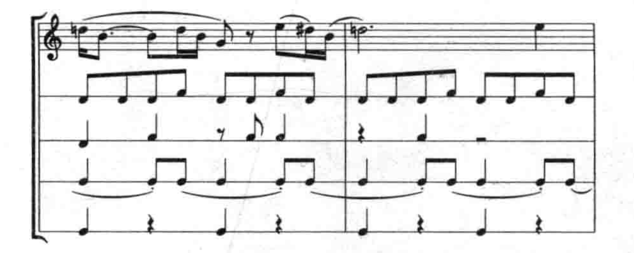
This extremely varied topography divides Colombia into five geographical-cultural regions: the Atlantic coast, the Pacific coast, the Andean region, the Llanos or eastern plains, and the Colombian Amazon (fig.1). On the Atlantic coast, also known as La Costa, the marshy areas near Panama, the arid Guajira Peninsula and the mountain mass at its base (the Sierra Nevada de Santa Marta) are inhabited primarily by Amerindians. The rest of the region is inhabited by a mixed race population that is of primarily Afro-Colombian and indigenous ethnic origins, with some European roots as well. Agriculture, cattle-ranching, fishing and tourism are the main economies. The Pacific

1. Map of Colombia showing geographical regions and distribution of the Amerindian tribes discussed

2. *Conjunto de cumbia of the Atlantic coast with guaches (tubular rattles), a caña de millo (clarinet), a llamador, a bombo and a tambor mayor (drums)*

coast, a narrow strip to the west of the Andes that broadens in the department of Chocó, near Panama, is primarily populated by Afro-Colombians, engaged in the fishing and lumber industries. Most of Colombia's population lives in the central Andean region of the country. The population of the Andean region, like that of the Llanos to the east, is primarily mestizo, a mixture of Spanish and Amerindian ethnic roots. Colombia's political and economic power is concentrated in its central Andean region, with a diversity of commercial sectors including coffee, textiles, flowers and livestock among other industries. The Llanos is primarily a cattle-raising area and forms part of the same cultural complex as the Venezuelan Llanos. Approximately 100 Amerindian tribes in Colombia speak their own languages; the Colombian Amazon is primarily populated by such tribes. Colombian geographers place the extreme north-western portion of the country, from the Gulf of Darien to the border of Panama, within the Pacific coastal region. Since this area, which is primarily inhabited by the Cuna Indians, faces the Caribbean Sea, it has here been incorporated into the discussion of the Atlantic coastal region.

The discussion below is based on recent research in Colombia by Lise Waxer, on published sources and on unpublished data collected in Colombia by George List, Abraham Cáceres, Manual Zapata Olivella and Elsie Fardig, or secured from other sources, and upon analysis of commercial and field recordings in the collections of the Indiana University Archives of Traditional Music. Many statements are necessarily generalizations since they refer to a constantly varying musical practice.



1. The Atlantic coastal region. 2. The Pacific coastal region. 4. The Andean region. 4. The Llanos. 5. The Amazon region.

1. The Atlantic coastal region. The principal musical style of the region is the *cumbia*, with its related genres, *porro* and *vallenato*. In the traditional dance known as *cumbia* proper, couples dance in a circle around seated musicians. The woman dances with shuffling steps, the man in a more animated zigzag pattern around her; there is much hip movement and the couples occasionally pass back to back. The *cumbia* is traditionally performed at night, lit by the bundles of candles that each dancing woman holds in a coloured handkerchief in her right hand. Although this practice is still maintained in remoter parts of the Atlantic coast region, traditional *cumbia* is now maintained primarily by folklore troupes, performing at Carnival and other festivals.

The accompaniment for the *cumbia* is provided by either of two ensembles: the *conjunto de cumbia* (or *cumbiamba*) and the *conjunto de gaitas*. The first consists of five instruments (fig.2). The only melody instrument is the *caña de millo* ('cane of millet'), known locally as the *pito*, a transverse clarinet consisting of a tube open at both ends with four finger-holes pierced near one end and a reed cut from the tube itself near the other end. The reed and the area of the tube immediately adjacent to it are covered by the mouth in playing. This instrument is a modified version of similar millet-cane clarinets of the Sudanic regions of Africa. In most cases the Colombian instrument is now made of *caña de lata*, the thin trunk of a small palm tree. The remaining four instruments of the ensemble are percussion. The *tambor mayor* and the *llamador* are single-headed drums of different sizes. The head is applied at one end with a flesh hoop consisting of a strong vine and a counter hoop of heavy wire; the drum is open at the bottom. A girdle of rope passes around the middle of the drum body. A single rope runs around the drum in a zigzag pattern connecting the girdle and the counter hoop. Wooden wedges are thrust down into the girdle and the drum is tuned by pounding the wedges downwards. The *tambor mayor* is held between the legs and played with both hands, the *llamador* on one knee and played with one hand. Both are of African origin. A

Ex.1 *Cumbia*, Cartagena; transcr. G. List

third drum, the *bombo*, has two heads attached in the same manner but tuned by a connecting rope lace. It is played with two sticks without heads or balls and is hit on either the right head or on the wood of the shell. The right hand usually strikes the head and the left the shell but both may strike either. Similar instruments are found in both Europe and Africa. The fifth player shakes one or two rattles; usually these are *guaches* (tubular rattles) made of bamboo or tin and filled with dried seeds, but sometimes large, round maracas are used instead.

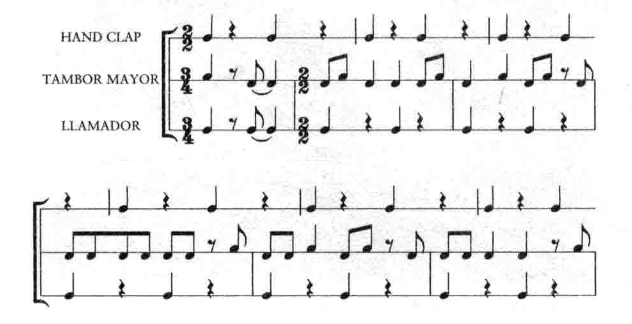
Ex.1 is a transcription of a section of a *cumbia* played by this type of ensemble. In the part for *tambor mayor* the notes below the line represent strokes near the edge of the head, which have more resonance, while the notes above the line represent strokes near the centre. In the part for *bombo*, notes written below the line represent strokes on the head, those written above the line represent strokes on the shell. In the past the *cumbia* was a solely instrumental piece but many *cumbias* are now provided with *coplas* or *cuartetos*, sung by one of the percussion players while the *pito* or *caña de millo* player rests.

The second ensemble that accompanies the *cumbia*, the *conjunto de gaitas* (fig.3), has two *gaitas* or duct flutes, a *tambor mayor*, a *llamador* and a maraca. The *ritmo* or genre played by this *conjunto* to accompany the *cumbia* is called the *gaita*. *Gaitas* are vertical duct flutes made of long tubes from a cactus-like plant (*cardón*). A head moulded of beeswax and vegetable carbon is placed on one end with a turkey quill inserted in it so that the breath blown through it breaks on the upper edge of the tube, partly escaping through a hole in the head. The *gaita hembra* ('female flute') has five finger-holes, the *gaita macho* ('male flute') two; one hole in each instrument is always stopped with wax. The *gaita hembra* is used for the melody; the player of the *gaita macho* plays a heterophonic part on it with one hand while shaking a maraca with the other. Parts for the *tambor mayor* and the *llamador* are similar to those played by the *conjunto de cumbia*. Traditional genres, the *porro* and the *puya*, are also played by both the *conjunto de cumbia* and the *conjunto de gaitas*.

The *gaitas* and maraca are of Amerindian origin. The trio of instruments is played by two men among the Kogi (Cágaba) and the Ika of the Sierra Nevada de Santa Marta, and in the village of Atánquez on the lower slope of this mountain mass, where they are used by the Spanish-speaking descendants of the Atánquez Indians. Such paired flutes are also found among the Motilón Indians of the Sierra de Perijá on the Venezuelan border, and among the Cuna Indians who live on the Darien Gulf near Panama; they are known as *kuizi* by the Kogi and as *tolo* or *suarra* by the Cuna.

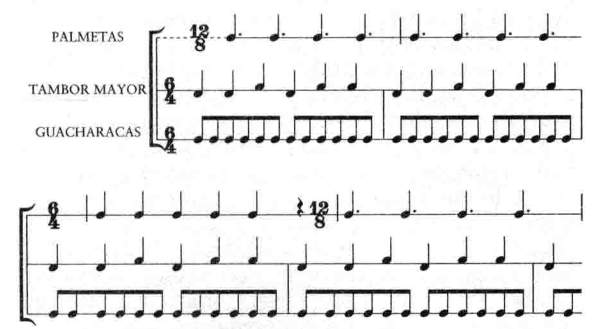
The music of two other dances of the area, the *bullerengue* and the *danza de negro*, have African characteristics. The *bullerengue*, an exhibition dance with much hip movement, is performed by a single couple, each partner being frequently and alternately replaced by another dancer. It is accompanied by a solo singer, a chorus of women, a *tambor mayor* and a *llamador*. The text is in litany form, into which *coplas* are inserted, and

3. Conjunto de gaitas of the Atlantic coast with a maraca, two gaitas (duct flutes), a llamador and a tambor mayor (drums)



involves much improvisation. The women of the chorus clap in time to their sung refrain, while the drums play in a pattern disjunct by half a beat to that of the clapping (ex.2).

Carnival is a particularly important context for public music-making and dancing on the Colombian Atlantic coast, especially in the city of Barranquilla, as in other parts of Latin America and the Caribbean. The *danza de negro* is a special Carnival dance performed by men. They strip to the waist, paint themselves blue, dance in a crouching position waving wooden swords, and accost passers-by demanding money or rum. Music is provided by a male vocal soloist and by men who play the *tambor mayor*, *guacharaca* and *palmetas* and also sing the refrain. The *guacharaca* is a rasp consisting of an incised tube of *caña de lata* (thin palm trunk) scraped by a *trinche* (metal fork). The *palmetas* are wooden paddles used instead of hand-clapping. In ex.3 the *palmetas* are in disjunct relationship with the *tambor* and *guacharacas*, an aesthetic influence which could be said to derive from West African polyrhythmic procedures.



In the early 20th century town brass bands derived from European influence began adapting the *cumbia* and *porro* to a more cosmopolitan style. Between 1905 and 1910, musicians in several towns began these adaptations, which were developed most strongly in the town of San Pelayo. The terms *pelayera* or *papayera* are used most commonly to refer to this kind of ensemble. During the development of this town band style on the Atlantic coast, the *porro* was established as an important semi-urban genre, paving the way for further developments in the cosmopolitan national style known as *música tropical* in the 1940s and 50s (see §III below).

Some older musical forms and practices exist. Certain *arrullos* (lullabies) and children's game songs have texts that can be traced to Spain. Their musical style, however, can be described as west European or pan-Caribbean, that is, they have musical characteristics that are found in English and French as well as in Spanish folksong. In some villages during *velorios*, or wakes for children, adults play special singing games, of which some, such as *El florón*, can be traced to the children's game repertory in Spain. Others, such as *A pilar el arroz*, are of local origin and display African influence in their free rhythm and overlapping call and response patterns. Music is not usually performed at the *velorios* for adults. An exception was the *lumbalú*, the music of a funerary cult at the town of Palenque de San Basilio that was founded in the early 17th century by refugee African slaves. Until the late 1960s the *lumbalú* was danced and sung by several elderly women to the accompaniment of drums in the house of the deceased.

Ex.2 *Bullerengue*, Mahates, Bolívar; transcr. G. List

Ex.3 *Danza de negro*, Mahates, Bolívar; transcr. G. List

Two types of work song are sung by men as solos or group songs in the rural areas: the *zafra*, used in agricultural labour, and the *vaquería*, sung while herding cattle. The texts consist of *coplas* or self-contained quatrains on philosophical or humorous topics, or verses from such *coplas*. Sometimes workers sing in turn, encouraged by cries from the others. The *vaquería* texts are sometimes about cattle, and the men leading the herd sing alternately with those in the rear. The music of both genres consists of improvised combinations of melodic patterns and does not have a definite tonality. The singing is in a very high tessitura.

As in Puerto Rico, Chile, Argentina, Uruguay, Cuba and other parts of Latin America, *décimas* (octosyllabic verses in patterns of ten lines; *see* DÉCIMA) are sung for the entertainment of others by skilled male performers. *Decimeros* (singers of *décimas*) invariably state that they are improvising their texts; in fact many *décima* texts are composed in advance and memorized. When textual improvisation does take place it usually consists of the combination and modification of known verses. Each *decimero* seems to have initial and cadential melodic formulae that he constantly uses. The music, however, generally has an improvisatory character and, like the work songs, is sung at a high tessitura. The *décima* melodies have a definite tonality. Most *decimeros* use the same general melodic contour, beginning at a high pitch and dropping to a cadence at the end of the fourth verse, then beginning high again and dropping to the same cadence point at the end of the tenth verse.

The *marímbula*, a large instrument of the African *mbira* family, was used in the past as the bass in popular ensembles. A large wooden box formed the resonating chamber; seven or more metal keys made from old phonograph springs were inserted between metal bridges and tuned by moving their secured end further in or out of the bridges. The player sat on the box with the keys between his legs and plucked them with his thumb and fingers.

A musical bow is still played by some Afro-Colombians and the Amerindians of the region. The bows used by the two groups differ in some respects; some scholars believe both to be African in origin, others that the bow used by the Amerindians is indigenous. Both are mouth-resonated, the bow being supported by the right hand. The bow used by Afro-Colombians is the larger; it is stopped by a short wooden rod held in the left hand, thus producing two fundamentals, and the cord is struck near the mouth with a thin piece of bamboo. On the bow played by the

Motilón and Guajiro Indians several fundamentals are obtained by stopping the cord with the fingers of the left hand, and tone is produced by rubbing the string with a thin piece of bamboo. This bamboo, used somewhat like a violin bow, is moistened by the mouth at frequent intervals to produce the necessary friction.

Another string instrument played by Afro-Colombians is the *carángano* or ground bow, probably of African origin. Resonance is produced by a box on which the player sits or by a cavity in the ground covered with a piece of tin. A piece of string is knotted, pulled through a hole in the top of the box or the piece of tin, and attached to a bent fence pole, a bent sapling, or a branch attached to a pillar of a house – any arrangement that will produce tension in the string. The player stops the string with the thumb and finger of the left hand and vibrates the part below with a wooden plectrum. Both the musical bow known as *marimba* and the *carángano* are now extremely rare. The *carángano* was the only instrument in the region primarily played by women, usually to accompany song.

The Motilón Indians play panpipes made of both bamboo and of the quills of bird feathers, and flutes made of human bone. The Cuna Indians play a panpipe made of two rafts bound together on which a melody is played in parallel 5ths. The only reed instrument of the Amerindians is an idioglot clarinet with a gourd resonator, played by the Guajiro.

2. The Pacific coastal region. The music and dance of this predominantly Afro-Colombian region combine strong African with strong Spanish traits. It is the only region where the marimba (xylophone) is played and where the Catholic hymn of praise, the *alabado*, has entered the folk repertory (as the *alabao*). The Pacific is divided between the south-west, where the marimba-based *currulao* predominates, and the Chocó (north-west), where brass band *chirimías* prevail. The Chocó is also one of the two regions in Colombia where *romances* whose texts can be traced to Spain are still sung.

The *currulao*, principal folkdance of the south-west, has major stylistic centres in Buenaventura, Guapi and Tumaco and across the border in Esmereldas, Ecuador. Although the dance is somewhat Spanish in character – no doubt the influence of the settlers who brought African slaves to work the region's gold mines during colonial days – the sound of *currulao* is unmistakably African in origin. The dance begins with men and women in rows facing each other; the man attempts to entice the woman to his side, his 'home'. Holding the upper torso and hips erect, the partners advance and meet, circle and change sides. This is then repeated. The man, foiled in his courtship of the woman, shows his displeasure symbolically by executing a *zapateo* which in this case, since the dancers are usually barefoot, involves striking his feet against the ground.

The music for the *currulao* is provided by a large ensemble consisting of a vocal soloist (a man or a woman), a chorus of women who shake *guasás*, a marimba played by two men, two *cununos* and two *bombos*. The *guasá* is a bamboo rattle similar to the *guache* of the Atlantic coast except that many seeds or sometimes chips of *chonta* (palm wood) are inserted through the wall of the bamboo into its cavity. These modify the timbre produced. The *cununo* is a single-headed drum resembling the *tambor mayor* of the Atlantic coast but is closed at the bottom except for a small hole. The *bombo* of the Pacific coast has a wooden flesh hoop like the European bass drum; it is struck on the head with a ball of cloth or rags on a stick, and on the wooden hoop with a headless stick.

The Colombian marimba is believed to derive from Central African marimbas and the Mande *balafon* of West Africa. It can have as many as 25 keys and as few as 21 (fig.4); 24 is usual. The keys are made from the wood of the *palma de chonta* (palm tree), which gives the Colombian marimba its characteristic sweet resonance. Each key has a resonating tube of *guadua* bamboo suspended perpendicularly below it. The keys are placed on the frame in a single row in groups of four, each group being separated from the other by a *pasador* (crosspiece) of *chonta*. The *pasadores* are part of the framework that supports the keys and resonators and also function as points of visual reference for the players. Beginning at the top of the keyboard with the smallest key and moving downwards, the groups of four keys are known alternately as *tablas duras* and *tablas blandas*. The resonating tubes are likewise cut from smallest to largest. In a group of eight the highest *dura* and the lowest *blanda* form an octave. A marimba keyboard of 24 keys is thus composed of three disjunct octave segments: 8765 4321, 7654 3217, 6543 2176. The seven highest keys are tuned to produce approximate neutral 3rds between keys 8, 6, 4, 2 and keys 7, 5, 3. The remaining keys are tuned in octaves with the keys above them. On the marimba itself the highest octave segment is to the right and the lowest to the left. Each of the two players uses two sticks tipped with small balls of raw rubber; one plays the *bordón* (lower part), the other the *requinta* or *tiple* (upper part). The *bordón* is an ostinato phrase repeated with slight variations.

Several musical forms are specific to *currulao*, each with its own distinctive rhythmic pattern or characteristic melody. These include the *currulao* proper, *abosao*, *jota chocoana*, *contradanza*, *caderona*, *bambara negra*, *berejú*, *makerule* and *pango*. Other terms, *bambuco viejo* and *bambuco moderno*, have also been used by musicologists (often in support of alleged connections between the music of the Pacific and the Andean *bambuco*), but this usage is very rare among Afro-Colombians themselves. Each has its own *bordón* which varies slightly from one

4. *Marimba of the Pacific littoral*

piece to another of the same genre. Ex.4 shows two *bordones* used in *pangos*. The *requinta* part of the

Ex.4 Two *pango bordones*, Buenaventura; transcr. A. Cáceres

marimba is improvised following the ground bass of the *bordón*. Ex.5 is an excerpt from another *pango* (percussion parts only). The *requinta* is in disjunct relationship with the *bordón* by only a semiquaver and the *guasás* are in vertical hemiola relationship with the *cununos* and *bombos*. The vocal parts enter after the percussion parts have been established. The soloist sings a phrase and is joined at the end in sustained harmonic 3rds by the chorus of women; this pattern is repeated several times and then performed in a shorter version, often with a counterpoint interposed by a member of the chorus. The women then sing a repeated word or phrase, again in 3rds.

A variation of the *currulao* form is the *juga*, which has its own particular *bordón*. In *juga* there are two vocal soloists, a man and a woman, and their parts form an argument or duel. The dance is performed in a spiral, the dancers moving from an outer to an inner circle and then out again.

Two other forms are sung by women with the accompaniment of *guasás*, *cununos* and *bombos* but not usually the marimba. The text of the first of these, the *bunde*, usually praises a patron saint but sometimes has a secular subject. The *arrullo* sung in this manner is about the child Jesus and serves the same function as the villancico or carol in the Andean region. In both forms the *entonadora* or the *cantadora* (soloist) begins and the *respondadoras* (the women of the chorus) join in repeated phrases or sections, usually singing in parallel 3rds.

The northern area of the Pacific coast, the Chocó, is characterized by brass band *chirimía* ensembles (fig.5). *Chirimía*, from a Spanish term for shawm or hornpipe, is commonly used in Latin America to designate fife-and-drum ensembles used in indigenous and mestizo ceremonial processions from highland Mexico through Central America and down through the Andes (in Colombia they are prominent from Popayán down to the Ecuadorian border). Although this format could be found in the lower San Juan river area of the Chocó through the 1960s, in the Chocó this term more commonly designates a town brass band ensemble similar to those of the Atlantic coast. At its most basic, a *chocoano chirimía* consists of clarinet, bass drum and cymbals, but usually also includes two or more trumpets, a small tuba known as *bombardino*, and a special drum rig called *pata e'gallina*, which entails two timbale-like drums, a cymbal and a wood block mounted together on a tripod that looks like chicken feet, hence the name. Sometimes a transverse flute with six finger-holes is used instead of a clarinet; it is usually made of the cane *carrizo* but in the Chocó it is also made of copper tubing. A double-headed drum, called *redoblante*, can also be used in place of the *pata e'gallina*.

The genres most commonly played by the *chirimía* are the *jota* and the *aguabajo*. Other genres are the *pasillo*, *abozao*, *tamborito* and *son chocoano*. The *danza*, *contradanza* and *corrido* are performed but less often than in the past. The *jota* is usually danced by a man and two women; the women dance in one spot while the man dances between and around them in a figure-of-eight, singing a *copla* as he dances. The accompanying music is usually in compound duple rather than simple duple metre. The percussionists play various rhythmic patterns that fit the metre; the *tambora* player sometimes produces a vertical hemiola relationship by playing a binary division of a beat while the others play a ternary division. African aesthetic principles such as call and response, repetitive structures, dense textures and polyrhythms are present. Most characteristic is the hemiola created by having the bass drum (*tambor*) play a binary division of the beat while the others play in triple feel. This is common in *jota* and *abozao*. Other forms have a strong duple feel emphasizing beats 2 and 4 in a manner similar to the *cumbia* of the Atlantic coast.

Throughout the Pacific littoral, music is performed at both the *velorios* for children and those for adults. A *velorio* for a child is called *gualí* in the Chocó and *chinguale* to the south in the Pacific littoral. Participants in the *gualí* or *chinguale* play singing games, sing *romances* and *décimas* and perform instrumental music. It is interesting that in this region the game song *El florón* is performed both by children in their play and by adults at the *velorio* for a child. The manner of performance is the same in both contexts, and the same on the Atlantic coast. The participants sit in a circle with their knees drawn up and pass an object round under their knees, while an individual in the centre of the ring attempts to grab it as it passes. At the burial of a child the people say farewell

5. Chirimía of the Chocó (Pacific coast) with redoblante and tambora (drums), platillos (cymbals), clarinets, trombone and baritone tuba

by singing *arrullos*, little lullabies in *copla* form. At the *velorio* for an adult the only music usually performed is the *alabao*, which is sometimes a biography of the deceased. It is sung by a group of women in rather imprecise tertian harmony, usually in the minor mode; sections often end with a harmonic major 3rd.

The *marímbula* (large thumb piano) was also known on the Pacific coast in the past. In this area its keys were made of *suncho* (metal strips used in crating boxes or cartons).

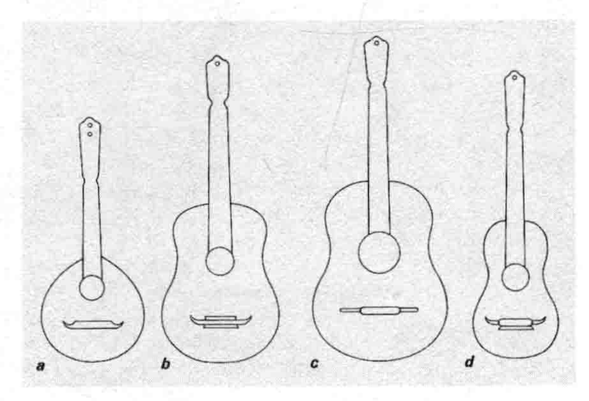
The music of three groups of Pacific coast Chocó Indians has been observed: the Noanamá living on the San Juan river at the border of the departments of Chocó and Valle de Cauca; the Noanamá of the Guapi region in the department of Cauca; and the Cholo, neighbours of the Noanamá in the Guapi region. The information concerning the Cholo was taken from Bermúdez Silva and Abadía Morales. Other sources consider the Cholo to be a group within the Noanamá; Cholo is a generic term applied to all Amerindians living in the Pacific coastal region of Colombia. The Noanamá have an annual agricultural ceremony during which a canoe-shaped drum (about 3 metres long) carved for the occasion by a shaman is hung from the ceiling of the shaman's house. A young woman plays it with two hard sticks to summon the god of fertility to listen to the ceremonial songs. A group of women dance anti-clockwise around the drum and player while an outer circle of men dance in the same direction playing end-blown or transverse flutes. The end-blown flutes carry the principal melody; the transverse flutes provide an accompaniment.

The Noanamá of the San Juan play beaked flutes in pairs. The Noanamá of Guapi have paired duct flutes with wax heads like the Cuna *tolo* or *suarra*; they also play a single-headed drum tuned with wedges in the same way as the *tambor mayor* or *cununo*, which may be an adaptation of the African tuning method to an indigenous drum. The Cholo have a small double-headed drum, played only by women, which is suspended from the left forearm by cords and played rapidly with the fingers. All three groups use large seashells incised at one end as signalling trumpets, to announce the beginning of a festival or to summon members of the family home from the fields.

The *jaibaná* (shamans) of the Noanamá and Cholo sing incantations for curing illness or casting spells in a high, throaty voice; the texts are symbolic and can be only partly understood by the uninitiated. All the incantations have a terrace-like melodic contour, beginning at a high pitch and descending nearly an octave, then rising to a medium level and descending again to cadence at a low pitch.

3. The Andean region. The Andean region consists of the high mountain plateaux of the country's three cordilleras, and parts of the Magdalena and Cauca river valleys. There is a group of such connected plateaux in the departments of Antioquia, Cundinamarca, Boyacá and Santander. This latter region of connected plateaux is referred to as the *altiplano*. Bogotá, the capital of Colombia, is in this *altiplano*, in the department of Cundinamarca. The inland region of Nariño department, which borders Ecuador, also forms part of the Colombian Andes.

Unaccompanied *romances* with texts that can be traced to Spain have been documented in the southern Andean region. All other song forms, however, are accompanied by instruments. Two types of ensemble accompany dancing and the singing of *coplas* in the Andean region. The first, consisting mainly of fretted string instruments, is clearly derived from Spanish sources (fig.6). The second, the *chirimía*, is probably derived from Amerindian music since the use of flutes and drums together is common among the Amerindians of the entire Andean region of South America. The string ensemble is characteristic of the *altiplano* and the central Magdalena valley, the *chirimía* of the southern Andean region.



The basic string ensemble of the Andean region is a trio, sometimes called a *murga*. The melody is played on the *tiple*, the *bandola* provides a chordal accompaniment or a counter melody and the guitar is used for both bass and chordal accompaniment (fig.7). The *tiple* is descended from a small Spanish instrument of the same name. It developed from four-, five- and eight-string prototypes of the mid-19th century to the 12-string modern form that

6. *Andean string ensemble: bandola, requinto, tiple and guitar, with rasp and drums*

was established around 1910–15. It is tuned in four courses of three strings each, to the pitches *e–e–e–b–B–b–g–G–g–d–D–d*. The *tiple* is usually plucked with the fingers, although a plectrum is used in some regions. The guitar is the typical Spanish instrument, with six strings (tuned *E–A–d–g–b–e′*) plucked with the fingers. The *bandola* is a descendant of the Spanish *bandurria*; it resembles a mandolin but has a flat back. By the 1890s the Colombian *bandola* adopted its definitive pear-shaped form. It has six courses of strings, three each in the upper four courses and two each in the lower two courses, and is tuned *F–B–e–a–d′–g′*. It is played with a plectrum and, as in mandolin playing, the effect of a sustained tone is produced by a tremolo across the course of strings. Another guitar-like instrument called *requinto* is used in place of the *bandola*, especially in the north-eastern department of Santander. Smaller than a *tiple*, the *requinto* has five courses of two strings each. The ensemble is sometimes augmented by a second *bandola*, the two playing in the characteristic parallel 3rds and 6ths. A larger Andean ensemble, the *estudiantina*, consists of a large number of fretted string instruments and *panderetas* (tambourines).

The *chirimía* of the Andean region always includes transverse flutes (usually two; fig.8). It is distinct, both in format and in repertory, from the Afro-Colombian *chirimía* of the Chocó. As well as a *tambora* (bass drum) and a *redoblante* (snare drum), maracas and a rasp are often played. The maracas, smaller than those used on the Atlantic coast, are known as *gapachos* as the seeds used are those of the *gapacho* plant. The resonator of the rasp is made of bamboo or an elongated gourd, both incised on the side to which the metal fork is applied. The *platillos* (cymbals) of the Pacific coast *chirimía* are not used in the Andean *chirimía*. The *chirimía* is at times augmented by a third flute, ocarinas, metal whistle-flutes and *panderetas*; similarly flutes and drums have been introduced into the string ensembles. Andean *chirimías* are often found during the pre-Christmas season, when groups of small boys form itinerant bands that perform to be rewarded with small amounts of money.

The *bambuco* is the characteristic dance of the Andean region. The dance figures, like those of the *cumbia* and the *currulao*, symbolize the man's courtship of the woman. In the *bambuco* the woman retreats when the man advances and follows him when he retreats. With hands on hips the two partners dance facing each other, dance side by side touching elbows as they turn, and dance back

7. *Instruments of the Andean string ensemble: (a) bandola; (b) tiple; (c) guitar; (d) requinto*

to back with shoulders touching, turning from side to side so that they can see each other's faces. At the end of the dance the man takes a coloured handkerchief from his neck and offers it to his partner as a gesture of engagement, then goes down on one knee and plaits and unplaits a corner of the handkerchief. Each area of the Andes has its own version of the *bambuco* dance, with variations in the number of steps. The music of the Andean *bambuco* is distinct from that of the *bambuco viejo* or *bambuco moderno* of the Pacific coast. There is considerable dispute over the origin of the Andean *bambuco*: because of its name, some writers assumed that it was brought to the highlands from the Pacific coast, having been derived from the *currulao*, while others believed it to be a purely mestizo development of the *altiplano*. It is possible that the confusion exists because of mention of the *bambuco* being performed by black slaves in *La María*, the classic 19th-century novel by Jorge Isaacs, which is set in the Cauca river valley near the present-day city of Cali. While the slaves probably played the music preferred by their masters, who were culturally closer to the Andes interior of the country, it is not clear whether the *bambuco* mentioned in the novel had ties to Afro-Colombian traditions of the Pacific.

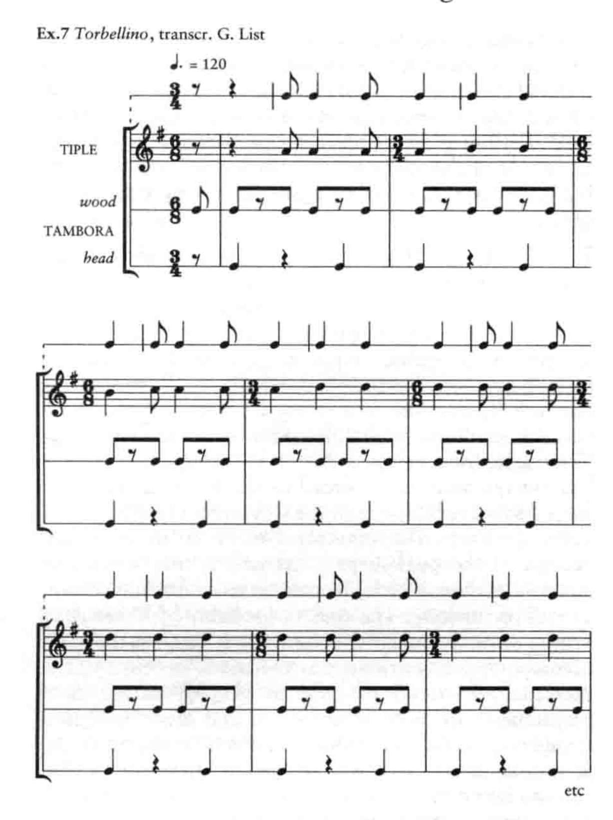
It is well established that *bambucos* were composed and published in the 19th century in Bogotá. Ex.6 is a section of a well-known *bambuco*, the *Cuatro preguntas*, composed by Pedro Morales Pino (1863–1926) (the introduction has been omitted). This example illustrates the typical accompaniment of the *bambuco* characterized by bass notes on the first and third beats of a rapid triple metre and a rest in the broken chordal pattern on the second beat. Rests in the melodic part that coincide frequently with those in the accompaniment figure are also characteristic of the *bambuco*; there are two in ex.6.

Ex.6 *Cuatro preguntas, bambuco* (Pardo Tovar and Pinzón Urrea, 1961)

The melody is in a highly syncopated relationship with the accompaniment. Although *bambucos* are written in simple triple metre (3/4) the rhythmic effects are felt as a two-against-three polymetric pull, more easily conceived of in 6/8 metre. The disjunct two-against-three feel is common throughout Latin America and is referred to by musicologists as *sesquialtera*. It is believed to have its

8. Chirimía of Caldas (Andean region) with two flutes, rasp, gapachos (maracas), redoblante and bombo (drums)

origins in the Moorish influence on Andalucian music, as found in traditions such as flamenco. The harmonic structure of the *bambuco* is European, if not specifically Spanish. Although *bambuco* is traditionally performed by a small string trio, one variant, the *bambuco sanjuanero*, adds cane flute, shakers, friction drum (*puerca*) and a square frame drum, *tambor chimborro*. Other variants of the *bambuco* are the *rajaleña* with picaresque stanzas, *fandanguillo* (where singers trade verses in a dual or 'challenge'), the *vuelta antioqueña* and the *guaneña*.



A second common Andean musical genre is the *torbellino* ('whirlwind'); this is characteristic of the department of Boyacá where it is used to accompany two dances, the *baile de tres* and the *danza de la trenza*. The *baile de tres* is danced like the *jota* of the Chocó, with one man weaving a figure of eight pattern around two women. The *danza de la trenza* is a maypole dance performed in honour of a patron saint, on Corpus Christi and at Christmas. Ex.7 is a section of a *torbellino* performed on a *tiple* and a *tambora*. The *tambora* part is written on two lines, the upper part representing strokes on the wood, the lower part strokes on the head. The *torbellino* is also characterized by *sesquialtera* rhythmic feel with the *tiple* performing in triple metre against the duple pulse of the *tambora*. According to Abadía Morales, the *torbellino* traces part of its origins to the *karakeney*, a travelling song of the Yuco-Motilón Indians. While *torbellino* is usually peformed in string trio format, cane flutes and percussion such as mule jawbone, reed shakers (*quiribillo*), armadillo shell and large friction drum (*zambombia*) may also be added.

The *guabina*, a genre typical of the departments of Santander and Tolima, is primarily used for singing *coplas* rather than for dance accompaniment. It is in triple metre and has a medium tempo, with frequent sections of a slower tempo in free rhythm. Other common dance forms in the Andean region are the *pasillo*, the *danza* and the *pasodoble*, all of them derived from Spanish colonial influence. A genre known as the *bunde* is also heard in Tolima department, and is considered to be a mixture of *bambuco*, *torbellino* and *guabina*. It differs from the genre of the same name common to the Pacific coast.

Among the Amerindian tribes living in Colombia at the time of the Conquest, the Chibcha of the *altiplano* had the most highly developed culture. They vigorously resisted the Spanish and as a result only a remnant of the tribe remains. According to the chroniclers the Chibcha played the maraca and other rattles, drums with skin heads, flutes and ocarinas. Trumpets were made of clay, metal and large seashells obtained by commerce from the coast. Great value was placed on these conch-shell trumpets which were used for signalling and for encouraging warriors in battle; they were often used as burial offerings.

Of existing indigenous groups, observations have been made on the music of the Guambiano and Paez of the department of Cauca and the Inga of Putumayo. All these groups are acculturated to some extent and, at least nominally, profess the Roman Catholic faith. They have *conjuntos* (ensembles) of transverse flutes with six finger-holes and double-headed drums similar to the *tambora* and *redoblante* of the *chirimía* (one such ensemble among the Paez is even referred to as a *chirimía*; fig.9). These ensembles have as many as three flutes and three drums of varying sizes. The music played usually has no specific

Ex.7 *Torbellino*, transcr. G. List

title but is identified by the particular occasion on which it is used: a procession, wedding celebration or festival such as Christmas. The first flute begins with a flourish, the other flutes enter one after another and the percussion then follows. Polyrhythms played on the head and shell of the large drum are like those produced on the *tambora* in the Andean and Pacific *chirimía*. Putumayo lies on the border of Ecuador, and the Inga celebrate the Carnavalito, a festival common in the southern Andes. The *carnavalito* dance is performed by women and men in concentric circles, each dancer carrying a musical instrument or a noise maker. These instruments include a small double-headed drum, played with one stick, known as *caja*. All dancers not playing wind instruments also sing.

9. Paez flute and drum ensemble of Cauca (Andean region)

Panpipes are played by both the Paez and the Inga. Among the Inga the cow's horn is used as a trumpet, and a whistle made of the shell of the land snail is played only by women. Another Inga instrument is made of a small turtle-shell: a piece of resin is placed at one end of the underside of the shell and is rubbed vigorously with the hand, the tone produced being amplified by the resonance of the shell.

4. THE LLANOS. The Llanos is the large region of grassy plains that stretch from the foothills of eastern Colombia into south-west Venezuela. The music of the Llanos is dominated by the recreational dance style known as *joropo*. In Colombia, this music was traditionally performed by a small ensemble consisting of the four-string *bandola llanera*, the four-string CUATRO, vocals and a pair of small maracas (also known as *capachos*). In Venezuela, by contrast, a 34- or 38-string diatonic harp has always been used instead of the *bandola*, although harp was played in parts of the Colombian Llanos during colonial times. The *bandola llanera* is an elongated version of the pear-shaped instrument, also known as *bandola pinpón*, which, in contrast to its Andean cousin, carries the melody. The *cuatro*, probably of Venezuelan origin, came to replace the eight-string TIPLE as the main accompaniment instrument by the late 19th century. The maracas are round or oval in shape, bearing clear resemblance to indigenous rattles, and are played in a straight up-and-down fashion, rather than on an angle, as is done in the Caribbean. A large friction drum called *furruco* and a mule jawbone (*carraca*) were also used in some areas of the Llanos, indicating probable influence from Santander and Huila provinces, where these are also played. A notched scraper made from a length of cane, called *charrasca* (similar to the Atlantic coast *guacharaca*) was also used. With the influence of commercial *joropo* recordings from Venezuela in the late 1950s, the harp usurped the *bandola* in Colombian practice. Electric bass guitar has been added in urban, stage-orientated formats to reinforce the bass lines of the harp.

The *joropo* is a courtship dance, where a symbolic play of advance and rejection is enacted between the man and the woman. The term *joropo* is believed to derive from the Arab-Andalucian word *xärop* (*jarabe* in Spanish). The Andalucian influence is quite evident in the foot-stamping of the dance, the driving two-against-three *sesquialteras* or hemiolas between the harp, *cuatro* and maracas, and the impassioned, soaring wails (*gritos*) which characterize the vocal melody. Variants of the *joropo* include the *pasaje*, a slow, lyrical song form; the *corrido* or *corrío*, derived from Spanish epic *romances* or ballads; and a number of subvariants of the *seis*, including *seis por ocho*, *seis por derecho*, *figueriao*, *atravesao* and the *seis por numeración*. The *galerón*, an archaic colonial musical form of the Llanos, is now rarely performed. Through the second half of the 20th century, the *joropo* has become an increasingly sophisticated genre, aimed more at urbanized audiences who listen rather than dance. The repetitive, participatory nature of traditional *joropo* has been usurped by an emphasis on virtuoso instrumental technique, sectional breaks, complicated cross-rhythms improvised on maracas, and dazzling riffs on the harp and *cuatro*.

Despite the dominance of the *joropo* in contemporary musical life on the Llanos, other musical forms and practices dating from colonial times have been maintained, albeit with decreasing vigour. A body of traditional work songs associated with cattle-herding, milking, the shoeing of horses and other ranching activities still exist. Religious genres include Christmas *aguinaldos*, and the *tonos* and *batallas* which are sung during the funerals of small children (*velorios de angelitos*) and also when asking favours of specific saints in domestic ceremonies known as *velorios de santo*. A processional carnival genre known as *negrera*, derived from the colonial Spanish *auto de fé*, has survived in the town of Arauquita. It is performed in early December and uses an ensemble of cane flutes, *cuatro*, drums, friction drum, and notched scrapers.

5. THE AMAZON REGION. Of the linguistically differentiated Amerindian groups living in the Colombian Amazon region the music of the Huitoto (Witoto) and Tucano, who live in its south-eastern part, is discussed here. The Huitoto play *juaraï*, slit-drums which are used for signalling and are made from sections of tree-trunks burnt out so that the sides are of different thicknesses. They are played with wooden sticks whose rubber heads are covered with a fibre web, and are used in pairs, one drum called 'husband' and the other 'wife': four tones can be produced on these drums. During the fiesta in which these drums are made, men and women sing in separate groups performing bawdy songs aimed symbolically against the genital organs of the opposite sex. The Huitoto also have panpipes with varying numbers of tubes, and flutes made of the bones of their enemies. Ceremonial songs and dances involving male-female choruses are also common.

The Tucano have a great variety of musical instruments, all played only by men. Large bark horns represent ancestral spirits and are played only at the initiation rite for boys and at the mourning rite for a man of status. They are believed to have the power of ensuring male physical growth and sexual vigour; this power is transferred to cord whips by placing them in the horns, and the boys in turn receive it when they are whipped during the initiation ceremony. The horns are 1 to 5 metres long; the very long horns are used only in the mourning ceremony. They are made of strips of tree bark which are coiled and reinforced with lateral strips and hoops of wood. A mouthpiece made from the *paxiumba* palm is inserted.

The Tucano use various sizes of notched flutes, duct flutes, cane and bamboo panpipes and flutes made of the bones of deer, jaguar and egret. Large duct flutes made from the stems of the *paxiumba* palm, some over a metre long, also represent ancestral spirits and are played in the boys' initiation rite. These are believed to be the largest flutes of the South American aborigines. The ancestral horns and flutes are stored underwater in a stream bed between rites, and women are forbidden, on pain of death, to look at them. Large groups of men often play panpipes antiphonally, and men also play panpipes as women pound cocoa leaves in paired mortars of different sizes.

The Tucano also play an instrument in the form of a turtle-shell, similar to that of the Inga of western Putumayo. The shell is grasped between the calf and thigh under the bent knee and is rubbed at the waxed end with the palm of the hand. Often one man plays both the turtle-shell and a panpipe together. Large maracas are frequently used to accompany the panpipes. Stamping tubes are used in dancing and circlets of rattles made of fruit shells are tied to the right ankles of male dancers.

Whistles made from the skulls of deer or monkeys are used for signalling.

III. Popular music

Throughout the 20th century Colombian popular music has displayed a vibrant fusion of traditional and contemporary currents, reflecting and reinforcing larger cultural and economic developments in the country. While often closely tied to the geographically and culturally diverse local traditions, popular styles in Colombia have usually been tied to national and transnational channels of diffusion (e.g. radio and records), allowing for the development of cosmopolitan popular identities that transcend local culture while remaining tied to it in specific ways.

During the late 19th and early 20th centuries, Colombian music was identified at the national level by the Andean *bambuco*. This genre was one of the most popular forms among the white and mestizo population of the Andean interior. Despite the popularity of the waltz-like *pasillo* in Colombia, the prominence it also enjoyed in neighbouring Ecuador and Venezuela did not lend *pasillo* to being upheld as a national musical style. According to Peter Wade, the nationalist image of *bambuco* developed not only within the context of Latin American nationalism, but also as a response to the incipient internationalization created by the fledgling record industry (Wade, 2000). *Bambuco* was the first widely recorded Colombian genre, often simply labelled *canción colombiana* – 'Colombian song'. In contrast to the string trio format traditionally used in the Colombian interior, these records featured cosmopolitan dance orchestras that played dozens of other 'ethnic' and popular ballroom genres (e.g. waltz, mazurka, bolero, *ranchera*, tango, fox-trot etc.). Although musicians began recording *bambucos* in New York as early as 1910, one of *bambuco*'s greatest commercial performers was also one of its last: Sarita Herrera, who recorded in the late 1930s and early 40s. Notably, the *bambuco* reinforced the image of a white-mestizo national culture, in contrast to Colombia's African and indigenous ethnic roots.

During the 1930s and 40s, dance band arrangements of Afro-Colombian styles from the Atlantic coast began to grow in popularity. Called *música tropical*, this style was similar to the ballroom rumba (a variant of Cuban *son*) that was popular throughout the Americas and Europe, although with a simpler rhythmic base and more florid melodic style. The process of adapting traditional rhythms and melodies from the *conjunto de gaita* began in the first decades of the century, when small town brass bands on the Atlantic coast, called *papayeras*, began performing arrangements of local genres. The *porro*, a slower version of the *cumbia* with vocals, was especially favoured. The famous town band of San Pelayo pioneered developments in *música tropical* by taking the *porro* and adding a brief introductory section in *cinquillo* rhythm, modelled after the Cuban *danzón*. The characteristic accents on beats 2 and 4, traditionally played by the *llamador*, were taken over by the bass drum and also played on the cymbals, a practice adapted in *música tropical orquestas* (dance bands) where they are played on a ride cymbal. The rest of the band adds to this rhythmic swing by establishing a counterpoint of jocular, arpeggiated phrases between low and high brass instruments. Notably, the trademark 'out-of-tune' brass of the *papayeras* was smoothed out in later *música tropical* dance bands, in conformity with cosmopolitan tastes. The songs played by these bands are strophic forms, with basic harmonic progressions. An important contribution of the *papayeras* was their distinctive melodic style, adapted by later dance orchestras. Using the short melodic cells found in traditional *cumbia*, these bands developed a repertory of stock phrases based on triadic arpeggios and wave-like melodic curves. A well-known *cumbia*, *La pollera colera*, is a good example of this kind of melodic treatment (ex.8):

Ex.8 Opening bars of *La pollera colora*

The process of adapting traditional rhythms and melodies to more cosmopolitan ensembles continued with the emergence of early *música tropical* bands in Cartagena and Barranquilla during the 1930s, such as the Orquesta Sosa and the Atlántico Jazz Band. During the 1940s and 50s the pioneers Lucho Bermúdez and Pacho Galán composed and arranged big-band adaptations of *cumbias*, *porros* and *gaitas*, popularizing the sound which became consolidated as the new national music of Colombia. Galán even developed a new rhythm called *merecumbé*, a fusion of *cumbia* with the Colombian *merengue*, played in 6/8 metre. The first important *música tropical* hit was *Se va el caíman*, composed by José María Peñaranda in 1940. Other landmark songs include Bermudez's *Carmen de Bolivar*, *Salsipuedes*, *Tolu*, *San Fernando* and *Colombia, tierra querida*, and Galán's *Ay cosita linda* and *El merecumbé*.

The transformation of *música tropical* from a regional sound to a national musical emblem signals a key moment in Colombian social history, in which growing international currents affected the economic and political climate of the country (Wade, 2000). While the coastal regions remained peripheral to the centres of power, they certainly were at the forefront of Colombia's growing international trade in coffee, livestock, mining and other exports. As a result of these influences, the cloistered regionalism marking 19th-century national identity shifted to one that was more cosmopolitan in outlook and more open (to a degree) to the ethnic and cultural diversity within its borders. Although the Afro-Colombian roots of *música tropical* were initially scorned by élite audiences as lascivious and vulgar, the cosmopolitan cachet of other international styles such as Cuban rumba and bolero, Argentine tango, Mexican *ranchera*, Brazilian *maxixe*, etc., spurred a more positive attitude to *música tropical*, in which the sensual 'hotness' of Afro-Colombian rhythms were reconfigured as desirably exotic. *Música tropical* also offered a homegrown response to the international vogue for Cuban music, a sound that was both Caribbean and uniquely Colombian at the same time. Ironically, the development of *música tropical* also involved an appropriation and neutralization of potentially disruptive forces from the minority mixed-race black and indigenous population of the Atlantic region, under the guise of celebrating a national heritage. By the late 1950s, *música tropical* had established a foothold in the leading social clubs and ballrooms of the country.

During this same period, composers from the Pacific coast adapted the traditional marimba-and-drum-based CURRULAO to more cosmopolitan formats, first for solo voice and acoustic guitar, then for cosmopolitan dance band. Among the most important innovators in this process were Petronio 'Cuco' Alvarez and 'Caballito' Garcés. In 1948, Garcés released *La muy indigna*, the first *currulao* to be recorded for voice and guitar, and a tune that broke national record sales that year, outstripping even *música tropical* numbers. Alvarez is best known for his composition *Mi Buenaventura*, a Colombian standard that has become an emblem for the port of Buenaventura, recorded by Tito Cortes in the early 1950s but widely popularized by Peregoyo y su Combo in the late 1960s. Peregoyo (Ernesto Urbano) was a key influence in the Pacific region, fusing *currulao* with Cuban-based *salsa*, *música tropical*, rock and other contemporary influences. His band enjoyed a brief moment of national prominence in 1968–72, and helped to push *currulao* a bit further into the national arena. Owing in part to the economic and cultural marginalization of the Pacific littoral, however, *currulao* has never enjoyed the same prominence as *música tropical*.

Throughout the 1960s, *música tropical* remained the national Colombian style. In the interior of the country, small combos comprising keyboard, electric bass, drumkit and only two or three horns simplified *tropical* rhythms, creating a commerical variant known as *raspa* or *chucu-chucu*. Recordings by groups such as La Sonora Dinamita, Los Corraleros de Majagual and Los Graduados enjoyed a brief national popularity, but had a greater impact outside the country, spreading a simplified form of *cumbia* to Mexico, Central America, Ecuador, Peru, Bolivia and Chile, where this style became extremely important.

Another important current from the Colombian Atlantic coast is the *vallenato*. Related to the traditional *cumbia*, *vallenato* originated in the area around the city of Valledupar in the 1940s and 50s. Performed by an ensemble consisting of accordion, vocals, *caja* (small double-headed drum) and *guacharaca* (notched gourd scraper), *vallenato* music is similar to *cumbia* in accenting beats 2 and 4, but places stronger emphasis on the crotchet-quaver rhythmic cell than *cumbia*. Melodic strophes are punctuated by brief accordion interludes. The two principal forms of *vallenato* are the *merengue* (which is played in 6/8 metre) and the *paseo* (which is played in simple duple metre). *Vallenato* texts typically centre on life and heartbreak in the semi-rural regions of the eastern Atlantic coast. The most important pioneers of *vallenato* were Rafael Escalona, Alejandro Durán, and Juan Polo Valencia.

Unlike the cosmopolitan *música tropical* style, *vallenato* was seen as an unsophisticated, plebeian music through the 1950s and 60s. During the 1970s, *vallenato*'s popularity grew with the addition of electric bass (first introduced by Los Corraleros) and the incorporation of a more plaintive singing style adopted from Mexican *ranchera*. A key factor in the national rise of *vallenato* during this decade was the growing economic power of the marijuana drug cartels around Santa Marta, which patronized *vallenato* musicians and provided resources for recordings and national distribution. Through the 1980s, the commerical *vallenato* ensemble was further enlarged, with back-up singers, keyboards and Cuban percussion. Lisandro Meza and Alfredo Gutiérrez were key musicians during the 1970s, along with Binomio de Oro and Diomedes Díaz, who reigned into the 1980s and 90s. By the early 1990s, *vallenato* had come to replace *música tropical* as the new popular Colombian sound. Its prominence was cemented by the unprecedented success of the album *Los clásicos de la provincia*, by former *balada* singer Carlos Vives, revamping old *vallenato* classics by Rafael Escalona in new pop-rock arrangements. After this release, several new groups began recording contemporary rock-tinged arrangements of classic 1940s and 50s *vallenato* and *música tropical* tunes, in a commercial, youth-oriented trend called *pop tropical*.

SALSA and its Cuban-based antecedents have formed the other major current of popular music in Colombia during the 20th century. Salsa is a popular dance music that was developed by Latinos in New York during the 1960s and 70s, based largely on Cuban styles (e.g. SON, *guaracha*, *mambo*, *chachachá*), and incorporating Afro-Puerto Rican elements and North American jazz and rock influences. In the early 1920s Cuban radio broadcasts began to be picked up by short-wave radio sets in Colombia, and by 1927, 78 r.p.m. recordings of Cuban music were available in Barranquilla, brought by sailors on Caribbean merchant ships. By the 1930s and 40s, sailors had also introduced recordings of Cuban music to the Pacific port of Buenaventura, where they spread inland to Cali. This process set the stage for the adoption of salsa in Colombia during the 1960s and 70s. Cali, in particular, lacked a strong local tradition and hence adopted salsa as its own representative style, as a symbol for the city's rapid urbanization after 1960 and also in order to mark the historical sense of difference from the rest of the nation.

The first major Colombian salsa group was Fruko y sus Tesos, founded by Ernesto 'Fruko' Estrada (formerly of Los Corraleros) in 1971 and still active today. Based in Medellín, the capital of the Colombian recording industry, Fruko's band was fronted by two singers from Cali, 'Piper' Pimienta and Wilson Manyoma, and the rising Barranquilla star Joe Arroyo. Pimienta returned to his own group in 1975; Arroyo set out on his own in 1980. Barranquilla and Cali have long rivalled each other for the title of Colombian salsa capital, both of them boasting numerous salsa dancers, record collectors and musicians. Cali, which had a vibrant popular culture of dancing to salsa records during the 1960s and 70s, experienced an unprecedented explosion in live local bands during the 1980s and 90s, said to have been supported in part by the growth of the Cali cocaine cartel. Among the bands that rose to international prominence during this time were Grupo Niche, Guayacán, and La Misma Gente. During the early 1990s, 11 all-women salsa bands were also established, unique in international salsa. The boom of Cali's live salsa scene consolidated its supremacy as the centre of Colombian salsa and cemented its position as a world site for salsa performance and consumption.

In addition to national and international popular styles, three other genres bear notice. *Carrilera*, a working-class and semi-rural lyric genre form performed on guitars, has been popular in Antioquia department since the 1950s. Similar to Dominican *bachata*, *carrilera* expresses themes of hearbreak and domestic strife, often with explicitly ribald lyrics. Argentine tango, disseminated to Colombia via recordings, has also become very important in Antioquia, especially in urban centres such as Medellín

and Maizales. Finally, the commercial Spanish pop *balada* has been promoted in Colombia by the international record industry since the 1960s, and romantic crooners such as Julio Iglesias and Leo Dan have also become part of the national urban popular soundscape.

GERARD BÉHAGUE (I), GEORGE LIST/LISE WAXER (II), LISE WAXER (III)

Colombini, Francesco (*b* Carrara, 1573; *d* after mid-1630s). Italian composer and organist. Fétis gave his date of birth as 1573; sources citing him as organist of the church of the Eremitani at Padua in that year would seem to be in error. His only documented employment was as an organist at Massa Carrara (now Massa del Prencipe), from 1623 to the mid-1630s. Except for a book of madrigals (two more appear to be lost), his entire surviving output is sacred and reflects the development of the concerted style during the first half of the 17th century. His work was notably popular with the printing house of Phalèse at Antwerp about 1640.

WORKS

Madrigali concertati, 5vv, bc (Venice, 1618, 2/1640)
Messe . . . con motetti, 5–10vv, bc; lost, listed in *Indice* (1621)
Completorium cum antiphonis ac litaniis, 5vv, op.3 (Venice, 2/1640)
Motetti concertati, 2–4vv, bc (org), op.4 (Venice, 1623, 2/1639 as Nectar caelicum . . . libro II)
Motetti concertati, 2–5vv, bc (org), Libro III, op.6 (Venice, 1626, 2/1638 as Mel musicum)
Concerti ecclesiastici, 2–5vv, bc (org), libro IV, op.7 (Venice, 1628, 2/1641)
Salmi concertati, 4vv, bc, libro I, op.9 (Venice, 1634)
Ambrosia sacra sive cantiones sacrae, 2–7vv, bc, liber III (Antwerp, 1639, 2/1646)
Madrigali, 5vv, ?bc, libro secondo, libro terzo; lost, listed in *Indice* (1649)
1 motet in 1611[2], 2 motets in 1615[5], 1 motet, 8vv, in *A-KR*, 1 motet, 3vv, in *PL-WRu* (lost)

Colombo, Giovanni Antonio. *See* COLOMBI, GIOVANNI ANTONIO.

Colombo, Giovanni Bernardo. *See* COLOMBI, GIOVANNI BERNARDO.

Colón, Fernando [Hernán] [Columbus, Ferdinand] (*b* Córdoba, 1488; *d* Seville, 12 Sept 1539). Spanish bibliophile and music collector. The illegitimate son of Christopher Columbus, he received a thorough education at the court of the Catholic Monarchs. From his earliest years he had a great passion for travel and accompanied his father on a journey to America. Later he made several extensive journeys through Europe, at first with Charles V and later on his own account. He took advantage of his journeys to acquire the best books he could find on many subjects, including music. He kept an exact account of all his acquisitions, with details of the most important ones; in each volume he noted the place and date of purchase and the price. He also compiled careful lists of his library. By the end of his life he had an extremely important library of more than 15,000 items, including numerous manuscripts; on his death he left the whole collection to Seville Cathedral. Regrettably, nearly three-quarters of the books have been lost; only some 4000 volumes remain. Among them, nevertheless, there are some very valuable items, ranging from medieval manuscripts to unique prints of Petrucci and theoretical works. His catalogues also largely survive and provide details of early printed music which has since been lost. In 1992 the library was renamed the 'Institución Colombina' and, together with the cathedral archives, was opened to the public.

JOSÉ LÓPEZ-CALO

Colón, Teatro. Opera house opened in BUENOS AIRES in 1908 (preceded by a theatre of the same name that was active 1857–88).

Colón, Willie [Colón Román jr, William Anthony; 'El malo'] (*b* South Bronx, New York, 28 April 1950). American bandleader, composer, arranger, trombonist, popular singer, producer and actor. Dubbed 'El malo' (the 'bad boy') of salsa, he began playing the trumpet in 1963 with the teenage band the Dandees. Switching to trombone, he made his professional début at 17 with the album *El malo* (Fania, 1967). Both as a bandleader and a member of the Fania All-Stars, he quickly moved to the fore of the burgeoning New York salsa scene, cementing the raw, trombone-heavy 'New York sound' inspired by earlier artists such as Eddie Palmieri and Mon Rivera. Between 1967 and 1973 he made a series of important recordings with vocalist Hector Lavoe, which included the albums *Asalto Navideño I* and *II* (Fania, 1972 and 1973) with *cuatro* virtuoso Yomo Toro, where traditional Puerto Rican Christmas *aguinaldos* were fused with salsa. During his second period (1976–82), Colón recorded several albums with Ruben Blades, his powerful arrangements serving as a perfect complement to Blades's lyrics. He began fronting his own bands as a lead vocalist after 1982 and has continued to be a popular star.

Colón's output has been prolific, with over 39 albums and 11 Grammy nominations to his credit. His innovative sound has long combined Caribbean and Brazilian rhythms with elements of jazz and rock. His signature compositions include *La murga*, *Calle luna, calle sol*, *Cheche colé*, *Todo tiene su final*, *Aguanile*, and also his versions of *Gitana* and *El gran varón*. Colón has been a fervent champion of Latino/a rights and advancement for many years, holding leadership positions in a number of important Hispanic organizations as well as running for the US Congress in 1994. He has also appeared in acting roles on television, and has composed music for television productions. Willie Colón received an honorary doctorate from Trinity College (Hartford, CT) in 1999.

LISE WAXER

Colonialism. Although originating in the concept of colonization, the settlement abroad of peoples from a mother country, colonialism is now normally identified with rule by European states (or states settled by Europeans) over peoples of Asia and Africa and, in a different sense, over Amerindians and Aboriginal Australians, as well as peoples of Latin America. Within Europe, however, elements of colonialism may also be found, for example in the history of English rule over Ireland and in the domination of Czechs by surrounding German populations during the period 1620–1914. But typically, colonialism is characterized by domination by an alien minority, which asserts racial and cultural superiority over a majority considered inferior. Beginning with the establishment of colonial empires by nations of Western Europe from the 16th century to the 18th, colonialism received increased impetus in the race for colonies during the late 19th and early 20th centuries. After World War II, most colonial areas gained formal independence, but the continuing predominance of culture and values of the former colonial powers as well as informal economic ties with them resulted in a form that has been called 'neo-colonialism'.

Colonialism has affected musics and musical cultures directly and indirectly in significant ways. Indeed, it may be regarded as one of the most important influences of the history of world musics. Most importantly, it is an aspect of the relations between different societies and their musics, particularly Western and non-Western societies and musics. Colonialism and music may be approached from three perspectives: (a) development and change of musical style and sound, musical behaviour and musical conceptualization as a result of colonialism; (b) issues of interpretation, including appropriation and misinterpretation; and (c) the role of colonialism in the development of ethnomusicology.

1. Musical results. 2. Issues of interpretation. 3. Ethnomusicology.

1. MUSICAL RESULTS. Arguably the most significant changes in the world's musics during the 19th and 20th centuries are the result of colonialism. The appropriation of musical sounds and structures from colonized societies by Western art and popular musics throughout the 20th century, ranging from Debussy's use of gamelan-derived sounds to the 'world beat' and 'world music' styles of the 1990s, is one facet of musical colonialism. Another, doubtless more significant, is the multiplicity of ways in which non-Western musical societies have changed, stimulated or forced by contact with Western music and musical values, and indeed by Western cultural values at large.

The most prevalent and perhaps obvious result of colonialism is the hegemony of Western music in a colonized culture, with the subsequent decline of the traditional music and its relegation from central ritual and social functions to 'native' and 'tribal' social contexts, such as entertainment of tourists or celebration of the past. For example, the rich musical culture of Bali has in the late 20th century been nurtured substantially by tourists, for whom special performances are provided as a major type of event, and by visits from North American and European gamelans that perform for tourists as well as the Balinese. The complex musical culture of North American Plains Indians has been reduced to domination by the intertribal powwow complex, again performances for both Amerindian and non-Amerindian audiences. The repertories of the colonized cultures characteristically shrank in number of genres, styles and compositions, by standardization of forms and by reduction of the ways in which music could come about, as well as in the number of individuals who remained musically competent and active. Thus Plains Indians abandoned many rituals, which remained extant only in vague memory; the recordings of their music made in the 1980s exhibit less variety of forms and styles than those recorded early in the century; there are an increased proportion of songs without words but with vocables only; and there is virtually exclusive use of the 'incomplete repetition' form (e.g. AABCD BCD) in recent recordings. A very small number of older individuals and a few younger enthusiasts retain older songs in their memories. The concept of musical composition in dreams and visions has been abandoned. In other societies, the same trends may be observed: in East Asia, only a few individuals (including the great artists called 'intangible national treasures' in Japan and Korea) retain mastery of older traditions. In Iran, classical music has become standardized by the use of the *radif* of Mirza Abdollah (1845–1918) and the establishment of a standard group of genres (*pishdarā-*

mad, *chahārmezrāb*, *āvāz*, *tasnif*, *reng*) which in contrast to greater flexibility in the 19th century now constitute the officially complete performance.

2. ISSUES OF INTERPRETATION. The introduction of concepts common in 20th-century Western and particularly academic musical culture greatly affected the musical culture of colonized peoples as well as the concepts used by ethnomusicologists. Prominent among these is the establishment of boundaries separating musics in ways analogous to the separation of social groups, classes, racial groups and colonialists from colonized. Thus the commonly held view of the musical world as consisting of Western (dynamic) and other (static) seems to be a result of colonialist attitudes; similarly, the notion of music as culture-specific, though defensible on various grounds, may have similar roots and produce the concept that each society has its own music and may not easily understand others. The division of parts of Africa and Asia into colonies that became nation-states resulted in concepts such as 'Nigerian music', 'Ghanaian music' and 'Indonesian music', each of which combines musical phenomena once restricted to individual peoples within the nation. The concept of a somehow united Amerindian culture and music is clearly the result of the colonization of the Americas; and this is true of Australia as well.

The adoption of specific concepts and artefacts from Western music by colonized peoples may be interpreted variously: as the adoption of the West's superior technology, as an attempt to enter into the international musical system, as a syncretic device, or as denigration of the traditional system. Thus, the Western violin, which has become extraordinarily widespread on account of its flexibility and portability, becomes integrated into the soundscape of Indian music as a major accompanying instrument retaining little of its European character, while in Persian music it brought with it the Western style of playing and tone production, adding these to the Persian concepts of music-making. Among peoples of Amazonian Ecuador, violins with two or three strings and a bow of bark imitated the repertory of the older musical bow, while the so-called Navajo violin or Apache fiddle, with one horsehair string, was introduced in the vocal repertory.

Reinterpretation and appropriation of the musical culture of the colonized by the colonial powers is also typical. For example, the DIDJERIDU, once used as a drone accompaniment to ceremonial singing by peoples of northern Australia, was gradually adopted by Aboriginals throughout Australia as a musical emblem in imitation of the prominence of instruments in Western music. It became a symbol of Australian Aboriginal culture by its use as the characteristic acoustical marker of Aboriginal popular music, and eventually, by its use in films about white Australians, the sonic emblem of white Australian culture as well.

There is no end to the possible illustrations of the musical effects of colonialism. From a strictly musical viewpoint one may find the results of otiose political, military and cultural pressures aesthetically appealing and intellectually interesting, and indeed the modern musical world is not really imaginable without the musical results of colonialism. Yet when one considers music as a component of society and as a system of ideas and behaviour patterns, the combination of musics brought about by colonialism is usually a one-sided affair. The introduction of Western musical ideas into other societies has relegated their music to a status of a backwater of hegemonic folklorization controlled by outside parties who 'legitimate condensed, simplified or commodified displays, invoking, promoting and cherishing them as official and authentic custom, while at the same time misunderstanding, ignoring, or suppressing the real creative forces and expressive meanings that animate them in the community' (Keil and Feld, 1994).

The effects of colonialism are clear also in the ways in which music from colonized cultures is used in Western (i.e. European and North American) contexts. For example, in ways analogous to the typical social relationships between colonials and colonizers, the world of Western musical concerts and music education permits performances of non-Western or minority musics in the context of Western-style concerts but maintains them in separate categories (e.g. one does not hear a string quartet in the first half and a *sitār* in the second half of a concert).

3. ETHNOMUSICOLOGY. Colonialism and its cultural outcroppings have been a major and, indeed, indispensable factor in the development of ethnomusicology (at least as practised in North America and Western Europe). Concepts and techniques characteristic of the earlier history of the field (*c*1900–50), such as the desirability of collecting and analysing the music of foreign cultures, the notion of comparative study, the paradigm of the world of music as distinct musics (a convenience, but clearly the result of the Western view of the rest of the world) and the willingness to separate musical sound from its social context (e.g. through recording by a field worker and analysis in a European archive) are closely associated with colonialist views of the world. The approach of collectors who wished to save what they regarded as disappearing cultures, and who tried to stimulate rural and tribal societies to maintain older musical traditions, also belongs in the category of colonialist thought. In neo-colonialist times, the exploitation of non-Western and rural musicians by recordists, scholars and producers continues colonialist practices, as do the maintenance of performer and consultant anonymity and the assumption of cultural homogeneity and general participation in musical life among so-called folk communities. Indeed, some have considered ethnomusicology as practised in Western Europe and even more in North America (with its emphasis on the study of non-Western societies) to be fundamentally a colonialist enterprise. One result has been concern with the ethics of fieldwork and publication and dissemination of material from other societies, the members of which may have little understanding of the use to which their cultural and intellectual property is being put.

From about 1975, ethnomusicologists also turned more explicitly to the study of colonialism – and to related areas such as racism and nationalism – in 20th-century music and in the history and methodology of ethnomusicology itself. Most of the literature dealing implicitly and explicitly with the subject dates from after 1985. Developments include the substantial influence of social theorists such as Antonio Gramsci, Pierre Bourdieu and Eric Hobsbawm; the establishment of committees and publications dealing with the ethics of ethnomusicological fieldwork and analysis, by organizations such as the Society for Ethnomusicology and International Council for Traditional Music, and, although the term itself rarely

appears in book and article titles and indexes, widespread critical examination of earlier and present ethnomusicological methods. Most prominent is the change in research methodology from studying non-Western and rural musics as unchanging artefacts to considering music as constantly interactive and dynamic, as well as recognizing the effects of colonialism in musics throughout the world and as a force, both negative and positive, affecting the study of the world's music.

BRUNO NETTL

Colonna, Fabio [called Linceo] (*b* Naples, *c*1580; *d* Naples, *c*1650). Italian instrument maker. He was the inventor of an enharmonic harpsichord or ARCICEMBALO with eight keyboards. The instrument, called 'Sambuca lincea' by its inventor but 'Pentecontachordon' (because of its 50 strings) by lexicographers, divided the octave into 17 parts. It is described and illustrated in Colonna's *La sambuca lincea overo dell'istromento musico perfetto* (Naples, 1618), which includes samples of enharmonic music by Colonna, an explanation of his division of the monochord, and a brief description of the hydraulic organ. Colonna's system of temperament is summarized in J.M. Barbour: *Tuning and Temperament* (East Lansing, MI, 1951, 2/1953/*R*, 153ff). Colonna probably owed his sobriquet, which he bestowed on his invention, to the fact that he was a member, and perhaps one of the founders, of the Accademia dei Lincei in Rome.

HOWARD MAYER BROWN

Colonna, Giovanni Ambrosio (*b* ?Milan; *fl* ?1616–27). Italian guitarist, printer and possibly lutenist. He belonged to the second generation of a family of Milanese printers, and according to Picinelli he was nicknamed 'lo Stampadorino'. In 1620 he was in the service of Count G.C. Borromeo and Duke Francesco Gallio of Alvito; by 1623 he was employed by Prince Theodoro Trivultio of Misocco. He compiled several books for five-course Baroque guitar containing his own *battute* accompaniments to popular songs and dances, including passacaglias, passamezzos, galliards and folias. The music is notated in the *alfabeto* tablature devised by Girolamo Montesardo in 1606, a system of chord notation in which letters of the alphabet designate fingering positions for various major and minor chords. In the first book of 1620 Colonna included instructions on reading the tablature, on the execution of strums and on the proper tempos for certain types of piece. The book also includes the earliest printed description of a transpositional system for three guitars of different tunings (called *grande, mezana* and *piccola*): the two smaller guitars are tuned a whole tone and perfect 5th higher than the bass. Many of the pieces in the book are transposed accordingly (e.g. into the keys of G, A, and D) so that the three guitars can play in ensemble. A book of lute works by Colonna, supposedly published by him in 1616, is lost. Colonna's own press published his first guitar anthology; he may have given up printing in about 1620, as the first anthology was reprinted, and his later works were published, by the family press under the title 'heirs of Giovanni Battista Colonna'. They also published *Scielta de canzonette*, an anonymously compiled, undated collection of canzonettas by Roman composers for solo voice, harpsichord or chitarrone, and guitar; it has sometimes, though without evidence, been attributed to Giovanni Ambrosio. It is not known in what way Giovanni Battista Colonna was related to Giovanni Ambrosio, and none of his publications survives.

WORKS

all published in Milan

Intavolatura di liuto (1616), lost (cited in *SartoriD*)
Intavolatura di chitarra alla spagnuola: dove si contengono passacalli, follie, & altre arie alla spagnuola: pass'e mezzi, gagliarde, corrente, & arie diverse all'taliana, con facilità passeggiate, & concertate per sonare à 2 & 3 chitarre: con una sonata in fine in ecco detta la Beolca (1620; 24 ed. in Hudson (1982))
Il secondo libro d'intavolatura di chitarra alla spagnuola (1620)
Il terzo libro de intavolatura di chitarra alla spagnuola, dove si contiene in particolare, diversi passacalli straordinarii chiacone, zarabande, e correnti alla francese (1623)
Intavolatura di chitarra spagnola del primo, secondo, terzo et quarto libro ... con una scielta de canzonette à voce sola de più illustri musici di Roma (1627) [incl. works previously pubd in above collections]
Intavolatura di chitarra spagnuola del primo, secondo, terzo, & quarto libro (1637/*R*) [incl. works previously pubd in above collections]; 1 ed. in Hudson (1982)

ROBERT STRIZICH/GARY R. BOYE

Colonna, Giovanni Paolo (*b* Bologna, 16 June 1637; *d* Bologna, 28 Nov 1695). Italian composer, teacher, organist and organ builder. He was the son of a well-known organ builder from Brescia, Antonio Colonna (alias Dal Corno) and Francesca Dinarelli, and himself became an active authority on organ construction. As a young man he took organ lessons in Bologna with Agostino Filipucci and then went to Rome to study composition with Abbatini, Benevoli and Carissimi. There he absorbed the technique of polychoral writing, which became a prominent feature in his later work. While in Rome he was possibly organist for a time at S Apollinare. He returned to Bologna, enjoyed an increasing reputation as a composer and was appointed second organist at S Petronio in September 1658 (though he did not take up his duties until December 1659). In 1661 he became the sole organist, but reverted to his former post when C.D. Cossoni was appointed first organist in 1662. On 11 February 1662 he married Laura Felice Checchi in the church of S Nicola di S Felice; they had two sons, Giovanni Antonio and Giovanni Domenico (Don Silvio). After the death of his father that year, Colonna succeeded him as tuner and caretaker of the organs in S Petronio. On 7 November, three years after Cazzati's departure, he was appointed *maestro di cappella*, and held this important post until his death. He was also *maestro di cappella* at the church of the Madonna di Galliera (1673–88) and at S Giovanni in Monte (1689–90).

Between 1680 and 1694 Colonna was actively involved in the composition of oratorios and the building of organs for Francesco II d'Este, with whom he regularly corresponded. He also worked for Marquis Ippolito Bentivoglio of Ferrara, served as an expert on instruments for Ranuccio II Farnese, Duke of Parma, and composed secular cantatas for the Medici court in Florence. In 1666 he was one of the founder-members of the Bolognese Accademia dei Filarmonici and was elected principal in 1672 and re-elected in 1674, 1685 and 1691. Biographers often refer to the famous dispute which took place by letter in 1685 when Colonna, together with Matteo Zani, Antimo Liberati, Giovanni Battista Vitali and others, accused Corelli in Rome of writing parallel 5ths in the allemande of the third sonata of his op.2. Colonna had the worse of the argument, and this led to cooler relations and greater separation between the Bolognese and Roman schools. In summer 1694 Colonna travelled to Rome in an attempt to restore his reputation there, and dedicated his third book of psalms, op.11, to Pope Innocent XII. The pope offered him the post of *maestro di cappella* at S Pietro in the Vatican, but Colonna refused, possibly for reasons of health. After a lingering illness, his death was marked with great solemnity at S Petronio. His pupils included Clari, Giovanni Bononcini (the son), Giacomo Cesare Predieri, Silvani, G.F. Tosi, Fiorè, Cherici and Urio. He was widely recognized in his lifetime and in the 18th century as one of the most distinguished Italian church musicians.

Colonna was an important composer of oratorios between Carissimi and Handel, but only eight have survived. Because of a special arrangement with the Habsburg Emperor Leopold I, who ordered a copy of each of his sacred works (the most interesting and extensive part of his output), 83 of them are preserved in the Nationalbibliothek, Vienna. Many unpublished ones are elaborate concerted settings of the mass and vesper psalms for one or two choirs, soloists and an orchestra sometimes including trumpets, which were a special feature of S Petronio. The published works for double choir are often provided with two separate parts for organ continuo, intended for performance on S Petronio's two organs, though manuscript versions (in *I-Bsp*) of these *stile antico* compositions show that they were performed with *colla parte* strings, cornetts and trombones.

Skilful and lively counterpoint, well adapted in harmony and texture to the particularly resonant acoustics of S Petronio, is a basic feature of most of Colonna's work. His *Messe e salmi concertati* op.10 are among the best of his mature printed works. The string accompaniments no longer slavishly double the vocal lines as in earlier Italian concerted music, and have taken on the style of the instrumental concerto with its open semiquaver patterns. The collections of solo motets, op.2, and two- and three-part motets, op.3, are really church cantatas in the Roman tradition of Carissimi and Bonifatio Gratiani, showing spirited counterpoint and fresh and attractive melodies; they clearly anticipate the style of Handel's chamber cantatas. In contrast to his immediate Italian predecessors Colonna was able to spin out his phrases and to lengthen whole sections by his sure grasp of harmony functioning within the tonal system. In his later choral music he frequently used suspensions and secondary-7th chords, which in works written in many parts produce a rich and often moving effect.

WORKS

music lost unless otherwise stated

SACRED

all printed works published in Bologna

Dialogo, 3vv (1668[2])
Salmi brevi per tutto l'anno, 8vv, 1/2 bc (org), op.1 (1681, 2/1701)
Motetti sacri, 1v, 2 vn, bc (org), op.2 (1681, 2/1691); 1 ed. in RRMBE, lvii (1987)
Motetti, 2, 3vv, bc (org), op.3 (1681, 2/1691, 3/1698)
Litanie con le 4 antifone della B. Vergine, 8vv, bc (org), op.4 (1682)
Messe piene, 8vv, 1/2 bc (org), op.5 (1684)
Messa, salmi e responsorij per li defonti, 8vv, 2 bc (org), op.6 (1685)
Il secondo libro de salmi brevi, 8vv, 1/2 bc (org), op.7 (1681)
Compieta con le tre sequenze dell'anno, 8vv, bc (org), op.8 (1687)
Sacra lamentationi della Settimana Santa, 1v, bc, op.8 [*recte* 9] (1689)
Messe e salmi concertati, 3–5vv, insts, bc, op.10 (1691)
Psalmi ... liber tertius, 8vv, 1/2 bc (org), op.11 (1694)
Psalmi ad vesperas, 3–5vv, insts, op.12 (1694)
Messa a 9vv concertata con strumenti, *A-Wn*, ed. in RRMBE, xvii (1974)
Several other sacred works (masses, psalms, canticles, motets etc.), in MSS at *A-Wn*, *D-Bsb*, *MÜs*, *GB-Lbl*, *Ob*, *I-Bc*, *Bof*, *Bsp*, *US-NYp* and elsewhere

ORATORIOS

Il trionfo della fede (L. Tesini), Bologna, 17 March 1672; invocazione only by Colonna, other music by F. Pratichista and G.B. Vitali
La morte di S Antonio di Padova (G. Desideri), Bologna, 1676
Il Sansone (G. Balbi), Bologna, 1677
S Teodora (G.A. Bergamori), Bologna, 1678
Il transito di S Giuseppe (Bergamori), Bologna, 1678, *I-MOe*
Salomone amante (Bergamori), Bologna, 16 March 1679, *F-Pc* (facs. in IO, v, 1986), lib *Bc*

San Basilio, Bologna, 1680 (attrib. doubtful)
Tre magi, *c*1682
Giudith (Bergamori), Modena, 1684
Absalone [L'Assalone], Modena, 1686, *A-Wn*, *F-Pc*
Il Mosè legato di Dio (G.B. Giardini), Modena, 1686, *I-MOe*
La profezia d'Eliseo (G.B. Neri), Modena, 1686, *MOe*
La caduta di Gerusalemme (Bergamori), Modena, 1688, *F-Pc* (facs. in IO, 1986)
Bettuglia liberata (Bergamori), Bologna, 1690
Giuliano apostata (A. Gargieria), Bologna, 1690

SECULAR DRAMATIC

L'alloro trionfato (dramatic cant., T. Stanzani), Bologna, 1672; with F. Pratichista and G.B. Vitali and others, lib *Bc*
Le contese di Pallade e Venere (dramatic cant., Bianchini), Bologna, 29 Nov 1666
Le stelle combattute dagli elementi (torneo), Ferrara, 1676, *GB-Cfm*
Pelope e Ippodamia (drammetto, A.M. Campeggi), Bologna, 1678
Amilcare e Cipro (dramma per musica, A. Gargieria), Bologna, 8 Dec 1692
19 arias, 1v, bc, in D. Freschi: Tullia superba (dramma per musica, A. Medolago), Bologna, 1680, *I-MOe*

SECULAR VOCAL AND INSTRUMENTAL

Vago al fin di mirare (Il Xerse), 1v, bc, 1685[1]
2 sonatas (fugues), org, 1697[8]
L'inferno degl'amanti, 1v, bc, *I-Bc* DD.51
22 cants., 1v, bc, *GB-Lbl* Add.27931
Other cants. in *I-MOe*, *Nc*, *Rvat*

PETER SMITH/MARC VANSCHEEUWIJCK

Colonne, Edouard [Judas] (*b* Bordeaux, 23 July 1838; *d* Paris, 28 March 1910). French violinist and conductor. He was the founder of the Concerts Colonne, the orchestral association, which still exists in Paris. His father and grandfather were musicians and at a very early age he began to learn several instruments, including the flageolet and the accordion. He studied the violin with Baudoin at Bordeaux, and in 1855 went to Paris, where he entered the Conservatoire in 1857; his teachers were Gérard and Sauzay (violin), Elwart and Ambroise Thomas (harmony and composition). He won the *premier prix* for harmony in 1858 and for violin in 1863. After working at the Théâtre-Lyrique, in 1858 he became principal violinist in the Opéra orchestra; he was also second violinist of the Lamoureux Quartet, and a member successively of the orchestras of the Concerts Populaires and the Grand-Hôtel. Newspapers mention a tour he is said to have made in North and South America as conductor of an operetta troupe.

Edouard Colonne: caricature by Charles-Lucien Léandre

It was to Colonne that the music publisher Georges Hartmann appealed in 1873 when it was decided to found the Concert National, and the first concert took place in the Théâtre de l'Odéon on 2 March 1873. Benefiting from the ardent nationalism that followed the war of 1870, the institution was a success in terms of prestige, if not financially. The next year it was transferred to the Théâtre du Châtelet, but as a result of pecuniary difficulties (Mme Erard paid the deficit) Hartmann broke with Colonne, who, undismayed, formed a new society, the Association Artistique. It was supported by increasing numbers of patrons, though it had to contend with the rivalry of Pasdeloup's successful Concerts Populaires. While giving many first performances of French works, Colonne also continued to present foreign ones, with the exception of Wagner's, which out of prudence he did not introduce before 1879. It was on performances of the works of Berlioz that his success was based: encouraged by Pasdeloup's example, he had the perspicacity to impose them on the public, in particular *La damnation de Faust*.

In 1878 Colonne was chosen to conduct the ten concerts at the Trocadero during the Exposition Universelle. Soon afterwards he began to tour Portugal and Spain, then later England, Germany and Russia, which he visited for the last time in 1907, and where he conducted Saint-Saëns's *Samson et Dalila*. In addition to the many concerts in which he accompanied soloists, he pursued his broader interests with the Odéon orchestra, which he conducted in Bizet's incidental music for Daudet's *L'arlésienne* more than 500 times. In 1892 he joined the Paris Opéra as artistic adviser and conductor; he remained there until 1893, and conducted Reyer's *Salammbô*, Saint-Saëns's *Samson et Dalila* and Wagner's *Die Walküre*, among other operas.

If Colonne finally triumphed over Pasdeloup, it was simply owing to his superiority as a conductor; contemporary witnesses agreed in praising his musicianship and his romantic temperament, even if he was notably less meticulous than Lamoureux. His second wife, Eugénie Vergin, was a soprano whose roles included Marguerite in *La damnation de Faust*.

ELISABETH BERNARD

Colophane [colophonium, colophony]. *See* ROSIN.

Color (Lat.). (1) A medieval Latin term used from the mid-13th century to the mid-15th to signify embellishment and more specifically repetition; the latter sense accounts for its modern use to designate melodic repetition in the tenors of medieval motets. It first occurs in the *De mensurabili musica* of Johannes de Garlandia (*CoussemakerS*, i, 175–82; ed. F. Reimer, 1972, pp.74, 76), in the later addition to it (Reimer, 94–7) and in the treatise by Anonymus 4 (ed. F. Reckow, 1967, pp.22, 46, 82, 84, 88). Anonymus 4 used 'color' mostly with reference to Perotinus's organa, 'replete with artful musical embellishments', though he also credited earlier composers, including Leoninus, with the orderly disposal of properly 'colourful' phrases (*ordines*).

The term and its meaning originated in rhetoric, as Prosdocimus de Beldemandis pointed out in the early 15th century, associating it specifically with repetition: 'rhetorical color is called repetition, and the term is applied metaphorically, since just as in rhetorical color there is frequent repetition of the same phrase, in musical color, too, there is frequent repetition' (*CoussemakerS*, iii, 226*a*, 248*a*).

The earliest known case of the association of 'color' with the specific embellishment of repetition occurs in the addition to Garlandia's treatise. Like Anonymus 4, the author equated color broadly with *pulcritudo* (Reimer, 74), but the three types of color he described all involve repetition: *sonus ordinatus* is the elaboration of a large melodic interval from a simple leap to a phrase involving the intervening scale degrees and patterned repetition of certain pitches (ex.1); *florificatio* is the individual reitera-

Ex.1

or:

tion of successive pitches; repetition of a phrase can involve either an 'identical phrase' or a 'separated phrase' (this last type turns out to be voice-exchange).

Almost all other known descriptions and definitions of 'color' also involve repetition. Anonymus 4, notably, did not mention this, though of course the Perotinian examples he referred to often contain passages embellished by various types of repetition, which was bound to play a prominent ornamental role in the melodically restricted polyphony of the time. Odington mentioned 'moteti colorati', in which a phrase in an upper voice is repeated over a given cantus firmus; any resultant dissonance, he said, was excusable (*Summa de speculatione musicae*, CSM, xiv; ed. F.F. Hammond, 1970).

Most subsequent writers (14th and 15th centuries), beginning with Johannes de Muris, mentioned color (and talea) in connection with the motet. They differed, however, as to the type of reiteration (i.e. rhythmic, melodic or both). In calling repeated statements of the cantus firmus of a motet 'colores' modern musicology has been influenced by the definition that was most common, according to Prosdocimus de Beldemandis (*CoussemakerS*, iii, 227*a*): color is melodic repetition, as distinct from rhythmic repetition (talea). For a more detailed discussion of the different opinions regarding talea and color, *see* TALEA; *see also* ISORHYTHM.

(2) The term was used in a different sense by some 14th- and 15th-century theorists. In 1317 or 1318 Marchetto da Padova (*Lucidarium*) used it to refer to the beauty of the chromatic genus. Prosdocimus de Beldemandis in his counterpoint treatise of 1412 said that MUSICA FICTA had been invented 'solely on account of the colouring of some consonance'; and Ugolino of Orvieto in his monochord treatise (mid-15th century) discussed at length, as Marchetto had done, the division of the whole tone into unequal parts 'with which we perfect the imperfect [intervals] and colour them'.

See also NOTATION, §III, 3.

ERNEST H. SANDERS (1), MARK LINDLEY (2)

Coloration. (1) In mensural notation, the introduction of coloured notes (especially red and, later, black) as a regular method of indicating a change in rhythmic values. The term refers mainly to the use of full notes, but also to the use of void notes. Coloration can perform a variety of functions, the most common of which is to reduce the normal value of a note by one third (thus, for instance, facilitating the notation of hemiola groups). The practice of coloration originated in the early 14th century, continuing well into the 16th century and beyond. *See* NOTATION, §III, 3; PROPORTIONAL NOTATION.

(2) In ornamentation, the writing out (and by analogy the IMPROVISATION) of florid diminutions (*see* DIMINUTION, (1)) or passages of free ornamentation such as were particularly common in the 16th century, normal

practice in the 17th and 18th centuries, and still familiar as COLORATURA in the 19th century.

See also ORNAMENTS.

ROBERT DONINGTON/PETER WRIGHT (1), ROBERT DONINGTON (2)

Coloratura (It.: 'colouring'; Ger. *Koloratur*). Florid figuration or ornamentation, particularly in vocal music. Coloratura is thus defined in several early non-Italian music lexicons, such as those of Praetorius (1618), Brossard (1703) and Walther (1732), where the term is dealt with briefly and always with reference to Italian usage. Bernhard defines it in two different ways: diminution, 'when an interval is altered through several shorter notes, so that, instead of one long note, a number of shorter ones rush to the next note through all kinds of progressions by step or leap' (*Tractatus compositionis*, *c*1657); and cadenza, described as 'runs which are not so exactly bound to the bar, but which often extend two, three or more bars further [and] should be made only at chief closes' (*Von der Singe-Kunst, oder Maniera*, *c*1649). In the principal Italian treatises on singing, however (Caccini, 1601/2; Tosi, 1723; Mancini, 1774; García, 1841), the term never occurs; it is likewise absent from the vocabulary of such English authors as Burney and Chorley, who wrote extensively about Italian singing at a time when ornamentation was of utmost importance. In German, 'coloratura' (or 'Koloratur') has long been used as a generic term for ornamentation. 16th-century German organ composers, for example, described an ornamented melody as 'colloratum'. Mattheson (1739) equated 'Coloraturen' with 'Zierathen', the term under which he listed all the principal ornaments. Recent German musicologists have used *Koloratur* to denote vocal ornaments of all periods, and this broad application has also become common in Italian and English.

The root of the Italian term is that of 'colour', and it is probably related through its use of diminution (the little notes that 'rush' to the next long note, as Bernhard writes) to the mensural practice of coloration. It has nothing to do with changing the tone colour of the voice for expressive purposes (*see* VOIX SOMBRÉE). The term is now widely used to denote (1) florid ornamentation of all periods, (2) operatic roles of which such passages are a prominent part, and (3) singers who specialize in florid singing. As a qualifying adjective, coloratura is most often applied to sopranos (Amelita Galli-Curci, Lina Pagliughi, Joan Sutherland) and mezzo-sopranos (Marilyn Horne), although the revival of *opere serie* of the 18th and early 19th centuries has promoted as well the coloratura tenor (Rockwell Blake) and the coloratura bass (Samuel Ramey).

OWEN JANDER, ELLEN T. HARRIS

Colotomic structure [colotomy] (from Gk. *kōlon*: 'section', 'limb'). A term adopted by the ethnomusicologist Jaap Kunst in his work on the gamelan music of Java and Bali, to describe the phrase structure of the *gendhing* ('piece'). Each major section of a *gendhing* begins and ends on a gong beat and is further subdivided into subsections and phrases by several other single-note instruments of the gong type; their function is to mark the skeletal melody (adapted and played by the metallophones in unison) at regular metric periods. Over a dozen different colotomic structures are in regular use, each with its own name such as *ladrang* and *ketawang*. A specific drum part is associated with each colotomic structure.

See INDONESIA, §III, 4 and Table 2.

Colour and music. The relationship between colour and music as part of the complex consisting of music and the visual arts has not yet been systematically investigated. Since Liszt wrote *Lo spozalizio* from *Années de Pèlerinage* (1839), based on a painting by Raphael, composers have often taken pictures as inspiration for their works (Fink, 1988, lists 711 such compositions). Conversely, painters have derived inspiration from musical compositions or the abstract idea of music. The subject of colour and music encompasses the relationships between colour and form, light and music, colour and tonal intervals, colour and sound, and indeed painting and music. Cosmological ideas pervade the history of these relationships, from antiquity to the 20th century.

1. Colours as related to music. 2. Music as related to colours. 3. Colour and music as an artistic synthesis. 4. Synaesthesia.

1. COLOURS AS RELATED TO MUSIC. A theory of music founded on mathematical principles, and distinguishing between consonance and dissonance, has frequently been taken as the model for theories of colour and the basis for establishing the harmony or disharmony of colour combinations. The ancient Greeks were the first to construct a scale of colours divided into seven parts, on the analogy of the seven musical notes and the seven known planets. In this scale, all colours derived from a mixture of black and white. Consonances of tonal intervals were transferred to colours (Aristotle, *De sensu et sensibilibus*, 439b–442a). Aristotle's theory of colour was considered valid into the 17th century, and different colours were associated with various tonal intervals in the 16th and 17th centuries, although usually in connection with further analogies in such heterogeneous fields as levels of being, the planets, the elements, the phases of human life and degrees of knowledge. The aim of such analogies was to define a harmony of colours. Hieronymus Cardanus (*De subtilitate*, 1550, bk 13) associated seven colours, seven flavours and seven planets with each other. Gioseffo Zarlino related the consonances of prime and octave to white and black, and the intermediate consonances to the intermediate colours of green, red and blue (*Le istitutioni harmoniche*, 1558, pt iii, chap.8). Athanasius Kircher drew up complex tables of analogies, among other things associating musical notes, colours, intensities of light and degrees of brightness with each other (*Ars magna lucis et umbrae*, 1646, p.67). Four years later he devised a system associating colours with intervals (*Musurgia universalis*, 1650, i, 568). Marin Cureau de la Chambre transferred proportions derived from the musical theory of intervals to pairs of colours, and devised a 'Système des couleurs et des harmonies' (*Nouvelles observations et coniectures sur la nature de l'iris*, 1650, p.215). All these attempts at analogy, and many others of the period, were based on Aristotle's theory of colour. Although the concrete associations of these systems cannot now be reconstructed in detail, and other works by their authors contain contradictions, it is clear that they represented a rational conception in which all phenomena were constructed on the same principles and reflected the harmony of the world.

André Félibien, in 1666, was the first to establish yellow, red and blue as the basis of a new colour system. At the same time Newton was making his first prismatic experiments, and in 1672 he associated tonal intervals with the colour bands of the spectrum, 'for the Analogy of Nature is to be observed' (*An Hypothesis Explaining the Properties of Light*, 1675). There are lingering remnants of cosmological thinking in Newton too when he traces connections between colours, notes and planets. A relationship between colour and musical intervals now seemed to have a physical foundation, and the idea had Newton's authority to support it. Reaction to his *Opticks* (1704), in which he returned to the analogy, can be observed in England, France, Germany and Russia. Under the influence of Newton, ideas of the relationship between colour and music developed in all these countries (see Jewanski, 1999).

The most intense discussion of the subject occurred in France. After 1772 Rameau's writings constituted the point of departure in music theory: he regarded the individual chord as the core of the harmonic system, and derived musical phenomena from the harmonic series. Louis-Bertrand Castel, a French mathematician and philosopher, built on these new ideas. He knew the colour theories of his day, the writings of antiquity and those of the 16th- and 17th-century theorists. Reviewing the French translation of Newton's *Opticks* in 1723, he commented, with reference to Kircher's table of colours and intervals, that 'to all appearance the range of our senses is exactly the same, and nature gives us as many sounds as colours' (p.1450). After 1725 Castel developed his own system of colours and notes, starting with C = blue. He adopted the colour theories of dyers and painters, rejecting those based on Newtonian physics. He simplified the relationship between colours and tonal intervals to a relationship between colours and notes, liberated it from its cosmological context, and at the same time attempted to transfer it to art as *Farbenmusik* ('colour music'). He built a *clavecin oculaire*, or 'optical harpsichord', which he demonstrated for a small audience on 21 December 1754. Every key on the instrument, when pressed, opened up a shaft through which coloured light passed. Castel's invention complemented earlier attempts to give the theory of colour a musical direction by adding the idea of an artistic synthesis. At the same time, the concept of a pure colour display was born.

The previously accepted application of harmonic principles to colour combinations, although no longer regarded as a legacy of classical thinking, was now extended to the relationship between music and painting, and discussed in that light for the first time. Castel noted that painters often adopted the vocabulary of music, speaking of colour tones, colour harmonies and even colour dissonances, while musicians described mingled chords as imitating chiaroscuro. He conceived of painting as simply a collection of colours and music as a collection of notes, and extended the comparison to a *musique des couleurs*, the translation of musical pieces into pictures. In 1739, on the basis of Castel's ideas, Telemann listed a number of 'truths' that can be reduced to the following principles: the compass of notes runs from low through medium to high, and the range of colours from dark through medium to light; the movement of both notes and colours is either rising or falling and ranges from fast to slow; the distance between both notes and colours is from one to its neighbour; presentation in both cases may be simultaneous or successive. These 'truths', Telemann concluded, suggest that 'a fugue in sounds will make up a fugue in colours'. This is the first recorded mention of a colour fugue.

Castel's many articles gave rise to animated discussion. Weighty arguments for and against the analogy of colours and notes, painting and music, were expressed by such intellectual giants as Diderot, Mairan, Rousseau and Voltaire. It was pointed out that colour harmonies depend on fashion while the definition of musical consonance always remains the same; that a dissonance in colour leaves a less disturbing impression than a musical dissonance; that colours mingle to create a unit incapable of analysis, as when yellow and blue make green, whereas two notes combined do not create the note between them; that the perception of notes is always related to a tonic and is therefore relative, while the perception of a colour is absolute; that the emotions aroused by music and painting are not attributable to relationships between colours and notes; and that sequences of colour cannot be retained in the memory like musical melodies.

Although 18th-century French writers denied a direct relationship between colour and notes, they compared drawing and melody, colour and pitch, and colour and instrumental timbre, without, however, reaching coherent conclusions. The idea of treating colours like music was taken up by Johann Gottlob Krüger, who made the first recorded sketch of a *Farbenclavecymbel* or 'colour harpsichord' (1743, pl.7) which would produce 'music to delight the eye' as a counterpart to 'music for the ear'. Nothing came of his plans, but the idea led Moses Mendelssohn to propose the notion of expressing melodies in 'various kinds of undulating and flame-like lines' (*Über die Empfindungen*, 1755). Carl Ludwig Junker compared the drawing, colouring and expression of a painting with the melody, harmony and expression of a musical composition (*Betrachtungen über Mahlerey, Ton- und Bildhauerkunst*, 1778). The idea of a colour keyboard instrument operating analytically, and other attempts to treat colours like music, fell into oblivion once the discussion of notes and colours shifted to its psychological and physiological aspects. By the last third of the 18th century individual colours and notes were no longer being compared; instead, music and painting were related to each other as a whole, music having a superior status because of its more immediate influence on the soul. 'No art affects the soul so directly as music .... Painting, sculpture and architecture are dead things by comparison with a sweet voice' (W. Heinse, 1780; 1977 edn, 74).

In the early 19th century E.T.A. Hoffmann and Schumann further broke down the barriers between the arts. Schumann's Eusebius claimed (*c*1833) that 'the educated musician will be able to derive as much usefulness from the study of a Madonna by Raphael as will a painter from a Mozart symphony', to which Florestan added, 'The aesthetics of the two arts are the same; only the material is different' (Schumann, *Gesammelte Schriften über Musik und Musiker*, ed. M. Kreisig, i, 5/1914, p.26). In his Kapellmeister Kreisler, Hoffmann created the archetype of an artist who transcended the frontiers between disciplines: 'I find colours, notes and scents all coming together, not so much in a dream as in that state of delirium that precedes sleep, particularly when I have been listening to a great deal of music'. In

1844 D.D. Jameson propounded the concept of 'colour-music', the translation of music into a play of colours. Later in the century H.R. Haweis called for a form of 'colour-art' as a pendant to 'sound-art', and William Schooling conceived a silent electric colour-organ. A.W. Rimington's 'art of mobile colour' continued the ideas of the painter J.M.W. Turner, who had explored colour's independent ability to represent subjects in such paintings as *Light and Colour (Goethe's Theory of Colour)* of 1843. Rimington hoped to replace Turner's naturally static colour shading by constant colour changes, that is by introducing movement into colour. He produced several schemata: a theory of colour and music, a translation of music into his play of colour, and a pure art of colour without music. Orientation by the musical model as previously accepted could now be abandoned.

The first two decades of the 20th century saw many attempts to establish the free play of form and colour as an independent art relating to music in various ways. Some artists continued to explore the translation of music into colour in accordance with Castel's ideas (see Klein, 1926; Scholes, 1938). Others developed the concept of the 'absolute film' based on the formal patterns, rhythmics and dynamics of music. Ludwig Hirschfeld-Mack's *Dreiteilige Farbensonatina*, Hans Richter's *Film ist Rhythmus* and Viking Eggeling's *Symphonie Diagonale* were among the works in this genre presented in Berlin on 3 and 10 May 1925. Paul Klee translated elements of music into pictorial equivalents. In his 'polyphonic paintings', such as *Polyphon gefasstes Weiss* (1930), differently structured areas are superimposed, with colour assuming particular significance. Of Robert Delaunay's *Les fenêtres sur la ville, première partie, premiers contrastes simultanés* (1912), Klee wrote in 1917: 'Delaunay tried to transfer artistic emphasis to the temporal aspect, on the model of the fugue, by opting for such a length that the whole picture cannot be seen at once' (*Paul Klee: Tagebücher 1898–1918*, ed. F. Klee, Cologne, 1957, p.383). The idea of 'kinetic painting' (Diebold, 1921) was promoted in both Germany and the USA, where W.H. Wright spoke of the new art that would use the resources of a colour organ instead of canvas and paint: 'The color-organ, in fact, is the logical development of all the modern researches in the art of color' (*The Future of Painting*, 1923, p.49). From 1922 Thomas Wilfred performed silent 'Lumia' compositions on his 'Clavilux', giving them opus numbers and sometimes musical titles. Many colour organs were built with a view to creating kinetic art through plays of changing colour (Goldschmidt, 1928).

Luigi Veronesi's *Chromatische Visualisierung: J.S. Bach Kontrapunkt No.2 aus 'Kunst der Fuge'* (1971) was based on a physical parallel between colour and music. In Jakob Weder's cycle of pictures *Orchestersuite 3 in D-Dur von J.S. Bach* (1980–81), each of the five movements of the suite is associated with a colour that supposedly reflects its character and subject. The separate colours are modulated with shading derived from the structure of the music.

2. Music as related to colours. In the 20th century the temporal differences between colours and notes, or music and painting, were no longer seen as irreconcilable. Painters such as Ad Reinhardt and Mark Rothko integrated a temporal element into their works, using colour procedures that made the act of looking at a picture a process in itself. In music time seems to stand still in such works as Ligeti's *Volumina* for organ (1961–2, revised 1966) and *Atmosphères* for orchestra (1961), where the elimination of rhythm makes tonal colour paramount, and form is constructed by a gradual succession of states of sound. Ligeti described the process of harmonic transformation in his orchestral work *Lontano* (1967) as a kind of polyphony of light: an imaginary perspective is created by means of reflections and refractions, slowly revealing itself to the hearer 'as if he were coming out of bright sunlight into a dark room, and only gradually perceiving colours and shapes' (O. Nordwall, *György Ligeti*, 1971, p.114). As early as Schoenberg's *Farben*, from Five Orchestral Pieces (1909), the two themes are reduced to their smallest possible extent both in number of notes and in range; the melodic function is obliterated, and only tonal colour remains. The composition may be seen as an attempt to transfer to music the wide variety of shades of a single colour found in painting, extending the opportunities open to music by the attempt to compose in colour.

In composition based on colours, and in music referring to pictures, the precise nature of the stimulus provided by the colours or the painting may not be evident. If the composer has given no other indication, analysis of the score will not even tell us whether there was any extra-musical stimulus at all. Without knowledge of this programme, it is impossible to link colours and music. Moreover, the character of individual colours is variable; the term 'red', for instance, does not define the colour exactly. Only a small number of colours can be chosen, usually limited to those of the 12-part colour circle, and their expressive character has no more variety than such common descriptions of musical movements as *adagio*, *moderato* or *allegro*. In Bliss's *A Colour Symphony* (1921–2), each of the four movements bears the name of a colour: 'Purple', 'Red', 'Blue' and 'Green'. The heraldic significance of the colours (green for instance, being associated with emeralds, hope, youth, joy, spring and victory) is reflected in the character of the music. Palle Mikkelborg used the names of colours to describe the movements of *Aura* (Sony 463351–2, 1989), while the singer Lauren Newton and bassist Joëlle Léandre have translated painting techniques (for instance Frank Stella's monochrome palette in *Stella Black*) into contemporary jazz (*18 Colors*, Leo LR 245, 1997).

Besides the general association of colour and music, colour has been equated with individual musical parameters. Messiaen employed his subjective association of colours with chords, forms and themes in such works as *Sept Haïkaï* (1962). In the fifth movement of this work he wrote into the score the colours to be associated with the chords, and in his preface to *Couleurs de la Cité Céleste* (1963) he explained: 'The form of this work depends entirely on colour'. The melodic and rhythmic themes, the complex of sounds and timbres, evolve like colour. In Michael Denhoff's cycle *Die blaue Vier – Musik zu Bildern von Jawlensky, Klee, Kandinsky und Feininger* (1977) there are 'correspondences of gestus and sound to colours and forms', for instance 'when the prismatic interlocking and shading of colours in Feininger's *Gelmeroda IX* corresponds to the changing tonal play of closely similar chords whose temporal construction derives from the proportions of the picture' (Denhoff, 1993, p.17).

3. Colour and music as an artistic synthesis. As early as 1889, in his opera *Mlada*, Rimsky-Korsakov

synchronized stage lighting with use of colour words in the libretto and a pattern of keys in the music. Independently, Skryabin sought to synthesize all sensations. In his *Prométhée* for orchestra, chorus and tastiera per luce (colour organ) of 1908–10, colours and sounds were associated in a pattern that is difficult to reconstruct. In *Die glückliche Hand* (1913) Schoenberg wanted the emotions arising from the action to be expressed by means other than music alone: 'it should be evident that movements, colours and light are to be treated in the same way as notes are usually handled: they must make music. Figures and structures are to be formed, as it were, from various light values and shades of colour, resembling the structures, figures and motifs of the music' (*Stil und Gedanke: Aufsätze zur Musik*, ed. I. Vojtěch, Frankfurt, 1976, p.238). Kandinsky also tried to achieve an artistic synthesis by using methods from each art in his stage work *Der gelbe Klang* (1912). Writing in *Der blaue Reiter*, he gave detailed instructions for the colours, but only vague indications of the music, for instance: 'Some indistinct chords in the orchestra. Curtain up. Dark blue twilight on stage, whitish at first, later becoming an intense dark blue. After a while a small light appears at the centre, becoming brighter as the colour deepens. Orchestral music after a while. Pause. A chorus is heard offstage' (1912, p.212). Only sketches of Thomas Hartmann's score for this piece have been preserved; it was reconstructed by Gunther Schuller in 1982. A more recent work is by Schnittke (1973–4, rev. 1983), who intended his dance composition to be seen as part of a multimedia theatre of movement.

In Bartók's opera *Bluebeard's Castle* (1911, first performed 1918), the composer integrated the coloured light of the seven rooms with the prevailing keys. At about the same time, Granville Bantock advocated the use of coloured light in the concert hall for performances of his *Atlanta in Calydon* (1911), but no lit performance is known to have been given. Mary Elizabeth Hallock-Greenewalt gave piano recitals in Philadelphia accompanied by a 'light color instrument' which filled the concert hall with colours complementing the music. In the years 1925–7 Alexander László gave concerts of works in the new genre of FARBLICHTMUSIK (colour-light music), in which music and colour were to be linked as arts. In Vishnegradsky's multimedia experiment *Mosaïque lumineuse de la coupole du temple* (1942–), he aimed to project colours on the ceiling of a temple while music was played; like Skryabin, he dreamt of the awakening of a cosmic consciousness. There have been many attempts to re-create *Prométhée*, *Die glückliche Hand* and *Der gelbe Klang*, but the visual expectations that audiences have developed from modern videoclips, light shows at pop concerts and laser-beam spectacles have made such reconstructions problematic.

Colour, or coloured light, has also been employed in many works composed since 1945. Shchedrin added a *luce* part to *Poetoria* (1968) to illustrate the form of the music and the symbolism of the text by different colours. Xenakis linked light, colour, music and architecture in *Polytope* (1967), *Persépolis* (1971), *Polytope de Cluny* (1972) and *Le diatope* (1978). In Gubaydulina's *Alleluja* for chorus, boy solo and orchestra, with colour, organ ad libitum (1990), colour is a basic rhythmic element in the formal development of the music. (Rihm added a part, 'Das Licht', to his opera *Die Eroberung von Mexico* of 1992, with dynamic indications, but as suggestions rather than actual instructions.) Stockhausen's seven-part operatic cycle *Licht* (1977–) seeks to achieve a unity of music, light, words, movement and stage design, referring to esoteric traditions and aiming to create a 'cosmic world theatre' (M. Kurtz, *Stockhausen*, 1988, p.275). In 1993 the painter Hans Werner Berretz (Ha Webe) began working with Gubaydulina, Denhoff, Galina Ustvol'skaya, Violeta Dinescu, Winfried Maria Danner and Bernd Hänschke on a series of works in which the score becomes part of the picture. Primary colours illustrate the musical parameters (red for pitch and duration, blue for rhythm, yellow for melody, green for harmony) and mingled colours accompany such non-musical elements as the text.

4. SYNAESTHESIA. Although any association of colour and music may be described as synaesthesia, it most frequently takes the form of 'colour-hearing', the involuntary perception of colours by someone hearing sounds or listening to music. Until the late 18th century colours and notes or intervals were associated by a process of analogy accepted as scientific method (see §1 above). Not until the turn of the 19th century did writers use verbal metaphors linking colour and music to express the new spirit of the times, with music promoted to the top of the artistic hierarchy.

The fundamental difficulty in assessing the artistic significance of synaesthesia is that in the case of many musicians and artists it is impossible to be sure whether they are experiencing synaesthesia, have a heightened sensitivity to interdisciplinary associations and/or are seeking new ways of expressing themselves by deliberately blurring the frontiers between the arts (for instance in sound-sculptures). The works of Skryabin, László, Messiaen and Denhoff involve synaesthetic phenomena in the process of composition, but it is not clear whether they are true synaesthesias in the sense of Cytowic's catalogue of criteria (*see* SYNAESTHESIA) and they are not necessarily perceived as synaesthetic by the hearer. Because synaesthesia varies from one person to another, problems arise when, as in Skryabin's *Prométhée* and László's Farblichtmusik, uniform perception of the music and the colour image is fundamental to the understanding of a multimedia performance.

Four congresses devoted to colour and music, directed by Georg Anschütz, were held in Germany between 1927 and 1936. In 1962 the Prometheus Studio was founded at the Technical University of Kazan in the former Soviet Union to study the artistic significance of synaesthesias. Research on synaesthesia has also been carried out at the Medizinische Hochschule, Hanover. The International Synaesthesia Association has its headquarters in the UK.

Colston Hall. The main concert hall in BRISTOL, built in 1867.

Coltellini, Celeste (*b* Livorno, 26 Nov 1760; *d* Capodimonte, Naples, 24 July 1829). Italian soprano, daughter of MARCO COLTELLINI. Her earliest known roles include Silvia in Astarita's *L'isola disabitata* in Florence in 1773 and Violante in Paisiello's *La frascatana* in Florence in 1780. In 1781 she sang in Naples where, except for two brief sojourns in Vienna, she remained for the remainder of her career, mainly at the Teatro dei Fiorentini. She was engaged by Joseph II for Vienna for the 1785–6 season, making her début on 6 April 1785 in Paisiello's *La contadina di spirito o sia Il matrimonio inaspettato*; she shared the position of first soprano with Nancy Storace. She was cast as Storace's rival in Salieri's *Prima la musica, poi le parole*, where she sang the *prima buffa* role of Tonina against Storace's *prima donna* role of Eleonora (not the other way around, as is often reported). As Mandina in Bianchi's *La villanella rapita* she sang the soprano parts in the substitute ensembles (K479–80) that Mozart wrote for the opera. A return engagement in Vienna for the 1788–9 season was prematurely terminated after only three months, owing to her late arrival, her poor reception by the public and her subsequent insolence. Back in Naples, she created the title role in Paisiello's *Nina, o sia La pazza per amore* (1789), where her success in moving audiences to tears launched a vogue for mad scenes. Zinzendorf heard her on 18 October 1791 in Mergentheim in *La contadina di spirito*, possibly one of her last performances, for in 1792 she married Jean-Georges Meuricoffre, a French banker and an acquaintance of Mozart's, and retired from the stage. She was universally admired for her acting skills: the *Wiener Früh- und Abendblatt* (29 April 1788) stated that 'no singer can rival her acting, but in her singing she is surpassed by Anna Morichelli and Nancy Storace'. Her sister Anna (*fl* 1780–93) almost invariably sang with her in the same productions at the Teatro dei Fiorentini.

RUDOLPH ANGERMÜLLER/DOROTHEA LINK

Coltellini, Marco (*b* Montepulciano, 4 May 1724; *d* St Petersburg, Nov 1777). Italian librettist. He carried the title *abate* as a lay brother and not as a priest, and in 1755 married Maria Spina; they had seven children including two singers, the mezzo-soprano Celeste Coltellini and her lesser known sister Anna. Coltellini lived in Livorno, where he was close to the large English community, and in 1752 or 1753 briefly visited England with the Earl of Essex. After ten years of literary activity he began writing opera librettos. His first full-length work, *Almeria*, based on Congreve's *The Mourning Bride*, was performed in Livorno in 1761 (in a setting by G.F. de Majo). He dedicated the work to Metastasio, who criticized the over-complex plot but was 'seduced by his poetic vivacity and by the magic of his beautiful writing', which he found 'live, harmonious, and full of images and ideas' (letter to Coltellini, dated 25 May 1761). By 1763 he was working in Vienna where he produced a series of librettos that show the influence of Algarotti and his fellow Livornese

Calzabigi, who called Coltellini his disciple. Coltellini could not have become Metastasio's successor, since Metastasio retained his position as imperial court poet until his death in 1782. Coltellini held the lesser post of sixth poet laureate. In his *Risposta . . . [di] Don Santigliano di Gilblas* Calzabigi said he called Coltellini to Vienna himself in order to have someone who would maintain the same style and could substitute for either himself or Metastasio. Coltellini's first Viennese libretto, *Ifigenia in Tauride*, was set by Traetta (1763). Predating Calzabigi's libretto for Gluck's *Alceste* by four years, Coltellini's *Ifigenia* was the first full-length Viennese opera to incorporate French elements – chorus, ballet, scene complexes and multiple ensembles – into an italianate dramaturgical framework. It was successful and highly influential in Italy, where Gluck's *Alceste* remained an occasional novelty. Similar works for Vienna followed: *Alcide negli orti esperidi* (set by Majo, 1764), *Telemaco* (Gluck, 1765), *Amore e Psiche* (Gassmann, 1767) and *Armida* (Salieri, 1771).

The staged assassination of Thoas in *Ifigenia* and the three tragic deaths in *Piramo e Tisbe* (Hasse, 1768) represented radical departures from the rules of 18th-century dramaturgy. In a letter to Ortis, Hasse mentions that Coltellini sang the tenor role of the father in *Piramo e Tisbe*, revealing yet another of his abilities. Coltellini's one *dramma giocosa* from this period, *La Contessina* (1770), was particularly successful; Gassmann's setting received many revivals, and the libretto was subsequently set by other composers, notably Piccinni.

In 1772 Coltellini was called to the Russian court; on his way there he visited Berlin, where he discussed opera reform with Frederick the Great, to whom he dedicated his first St Petersburg libretto, *Antigona*, a *tragedia per musica* set by Traetta (1772). Freed from the often frivolous festival assignments in Vienna, Coltellini was once again able to produce a serious drama with strong doses of pity and terror, which he believed to be the two most powerful resources of the tragic scene. This masterpiece epitomized a decade of effort to revitalize Italian serious opera, which had begun in 1763 with Traetta's *Ifigenia in Tauride*. He produced only one other new work for that court, *Lucinda ed Armidoro* (Paisiello, 1777), though he probably revised his *Amore e Psiche* (1773) and *Armida* (1774) for productions there. He was probably also responsible for the version of Metastasio's *Nitteti* set by Paisiello (1777), notable for the addition of some scenes containing ballets and choruses.

A more elegant poet than Calzabigi, Coltellini was praised for the variety of his arias and the beauty of his recitative (Arteaga), but criticised for his prolixity and an excess of intrigue in his dramas. Although close to Calzabigi in stylistic intent, he did not always adhere to his mentor's central principle of presenting the drama in a series of tableaux so striking and self-explanatory as to render the text of secondary importance. He often preferred to work within the formal structure of the *opera seria*, which he modified and enhanced in much the same way that Verazi was doing in Mannheim. The obvious borrowings as well as the sharing of the composers Traetta and Majo point to a close professional relationship between the two librettists. Both infused their ensembles with action: the action finale in Coltellini's serenata *Amore e Psiche* preceded by one year Verazi and Jommelli's action finale in *Fetonte*, the earliest such construction appended to an *opera seria*. Conversely Coltellini picked up Verazi's ensembles of fluctuating personnel and action pantomimes during the introductory sinfonia. Such innovations within the Italian dramaturgical framework made elements of Viennese reform accessible to the Italian theatre, paving the way for a new style of opera in the 1790s.

From 1762 to 1770 Coltellini owned, but did not himself operate, the most important press in Livorno, which published the works of Algarotti. He had the courage to publish works that had been censored in other regions of Italy, most notably Beccaria's *Dei delitti e delle pene*. He also made his firm a dissemination point for foreign literary work including the French *Enciclopèdie*. It is not unlikely that Coltellini held liberal political views, and it is possible that he wrote satires against Maria Theresa and Catherine II. But the claim that Catherine had him poisoned is unfounded.

MARITA PETZOLDT McCLYMONDS, CAROLINA BALDI

Coltman, John W. (*b* Cleveland, 19 July 1915). American physicist and acoustician. After studying physics at the Case School of Applied Science (BS 1937) he obtained the PhD from the University of Illinois. From 1941 to 1980 he held various research and management positions at the Westinghouse Corp. His research into the acoustics of the flute, carried out in a small laboratory at his home, has contributed significantly to what is known today about the behaviour of flutes and organ pipes. Several of his papers are recognised as standard reference material. His theory of feedback and how this relates to the means by which the flautist produces the desired frequencies and loudness is particularly relevant to performance. He also studied the significance of mouth resonance and the effect of mode stretching on harmonic generation. His work on the intonation of both antique and modern flutes and his critical assessment of Theobald Boehm's methods have helped in shaping current views on the historical development of the instrument.

CLIVE GREATED

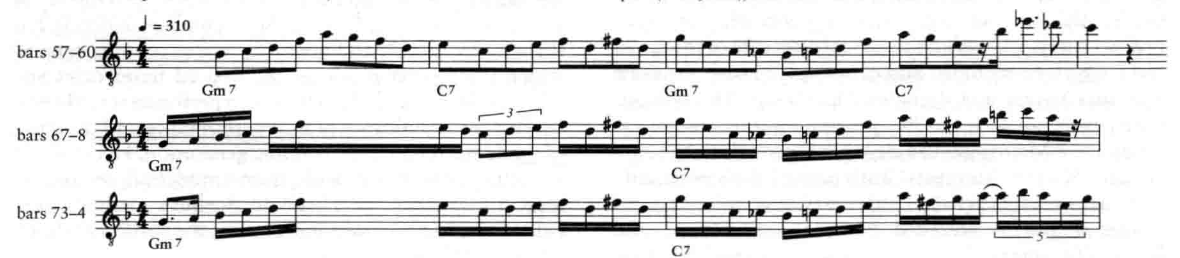
Coltrane, John (William) [Trane] (*b* Hamlet, NC, 23 Sept 1926; *d* New York, 17 July 1967). American jazz tenor and soprano saxophonist, bandleader and composer. He was, after fellow black jazz musician Charlie Parker, the most revolutionary and widely imitated saxophonist in jazz.

1. Life. 2. Music. 3. Influence.

1. LIFE. Coltrane grew up in High Point, North Carolina, where he learnt to play the E♭ alto horn, clarinet and (at about the age of 15) alto saxophone. After moving to Philadelphia, he enrolled at the Ornstein School of Music and the Granoff Studios; service in a navy band in Hawaii (1945–6) interrupted these studies. He played the alto saxophone with the trumpeter King Kolax, then changed to the tenor to work with the alto saxophonist Eddie 'Cleanhead' Vinson (1947–8). He performed on both instruments while in groups led by the saxophonist Jimmy Heath, the trumpeter Howard McGhee, Dizzy Gillespie, the alto saxophonist Earl Bostic and lesser-known rhythm-and-blues musicians, but by the time of his membership in Johnny Hodges's septet (1953–4) he was firmly committed to the tenor instrument. He leapt to fame in Miles Davis's quintet (1955–7), but throughout the 1950s addiction to drugs and then alcoholism disrupted his career. Shortly after leaving Davis, however, he overcame these problems; in 1964 his album *A Love Supreme* celebrated this victory and the profound religious experience associated with it.

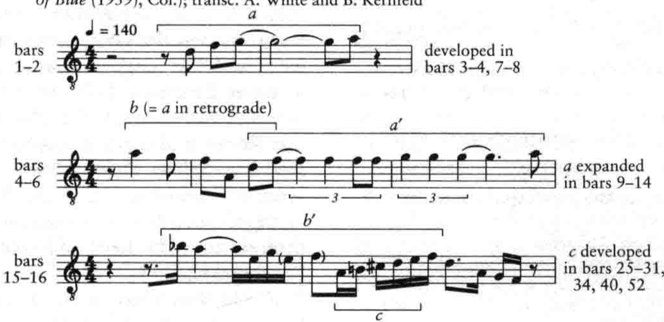
Coltrane next played in Thelonious Monk's quartet (July–December 1957). He rejoined Davis and worked in various quintets and sextets with Cannonball Adderley, Bill Evans and others (1958–60). While with Davis he discovered the soprano saxophone, and purchased his own instrument in February 1960. Having led numerous studio sessions, established a reputation as a composer and emerged as the leading tenor saxophonist in jazz, Coltrane was now prepared to form his own quartet. Its long-standing members were McCoy Tyner (piano), Jimmy Garrison (double bass) and Elvin Jones (drums). Eric Dolphy also served as an intermittant fifth member.

Coltrane turned to increasingly radical musical styles in the mid-1960s. Surprisingly these controversial experiments attracted large audiences, and by 1965 he was affluent. From autumn 1965 his search for new sounds resulted in frequent changes of personnel in his group. New members included Pharoah Sanders (tenor saxophone), Alice Coltrane (his wife, piano), Rashied Ali (a second drummer until Jones's departure) and a number of African-influenced percussionists. In his final years and after his death, Coltrane acquired an almost saintly reputation among listeners and fellow musicians for his energetic and selfless support of young avant-garde performers, his passionate religious convictions, his peaceful demeanor and his obsessive striving for a musical ideal. He died at the age of 40 of a liver ailment. *The Coltrane Legacy* was issued in 1987.



2. MUSIC. The success of Coltrane's performances in the 1950s depended largely on their tempo: although mature in his ballad playing and often imaginative at medium tempos, he was frequently shallow in his fast bop solos. At times he rendered ballad themes with little or even no adornment, as in *Naima* (named after his first wife) (from the album *Giant Steps*, 1959, Atl.). In other ballads, such as Monk's *Round Midnight* (1956, Col.) on Davis's album *'Round about Midnight*, he alternated paraphrases of the theme with complex elaborations in which brief thematic references served as signposts. In either case, his priority was beautiful sounds. However esoteric his music became in later years, Coltrane remained a great romantic interpreter of ballads.

One of Coltrane's main objectives was to elaborate the full implications of bop chord progressions. At moderate speeds he could do this without ignoring rhythmic and expressive nuance, for example in his widely varying improvisations on *All of You* (on *'Round about Midnight*), *Blues by Five* (on Davis's album *Cookin'*, 1956, Prst.) and *Blue Train* (on *Blue Train*, 1957, BN). But the faster the piece, the more concentrated was his exploration of harmony at the expense of other considerations. Like Charlie Parker, Coltrane improvised rapid bop melodies from formulae: but unlike Parker he drew on a small collection of formulae, failed to juxtapose these in new combinations, and tended to place them in predictable relationships to the beat. Early solos on *Salt Peanuts* (on Davis's album *Steamin'*, 1956, Prst.) and *Tune-up* (from *Cookin'*) exemplify this practice, which culminated in a blistering performance in the title track on *Giant Steps*. This solo was impressive because of Coltrane's huge driving tone, his astonishing technical facility and his complex harmonic ideas; but rigid, repetitious quaver formulae lay just beneath the surface.



Whereas Coltrane was far more important as an improviser than as a composer, he did write several pieces that have become jazz standards and from May 1959 until his death the vast majority of his recordings as a leader were of his own compositions.

By seeking to escape harmonic clichés with pieces such as *Giant Steps*, he had inadvertently created a confining,

Ex.1 Coltrane's improvisation on *Ah-leu-cha*, from M. Davis: *Miles and Monk at Newport* (1958, Col.); transcr. A. White and B. Kernfeld

Ex.2 Motivic relationships in Coltrane's improvisation on *So What*, from M. Davis: *Kind of Blue* (1959), Col.); transc. A. White and B. Kernfeld

one-dimensional improvisatory style. In the late 1950s he pursued two alternative directions. First, his expanding technique enabled him to play what the critic Ira Gitler called 'sheets of sound', as exemplified in his very fast semiquaver runs during a live performance of *Ah-leu-cha* recorded at Newport in 1958 (ex.1). Such flurries gradually replaced the rhythmic clarity in *Giant Steps* and disguised his excessive reiteration of formulae. Second, when Miles Davis discarded bop chord progressions in favour of relaxed ostinatos, Coltrane abandoned formulae in favour of true motivic development. Davis's *So What* (on the album *Kind of Blue*, 1959, Col.) was the first recording on which Coltrane systematically varied motifs throughout a solo (ex.2). This process became increasingly prominent in his most famous recordings, including *My Favorite Things* (on *My Favorite Things*, 1960, Atl.), *Equinox* (on *Coltrane's Sound*, 1960, Atl.), *Teo* (on Davis's *Someday my Prince will Come*, 1961, Col.), *Impressions* (on *Impressions*, 1961–3, Imp.) and the album *A Love Supreme* (1964, Imp.). Initially he developed motifs only in performances when neither tempo nor harmonic rhythm was fast. Eventually Coltrane was also able to avoid repetitive responses at high speeds; for example, large portions of *Impressions*, played at a metronome marking of 310, gained coherence by his continuous, inventive manipulation of distinctive quaver formulae. (These recordings of the early 1960s are often described as being modal, the concept of which owes more to Tyner's accompaniments – some of which suggest modal scales – than Coltrane's chromatic lines.)

While consolidating his new manner of organizing melody, Coltrane embarked on a quest for new sonorities. Following Lester Young, Illinois Jacquet and others, he used 'false' fingerings to extend the tone-colour and upper range of his instrument. The same quest led him to rescue from oblivion the soprano saxophone, which soon rivalled the tenor as his principal instrument. On both he learnt to leap between extreme registers at seemingly impossible speed, and thus to convey the impression of an overlapping dialogue between two voices, as in the latter part of *My Favorite Things* (on *Selflessness*, 1963, Imp.). Radical timbres akin to human cries dominate his late improvisations as his concern with tonality and pitch waned.

At this time Coltrane also developed a type of meditative, slow, rubato melody based on black gospel preaching. In *Alabama* (on *Live at Birdland*, 1963, Imp.), he interpreted a speech by Martin Luther King; later, in *Psalm* from *A Love Supreme* (1964), he instrumentally 'narrated' his own prayer. This technique also appears without obvious reference to a written source in several late recordings.

Coltrane's expansion of individual sonority went hand in hand with an expansion of group texture. In the quartet, Tyner often kept time and established tonal centres with chordal oscillations, thus freeing Jones to create swirling masses of drum and cymbal accents. Jones (later, Ali) and Coltrane frequently engaged in extended colouristic duets. The addition of Dolphy's bird- and speech-like sounds on wind instruments and Sanders's screaming tenor saxophone intensified the group's textures. Coltrane moved to the forefront of experimental jazz with *Ascension* (1965, Imp.), which presented a sustained density of dissonant sound previously unknown to jazz. Two alto and three tenor saxophonists, two trumpeters, a pianist, two double bass players and a drummer played through a scarcely tonal, loosely structured scheme; their collective improvisation and many of their 'solos' stressed timbral and registral extremes rather than conventional melody. Thereafter, Coltrane's ensembles concentrated on maintaining extraordinary levels of intensity by filling a vast spectrum of frequencies, tone-colours and (when he employed extra percussionists) accents. The albums *Om* and *Meditations* (1965, Imp.), the late versions of *My Favorite Things* and *Naima* (on *Live at the Village Vanguard Again*, 1966, Imp.) and many other recordings exemplify this final stage of his musical evolution.

3. INFLUENCE. Coltrane's impact on his contemporaries was enormous. Countless players imitated his sound on the tenor saxophone, though few could approach his technical mastery. He alone was responsible for recognizing and demonstrating the potential of the soprano saxophone as a modern jazz instrument; by the 1970s most alto and tenor saxophonists doubled on this once archaic instrument. Finally, by selling hundreds of thousands of albums in his last years, he achieved the rare feat of establishing avant-garde jazz, temporarily, as a popular music.

BARRY KERNFELD

Columbano, Oratio. *See* COLOMBANI, ORATIO.

Columbia. American (and sometime British) record company. The name is probably the longest-standing title of any record company, dating from the foundation in 1887 of the American Graphophone Company in Washington DC. At first the company used patents of Charles Sumner Tainter and Alexander Graham Bell and engaged, in association with Edison, in the manufacture and sale of cylinder machines for business use. The project soon failed, but the subsidiary Columbia Phonograph, active in the District of Columbia and the surrounding region, was still profitable and the name was used increasingly by the parent firm, which turned to entertainment when the sale of 'graphophones' for business proved unsuccessful. By 1891, a ten-page catalogue of entertainment cylinders was issued. The US Marine Band recorded for the firm as did the new Sousa Band in 1893. In 1894 the company produced clockwork playing machines (the collaboration with Edison, who favoured electric motors, had ceased). It moved to New York in 1896, retaining however its factory in Bridgeport, Connecticut; branches were set up in a number of American cities, in Paris the next year, in London in 1900 and later in other European cities. The company also began to make discs and machines for playing them.

In 1903, Columbia made the first recordings, on ten-inch (25 cm) discs, of distinguished opera singers from the Metropolitan Opera, New York (Victor's first were made later the same year). Sales were disappointing and the management decided to concentrate on more popular repertory. A factory was opened in Wandsworth, London, in 1906, to produce records (discs and cylinders) and manufacture players. Recordings were also made in Britain and Louis Sterling joined the British branch of the Columbia Phonograph Co. as manager in 1909, becoming European general manager in 1915. The production of cylinders was abandoned in 1912. Columbia increased their recording programme and marketed their records vigorously in the USA, South America and Europe; they were able to engage many leading artists, including Thomas Beecham, Felix Weingartner and Henry Wood among conductors; Lillian Nordica, Clara Butt, Alessandro Bonci and Leo Slezak among singers, and among instrumentalists Pablo Casals, Arthur Friedheim, Josef Hofmann and Eugène Ysaÿe. The name of the firm was changed in 1913 to Columbia Graphophone Co. (although the US firm reverted in 1924 to Columbia Phonograph Co.).

World War I saw a rise in the fortunes of the British firm, which increasingly became independent of its American parent; in 1922 it was bought by Sterling, and in 1925 the British company bought the American one for $2.5 million and reorganized the group as Columbia International, which also acquired the German Carl Lindström group. It had by then introduced its 'new process' of producing laminated records, much reducing surface noise. The American firm was active in jazz and made recordings with the Original Dixieland Jazz Band in 1917 and soon after with black groups, Handy's Orchestra of Memphis and Wilbur Sweatman's Original Jazz Band, and the Louisiana Five. Race records were issued from 1923, with Bessie Smith, King Oliver, Ethel Waters and others; there were also field recordings made in New Orleans and Atlanta. Paul Whiteman, Jack Teagarden and Ted Lewis were among the bandleaders recording for Columbia, with Louis Armstrong, Benny Goodman and Duke Ellington in the 1930s. The Okeh company was acquired in 1926 (and sold in 1933), and in 1928 the French Pathé organization. Because of US monopoly laws, the British company sold the American one in 1931 and it passed to the American Record Company in 1934.

The British Columbia firm made recordings at the Bayreuth Festival in 1927, and recorded substantial numbers of chamber and orchestral works by Beethoven and Schubert in 1927–8 to mark those composers' centenaries; it also sponsored an international competition for a completion of Schubert's Unfinished Symphony and another for a new symphony (won by Kurt Atterberg, no.6 in C). During the depression the company was forced to merge with its former chief rival, HMV, to form EMI, with Louis Sterling as managing director; the labels and sales organizations remained separate. (For a fuller account of the British firm, *see* EMI.)

In the USA, the company was bought in 1938 by the Columbia Broadcasting System and embarked on a programme of new recordings, many with American artists or ones recently emigrated to the USA from Europe. American orchestras recording with Columbia, on the Columbia/CBS label included the Philadelphia under Eugene Ormandy, the Cleveland under George Szell and the New York Philharmonic Symphony, under Bruno Walter and others; and the label's roster of artists included Pablo Casals, the Budapest Quartet, E. Power Biggs, Isaac Stern and later Glenn Gould. With the composer Goddard Lieberson as a director, much attention was given to contemporary music, with the first recordings of Berg's Violin Concerto and Schoenberg's *Pierrot lunaire* (conducted by the composer), both in 1940, and a number of recordings of modern American music (notably works by black composers), as well as recordings of works by

Stravinsky under his own direction, and no fewer than 69 American musicals.

After a period of experimentation with narrow-groove records, at 33⅓ r.p.m., Columbia, in June 1948, became the first company to issue LPs; EMI's slowness to do so in other countries was a factor in the company's decision to terminate its affiliation with non-American Columbia labels in the 1950s, and thereafter their recordings were sold through Philips or through subsidiaries. The label CBS was generally used as Columbia remained a trademark of EMI in many areas. The British Columbia firm issued their recordings in the USA on the Angel label.

Jazz artists working with the firm after World War II include Dave Brubeck (1953–68), Miles Davis (1955–86), Duke Ellington (1956–62), Thelonious Monk (1962–8) and Wynton Marsalis (from 1981). The label was particularly successful in the pop field in the 1950s, with recordings by Guy Mitchell, Johnny Cash, Jo Stafford and Rosemary Clooney; the antipathy of their musical director Mitch Miller to rock and roll proved costly for Columbia, but later in the rock field, Bob Dylan, Simon and Garfunkel, Janis Joplin and Chicago recorded for the firm, and later Michael Jackson, Barbra Streisand and Celine Dion recorded for Columbia and its Epic label.

In 1988, CBS sold its record business and the Columbia label to the Japanese SONY organization.

RAY BURFORD (with DAVE LAING)

Columbia-Princeton Electronic Music Center. Electronic music studio set up in 1959 at Columbia University, New York, with funding from the Rockefeller Foundation. A joint venture with Princeton University, it was one of the first university-based centres for the development of electronic music. Its founding composers Luening and Ussachevsky, with colleagues such as Babbitt and Davidovsky, pioneered digital sound synthesis and processing, using a synthesizer provided by the Radio Corporation of America. Occupying an entire room, this machine was able to produce sounds of defined pitch and timbre. The inaugural concerts of the centre, in 1961, featured works in which electronic sound was integrated with live instruments or voices, including Luening's *Gargoyles* and Ussachevsky's *Creation: Prologue*, as well as entirely electronic pieces, such as Babbitt's *Composition for Synthesizer*. During the next decade the centre remained at the forefront of the field, its output including Babbitt's *Philomel*, Davidovsky's *Synchronisms* and Wuorinen's *Time's Encomium*. By the 1970s computer-music studios had developed at several American universities, notably Princeton, Stanford and MIT.

Colyns [Colijns], **Jean-Baptiste** (*b* Brussels, 25 Nov 1834; *d* Brussels, 31 Oct 1902). Belgian violinist, conductor and composer. At an early age he entered the Brussels Conservatory, where he studied with L.-J. Meerts, and N.-L. Wéry, and won a *premier prix* for violin. He played solo violin at the Théâtre de la Monnaie in Brussels, and in 1863 was appointed to teach the violin at the Brussels Conservatory. He was the first violinist of the Belgian court's string quintet and conducted the Société de Symphonie des Amateurs, which gave numerous concerts in Brussels. As a soloist he toured in England, France, Germany and the Netherlands with great success. In 1884 he conducted the Cercle Symphonique et Dramatique and from 1888 he taught at the Antwerp Conservatory. He was highly regarded as both a teacher and performer; the delicacy and purity of his interpretations were particularly praised. His compositions include a violin concerto, several salon pieces for the violin and two operas.

PATRICK PEIRE

Coma, Annibale (*b* Mantua, *c*1550; *d* after 1598). Italian composer and organist. Towards the end of 1570 he was appointed organist at Mantua Cathedral, partly through the influence of Duke Guglielmo Gonzaga and, except for a short time during the plague of 1576–7, he remained in the post until 1580. During this period, and especially in 1572, his relations with the cathedral chapter were often difficult; nevertheless, although he was reproached for lack of discipline and irresponsibility in the discharge of his duties, his abilities as an organist were valued. Although there is no supporting documentation he was probably in service at the court after 1580 and in 1588 he contributed to Alfonso Preti's *L'amorosa caccia* (RISM 1588[14]), a collection entirely devoted to compositions by native Mantuans. The dedication, to Duke Guglielmo Gonzaga, of Coma's first book of madrigals speaks of the Duke's knowledge of music and of his skill as a composer, and opens with an encomiastic piece in his honour. The volume includes an eight-section canzone and concludes with a dialogue for eight voices arranged in two choirs. The publications of the 1580s exhibit a preference for lighter textures and pastoral verse; *Il terzo libro* also includes two pieces ascribed to Cesare Ceruti. Dedications to Mario Bevilacqua, Ferrante Gonzaga of Guastalla and Duke Alfonso II d'Este suggest continued associations in north-east Italy, and in particular at the courts of Ferrara and Mantua.

Antonio Coma, probably a relative (see *LaMusicaD*), was from 1606 *maestro di cappella* at S Biagio, Cento. He was a monk in holy orders and published a five-voice *Officium BVM* (Venice, 1606), the *Psalmi omnes … cum 3 beatae Mariae canticis* op.3 (Venice, 1609) for four, five and eight voices with organ, and the *Sacrae cantiones … et in fine Stabat mater* op.4 (Bologna, 1614[5]), which contains three motets by Giacomo Coma, who was also probably a relative (see *EitnerQ*). Both the Marian office and the Vespers music are highly sectional works which make much use of simple homophony, syllabic word-setting and passages of falsobordone writing; both were evidently written for the choir at S Biagio. The *Sacrae cantiones*, which is dedicated to the town of Cento, shows the impact of early 17th-century vocal styles; it contains a number of duets and trios including a setting of the Marian litany (some of these are for male voices), a group of four-voice pieces which includes a setting of the *Stabat mater* addressed to the 'Congregatione confratum disciplinae', and two instrumental works.

Coma, Giacomo. Italian composer, probably a relative of ANNIBALE COMA.

Comanedo, Flaminio (*b* Milan, *c*1570; *d* ?Milan, after 1622). Italian composer and singer. The title-pages of his two books of canzonettas indicate that he was born in Milan and that he was a pupil of G.C. Gabussi, *maestro di cappella* of Milan Cathedral, where Comanedo was a salaried tenor from April 1603 to December 1622. The madrigals of his second book circulated in manuscript form and were performed at private academies before being published in 1615. In 1617 he was considered one of the most famous musicians in Milan (see RISM 1617[2]), and in 1619 he was mentioned by his contemporary Borsieri for having followed 'the manner of the most modern composers' in his books of canzonettas. In 1670 Picinelli remembered him for having been the equal of the 'greatest musicians of the day'.

SERGIO LATTES (with AUSILIA MAGAUDDA and DANILO COSTANTINI)

Combarieu, Jules (Léon Jean) (*b* Cahors, Lot, 5 Feb 1859; *d* Paris, 7 July 1916). French musicologist. His musical education began at Cahors under Langlane; he studied at the Sorbonne and in 1888 left to follow the courses of Spitta in Berlin. He taught first in the French provinces and then in Paris at the Lycées Condorcet and Louis-le-Grand. Struck by the shortcomings in French music teaching, he established manuals and ministerial circulars to regulate instruction and promoted choral singing in the secondary schools. During the same period he founded the *Revue d'histoire et de critique musicales* (1901), the first French journal of its kind, which became the *Revue musicale* (1904) and in 1912 absorbed the journals of the Société Internationale de Musique. The journal's first 12 numbers (1901–12) have been reprinted (Scarsdale, NY, 1969). He held a professorship at the Collège de France (1904–10), and his lectures on the history of music were published (1906) under the title *Eléments de grammaire musicale historique*. He was one of the first exponents of a sociological tendency in musicology, aiming at a rigorous strictness of method. He contributed music criticism to various newspapers and journals, among them the *Revue de Paris*, *Revue philosophique* and *Revue critique*.

Combination action (Fr. *appel*, *pédale de combinaison*; Ger. *freie Kombination*). In organs, a device that allows the player to put a group of stops into operation at once. Such actions may be either fixed (unalterable) or adjustable by the player, and are found in organs with every type of key action: mechanical, pneumatic or electric. Early mechanical types of combination action were generally foot-operated, but in electric-action organs thumb-buttons between the manuals are common. *See also*

COMPOSITION PEDAL; MACHINE STOP; ORGAN STOP; PISTON (ii); REGISTRATION, §I.

□

Combination pedal. *See* COMPOSITION PEDAL.

Combination tone. A sound that may be heard when two loud musical tones are sounded together but is not present when either of the tones is sounded separately. If the frequencies of two pure tones are f_1 and f_2, the frequencies of the combination tones are f_1+f_2, f_1-f_2, $2f_1+f_2$, $2f_1-f_2$, f_1+2f_2, f_1-2f_2, $2f_1+2f_2$, $2f_1-2f_2$ etc. They are usually attributed to non-linearities in the system through which the sound is being transmitted or reproduced. If the only system involved is the ear, they are sometimes described as 'subjective tones'; the most prominent are the 'simple' difference tone, with frequency f_2-f_1, and the 'cubic' difference tone, with frequency $2f_1-f_2$, where f_1 is the lower frequency.

See also SOUND, §9; DIFFERENCE TONE; RESIDUE TONE.

CLIVE GREATED

Combination unit [Combo]. Amplification equipment in which an AMPLIFIER and a LOUDSPEAKER are housed in a single cabinet. *See* ELECTRIC GUITAR, §2.

Combinatoriality. In TWELVE-NOTE COMPOSITION, a technique whereby a collection of pitch classes can be combined with a transformation of itself to form an aggregate of all 12 pitch classes. *See* SET.

Combite songs. *See* HAITI, §II, 2(iii).

Combo (i). A term, derived from the word 'combination', used of a small group of musicians and applied principally to small ensembles, especially in jazz and popular music (hence 'beat combo').

Combo (ii). *See* COMBINATION UNIT.

Comédie-ballet (Fr.). A French Baroque stage work that combined spoken, or later sung, *comédie* and ballet.

As Molière stressed in his preface to *Les fâcheux* (1661), his artistic aim was for a more integrated spectacle, one in which vocal music and dance complemented the principal intrigue conveyed through the spoken dialogue. In partnership with Lully (from 1663 to 1670), he created the most enduring examples of the genre. In the course of this period there was a gradual breaking down of the compartmentalization of *intermède* and dialogue in favour of a more flexible structure: music was increasingly assigned a more prominent role. The subject of the last of their collaborations, *Le bourgeois gentilhomme* (1670), a rich bourgeois and his efforts to become a cultivated gentleman, provided ample scope for Lully (in scenes where the titled character seeks to be a patron or student of the arts with comic results) – so much so that the critic of the *Gazette de Paris* found the intrigue of the *comédie* too accessory. After falling out with Lully, Molière turned to Marc-Antoine Charpentier, whose *Le malade imaginaire* (1673), revised three times to avoid legal entanglements with Lully, achieved a notable success.

In the 18th century few works of this type were called *comédies-ballets* (Voltaire's *La princesse de Navarre* with music by Rameau, 1745, is a hybrid between *tragédie* and *comédie-ballet*, though termed the latter; *see* PARIS, fig.17); nonetheless, the model of Molière and his musicians was an important legacy. Incidental music (instrumental and vocal) supporting elements of the plot and characterization was a feature of French spoken theatre well into the 19th century.

While some scholars restrict the term *comédie-ballet* to works conforming to the Molière-Lully model, for 18th-century authors it also aptly designated a type of OPÉRA-BALLET, with no spoken dialogue and in three or four acts with a prologue. Rather than being composed of separate entrées, it had principal characters that appeared in all the acts and a continuous, though dramatically slight, plot. A.C. Destouches' *Le Carnaval et la Folie* (1703) was the most popular example. Another is Rameau's Platée (1745). The humour was broader than in other *opéras-ballets* and, of course, in strong contrast to the dignity of tone sought in *tragédies lyriques*.

Comes, Bartholomeus. *See* LE CONTE, BARTHOLOMEUS.

Comes, Juan Bautista (*b* Valencia, *c*1582; *d* Valencia, 5 Jan 1643). Spanish composer. He was one of five children of Gaspar Comes, a clog maker, and Hieronyma Villafranca. Juan Bautista was a choirboy at Valencia Cathedral from 1594 until 1 August 1596. He possibly worked as organist and choirmaster in Sueca (Valencia) in 1602 and was employed at Lérida Cathedral between 1605 and 1608 as a singer and later as *maestro de capilla.* He returned to Valencia in 1608 as *vicemaestro de capilla* at the Real Colegio del Corpus Christi (Patriarca), and on 20 April 1613 was appointed *maestro de capilla* at Valencia Cathedral. Comes was ordained as prior on 15 May 1615 and three years later he was appointed *vicemaestro* of the royal chapel, Madrid. His letters suggest that he missed life in Valencia and payment records indicate that he was absent from the royal chapel three times between 1622 and 1626, for periods ranging

from several months to over a year and a half. Notwithstanding the additional 'plaza de Borgoña' awarded him by the court, he returned permanently to Valencia as *maestro de capilla* at the Patriarca on 29 June 1628, and was re-engaged as *maestro* by Valencia Cathedral on 16 October 1632. In 1638 he was relieved of duties relating to the choirboys while retaining his full salary, and the authorities continued to pay for medical treatment and other personal expenses, even reimbursing his heirs some 400 libras (minus the value of certain loans) for compositions he bequeathed to the cathedral on his death. He was buried in the priests' pantheon in Valencia Cathedral.

About 215 compositions by Comes survive, many of which are for two to four choirs. His oft-cited 17-part *Dixit Dominus* contains instrumental indications, while other works include the names of the solo singers for each part in three of the four choirs. The reworking he did of Jan Nasco's St Matthew Passion adds or subtracts parts or sections to reflect the number of persons in the narrative. His *stile antico Misa 'Exsultet caelum'* contains surprising harmonic passages, while his two parody masses, *Iste confessor* and *Ad instar praelii constructa* (both with continuo), use masses (not motets) as their models, namely Palestrina's *Missa 'Iste confessor'* and Victoria's *Missa pro victoria* respectively. Nearly half of Comes's extant works are settings of devotional Spanish texts as villancicos or *tonadas*. These have sections for solo voice(s) and chorus and use folklike and serious musical styles in an unusual three-part structure.

GRETA OLSON

Comes, Liviu (*b* Şerel, Hunedoara district, 13 Dec 1918). Romanian composer, musicologist and teacher. After attending the Tîrgu Mureş Conservatory (1927–37) he studied composition with Toduţă at the Cluj Academy (1946–50). He also graduated in medicine and philosophy from the University of Cluj. He remained at the Cluj Academy as a teacher (1950–69) until he was appointed counterpoint teacher at the Bucharest Conservatory (1970–81). His compositional style, imbued with Transylvanian folk music, combines modalism with elements of Renaissance counterpoint in the tradition of Toduţă. His works for children, prompted by his interest in music education, include the ballet *Little Red Riding Hood* (1957). Comes has published a number of books on Renaissance polyphony.

OCTAVIAN COSMA

Comes [Gomez, Gomes], **Pietro** (*fl* Naples, 1739–55). Italian composer. According to Eitner he was born 'near Naples', and Florimo referred to him as a singer, though he seems never to have performed on the Neapolitan stage. Librettos of his works call him variously 'Maestro di Cappella Napoletano' and 'Maestro di Cappella dell ... Duca di Castropignano'. At first glance his list of works, entirely in the field of comic opera in Naples, is impressive, but examination of the librettos suggests that Comes was an undistinguished musician called upon when better and more expensive talent was not desired or available. It is probably significant that, except for his last two operas, all his commissions came from the least important and least successful of the Neapolitan theatres, the Teatro della Pace.

Thus his first opera, *La taverna di Mostacchio* (text, B. Saddumene; December 1739) is a resetting of *La Rina* (original music by N. Pisano, 1731); *Le fenziune abbentorate* (P. Trinchera; winter 1745) Scherillo believed to have been a rewriting of Tullio's *Lo finto Armenio* (by A. Orefice, 1717) and an unsuccessful attempt to bring an old-fashioned work up to date; *La vennegna* (Trinchera;

1747) was, as its librettist admitted, written out of season and in a hurry; *Il nuovo Don Chisciotte* (A. Federico and A. Palomba; Teatro dei Fiorentini, winter 1748) was a new version of *Il fantastico* (by L. Leo, 1743); and for *Rosmonda* (Palomba; Teatro Nuovo, Carnival 1755), Comes was commissioned to write only part, in collaboration with Logroscino, Traetta and C. Cecere. Comes also composed *Li despiette d'ammore* (Palomba; spring 1744), *Lo chiacchiarone* (Palomba; winter 1748) and possibly *Laboravi im gemito meo* for six voices (*E-VAcp*).

Although none of the music survives, the librettos of Comes's operas are of historical interest, incorporating developments of Neapolitan *opera buffa* during the 1740s: the move away from Neapolitan dialect for all characters, incorporation of plot elements drawn from literary romance, character satire instead of pure domestic farce and (to judge by their reduction in quantity) elaboration of the individual musical numbers.

JAMES L. JACKMAN/R

Come sopra (It.: 'as above'). A direction found particularly in scores as a substitute for recopying a whole section. It also appears with the same meanings as COME PRIMA.

Come stà (It.: 'as it stands'). An instruction to play without improvised ornamentation or rhythmic alteration, found particularly in scores of the later 17th and 18th centuries. It appears at the *grave* 4/2 section near the beginning of Corelli's 'Christmas' Concerto (op.6 no.8, 1714) in the direction *arcate sostenute e come stà*, indicating that the strict *stile antico* counterpoint would have been ruined by the embellishment normally applied to slow movements at the time.

DAVID FALLOWS

Comettant, (Jean-Pierre) Oscar (*b* Bordeaux, 18 April 1819; *d* Montivilliers, nr Le Havre, 24 Jan 1898). French critic. He entered the Paris Conservatoire in 1839, studying composition with Carafa, and from 1844 was a popular salon pianist and composer. After living in the USA from 1852 to 1855 Comettant became known in Paris as a writer. His periodical articles, informative, polemical and attractive to read, were published in *Le musée des familles*, *La gazette musicale*, *La mélomanie*, *Le ménestrel*, *La France musicale*, *L'art musical*, *Le luth français*, *L'almanach musical* and *Le siècle*, whose music critic he was for many years. He wrote books on various subjects: on behalf of the French government he made a number of foreign tours (for example to Australia and Scandinavia) to study indigenous musics, and the results of his research form a large part of his published output. Among the principal works are *Histoire d'un inventeur au XIXe siècle: A. Sax* (1860), *Musique et musiciens* (1862: articles reprinted from *L'art musical* including essays on Glinka and Kastner), *La musique, les musiciens et les instruments de musique chez les différents peuples du monde, archives complètes de tous les documents qui se rattachent à l'Exposition internationale de 1867* (1869) and *Les musiciens, les philosophes et les gaîtés de la musique en chiffres* (1870). In 1871 he and his wife, who was a singer, together founded the Institut Musical, a music school for women. Comettant's compositions include piano music, songs, chamber music and choral pieces, among them a suitably populist *Marche des travailleurs* in 1848, dedicated to the Orphéon de Paris, for which he won a prize.

GUSTAVE CHOUQUET/DAVID CHARLTON

Comic opera. A musico-dramatic work of a light or amusing nature. The term does not have any precise historical meaning; it may, for example, be applied equally to an Italian intermezzo, *farsa* or *opera buffa*, a French *opéra comique* (though many *opéras comiques* are serious or tragic works), a German Singspiel, a Spanish zarzuela or an English opera of a light character. It is often applied to operetta or *opéra bouffe* and may be applied to musical comedy. Most comic operas in languages other than Italian have spoken dialogue rather than continuous music.

See FARSA; INTERMEZZO (ii); OPÉRA BOUFFE; OPERA BUFFA; OPÉRA COMIQUE; OPERETTA; SINGSPIEL; and ZARZUELA.

□

Comişel, Emilia (*b* Ploieşti, 28 Feb 1913). Romanian ethnomusicologist. She studied with Alessandrescu, Brăiloiu, Breazul and Chirescu at the Bucharest Conservatory (1933–7), and in the sociology faculty of Bucharest University (1942–3). She was a research worker at the Arhiva de Folclor (1935–49), a secondary school teacher in Bucharest and Ploieşti (1942–9), professor of folklore at the Bucharest Academy (1949–76), a scientific researcher at the Bucharest Institute for Folklore (1949–64) and Institute for South-East European Studies (1967–74) and professor of music at Timişoara University (1992–4). She has collected more than 9000 Romanian folksongs, both in Romania and from Romanians living abroad and has used them as the basis for transcriptions and thoroughly documented studies, which aim to promote the aesthetic value of Romanian folk music. She has written the biography of Constantin Brăiloiu (1996), and edited six volumes of his works (1967–98).

VIOREL COSMA

Comişel, Florin (*b* Ploieşti, 10 April 1922; *d* Bucharest, 7 Oct 1985). Romanian composer. He studied with Negrea and Andricu at the Bucharest Academy (1939–48). His exploration and knowledge of Romanian folk music, inspired by Brăiloiu, informed many of his later scores. His many posts in the capital's musical life included resident composer for the Army Theatre (1946–7), inspector in the State Committee for Culture (1950–51), assistant lecturer at the Conservatory (1951–2) and music secretary of the Ensemble 'Rapsodia Română' (1957–81). Though his folk-inspired orchestral pieces were well regarded, Comişel was most successful as a composer of operettas. Rich in melodic invention and rhythmically incisive, these works display his mastery of character development. Through his avoidance of cliché and incorporation of folk elements he demonstrated the continuing potential of the genre.

WORKS
(*selective list*)

Operettas: Culegătorii de stele [The Star Pickers] (3, P.M. Ionescu and B. Căuş), 1953, Bucharest, Operetă, 3 March 1953; Soarele Londrei [The Sun of London] (2 pts, N. Constantinescu, after A. Dumas), 1968, Bucharest, Operetă, 26 Dec 1970; Leonard (2, B.A. Emandi), 1972, Galaţi, Muzical, 24 Dec 1972; Adâncile iubiri [Deep Loves] (2, C. Tipa), 1977, Craiova, Liriç, 12 April 1977; Plăieşii (2 pts, Ionescu), 1977, Galaţi, Muzical, 20 Nov 1977; other operettas, musicals, ballets
Orch: Bărbuncul, 1949; Fantezie concertantă, cymbals, orch, 1949
Other works, incl. vocal-orch and choral pieces, film scores

OCTAVIAN COSMA

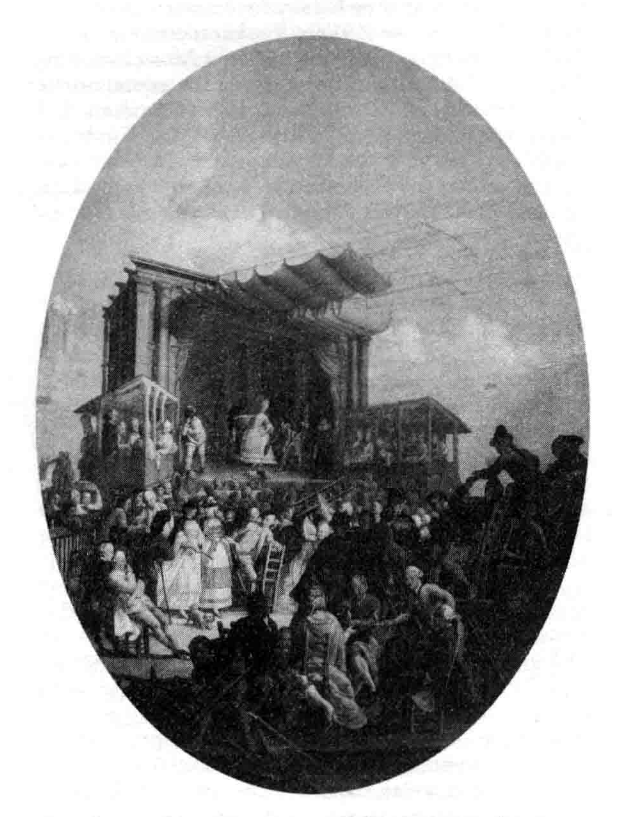
Comissiona, Sergiu (*b* Bucharest, 16 June 1928). Israeli and American conductor of Romanian birth. He studied the violin and conducting at the Bucharest Conservatory, continuing his conducting studies with Silvestri and Lindenberg. After his début with the Romanian State Opera with *Faust* in 1946, he joined the Bucharest Radio Quartet and the Romanian State Ensemble as a violinist, becoming musical director of the latter (1950–55). He was principal conductor of the Romanian State Opera (1955–9) in Bucharest and won the 1956 conducting competition in Besançon. He emigrated to Israel (becoming naturalized in 1959) and became musical director of the Haifa SO (1959–66) and founder-conductor of the Ramat Gan Chamber Orchestra (1960–67). He made his British début with the LPO in 1960, and his US début with the Philadelphia Orchestra in 1965; his success led to many engagements as a guest conductor, including the Boston SO, Cleveland Orchestra, San Francisco SO, New York PO and the Berlin SO. His musical directorships have included the Göteborg SO (1966–77), Baltimore SO (1969–84), Chautauqua SO (1976–80), American SO (1978–82), Houston SO (1978–87), Helsinki PO (1990–95), Radio-Televisión Orquesta Sinfónica, Madrid (from 1990), and Vancouver SO (1991–2000). He has also been associated with several radio and regional orchestras in Europe, and has frequently conducted opera, chiefly at Covent Garden and the New York City Opera. Comissiona is a colourful personality in performance, with a clear preference for Romantic and Impressionist repertory. His recordings include Franck's Symphony, Saint-Saëns's Symphony no.3 and works by Ravel, Sibelius, Blomdahl and Wirén. He has received the Romanian Order of Merit, the City of Göteborg cultural award, and honorary degrees from Johns Hopkins University and the Peabody Conservatory.

CHARLES BARBER, JOSÉ BOWEN

Comma. A small pitch interval of fundamental importance to temperament and tuning. There are two types of comma. The 'syntonic comma' (also called 'comma of Didymus' or 'Ptolemaic comma') is the difference between a just major 3rd and four just perfect 5ths less two octaves, which is 21.51 cents. The 'Pythagorean comma' (or 'ditonic comma') is 23.46 cents, being the difference between twelve 5ths and seven octaves. For practical tuning purposes, the difference between the two types of comma is often ignored and the comma is taken to equal 24 cents.

CLIVE GREATED

Commanday, Robert (Paul) (*b* Yonkers, NY, 18 June 1922). American music critic. He studied theory and history at Harvard University (BA 1943), piano at the Juilliard School (1946–7) and musicology at the University of California, Berkeley (MA 1952). He taught music at Ithaca College (1947–8), the University of Illinois (1948–50) and the University of California, Berkeley (1951–61), where he directed the university's choral association (1950–63). He also directed the chorus of the Oakland SO from 1961 to 1965. In 1964 he succeeded Alfred Frankenstein as music and dance critic of the *San Francisco Chronicle*. He retired in 1994. An erudite and informed writer, he was a champion of local composers and musical organizations and one of the leading critics on the West Coast; in his writing he has focussed on the history of music in San Francisco from 1850, American music after 1950, American opera and music education. He received the John Swett Award of the California Teachers Association in 1975 and the Deems Taylor Award from ASCAP for 1975–6. From 1981 to 1985 he was president of the Music Critics Association.



PATRICK J. SMITH

Commedia dell'arte (It.). A type of Italian theatre that flourished in the 16th and early 17th centuries, so called because it was performed by professional actors and actresses who formed regularly constituted companies. The genre is characterized by a combination of improvisation and stereotypical elements, such as a standardized plot line (the *scenario* or *canovaccio*) and masks or fixed character roles. *Commedia dell'arte* plays usually have both masked and unmasked characters, including two or more pairs of lovers (*innamorati*), a swaggering military man, a female servant, two or more comic servants (*zanni*), and two old men. The masked characters often exhibit stereotypical traits associated with various regions of Italy and other European countries; examples include the Dottor Bolognese, Arlecchino of Bergamo, Beltrame of Milan, Pantalone of Venice, the hook-nosed Pulcinella of Naples and Captain Matamoros of Spain. The unmasked characters include all female roles (although

actresses sometimes wore veils or non-stylized half-masks) and, typically, the *innamorati* and any other representatives of the nobility.

Commedia dell'arte plots tend to reinforce social mores regarding marriage and procreation, while deprecating what must have been fairly common but 'aberrant' behaviour involving love and sexual desire. Standard jokes (*lazzi*) poke fun at romantic liaisons between young women and old men, at sodomitic practices and gluttony, at the lust of old men and old women, and at the potential embarrassments of unwanted pregnancy. Humour is often expressed physically, with pronounced movements and dances, acrobatics, conspicuous phallic representations and cross-dressing. While *commedia dell'arte* companies from the mid-16th century on included actresses, a clear distinction must be drawn between the sex of character roles and the sex of the actors who played them, for both men and women appeared in transvestite costume, and many stock jokes were based on gender reversals or differences in sex or sexuality. As a result, the scenarios and dialogues use a highly developed equivocal language, referring to both heterosexual and homosexual practices, and to their potential implications and consequences.

Commedia dell'arte troupes, typically itinerant, also exploited the vogue for humanistic scholarship and imitated the practice of Italian academies in adopting symbolic names, such as the Compagnia dei Gelosi (the Jealous), Accesi (the Ignited) or Fedeli (the Faithful). Individual performers were often known by their stage names. Virginia Ramponi Andreini, for example, the *prima donna innamorata* of the Compagnia dei Fedeli, was called 'La Florinda' after the character she portrayed in her husband G.B. Andreini's tragedy of the same name; Tristano Martinelli was known throughout Europe as 'Arlecchino', and the actor-musician Giovanni Gabrielli was more commonly referred to as 'Sivello'.

'An Italian Comedy in Verona': painting by Marco Marcola, 1772 (Art Institute of Chicago), showing a commedia dell'arte performance on a temporary stage in the Verona amphitheatre

Music was a regular feature of *commedia dell'arte* performances, and many comedians were known for their abilities to sing and play various instruments. The climax of an entertainment was often marked by musical performance, as it was in Isabella Andreini's *Pazzia d'Isabella* (1589) and in G.B. Andreini's *La Florinda* (1603). A tree filled with musical instruments was a standard icon, and a performer like Francesco Andreini would indicate his retirement from the stage by 'hanging up his pipe' on its verdant branches. One of the earliest and most detailed descriptions of a *commedia dell'arte* performance outlines the standard practice for including music in plays. Massimo Troiano, writing in 1568 of the festivities organized by Orlande de Lassus at the court of Munich for the wedding of Wilhelm V and Renata of Lorraine (*Die Müncher Fürstenhochzeit von 1568*, ed. H. Leuchtmann, Munich, 1980), related that, in the course of an improvised comedy, Lassus enacted the character of Pantalone di Bisognosi and sang two stanzas of the villanella *Chi passa per questa strada* to lute accompaniment. The singers of the court chapel performed madrigals between the acts of the play, including one between the prologue and first act, and the entertainment ended with a staged dance. The music performed within the texts of plays tends towards the repertories of the villanella, *barzelletta* and *scherzo*.

Commedia dell'arte players performed a wide variety of theatrical genres, including pastorals, tragedies and *drammi per musica*, and many of the prima donnas were considered great singers. Accounts of Virginia Ramponi Andreini's music-making, for example, in the leading role in the first performance of Monteverdi's *Arianna* and in his *Ballo delle ingrate* (both 1608), in G.C. Monteverdi's *Il rapimento di Proserpina* (1611), in the *Trasformazione di Millefonte* (1609) and in her husband's sacred drama *La Maddalena* (1617), set to music by Monteverdi, Mutio Effrem, Salamone Rossi and Alessandro Ghivizzani, attest the broad compass of her talents in particular and of the *commedia dell'arte* repertory in general. Other comedians, such as Giovanni Gabrielli and his son Francesco ('Scapino'), carried with them vast collections of musical instruments, as noted by Claudio Monteverdi and G.B. Doni, among others. The 'Aria di Scapino' was perhaps the most famous of Francesco Gabrielli's canzonettas, some of which survive in his publications *Villanelle di Scapino* (1624) and the *Infermità, testamento, e morte di Francesco Gabrielli detto Scapino* (1638). Music from the *commedia dell'arte* stage also appears in the popular song anthologies printed in the early years of the 17th century, including the *Arie di diversi* (1634) of Alessandro Vincenti and the multi-volume *Raccolta di bellissime canzonette musicali* (*c*1618–25) of Remigio Romano; such songs were often published with alfabeto notation and a verbal instruction that they be performed to the accompaniment of a chitarrone or Spanish guitar.

Commedia dell'arte themes and characters were popular models for later musical comedies, comic operas, ballets and circuses. Stock characters (Arlecchino, Scaramuccia, the soubrette etc.), or characters developed from them, are introduced in, for example, Orazio Vecchi's

L'Amfiparnaso, Pergolesi's *La serva padrona*, Mozart's *Le nozze di Figaro* and *Die Zauberflöte*, Busoni's *Arlecchino*, Strauss's *Ariadne auf Naxos*, Stravinsky's *Petrushka* and *Pulcinella*, and Schoenberg's *Pierrot lunaire*. *Commedia dell'arte* characters are also referred to in the the titles of instrumental pieces by Schumann (*Carnaval*), Milhaud (*Scaramouche*) and others. Modern actors and acting troupes who model their performances on *commedia dell'arte* themes and practices include Dario Fo and the Cirque du Soleil.

ANNE MACNEIL

Commedia per musica (It.: 'comedy through music'). A term used for comic opera, particularly in Naples, in the 18th century. Sometimes the form 'commedia in musica' was used. It seems to have indicated no nuance of genre as compared with OPERA BUFFA or DRAMMA GIOCOSO. In the 19th century it denoted a type of comic opera in which spoken dialogue in Neapolitan *patois* replaced recitative. A late example is Luigi Ricci's *La festa di Piedigrotta* (1852).

See OPERA, §IV, 2(ii).

□

Commer, Franz (Aloys Theodor) (*b* Cologne, 23 Jan 1813; *d* Berlin, 17 Aug 1887). German music historian, editor, organist and composer. He was a pupil of Joseph Klein and Carl Leibl and in 1828 became organist of the Carmelite church at Cologne and a member of the cathedral choir. In 1832 he went to Berlin, where he studied with A.W. Bach (organ) and K.F. Rungenhagen (composition) and attended A.B. Marx's lectures. His interest in old music was stimulated by his friendship with Carl von Winterfeld, whom he met in 1835, and by a commission to set in order the library of the Royal Institute for Church Music, which from 1845 held much of Forkel's personal library. In 1839 *Musica sacra*, the first of Commer's many important editions of early music, began to appear. In 1845 he became *regens chori* of the Hedwigskirche and singing teacher at the Elisabeth School, and he held several other similar positions. He was much decorated by royalty for his research. In 1844 he helped found the Berliner Tonkünstlerverein, and in 1868, with Eitner, the Gesellschaft für Musikforschung. His nearly 100 opus numbers (songs, partsongs, choruses) and many other published and unpublished works include music for *The Frogs* by Aristophanes and *Electra* by Sophocles, but it is for his editorial work (over 1000 psalms, motets and masses) and as a collector (a catalogue of his own library was published posthumously in 1888) that he is remembered.

EDITIONS
(*selective list*)

Musica sacra: Sammlung (Berlin, 1839–42); continued as *Cantiones XVI, XVII saeculorum* (Berlin, later Regensburg, 1860–87)
Collectio operum musicorum Batavorum saeculi XVI (Berlin, 1844–58)
Collection de compositions pour l'orgue des XVIe, XVIIe, XVIIIe siècles/Composition für die Orgel aus den 16., 17., 18ten Jahrhundert zum Gebrauch beim Gottesdienst (Leipzig, 1866)
Geistliche und weltliche Lieder für drei, vier, fünf, und sechs Stimmen, aus dem XVI.–XVII. Jahrhundert (Berlin, 1870)
Cantica sacra: Sammlung geistlicher Gesänge aus dem 16. und 17. Jahrhundert (Berlin, n.d.)

Commercial. An advertisement created for broadcast via radio or television, sometimes also transmitted on videotapes and in cinemas. As an adjective, the term is applied to all types of music created for the media, including advertising and film music, but is also sometimes used to refer to any music meant for profit.

Commercials are short, normally ranging from 15 seconds to a minute, and fall into three main categories. In rough order of historical appearance, these are the direct sales pitch, including comparison with a rival product; the scenario in which the product solves a dramatic crisis; and the 'lifestyle spot', which uses attractive images to build up associations between the product and the comfortable life. Music for commercials likewise falls into three categories – the JINGLE, the film-type score, and the music-video style – which correspond roughly to the three types of commercial. The sales pitch and the dramatic scenario may be without music, but both may feature a jingle; the short film score (which may include a jingle) has a natural affinity with the dramatic scenario; and the lifestyle spots, which appeared in the 1970s, proved a training-ground for pioneering music-video directors, like Bob Giraldi. The development of the music VIDEO in the 1980s as an advertisement for the musical product (the record) in turn influenced television advertising.

Commercials in a series, linked by a spokesperson, a jingle or a similarity in scenario, have been common since the days of radio; since the 1980s such series have commonly been of lifestyle spots. In the late 1980s the 'Night Belongs to Michelob' series of beer commercials featured popular songs with the word 'night' in their titles and brought accusations of 'selling out' to the rock stars who participated, among them Eric Clapton, Steve Winwood and Phil Collins. On both sides of the Atlantic, the Levi's 501 commercials, have been influential beyond the immediate goal of selling jeans: in the USA, advertisements in a similar surreal visual style were scored by such prominent musicians as Ry Cooder and Bobby McFerrin; in Britain each advertisement was in a distinctive visual style, and the series launched highly successful singles by previously unknown artists, including 'Spaceman' by Babylon Zoo (1996), one of the fastest-selling singles ever.

ROBYNN J. STILWELL

Commission. A contract or an understanding, usually in writing, by which a musician agrees to compose a piece of music for a patron or an organization. It usually specifies the genre, the date of completion and the terms of recompense and rights.

Historically, a commission related to a specific work, separate from a musician's more general long-term responsibilities to compose, perform or teach for an individual, a court or an institution. Even if a musician was employed by or enjoyed the protection of a patron, a commission might additionally be drawn up for a particular composition. Mozart, for example, received commissions for his flute works of the 1770s, the 'Paris' Symphony and, most famously, the Requiem.

The practice of commissioning music can be traced as far back as the Renaissance. Confraternities in 16th-century Flanders customarily drew up agreements with musicians to compose motets or liturgical works. At the same period, publishers commissioned composers, at first chiefly for psalm books (e.g. East's *Whole Booke of Psalmes*, 1592) and by the late 17th century for six or 12 instrumental works in a series. From the late 18th century concert societies made frequent commissions to composers, as in the dealings between Beethoven and the Philharmonic Society of London. A notable 20th-century example was the commissioning of works from American composers by the Louisville SO in Kentucky. Radio stations played an increasing role, notably the BBC, in the 1920s, and for the Proms every year, and after 1945 the French, Italian and German state radio organizations. While recording companies have played a less significant role, in America the NBC did some commissioning in Toscanini's time. Nonesuch Records was the first record company to commission an electronic work (Morton Subotnik's *Silver Apples of the Moon*, 1967). Opera houses frequently commission new works as part of their regular programmes (e.g. Covent Garden, ENO, Glyndebourne and the Met). Since 1960, government organizations have played an increasing role as commissioners, notably the Arts Council of Great Britain and the National Endowment for the Humanities in the USA.

Personal commissions, sometimes administered by a foundation (e.g. Koussevitzky), remained important during the 20th century. The Swiss conductor Paul Sacher commissioned major works, chiefly for his own orchestra, from Bartók, Stravinsky and Hindemith. In 1952 Paul Fromm established a foundation for the support of new music based at Harvard University. In 1956 Gulbenkian established the Calouste Gulbenkian Foundation in Lisbon.

Women have played central roles in commissioning. In France Suzanne Tégenas Présidente supported Pierre Boulez's Domaine Musicale series and commissioned works from him at that period. A strong tradition of female patrons in the USA has included Isabella Stewart Gardner of Boston, Jeannette Meyer Thurber of New York and Elizabeth Sprague Coolidge of Chicago and the District of Columbia. Since the 1960s Betty Freeman of Los Angeles has commissioned works from composers such as Partch, Cage, Le Monte Young and Glass (including *Einstein on the Beach*, 1975–6); she later became active commissioning works by Europeans such as Goehr and Lutosławski (Symphony no.4, 1988–92), as well as at the Salzburg Festival when it began to focus on new music in the 1990s.

WILLIAM WEBER

Committee for the Promotion of New Music. English organization, founded in London in 1942 and later renamed SOCIETY FOR THE PROMOTION OF NEW MUSIC.

Commodamente [commodo]. *See* COMODO.

Commodore. American record company. It was established in New York in 1938, although at first its recordings were produced and manufactured by the American Record Company. Its catalogue contained much Chicago jazz, but recordings in swing styles also figured prominently. Issues included items by the Kansas City Five and Six,

Coleman Hawkins and Hot Lips Page, a series by Billie Holiday and reissues of some of Jelly Roll Morton's last recordings for General. Although intensive activity ceased in the 1940s, the label remained operational intermittently into the following decade.

Material from the catalogue was reissued on Mainstream in the 1960s and on London in the 1970s, as well as under its original label name. In the late 1970s the label was revived and a series of LPs with much previously unreleased material was sold in the USA and Germany; the latter series continued into the late 1980s. Mosaic reissued the entire catalogue from about 1988 to 1991.

HOWARD RYE

Common chord (Fr. *accord parfait*; It. *accordo perfetto*). A major or minor TRIAD; in American terminology a major triad only (Ger. *Durdreiklang* or *Hauptdreiklang*).

Common flute. *See* RECORDER.

Common of the Saints (from Lat. *Commune sanctorum*). Chants, readings and prayers for Mass and Office used in the celebration of feasts of saints lacking a special, proper Office. The Commons are classified according to categories of saints: apostles, evangelists, martyrs, doctors, popes, bishops, confessors, virgins etc. *See also* LITURGY AND LITURGICAL BOOKS, §II, 1.

Common time. 4/4 time. It has been supposed, erroneously, that the time signature C, derived from the medieval half-circle designating the duple division of breve and semibreve, represented a 'C' standing for 'common time'. *See* TIME SIGNATURE and NOTATION, §III, 4(iii).

Commuck, Thomas (*b* Charlestown, RI, 18 Jan 1805; *d* Calumet County, WI, 25 Nov 1855). American composer of Narragansett (Indian) ancestry. He lived at Brothertown, New York, from about 1825 to 1831 when he and his bride, the Pequot Indian Hannah Abigail (married 31 July 1831), moved west. Eventually they settled at Brotherton, Wisconsin, where they had ten children and Commuck became the first postmaster and first justice of the peace. An ambitious writer as well as composer, he is remembered for two valuable historical articles (1855, 1859). His death by drowning may not have been accidental.

In 1845 he published *Indian Melodies . . . Harmonized by Thomas Hastings* (New York), a collection of 120 tunes named mostly after chiefs or tribes. Hastings, who befriended many Indians, was the first American to publish two Brazilian Indian (Tupynambi) tunes collected by Jean de Léry in about 1557. He included them in his *Dissertation on Musical Taste* (Albany, NY, 1822) and was therefore Commuck's ideal collaborator. Two of Commuck's tunes were used by MacDowell: *Old Indian Hymn* in the fifth of his *Woodland Sketches* op.51 and *Shoshonee* in the third movement of the Second 'Indian' Suite op.48.

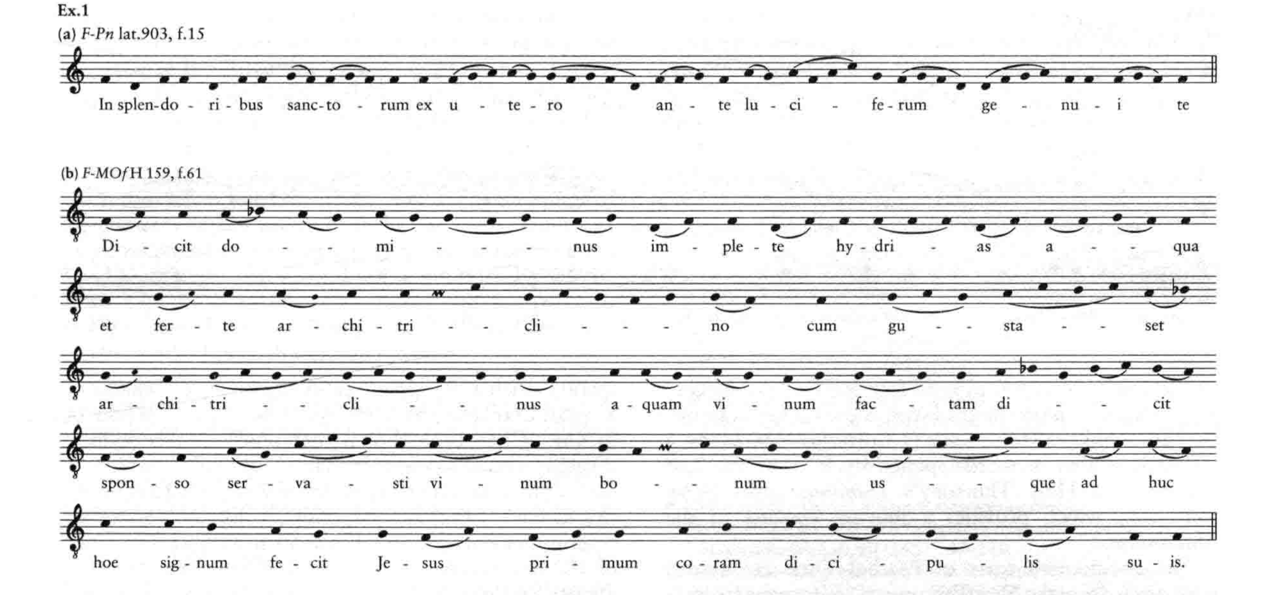
ROBERT STEVENSON



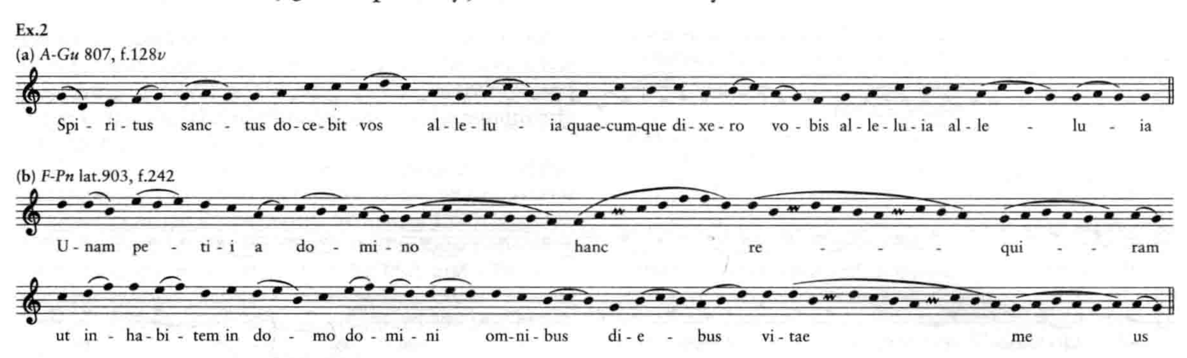
Commune sanctorum (Lat.: 'Common of the Saints'). *See* LITURGY AND LITURGICAL BOOKS, §II, 1.

Communion (from Lat. *communio*). The last of the Proper or variable chants of the Mass. The communion is described in the early 8th-century *Ordo romanus I* as an antiphon and psalm sung during the distribution of Communion. The psalm was sung to the same psalm tones as the introit (*see* INTROIT (i)). By the 12th century most sources provide only the antiphon, indicating a curtailment of the earlier format that is most probably due to the decline of frequent Communion among the faithful.

1. Origins and early history. 2. Repertory, texts and annual cycle. 3. Musical style. 4. Later history.

1. ORIGINS AND EARLY HISTORY. The singing of a psalm during the distribution of Communion is attested by several 4th-century patristic authors. It could be said, then, that the communion chant is a particularly ancient item in the Mass Proper; but it might be more appropriate to think of it as a chant of the Mass Ordinary at this early period, because most sources specify the same psalm – Psalm xxxiii (Vulgate numbering). It appears to have been sung in its entirety by the lector or cantor with its appropriate verse 8, 'Taste and see that the Lord is good', serving as a congregational response. This proto-communion retained a central position in the medieval Byzantine liturgy, where it served as the regular *koinōnikon* of the ancient Liturgy of the Presanctified Gifts, which was said on the weekdays of Lent and on other fast days throughout the year. Schattauer, in his analysis of the 10th-century typikon of the church of Hagia Sophia in Constantinople, has shown how the ferial *Geusasthe kai idete* ('Taste and see') was joined at an early date by the festal *Aiveite ton kyrion* ('Praise the Lord', Psalm cxlviii.1), which survives in the 10th century at several dates of the Paschal season and on Sundays throughout the year. Next came two more chants that functioned as Common *koinōnika*: *Potērion sōtēriou* ('Cup of salvation', Psalm cxv.4), sung on feasts of the Virgin Mary; and *Agalliasthe dikaioi* ('Rejoice ye righteous', Psalm xxxii.1), sung on feasts of the saints. In succeeding centuries these four were joined, and in some instances replaced, by several *koinōnika* of a more Proper character, for example, by *To pneuma sou* ('Thy spirit', Psalm cxlii.10), which took the place of the original *Aiveite* on Pentecost Sunday. Among the later *koinōnika* a number of non-psalmic and even non-biblical texts were employed in order to obtain a more explicit reference to the festival on which they were sung. By the 10th century the repertory consisted of 22 *koinōnika* (26 by the 12th century according to Conomos); they appear to have consisted of the antiphon only, having lost their psalm verses at some unknown stage in their history.

The early medieval Roman communion repertory creates a substantially different impression from that of



the Byzantine *koinōnikon*. It is much larger, comprising nearly 150 items, with a Proper chant for virtually every date in the *Temporale* and a large portion of the *Sanctorale*. It fails to grant, moreover, a privileged position to a small group of ancient communions. The proto-communion *Gustate et videte* is used only once in the liturgical year, figuring simply as an undifferentiated member of the post-Pentecostal series. Thus the Roman communion does not display evidence of a centuries-long evolution; its early history is hidden behind what would appear to be a large-scale revision – accomplished within a comparatively brief span of time – that was undertaken to provide a Proper chant for every important date in the annual cycle. What form the communion took before this purported final revision remains speculative, and the most plausible line of speculation must centre on the monastic Office psalmody of the Roman basilicas. There would appear to survive in the Lenten weekday communions, which use Psalms i–xxvi in numerical sequence, a vestige of the *recitatio continua* that characterizes the psalmody of the monastic Office.

2. Repertory, texts and annual cycle. If the core repertory of any particular item of the Mass Proper is defined as those chants that appear in both the Roman manuscripts and the earliest Frankish manuscripts – and thus make up the repertory transmitted from Rome to the north in the mid-8th century – then for the communion there are precisely 140 chants. In addition to these there are eight communions in the Roman graduals that do not appear in the Frankish manuscripts edited in Hesbert's *Antiphonalium missarum sextuplex*, and 11 in the Frankish manuscripts not appearing in their Roman counterparts (see §4 below for a discussion of this group of 19 chants).

Non-psalmic chants predominate in the core repertory: 80 communions derive their texts from non-psalmic sources, with only 60 taken from the Psalter. Of the former, 57 are derived from the Gospels, eight from other New Testament books, 14 from the Old Testament, and one – St Agatha's *Qui me dignatus* – from a non-biblical source. The bulk of the psalmic communions (a total of 44) appear during Lent and on the Sundays after Pentecost, while the festal seasons of Christmas Time and Paschal Time rely almost exclusively on New Testament texts. In most instances these latter are Gospel texts, indeed texts derived from the Gospel of the day; such a practice is unique to communions among items of the Mass Proper. Sanctoral texts are also predominantly non-psalmic: 29 out of a total of 39, with 24 from the Gospels.

The entire annual cycle of the communion displays striking evidence of what might best be called 'compositional planning', a phenomenon in which the prevalence of non-psalmic texts plays an important role. Advent and Christmas Day have a series of ten communions with texts derived from the Prophets (including David), while the nine post-Christmas communions (from the feast of St Stephen to the third Sunday after Epiphany) form a sharp contrast with their colourful narratives derived from the Gospels. Musically, the first group is characterized by a restrained lyric style that focusses on the interval *re–fa*, with a single gesture to upper *ut* (see *In splendoribus*, ex.1*a*); while several of the second group feature a flamboyant dialogue type, exemplified here by *Dicit dominus* (ex.1*b*), which presents a vivid portrayal of Jesus's first miracle at the marriage feast at Cana.

The weekdays of Lent, as noted above, derive their texts from Psalms i–xxvi, in numerical order. The sequence is interrupted twice: first by the insertion of six communions borrowed from the post-Pentecostal repertory at the time that the Lenten Thursdays were established as liturgical under Gregory II (715–31); and secondly by the five much-discussed Gospel communions – *Oportet te* (*Luke* xv.32), *Qui biberit* (*John* iv.13–14), *Nemo te* (*John* viii.10–11), *Lutum fecit* (*John* ix.6–38), *Videns Dominus* (*John* xi.33–44) – that were substituted for five communions of the psalmic sequence, those with texts from Psalms xii, xvi, xvii, xx and xxi. These five Gospel communions with their original simple syllabic melodies and their variety of more ornate settings in the later manuscripts have long puzzled chant scholars (see also §3 below). While the Lenten weekday communions may represent an earlier layer of communion composition, several chants

of the Lenten Sundays and of Holy Week show signs of belonging to a more recent layer; there is, for example, the fifth Sunday's *Hoc corpus* (*1 Corinthians* xi.24–5), a dramatic setting of words spoken by Jesus at the Last Supper, and Holy Thursday's *Dominus Jesus* (*John* xiii.1–22), which provides a moving vignette of the *Mandatum*.

The communion texts of Paschal Time are almost exclusively from the New Testament: 14 from the Gospels and five from the Epistles. The text of every Gospel communion is derived from the Gospel of the day up to the feast of the Ascension, at which point there is an abrupt change of procedure. The nine communions from the Ascension to Saturday in Pentecost week are borrowed from the responsories and antiphons of Ascension and Pentecost Matins. This sudden abandonment of the compositional principles previously employed in the festival cycles of the *Temporale* creates the impression of a hastily improvised conclusion to the entire annual cycle.

The post-Pentecostal sequence (perhaps roughly contemporary in its beginnings with the Lenten weekday series) has at its core a group of communions that are bound together by a rich theme of harvest, eucharistic and sacrificial motifs. At a later point in its history it appears to have had several communions added to it and to have had its psalmic communions arranged in numerical order. Among the additions were four psalmic communions at the head of the series, three of which – *Cantabo* (Psalm xii.6), *Ego clamavi* (Psalm xvi.6) and *Dominus firmamentum* (Psalm xvii.3) – were the first three of the five Lenten communions replaced by Gospel communions.

As for sanctoral communions, the tendency for the same chants to be used for many saints of the same category – in effect a proto-Common – might be expected to result in a *Sanctorale* that is generally older and has a higher proportion of psalmic texts than the *Temporale*. However, as noted above, this is by no means the case. Virtually every one of the major sanctoral dates has a Gospel communion of direct thematic relevance, whether it be Andrew's *Dicit Andreas* (*John* i.41–2), the Holy Innocents' *Vox in rama* (*Matthew* ii.18) or John the Baptist's *Tu puer* (*Luke* i.76). Even the most frequently used communions – chants such as *Beatus servus* (*Matthew* xxiv.46–7) and *Qui vult venire* (*Matthew* xvi.24) that would eventually figure in the Common of Saints – are predominantly non-psalmic.

3. Musical style. The communion is unique among items of the Mass Proper for its stylistic heterogeneity. There are short syllabic communions, for example, and long melismatic ones; communions of a restrained lyric quality (such as *In splendoribus* of ex.1*a*), and chants of a quasi-dramatic character (such as *Dicit Dominus* of ex.1*b*). It has been shown that much of this stylistic diversity is due to the fact that a substantial portion of the communion repertory is shared with Office antiphons (McKinnon, 1992) and responsories (Maiani). Some ten communions of the core repertory (including at least four of the five Lenten weekday Gospel communions cited above) are also antiphons, and about 30 are responsories. Thus a simple syllabic communion such as *Spiritus sanctus* (ex.2*a*), which has been described as 'antiphon-like', is in fact an Office antiphon; and a chant such as *Unam petii* (ex.2*b*), which manifests the binary structure and formulaic character of a responsory, also appears in the antiphoners as a Matins responsory.

The antiphon-communions and responsory-communions offer valuable insight into the chronology of the communion cycle's creation. They tend to cluster at points in the annual liturgical cycle that display signs of later adjustments – Paschal Time, Holy Week, the later Sundays of Lent, the post-Epiphany Sundays, the opening Sundays of the post-Pentecostal sequence and later sanctoral dates like the Purification. The responsory-communions, moreover, share their melodic and textual peculiarities with other communions (such as *Dicit Dominus*) that also tend to appear in the same portions of the Church year.

The sharing of chants with the Office, especially as it involves responsories, serves to explain another frequently cited musical peculiarity of communions – their high incidence of modal instability. Nearly half of the Gregorian communions that appear in the sources with different *maneriae* are responsory-communions (13 out of 27, according to the present author). If these chants are removed from the reckoning, the communion displays about the same degree of modal instability as other genres of the Mass Proper. Why responsory-communions are so frequently modally unstable remains a matter for speculation, but the reason would seem to be somehow connected with their late entry into the Roman repertory.

4. Later history. It was mentioned above that eight communions appear in the Roman graduals but not in the early Frankish manuscripts of Hesbert's *Antiphonale missarum sextuplex*, and conversely that 11 communions appear in the latter sources but not in the Roman ones. Some of these chants are clearly later additions to the Roman and Frankish repertories, respectively, occasioned by the establishment of new liturgies after the mid-8th-century transmission of the Roman chant to the Carolingian realm. On the Roman side, for example, there is the communion for a nuptial Mass, *Christus qui natus*; and on the Frankish side *Inclina aurem tuam*, the communion

for the seventh Sunday after Pentecost, a Frankish addition to the Church year; and *Benedicimus Deum* for the Carolingian festival of Trinity Sunday. But not all of these communions are so easily explained, and as a group they present a unique opportunity to study the relationship between Roman and Frankish chant during the period of transmission. It is an intriguing fact, for example, that discrepancies between the Roman and Frankish liturgical assignments appear precisely at the end of the sequences of post-Epiphany and post-Easter Sundays: for the third Sunday after Epiphany the Roman graduals have *Puer Jesus* and the Frankish *Mirabantur*, and for the fifth Sunday after Easter the Roman books have *Pater cum essem* and the Frankish *Cantate Domino*.

The history of the antiphon-communion and responsory-communion in the Frankish and Gregorian sources is particularly interesting. At first the two genres follow a parallel course: most of the Roman representatives of the two types are retained and a number of new examples of each are added. The antiphon-communion *Vos qui secuti*, for example, is assigned to the feast of St Simon and St Jude, and *Nos autem* to Tuesday in Holy Week and to feasts of the Cross. About a half-dozen responsory-communions are similarly added, chiefly to sanctoral liturgies, for example, *Qui me dignatus* for the feast of St Agatha, and *Quinque prudentes* for St Agnes. But in 11th- and 12th-century sources the two genres display remarkably divergent behaviour. Antiphon-communions develop a great diversity of more florid melodies, varying from region to region (see Huglo, 153, 171 and 194), but retain their original simple melodies in the Office. The most plausible explanation for this would seem to be that cantors were spurred on to create new communion melodies to avoid singing a text at Mass to the same melody as that sung earlier at Matins. But responsory-communions do precisely the opposite. The original melodies continue to be sung at Mass virtually without exception, while the related Matins responsories are either given new melodies or, as is more often the case, dropped entirely from the repertory. A partial explanation of such contradictory circumstances might be that the antiphon-communions abandoned their original simple melodies because they were obviously stylistically inappropriate to the communion, while the responsory-communions retained theirs because of their approximate compatibility.

The expansion of the communion repertory in later centuries varied considerably from region to region. Central European sources are remarkably conservative in this respect. Manuscripts as late as the 14th-century gradual of the Thomaskirche in Leipzig (see Wagner, 1930–32) and the early 16th-century gradual of St Adalbert's at Esztergom (see Szendrei) have almost precisely the same repertory (apart from a handful of obviously necessary additions such as *Quotiescumque* for Corpus Christi, and *Beata viscera* for the votive Mass of the Virgin Mary) as early manuscripts such as *CH-SGs* 339 and *CH-E* 121. Aquitanian and Italian sources, however, add a significant number of communions to the repertory, principally to accommodate new liturgical occasions such as nuptial and funeral Masses, votive Masses of the Virgin Mary, and dates added to the *Sanctorale* such as the feasts of St Benedict, St Bartholomew and St Martin. A large portion of these new communions – at least a dozen – were created for the Mass of the Dead. Most of the later communions, chiefly products of the 11th and 12th centuries, have newly composed melodies, but the Carolingian *Per signum crucis* for the Exaltation of the Cross and *Benedicimus* for Trinity Sunday were adapted from *Ab occultis* and *Feci judicium*, respectively, and *Quotiescumque* for the 13th-century festival of Corpus Christi was adapted from Pentecost's *Factus est repente*.

Comodo (It.: 'comfortable', 'convenient'). A word used both as a tempo designation in its own right and as a qualification to other tempo marks. It is also spelt *commodo*. Frescobaldi mentioned a *battuta commoda* in the preface to his *Toccate e partite* of 1615 but in no particularly technical sense. J.G. Walther (*Musicalisches Lexicon*, 1732) defined the adverbial form *commodamente* 'nach guter Bequemlichkeit' ('good and comfortably'), adding that it was 'so viel, als Adagio' ('the

equivalent of *adagio*'); but he was presumably there taking ADAGIO in its literal sense, 'at ease', for there is nowhere else any apparent suggestion of *comodo* being anything but a fluent and agreeably fast tempo. Leopold Mozart (1756) defined *tempo commodo* as the same as TEMPO GIUSTO: both of them 'lead us back to the piece itself'. The rondo of Beethoven's Piano Sonata in E op.14 no.1 is marked *allegro comodo. Andante comodo* and *a tempo comodo* are relatively common; *comodamente* (the adverb) and *comodetto* (the diminutive) appear in 18th-century scores.

For bibliography *see* TEMPO AND EXPRESSION MARKS.

DAVID FALLOWS

Compan, Honoré (*b* ?Paris; *d* ?Paris, after 1798). French harpist and violinist. He composed numerous short pieces for the harp and a significant method containing several short pieces (to illustrate the principles he advocated) as well as *ariettes* with accompaniment: *Méthode de harpe, ou Principes courts et clairs pour apprendre à jouer de cet instrument* (Paris, 1783). In 1798 he was still listed as a violinist of the Théâtre de la Pantomime. (*FétisB*, *GerberL*, *GerberNL*, *MCL*)

HANS J. ZINGEL

Comparative musicology. A translation of the German *vergleichende Musikwissenschaft*, this 'takes as its task the comparing of tonal products, in particular the folksongs of various peoples, countries and territories, with an ethnographic purpose in mind, grouping and ordering these according to the variety of [differences] in their characteristics' (Adler, 1885; trans. 1981, p.13). One of four subdivisions of systematic musicology in Guido Adler's formative 1885 definition of 'the scope, method, and aim of musicology', comparative musicology was renamed ethnomusicology in the 1950s in the United States.

Adler and his followers applied the then recent advances in the sciences of geology and biology to the new *Musikwissenschaft* ('music science'). In geology, this involved the ability to infer chronological sequence from stratigraphic layering of fossils in rock beds; in biology, the classification of plants and animals; while comparative methods from anatomical studies and Darwin's evolutionary theories (and their applications to history and ethnology) provided the intellectual framework within which comparative musicologists worked for more than 50 years (Mugglestone, 1981). The invention of phonograph recording (by both the American Thomas A. Edison and the Frenchman Charles Cros, working independently) in 1877 gave comparative musicologists the tool they needed to collect performances of unwritten, orally-transmitted music in a fixed form for scientific analysis, comparison and classification in a laboratory.

Two of the earliest works in this discipline, published in England, cast doubt on the prevailing 'scientific' assumptions of the time. In 1885 Alexander J. Ellis invented a linear scale, the so-called cents system, that facilitated the measurement and comparison of interval sizes. Dividing the octave into 1200 equal units, he measured 'the musical scales of various nations' and discovered that they were not governed by 'natural laws' that proved the superiority of Western harmonic practices. Instead, they were extremely diverse, even 'capricious', and apparently unregulated by mathematical laws. Richard Wallaschek's 1893 study of 'primitive music' was steeped in the prevailing late 19th-century assumptions about the progress of man from savage and simple to civilized and complex. Yet his sometimes favourable impressions of the musicality that must have been necessary to play certain kinds of 'primitive' music could be seen to indicate the beginnings of a suspicion (never fully articulated) that a comparative musicology could challenge rather than ratify the commonly-accepted evolutionary framework of the time.

Comparative musicology flourished in the hands of psychologist Carl Stumpf (1848–1936) and his student Erich Moritz von Hornbostel (1877–1935), who founded the Berlin Phonogramm-archiv at the University of Berlin. Using cylinders recorded by anthropologists in the field, they and their associates (some trained in other sciences such as physiology) focussed mainly on pitch, intervals and tone systems, and used their findings to study psychoacoustics comparatively (Hornbostel, 1910); speculate on the origins of music (Stumpf, 1911); invent methods for analysing scale and melody (Hornbostel, 1913); create a classification system for musical instruments (Hornbostel and Sachs (1914); and transcribe and analyze the musical structures of many individual musical styles (e.g. Hornbostel, 1923). Hornbostel produced only two doctoral students in comparative musicology, Mieczyslaw Kolinski and Fritz Bose, but other influential scholars who worked with them included Otto Abraham, Robert Lachmann, Marius Schneider, Curt Sachs and George Herzog, some of whom brought their ideas to North America in the 1930s and 40s.

In addition to classification systems for tonal material and musical instruments, some German research in comparative musicology was influenced by the evolutionary theories of German anthropologists. According to their 'culture-circle doctrine' (*Kulturkreislehre*), cultural traits could be grouped into geographical circles of distribution. The circles could then be placed in chronological order, representing the evolutionary stages of development of those traits: the widest circles were presumed to contain the oldest traits and the smallest, the newest. Marius Schneider (1934–5) applied this doctrine to the study of polyphony and found that monophony (or sometimes heterophony) appeared most widely distributed and was therefore the oldest type, with various forms of polyphony evolving (in stages) out of monophony. Curt Sachs (1940) applied the doctrine to musical instruments, finding that rattles have the widest distribution and are therefore the oldest instruments; that the musical bow and xylophone evolve at a later stage; and that the African *sanza* (lamellophone), with its somewhat restricted distribution, is younger still. Though the evolutionary underpinnings of this doctrine, and therefore the conclusions based on it, were rejected by American researchers of the period and later, these scholars' ability to control huge amounts of data was nonetheless impressive. The cents system and the Hornbostel-Sachs system of instrument classification remain the main legacy of comparative musicology.

If comparative musicology is taken as an umbrella term for all research on 'folk', 'primitive' and 'Asiatic' music from the late 19th century to the 1950s, then not all researchers in the period worked in the German tradition. Another important stream included American collectors of Amerindian music such as J.W. Fewkes, Francis Densmore and Helen Roberts. Yet a third stream consisted

of the many European collectors of national folksongs. Some worked strictly within national boundaries, but some, such as Béla Bartók in Hungary, Oskar Kolberg in Poland and Constantin Brăiloiu in Romania, had a more or less comparative outlook. Fundamental to all scholarship in this period, however, was the collection, classification, comparison and historical stratification of styles.

When ethnomusicology replaced comparative musicology as the disciplinary label in the 1950s, research turned primarily to localized studies of music conceived as a part of culture. However, the comparative impulse, stripped of its evolutionary underpinnings, has surfaced occasionally, in Miecyslaw Kolinski's classification of melodic movement (1965), Alan Lomax's cantometrics (1968), Anna Czekanowska-Kuklinska's (and others') study of pan-Slavic features (1972); Steven Feld's proposal for a comparative sociomusicology of egalitarian cultures (1984); and Bruno Nettl's descriptions of musical styles and cultures (1989).

TIMOTHY RICE

Compass. *See* RANGE, particularly of an instrument or a vocal or instrumental part.

Compenius. German family of organ builders (possibly a branch of the Low Countries family of Kompen or ten Compe), active 1546–1671. Timotheus Compenius lived at various times in Königsberg (now Kaliningrad) and Staffelstein (both in Upper Franconia) and worked in the diocese of Würzburg. In 1596–7 he added a pedal-board to the organ (built 1572–3 by Rodensteen) in the Stadtkirche, Bayreuth, and wrote a guide to the instrument's registration, *Ordentliche Specification und Verzeichnung zur Zusammenziehung der unterschiedlichen Register* (included in Hofner). In 1602 he built an organ for St Michael, Hof, with two manuals and 20 stops.

Timotheus's brother, Heinrich the elder (*d* Nordhausen, 2 May 1611), is mentioned as organist of St Andreas, Eisleben, in 1546 and 1572, but by 1579 he had moved to Nordhausen, which remained his base while he built organs for such places as the Predigerkirche in Erfurt (1579), the Stadtkirche in Cönnern (1580–82) and, with Timotheus, the cathedral in Fritzlar (1588–90). He wrote a composition manual, *Musica teutsch in kurze Regulas und Schriftstücke verfasst*, in 1567 (now lost), and a cantata, *Gib Glück und Heil, Herr Jesu Christ*, for the Erfurt council election in 1572 (the cantata survives in manuscript).

Organs by Heinrich's son Esaias (*b* Eisleben; *d* Hillerød, 1617) included those for St Martin, Kroppenstedt (1603–13); Hessen Castle (between Wolfenbüttel and Halberstadt) (1605–10; two manuals, 27 stops, based on the ideas of the Duke of Brunswick and Lüneburg, under the supervision of Michael Praetorius and now in the chapel of Frederiksborg Castle at Hillerød; see illustration); and the Stadtkirche in Bückeburg (1615). Esaias held the official position of organ builder and instrument maker to the court of Brunswick. He assisted Praetorius in the writing of his *Organographia* and was co-author with

Organ by Esaias Compenius, built for Hessen Castle, 1605–10 (Frederiksborg Castle, Hillerød)

him of the *Kurzer Bericht, was bei Überlieferung einer Orgel zu observieren*, published in Blume.

Heinrich's son Heinrich the younger (*b* Eisleben; *d* Halle, 22 Sept 1631) was official organ builder to the Archbishop-Elector of Magdeburg. He made instruments for such buildings as Magdeburg Cathedral (1604–5), the monastery at Riddagshausen, near Brunswick (*c*1610), the Stadtkirche, Markranstädt (1617), and St Ägidien, Oschatz (1627).

Esaias's son Adolph (*d* Hanover, 1650) built an organ for the court chapel in Bückeburg (1620) and was active in Bremen between 1636 and 1644. He was organist of St Ägidien, Hanover, 1626–36 and 1644–50.

Johann Heinrich (*b* Halle; *d* Halle, 11 Dec 1642), son of Heinrich the younger, built the organ of the Moritzkirche, Halle (1624–6), for Samuel Scheidt, under Scheidt's supervision.

Heinrich the younger's son Ludwig (*b* Halle; *d* Erfurt, 11 Feb 1671) was official organ builder to the chapter of Naumburg Cathedral. His instruments included those in St Johannis, Gera (1645–7), the Predigerkirche in Erfurt (1647–9) and the Schlosskirche in Weimar (from 1657). He designed the organ at the Brüderkirche in Altenburg (from 1655).

Jakob (*d* Sorau, 1602; his exact relationship to the others is unknown) worked with Michael Hirschfeldt of Nordhausen on an organ with transmissions and extensions for St Maria Magdalena in Breslau (1595–1605).

The Compenius family carried on the craft of the Beck family, with whom they had personal connections. They emulated in particular David Beck's wealth of foundation stops and reeds, using finely shaded individual colours. But in the layout of their instruments (with the exception of the Magdeburg Cathedral organ) they followed the less elaborate model of Esaias Beck, providing a comprehensive Principal chorus only for the *Hauptwerk*, and leaving the Pedal in a largely ancillary state. Heinrich the elder built spring-chests, his sons slider-chests. Ivory and ebony were sometimes used for the pipes. The wind pressure of the Compenius organ at Hillerød, all the pipes of which are either wood or ivory, amounts to 55 mm. The manuals of Compenius organs were C to *c‴* (sometimes to *f‴*), the pedal-board C to *d′* (occasionally to *e′*); C♯ and D♯ were often absent, and sometimes F♯ and G♯ too. On the other hand they often had double keys for D♯/E♭ and G♯/A♭. The German *Orgelbewegung* was indirectly inspired by the Compenius organ, through the building of the 'Praetorius Organ' in the university of Freiburg (1921; Gurlitt/Walcker). The only surviving Compenius organ is that in Frederiksborg Castle at Hillerød; the Gedeckt 8′, Quintaden 8′ and Rohrflöte 4′ stops from the Magdeburg Cathedral organ are incorporated in the present organ of St Martin, Kroppenstedt.

HANS KLOTZ

Compensation frame. The name given to a wooden piano frame with metal bracings patented by James Thom and William Allen (who both worked for William Stodart) in 1820. Unlike earlier metal-braced frames, this used brass tubes above the brass strings and iron tubes above the iron ones in order to achieve greater stability of tuning. Rimbault described the device in terms of 'metallic tubes possessing the same properties as the strings, extended or relaxed simultaneously with them' (*The Pianoforte*, London, 1860, p.152). Stodart purchased the invention and patent rights from Thom and Allen, and proceeded to use the compensation frame in his pianos.

Compensationsmixtur. *See under* ORGAN STOP (*Mixture*).

Compère, Loyset (*b* Hainaut, *c*1445; *d* St Quentin, 16 Aug 1518). French composer. He was one of the leading chanson and motet composers of the late 15th and early 16th centuries.

1. LIFE. According to the poet Jean Molinet, who evidently knew him well, Compère belonged to a family from St Omer, in the county of Artois; a Milanese document of 1476, moreover, describes him as a cleric of Arras, also in Artois. Nevertheless, a decree written by Charles VIII of France in April 1494, granting Compère French nationality so that he could safeguard benefices acquired during royal service, explicitly calls him a native of Hainaut. The birthdate usually suggested for Compère, about 1450, probably lies at least five years too late. An anonymous chanson linking him and Molinet appears in a manuscript with a repertory from the 1460s (*I-PAVu* Aldini 362), and the beautifully polished chanson *Puisque si bien* was copied into the Laborde chansonnier (*US-Wc* M 2.1.L25 Case) about 1465. The motet *Omnium bonorum plena*, datable before 1474 (perhaps for the dedication of Cambrai Cathedral on 5 July 1472), reveals a fully skilled, mature composer.

During the mid-1470s Compère belonged to the *cappella* of Galeazzo Maria Sforza, Duke of Milan. His name appears in a list of singers dated 15 July 1474 and in further lists of 30 March and 4 April 1475: in September 1476 the duke attempted to procure a benefice for him at S Georgio de Catasijs in Pavia. Compère may have come to Italy from the French royal court, where he later spent the major part of his career. The Sforzas had close political ties with Louis XI, and on 23 November 1472 Galeazzo Maria had written to Ockeghem, the head of Louis' chapel, for help in securing singers. On the other hand, the text of *Omnium bonorum plena* seems to suggest an early association with Cambrai: the *secunda pars* contains a prayer for a series of musicians traceable almost without exception to Cambrai Cathedral or – to a lesser extent – the courts of Louis XI and Charles the Bold, duke of Burgundy. Compère's own name, however, does not occur in the fairly extensive surviving records of any of those institutions.

Compère's stay in Milan came to an end shortly after the murder of Galeazzo Maria on 26 December 1476. On 7 January 1477 the court decided to reduce the *cappella*, and a document of 6 February lists Compère among those scheduled to leave. No further indication of his whereabouts survives for the next decade, though he may well have been in Moulins at the court of Jean II, duc de Bourbon, two of whose poems he set. In February 1486 a document from the French court describes him as *chantre ordinaire* to Charles VIII; eight years later the king's decree of naturalization refers to Compère as *chappelain ordinaire et chantre de nostre chappelle*. In autumn the same year Compère accompanied Charles on the French invasion of Italy. In a letter of 7 October 1494 Ferrante d'Este told his father, the Duke of Ferrara, of a meeting with Compère at Casale Monferrato. The composer

> was extremely sorry not to be able to furnish Your Lordship with any good compositions because the only works he had with him are old ones. He finds that he left behind in France certain of his books, in which he has some good new compositions, and he will be glad to satisfy Your Lordship as soon as he is able to do so.

Compère presumably spent the month of January 1495 in Rome, when Charles and his troops were occupying the city. The appearance of five motets and a Magnificat setting by Compère, all copied about 1495–7, in the Vatican choirbook *I-Rvat* C.S.15 may represent a souvenir of this visit.

Between 30 April 1498 and 5 May 1500 Compère served as dean at the church of St Géry in Cambrai; from then until 1503 or 1504 he held the post of provost at the collegiate church of St Pierre in Douai. A manuscript history of St Pierre dating from 1730 (discovered by Herbert Kellman) describes Compère's tenure as a difficult one:

> In his time the lords of the city broke the immunity of our cloisters and quarters, in the year 1503 violently forcing their way into the house of this same canon, breaking down the doors, smashing the wall and inflicting other damnable deeds upon us.

The history also reveals that Compère held bachelor's degrees in both canon and civil law.

Despite his obligations to Cambrai and Douai, Compère may have continued to serve the French court at least intermittently after 1498. He would appear to have written the motet *Gaude prole regia* for the reception of Duke Philip the Fair, Governor of the Netherlands, in Paris on 25 November 1501: the text, a prayer to St Catherine of Alexandria, depicts France and Flanders uniting in praise of the saint, whose feast day falls on 25 November. The motet *Sola caret monstris*, probably composed in early 1508, contains a bitter diatribe against Pope Julius II on behalf of King Louis XII and the episcopal *maître de chapelle* of the royal chapel, René de Prie. Compère evidently spent his last years at the collegiate church of St Quentin: he had held a canonry there since at least November 1491, when he paid a tax on a benefice in the diocese of Coutances. It appears probable that he received a more lucrative position in the chapter in the spring of 1504, when a permutation of benefices moved one Pierre Duwez into Compère's provostship of Douai in order to free up the provostship of Condé-sur-l'Escaut for Josquin des Prez. He was buried in the church of St Quentin.

2. Works. Compère's place in musical history has undergone a decisive change with the discovery that the Josquin at Milan during the 1460s and 70s was not Josquin des Prez. It now looks as though Josquin des Prez would have been about 10 years younger than Compère, and it seems very likely that Compère was a pioneer in some of the stylistic and technical features they share. He may well be the earliest composer to use consistent points of imitation, in his early works often preferring three different pitches of entry; he was the purest exponent of the melismatic chanson style that came to the fore in the 1460s; and he may also have been the first composer to explore the motet-cycle of *Motetti missales* as an alternative to the mass ordinary cycle. As a flawless contrapuntist who also wrote some of the sweetest music of the 15th century, he may well have been an attractive model for the young Josquin.

In spite of a considerable range of experimentation, two main styles are evident in Compère's music. He had a thorough grounding in traditional late Burgundian style and cultivated this in his tenor motets, several of his cantus-firmus motets and many of his chansons. This style involved structural reliance on duets between superius and tenor with the other voices taking supporting roles; forms based on purely musical rather than textual logic; florid, expansive melodic lines in a predominating superius part; and the use of traditional liturgical or chivalric types of text. The other main style of his music is rooted in Italian popular forms of the late 15th century, the *lauda* and frottola, where the bass is the fundamental harmonic support. Predominantly syllabic melodic lines reflect the rhythm and accentuation of the words; the voices are treated equally and often imitatively; duets in various combinations frequently contrast with full polyphony or homorhythmic writing; and text interpretation through illustration, analogy and contrast, achieves a new level of importance and to some extent dictates the form. Compère's choice of texts also gradually changed: in sacred works he most commonly used biblical texts, chiefly from the Prophets or the Gospels, medieval sacred poems or compilations drawn from various biblical or poetic sources. His later vernacular texts are distinctly irreverent, reflecting contemporary popular poetic types. Although many of his works exactly fit into one of these two styles, some are intermediate, reflecting his attempt to assimilate the Italian style or to synthesize the two.

One of Compère's earliest surviving works is apparently *Omnium bonorum plena*. Drawing extensively on Hayne van Ghizeghem's *De tous biens plaine*, both for musical material and for the opening of the text, it demonstrates Compère's brilliant technical mastery. The text, which he probably also wrote, mentions a number of older, revered musicians, including some whose names are otherwise unknown. In style the motet owes much to Du Fay and even more to Busnoys.

Similar in design are four tenor motets for five voices modelled on Regis. Each has a tenor cantus firmus as a central axis, surrounded by four voices with a different text though thematically related to the tenor. Two of these motets were written to commemorate a specific political event, whereas the others are sacred. *Sola caret monstris/Fera pessima* is stylistically remarkably like Ockeghem (probably in order to exemplify the musical style of the French royal chapel); and *Gaude prole regia/Sancta Catherina*, with its compact lucid form, adapts the italianate style to the traditional framework of the tenor motet.

Apart from *Omnium bonorum plena* and the tenor motets, Compère wrote at least five cantus-firmus motets,

all sacred, with a text common to all voices. Many features of the italianate free motets are found here within the context of the traditional northern motet. Among these motets is *Ave Maria, gratia plena*, his most popular work and one of the most widely disseminated of the period. The text is compiled from various liturgical sources, and each section has its own melody. But his preference for syllabic text declamation and chordal and duet writing based on melodic formulae hampers his melodic invention. Although the work is technically virtuoso it lacks both the fantasy of the Netherlandish motet and the euphonious clarity of the italianate type.

Perhaps most characteristic are Compère's free motets. All but one are sacred, without a cantus firmus, and draw heavily on the style developed in Italian popular and sacred forms in the late 15th century. Central to their conception is the prominent role assigned to the words: since there is no cantus firmus to provide a superstructure, the text is made to assume this function. Lines are presented one by one, a variety of textures shows relationships within the text and produces lucid, symmetrical forms; syllabic declamation enables the words to be heard clearly. In the most advanced pieces, such as the *Officium de cruce*, word-painting bordering on true madrigalism is used repeatedly. The only secular free motet is *Sile fragor*, whose humanistic poem refers to singing in church and curiously combines a prayer to the Holy Virgin with an invocation to Bacchus; it may be an irreverent substitute for 'Deo gratias' at the end of Mass or Vespers.

Of the two firmly ascribed complete mass Ordinary cycles, *Missa 'L'homme armé'* is probably the earlier; it was copied into *I-Rvat* C.S.35 by about 1490. It presents the familiar tune in an unusual Phrygian transposition and features canons at a variety of difficult intervals, including the 2nd and the 9th; it had considerable success and seems still to have been sung in the papal chapel as late as 1568. *Missa 'Alles regrets'* combines principles of parody technique and through-imitation more successfully to achieve a unified composition. The tenor of Hayne van Ghizeghem's famous chanson appears in the tenor, but with continuously changing mensuration. Around it are woven motifs from the chanson superius and contratenor, as well as freely invented points of imitation, resulting in a virtuoso display of contrapuntal skill.

Compère also wrote at least three cycles of *motetti missales* (also called 'substitution masses'). Each comprises eight motets to be sung in place of parts of the mass Ordinary or Proper of the Milanese rite. It has been argued that they may originally have been written as motet cycles similar to the *Officium de cruce* and only later adapted as *motetti missales* by Gaffurius, and that they do not necessarily date from Compère's Milan period (see Lowinsky, 1963). It is clear, however, that they were composed as cycles, for they are unified by mode, clef combination and near-consistency of mensuration changes; and *Ave Domine*, in addition, has an unidentified cantus firmus in six of its eight movements. Furthermore, the sections designated for the Elevation, like those in Weerbeke's unquestioned Milanese *motetti missales*, show a distinctive homophonic texture in long notes with fermatas, showing the cycles to be true *motetti missales*. Finscher (1964) and Ward (1986) have conjecturally identified several other cycles that are not transmitted in the sources as *motetti missales*. All these are probably among Compère's earliest experiments with the 'Italian' style, and they may have been an important influence on the early development of Josquin's style in the 1470s.

Compère was perhaps at his best in composing chansons. They fall into three main categories: motet-chansons, three-voice chansons in the old Burgundian tradition, and the more modern Italian type, mostly for four voices. The motet-chanson closely resembles the medieval motet which disappeared around 1440 and enjoyed only a brief revival in this more modern guise around 1490, when Compère, the most prolific composer of the genre, produced five works. Each has a cantus firmus, with Latin text, in the bass, supporting two upper voices which set a French rondeau or virelai. In each piece the two texts are symbolically related through a similarity in their openings. In works thought to be of early date the cantus firmus moves in long values, quite independently of the upper parts, which consist chiefly of points of imitation (e.g. *Le corps/Corpusque meum*). In presumably later pieces (e.g. *Plaine d'ennuy/Anima mea*, *Tant ay d'ennuy/O vos omnes*) the cantus firmus is more animated and is integrated rhythmically with the other voices, occasionally engaging in imitation with them.

The three-voice chansons range in style between those similar to Du Fay's late works and Flemish tricinia. They form the largest group, with over 30 pieces. Most of those whose texts survive in full are *formes fixes*. Some of the earliest (e.g. *Dictes moy toutes*, *La saison en est*) consist of a songlike superius supported by tenor and contratenor, undifferentiated in range, which cross freely, especially at cadences. Phrases are clearly delineated without overlap. Imitation, when present, is nearly always confined to the superius and tenor. Usually these two parts form the basic structure, supported by a contratenor or bass which moves in a low range and rarely crosses the tenor. Sometimes all three voices engage in imitation. A particularly noteworthy group consists of the *chansons de regret* (*Sourdez regretz*, *Vat'en regret*, *Venés*, *regretz*); they are related to earlier works, especially Hayne van Ghizeghem's *Allez regrets*. As a group these form some of the finest fruits of an already moribund musical culture. A smaller group of chansons, largely confined to French sources, notably *F-Pn* fr.2245, was apparently composed shortly before 1496 when Compère was at the French court. These are rather more melismatic and more regularly imitative, with a less songlike contratenor. Some (e.g. *Pour estre ou nombre*, *Faisons boutons*) are in *tempus perfectum*, archaic by this late date. *Au travail suis* is a brilliant quodlibet, drawing extensively on earlier, popular chansons. Similar in style to this 'French' group of chansons is an 'Italian' group, which appears predominantly in manuscripts of Italian provenance.

Sharply contrasting in style with all of these are the 14 four-voice chansons. They seem to have been composed shortly before 1501–3, when Petrucci drew heavily on them in his chanson publications. They use gay, amorous or occasionally political texts, and their concise, popular verses are set to sprightly melodies with lively rhythms. The words are declaimed syllabically to rhythmically clearcut motifs, homophonic sections and bustling duets, punctuated by clean cadences, rests or *coronae*. Their brisk vitality has its origins in the Italian frottola, which had only recently appeared. They are among the earliest musical manifestations of the Renaissance spirit in France. Curiously, the two pieces with Italian texts, published by

Petrucci as frottolas, might more properly be called Italian chansons; one of them, *Scaramella fa la galla*, even suggests the gravity of a motet.

WORKS

Ad honorem tuum Christe, F iv; Asperges me Domine, F iv; Ave Maria, gratia plena, F iv; Crux triumphans, F iv; Gaude prole regia/Sancta Catherina, 5vv, F iii; O admirabile commercium, F iv; Officium de cruce (In nomine Jesu), F iv; O genitrix gloriosa, F iv (also attrib. Ghiselin, Richafort); Omnium bonorum plena, F iv
Paranymphus salutat virginem, F iv; Profitentes unitatem, F iv; Propter gravamen, F iv; Quis numerare queat/Da pacem, 5vv, F iii; Sile fragor, F iv; Sola caret monstris/Fera pessima, 5vv, F iii; Virgo celesti, 5vv, F iii; O post partum munda, lost

MOTET–CHANSONS
all for 3vv; all ed. in F v

Le corps/Corpusque meum (full French text perhaps Henri Baude's rondeau 'Le cueur la suit')
Malebouche la decevable/Circumdederunt me viri mendaces
O devotz cueurs = Tant ay d'ennuy
Plaine d'ennuy de longue main attainte/Anima mea liquefacta est
Royne du ciel/Regina celi (also attrib. Prioris in a version that differs only in its opening notes)
Tant ay d'ennuy [= O devotz cueurs]/O vos omnes qui transitis (also attrib. Obrecht but surely by Compère)

CHANSONS
for 3vv unless otherwise stated; all ed. in F v

Adiu ma dame = Ne vous hastez pas
Aime la plus bella = Puis que si bien
Alons fere nos barbes, 4vv (melody reused in Henry VIII's En vray amoure; 2nd half, beginning 'Et ou la troveroye', appears in only one source of this work, but it also appears as 2nd half of Mon pere m'a donné mari, and for many reasons may be a separate work)
A qui diraige ma pensee (Dc later used in San of Obrecht's Missa plurimorum carminum (ii))
Au travail suis sans espoir de confort (based on Barbingant's or Ockeghem's chanson with additional references to other chansons)
Barises moy = Guerissés moy
Beauté d'amours = Seraige
Bergeronette savoysienne
Chanter ne puis chieux la mynonne
De les mon getes = Volés oïr une chanson
Des trois la plus et des aultres l'eslite
Dictes moy toutes vos pensees (used for masses by A. de Févin and Mouton)
Disant adieu a ma dame et maistresse
[Disant] adiu [a] ma dame = Ne vous hastez pas
En attendant de vous secours
Et dont revenés vous, 4vv
Et ou la trouveroye, 4vv (cf Alons fere nos barbes, Mon pere m'a doné mari)
Evray Dieu que payne = Vray Dieu quel payne
Faisons boutons, le beau temps est venu (text by Jean II, duc de Bourbon)
Gentil patron, maistre de la galee, 4vv
Guerissés moy du grant mal que je porte
J'ay ung syon sur la robe, 4vv (double canon)
Je suis amie du fourrier, 4vv
La saison en est ou jamais (also attrib. Agricola, but surely by Compère)
L'aultre jour me chevauchoye, 4vv
Le grant desir d'aymer m'y tient
Le renvoy d'ung cuer esgaré (evidently derived from ?Barbingant's Terriblement suis; used for a mass by Ghiselin, in Ag of Obrecht's Missa plurimorum carminum (ii), and in a duo by La Rue)
Lourdault, Lourdault, garde que tu feras, 4vv (also attrib. Josquin, Ninot le Petit, but surely by Compère; perhaps addressed to JEAN BRACONNIER, called 'Lourdault')
Me doibt on prendre = Ne doibt on prendre
Mes pensees ne me laissent une heure (presumably used for the lost mass 'de mes pensees' listed in index of *I-Bsp* A.XXIX)
Mon pere m'a donné mari, 4vv (2nd half, beginning 'Et ou la troveroye', also appears as 2nd half of Alons fere nos barbes, and for many reasons may be a separate work)
Ne doibt on prendre quant on donne (text by Jean II, duc de Bourbon; also found in sources from 1543 and later with text Venite amanti insieme, attrib. C. Festa, 'Foglianus')
Ne vous hastez pas en malheure [= Adiu ma dame]
Nous sommes de l'ordre de Saint Babouin, 4vv
Or suis je bien transy d'esmay = Vous me faittes morir
Pensant au bien que ma dame m'a fait
Pleut or a Dieu que n'aymasse jamais
Pour estre ou nombre des loyaulx (inscription 'Royal' in margin of *F-Pn* fr.2245 may indicate the poet)
Puis que si bien m'est advenu [= Aime la plus bella]
Quam diu che pena messe = Vray Dieu quel payne
Reveille toy franc cuer joyeulx
Royne de ciel, 3/4vv (A marked 'si placet'; not related to Compère's motet-chanson with the same incipit)
Se mieulx ne vient d'amours peu me contente (text perhaps by Guillaume Crétin, also set by Convert and Agricola)
Se pis ne vient d'amours je me contente (possibly a *response* to Se mieulx ne vient, but musically closer to Convert's setting of that chanson)
Seriage [vostre mieulx amee] [= Beauté d'amours]
Si j'ay parlé aucunement (text by Henri Baude)
Sourdes, regretz, avironez mon cueur
Tant ha bon oeul
Tout mal me vient Dieu mercy et fortune
Une plaisante fillette, 4vv
Un franc archier a la guerre s'en va, 4vv
Va t'en, regret, celuy qui me convoye (used for a mass by Simonet Censier)
Venés, regretz, venés, il en est heure (on T derived from Hayne's Allez regrets)
Vive le noble roy de France (perhaps refers to Battle of Fornovo, July 1495; see Winn, 1979)
Volés oïr une chanson, 4vv [= De les mon getes]
Vostre bargeronette m'amiette, 4vv
Vous me faittes morir d'envie [= Or suis je bien transy] (text apparently by Jean II, duc de Bourbon)
Vray Dieu quel payne m'esse, 4vv [= Quam diu che pena messe] (also attrib. 'Gaspart' [van Weerbeke], Pipelare, but almost certainly by Compère)

FROTTOLAS

Che fa la ramacina, 4vv, F v
Scaramella fa la galla, 4vv, F v (on same tune as Josquin's Scaramella va alla guerra)

DOUBTFUL AND MISATTRIBUTED WORKS

Missa 'De tous biens plaine', 4vv (attrib. Compère in Berlin, Preussische Staatsbibliothek, Mus.ms.40634 [now in *PL-Kj*], but more plausibly to 'Johannes Notens' in *A-Wn* 11883; Steib, 1993, argues for Compère's authorship); ed. in AMMM, vi (1966), 118 (Gl, Cr, San only)
Ave regina celorum, 4vv (anon. in *I-Md* 1; attrib. Compère by Finscher, 1964, p.53, supported by Ward, 1986, pp.506–8)
Cayphas, 3vv (in *E-SE* s.s. attrib. 'Loysette Compere' on the left and 'Johannes Martini' on the right; very much in Martini's style), F v

Ha traistre Amours, 3vv (anon. in *c*1535[14] but with incipit 'Compere'; almost certainly by Stokem; also attrib. Rubinet)
Helas le bon temps que j'avoie, 3vv (attrib. Compère in *E-SE* s.s.; by Tinctoris)
Il n'est vivant tant soit [= Pensees avant], 3vv (attrib. Compère in *I-Rvat* C.G.XIII.27; almost certainly by Agricola)
J'ay beau huer avant que Gien havoyr [= Robert], 3vv (attrib. Compère in *E-SE* s.s.; by Agricola)
Je ne fay plus, je ne dis ne escrips, 3vv (attrib. Compère in *SE* s.s.; almost certainly by Mureau; also attrib. Busnoys)
Je ne puis plus haver [= Benedic anima mea], 3vv (attrib. Compère in *SE* s.s.; probably by Agricola)
Mais que ce fust secretement [= Donzella no men culpeys], 3vv (attrib. Compère in 1501; by Pietrequin), F v
O bone Jesu, 4vv (attrib. Compère in 1519[2]; also attrib. Anchieta, Peñalosa, Ribera), F iv
Puis que je suis hors du compte, 4vv (by La Rue, though attrib. Compère in index of *I-Fc* Basevi 2439)
Se non dormi, donna, ascolta, 4vv (attrib. 'L.C.' in *F-Pn* Rés.Vm[7] 676), F v
Veci la danse barbari, 4vv (attrib. Compère in *E-SE* s.s.; almost certainly by Vaqueras)

JOSHUA RIFKIN/JEFFREY DEAN, DAVID FALLOWS (1), BARTON HUDSON/JEFFREY DEAN, DAVID FALLOWS (2)

Complainte (Fr.). *See* PLANCTUS.

Complement. The difference between an octave and a given simple INTERVAL (i.e. an interval less than an octave), hence the INVERSION of that interval at the octave. The complement of a perfect 5th is a perfect 4th, that of a major 3rd is a minor 6th, that of a minor 2nd is a major 7th etc. The complement of a unison (prime) is an octave, and vice versa.

Completorium. A chant sung at Matins and Vespers in the Ambrosian rite to conclude the ceremonies in the baptistry; *see* AMBROSIAN CHANT, §6(v).

Compline (from Lat. *completus*: 'completed'). One of the services of the DIVINE OFFICE. Traditionally performed at the end of the day, Compline seems to have originated as a form of prayer before going to bed; this was once the purpose of Vespers, with which it shares common theological themes, but Compline was never as variable or as imposing as its earlier counterpart. Basil the Great (*d* 379) mentioned a form of Compline, perhaps still very rudimentary, in his so-called *Longer Rules*. Both he and the monastic rule written for Arles by St Aurelian (bishop 546–51) referred to the singing of Psalm xc (Vulgate numbering) during the Office. Two very early Western sources, the *Ordo monasterii* attributed to Alypius of Thegaste and the *Institutiones* of John Cassian, imply the singing of fixed psalms. It is perhaps because of this long-established tradition that the Rule of St Benedict (*c*530) excludes the service from its regular course of psalms.

In some sources Compline is preceded by what may be termed a preface, consisting principally of a short lesson (*1 Peter* v: 'Fratres sobrii estote'), a general confession (*Confiteor Deo omnipotenti*) that is said first by the priest and then by the congregation, and a sung versicle and response (*Converte nos Deus*). The general confession may be a later addition; not mentioned in the Rule of St Benedict, it nevertheless seems to be referred to in the *Regula sancti Fructuosi* (*c*670). Many breviaries of even the late Middle Ages do not contain either the lesson or the confession, but the versicle following the confession (and linking the preface to the Office itself) is found at the

beginning of the unusual and very elaborate Epiphany Compline service of the 12th-century manuscript *F-LA* 263, ff.131–41.

The service itself begins with three psalms: iv (*Cum invocarem*), xc (*Qui habitat*) and cxxxiii (*Ecce nunc benedicite*). Other early services added, appropriately, Psalm xxx to the phrase 'In manus tuas, Domine, commendo spiritum meum', but this was probably a later addition and is sometimes omitted. Commentators on the liturgy from Amalar of Metz (*c*830) have pointed out that each of these psalms has a special relevance to night, or to sleep as the image of death. In the monastic cursus these psalms are said very simply, and without an antiphon. In the Roman cursus there is only one antiphon for all the psalms, usually *Miserere mei*. Proper antiphons for Compline are rare. The Compline hymn, most often *Te lucis ante terminum*, is followed by a short lesson, the chapter, which begins *Tu* [*autem*] *in nobis*. Neither the hymn nor the chapter was mentioned by Amalar: these were apparently added after his time. (In some sources, for example the Exeter Ordinal of 1337, their order is reversed.) The short responsory *In manus tuas* is the most recent addition to Compline; it is absent from many manuscripts. Next come a versicle and response, *Custodi nos domine*; *Nunc dimittis* (the Canticle of Simeon, *Luke* ii. 29–32), with antiphon; a simple Kyrie, the *Pater noster*, Apostles' Creed (*Credo in Deum*), and a series of versicles and responses leading to the final prayer *Visita quaesumus* (in some medieval sources, *Illumina quaesumus*); and *Benedicamus Domino*. This is the usual pattern.

Special embellishments are given to Compline in three medieval manuscripts: *F-SEm* 46 (early 13th century; ed. H. Villetard, *L'office de Pierre de Corbeil*, Paris, 1907); *GB-Lbl* Eg.2615 (Beauvais, 13th century; ed. W. Arlt, *Ein Festoffizium des Mittelalters aus Beauvais*, Cologne, 1970); and *F-LA* 263 (see Arlt, and D. Hughes: 'Music for St. Stephen at Laon', *Words and Music: The Scholar's View . . . in Honor of A. Tillman Merritt*, ed. L. Berman, Cambridge, MA, 1972, p.137). At Sens and Beauvais the Compline service is for the feast of the Circumcision (1 January), at Laon for Epiphany (6 January); these are special days of festivity for sub-deacons. In these manuscripts the versicle *Custodi nos domine* is replaced by a rhymed paraphrase. The *Nunc dimittis* is followed by or sung in alternation with the chant *Media vita in morte sumus*, one of the most powerful of the texts dealing with death used in the Middle Ages. The *Pater noster* is troped, and followed by the response *In pace in idipsum* with its versicle *Si dedero*. (Concerning polyphonic settings of this responsory for use in Compline, see *HarrisonMMB*, pp.367, 371.) The Credo is troped, and the versicles and responses that follow are sung, in the Beauvais and Laon offices, to elaborate melodies (quite different from the simple formulae in the 15th-century Erlyngham Breviary shown in facsimile in *AS*, 7) that were originally composed for these texts in other liturgical roles: for example, the versicle and response *Benedicamus patrem – Laudemus* has the melody of the Trinity responsory and verse with this text; a versicle used at Laon, *Benedictus es Domine*, is sung to the melody of an alleluia verse. A song in accentual poetry, 'Juste judex', with the rubric 'Confessio' is interpolated into these at Laon. It appears that the confession identified at the beginning of this article as part of the preface to Compline had, at some times and places, its regular position here: it occurs thus in the liturgy of Exeter (ed. J.N. Dalton, *Ordinale Exon.*, i, London, 1909, p.28), and Bayeux (the 13th-century breviary, *F-Pa* 279, ff.*54v–55r*), and in the Erlyngham Breviary. This poem is a paraphrase replacing the standard form of confession. The service continues with the final prayer and a verse paraphrase of the *Benedicamus Domino*; at Laon there is additional material, as there is throughout that office.

Of the rather numerous antiphons addressed to the Blessed Virgin Mary, some with regular places in the liturgy, others for processions and special observances in her honour, found for the most part in later medieval sources, four appear in modern liturgical books at the end of Compline, each for a definite season of the year: *Alma Redemptoris mater*, *Ave regina caelorum*, *Regina caeli* and *Salve regina*. The rich variety of liturgical contexts in which Marian antiphons were sung during the Middle Ages is suggested by Harrison (op cit, pp.81–8), who describes the customs of churches in the British Isles.

For bibliography *see* DIVINE OFFICE.

RUTH STEINER/KEITH FALCONER

Componium (Ger. *Komponium*). A MECHANICAL INSTRUMENT of the ORCHESTRION type, invented by DIEDERICH NIKOLAUS WINKEL in 1821. Winkel's instrument, which survives at the Brussels Conservatory, comprises wooden and metal organ pipes, a triangle and a drum, all activated by two pinned wooden barrels. It also includes a device for automatically sequencing two-bar units of music from each barrel in turn in order to produce endless variations on a single theme.

Composers' Collective of New York. A group of composers of music for the working class. The Collective, which grew out of a seminar in the writing of mass songs organized in 1933 by Jacob Schaefer, Leon Charles and Cowell, sought to make an American contribution to the international working-class music movement then flourishing in Europe through the work of writers such as Brecht and composers such as Eisler. At first a part of the Pierre Degeyter Club (named after the composer of the *Internationale*), the group soon became independent; for some time its members held weekly discussions in which general musical and political ideas were aired and new works held up to scrutiny. The journal of the American Music League, *Unison*, in 1936 listed Blitzstein as secretary of the Collective and the following as members or former members: Lan Adomian, Norman Cazden, Robert Gross, Herbert Howe, Alex North, Earl Robinson, Leon Charles, Jacob Schaefer and Elie Siegmeister. Not mentioned were some, such as Charles Seeger and H.L. Clarke, who for professional reasons did not want their work with the group widely known (several, including Seeger, Siegmeister and Clarke, used pseudonyms for the songs they wrote for the Collective).

Although they were for the most part highly trained, members accepted the guidance of several experts, including Schaefer, long the director of the Yiddish-language Freiheit Gezang Farein. Eisler visited New York

in 1934 and took an active part in the discussions of the Collective; his speech 'The Crisis in Music', delivered in Town Hall and printed by the Downtown Music School, exerted a major influence. Victor J. Jerome, an editor of the *Daily Worker*, served the Collective as editor, translator and adviser. The two-volume *Workers Songbook* (1934–5), published by the Workers Music League, is devoted principally to works by Collective members and shows the wide range of their songs. Close to the American vernacular are the rounds of 'Carl Sands' (Charles Seeger) and 'L.E. Swift' (Elie Siegmeister), the United Front song of 'J. Fairbanks' (H.L. Clarke) and especially the songs of Earl Robinson, whose *Joe Hill* later became part of the folksong repertory. But experimental harmonies predominate in George Maynard's setting of Mike Gold's *John Reed, our Captain* and Copland's setting of Alfred Hayes's *Into the Streets May First*, judged the best setting of the text assigned for May Day 1934.

By the end of 1938 the Collective had disbanded, though it had set the stage for Blitzstein's opera *The Cradle will Rock*, Robinson's *Ballad for Americans* and all that followed from them. It also provided an example for Alan Lomax, Woody Guthrie, Pete Seeger and other pioneers of the activist folksong movement.

H.L. CLARKE

Composers' Forum. Organization formed in 1935 by Ashley Pettis, with funding by the WPA's Federal Artist Project, to present the work of emerging American composers; it has also been known as the Composers' Forum-Laboratory. It sponsored concerts that included forums, or moderated question-and-answer sessions involving the audience; this format became popular with other WPA composer organizations and universities. The first concert was held on 30 October 1935 in New York, and by 1940 more than 1600 works had been presented. When the WPA was ended, the organization moved to San Francisco under private patronage; it continued for two seasons before the war, then was revived in 1947 under the joint sponsorship of the New York Public Library and Columbia University. An archive was established to house letters, transcripts, programmes and, from 1951, sound recordings of concerts and discussions.

B.C. VERMEERSCH/R

Composers' Guild of Great Britain. An organization founded in 1944 to further the artistic and professional interests of British composers, who had previously been represented by a sub-committee of the Incorporated Society of Authors and Playwrights. Vaughan Williams was the guild's first president, Thomas Dunhill its first chairman. It publishes the magazine *Composer* (quarterly from 1958 to 1974, and three times annually thereafter; *Composer News* from 1987); it has included since 1990 a comprehensive list of UK first performances. In 1967 the guild founded the British Music Information Centre, with which it works in close association. In 1993, with the Association of Professional Composers, and the British Academy of Songwriters, Composers and Authors, it formed the Alliance of Composer Organisations.

□

Composers String Quartet. American string quartet formed in 1966. Its original members were Matthew Raimondi, Anahid Ajemian, Bernard Zaslav and Seymour Barab; Zaslav was succeeded in turn by Jean Dupouy, Jean Dane and Ron Carbone, and Barab by Michael Rudiakov and Mark Schuman. Although it was founded largely to perform contemporary music, the quartet soon expanded its repertory to embrace the standard quartet literature. For several seasons it was quartet-in-residence at the New England Conservatory, where in 1970 it established the biennial Composers Quartet Composition Prize, which guaranteed the winner the publication of his or her work and its public performance and recording by the quartet. Its foreign tours have included visits to the USSR and Bulgaria (1972), where it was the first American ensemble to perform after World War II, Europe, Africa, India and the Middle East. The ensemble has performed quartets by over 60 American composers, and has recorded works by Carter, Perle, Crawford and Babbitt, as well as by Mendelssohn, Dohnányi and Hindemith. In 1974 it was appointed quartet-in-residence at Columbia University.

DENNIS K. MCINTIRE

Composing-out. *See* AUSKOMPONIERUNG.

Composition. The activity or process of creating music, and the product of such activity. The term belongs to a large class of English nouns derived from the participial stems of Latin verbs (here *composit-*, from *componere*: 'put together') followed by the suffix *-io/-ionem*. Etymologically, the primary senses of 'composition' are 'the condition of being composed' and 'the action of composing'. Since the 16th century the English word and its cognates in other languages have been applied to pieces of music that remain recognizable in different performances as well as to the action of making new pieces. Both the creation and the INTERPRETATION of compositions in this restrictive sense are commonly distinguished from IMPROVISATION, in which decisive aspects of composition occur during performance. The distinction hinges on what performers are expected to do in various situations and on how they prepare themselves to meet such expectations.

Many societies place great value on songs, instrumental pieces, dances or ceremonies that have been received as gifts or acquired by inheritance, study, theft or purchase. Notions of the proper uses of existing compositions range from insistence on accurate reproduction to demands for continual reinterpretation and revision. Stories about the acquisition of songs, dances and ceremonies may or may not mention 'composers', persons or non-human agents to whom the invention of a GENRE or the production of specific items within a REPERTORY is attributed. It is likely that efforts to remember compositions and their histories

have accounted for a significant proportion of human mental activity.

The fact that humans are capable of musical composition led the anthropologist Claude Lévi-Strauss to call music 'the supreme mystery among the human sciences'. His point is confirmed by the great number of myths that bear on musical creativity and by the veneration accorded to compositions and composers in many societies. Yet it is no less common for composition within the constraints of a genre (e.g. lament) to be numbered among the basic obligations of social life.

Performers and informed listeners generally have some conception of the provenance of a composition. It may have been newly received in a vision or acquired from an existing repertory through study (or by other means) and prepared for performance. Perhaps it is composed or recomposed during performance by an individual or by members of an ensemble; perhaps it has been newly created or revised by an individual or by members of an ensemble in advance of a specific performance. The music performed on one occasion may combine several types of composition, as when musicians improvise a prelude before presenting a newly revised version of a piece they have studied for years. Such combinations can endow a performance or a ceremony with a rich spectrum of historical references.

1. Genres and repertories. 2. Ritual and ceremony. 3. Myths of creation and transmission. 4. Terminology and theory. 5. Compositional resources. 6. Counterpoint. 7. Works, styles and ideas. 8. Modernity.

1. GENRES AND REPERTORIES. Most societies recognize different genres of performance, that is, ways of acting that are appropriate under certain conditions. Performers sometimes learn to sing, dance or play instruments without learning a repertory of compositions; names of genres often carry more weight than any names assigned to songs, dances and instrumental pieces. The requirements of a genre may include advance preparation of new or old compositions, variation or recomposition of existing pieces during performance, spontaneous composition of a performance suited to the occasion or some combination of these.

The names given to genres and compositions help people to learn and remember how they ought to respond. In many cases the name of a genre also stands for a repertory of pieces sharing the same function. According to Joseph MacDonald (*Compleat Theory of the Scots Highland Bagpipe*, compiled *c*1762), 'gatherings' were 'the most animating of pipe compositions, as they were originally intended to assemble the highlanders under the respective chiefs upon any emergency . . . Every chief had a gathering for his name'. When composition during performance is more important than the reproduction of existing compositions, a musician's repertory is apt to consist largely of conventional subjects, procedures, models and formulae (some of which may very well carry their own names; see §5 below).

Depending on the genre and its function, performers may be required to follow models that severely limit the scope of permissible variation, or they may be expected to discover new ways of treating familiar resources. The two types of demand may be seen as mutually reinforcing, or as an opposition between 'exact' reproduction of existing pieces and creation of wholly 'original' works or performances. One motivation for formulations that approach one or the other extreme is to assert one's competence or authority to evaluate either the 'fidelity' or the 'originality' of performances. Arguments concerning criteria for judging the effectiveness of performances have played an important role in the development of musical thought and music theory.

In many cultures compositions are valued, above all, as a repertory of items that can be recomposed. The creation of a new *ekisoko* among the Ganda people (*see* UGANDA, §II, 2) involves the modification of an existing song by interpolating references to current events; inventing the text and tune of a song is a very different process, called *okuyiiya*. A successful *ekisoko* may assume its own place in the repertory, possibly to be recomposed in its turn. The practice presupposes the existence of listeners who are familiar with the history of specific compositions.

Obligations to praise a patron or to lament the death of a relative are two of the more common incentives for composition during performance (which is sometimes called 'oral composition'). Evaluation of such performances may focus attention on the extent to which sequences of sounds and motions have been made to fit with one another and with pertinent aspects of the immediate situation. Detailed planning in advance of the performance is not appropriate in situations where a 'prefabricated' piece might be taken as a sign of the performer's lack of involvement. In circumstances where musical ensembles compete, however, they may need to compose and rehearse new pieces for the occasion (as happens with panpipe ensembles in Andean Peru). Musical notations may be designed in ways that enable musicians to perform the notated music at sight or that require a long process of interpretation (called *dapu* in the case of the extensive repertory for the Chinese seven-string zither *qin*).

In certain performance genres of the Kaluli people (Papua New Guinea), an act of spontaneous composition creates a 'path' (*tok*) so that composer and listeners can 'simultaneously experience a progression of lands and places and a progression of deeply felt sentiments associated with them' (Feld, 1982, p.151). Listeners who are familiar with the places named and with the techniques of performance have no way of knowing in advance just how the composer will connect and coordinate place names, melodic shapes and ways of using the voice.

The vocabularies of musicians in many parts of the world have included terms for 'paths', 'roads' or 'ways'. Rather than creating or discovering new paths during performance, musicians may retrace paths inherited from their predecessors or revealed to them in visions. A BARD who has mastered a large repertory of resources for composition during performance might boast that 'I am self-taught, and a god has planted in my soul every way [*oimos*] of song', as Phemius tells Odysseus (*Odyssey* xxii.347–8; *see* AOIDOS). The path (*indlela*) adopted by a Zulu singer is a melodic shape that can be adjusted to fit different words by changing some of the pitches. Among the Temiar of Malaysia, the term *nɔŋ* ('path') designates not only the songs taught to mediums by their spirit guides in dreams but also the genres of performance (e.g. *nɔŋ tahun*: 'annual fruit way').

2. RITUAL AND CEREMONY. People who repeatedly carry out a prescribed series of actions are engaged in ritual or ceremonial behaviour. Specialists who must remember and teach the proper sequences of ritual actions often

have good reason to isolate and name certain components of those sequences and to distinguish multiple levels of organization ('paths within paths'). Many rituals link together a number of performance genres and require coordination of simultaneous as well as successive actions. The purposes of a ritual may call for greater or lesser degrees of flexibility in re-enacting its constituent sequences. Participants may be obliged to create or reproduce compositions in ways appropriate to their specific roles.

Various types of composition during performance are particularly important in shamanic rituals where they may function to induce a state of trance in the shaman, support his journey to another world or convey his report of the journey or the messages of a spirit that has possessed him. It is doubtful whether shamans could operate effectively by restricting themselves to the reproduction of existing songs and dances, important though these may be in a shaman's repertory.

Rituals that call upon deities or spirits to respond appropriately may well include compositions that can be recognized by all concerned. When pieces (*nziyo*, sing. *rwiyo*) for the Shona lamellophone *mbira dza vadzimu* are played during possession rituals in order to attract the spirits of ancestors (*see* ZIMBABWE), it is appropriate for players to select whatever piece a particular spirit is known to prefer. The norms of *mbira* performance require a high level of improvised variation, which the spirits and other participants would both expect and appreciate. The repertory of pieces is, in effect, a repertory of models or frameworks for improvisation, with no requirement that pieces be played in a conventional order.

In contrast, the ordering of songs and drumming patterns associated with the deities in the Brazilian *candomblé* religion and other African-derived religions of Latin America and the Caribbean follows the requirements of a liturgy. In the first part of the public ceremonies known as *orô* in Bahia, the gods are greeted and called in a fixed order as the leader selects songs associated with each god in turn, with the aim of bringing some of that god's initiates into a state of possession (*see* LATIN AMERICA, §III). Leaders who control large repertories and are familiar with initiates' preferences are best able to judge which songs may prove most effective at different points in the ceremony; the initiates of each god will have accumulated rich funds of experience linked to certain items in that god's repertory.

The demands of ritual and ceremony have long furnished compelling incentives to organize, rearrange, enlarge or abridge repertories. Such actions are often attributed to legendary sages or to saints (e.g. the pope Gregory I, said in the prologue of the 9th-century cantatorium of Monza to have 'composed this book of musical art'). The *Analects* of Confucius mention a 'reform' in which 'the pieces in the Royal songs (*ya*) and Praise songs (*song*) all found their proper places' (ix.14, trans. Legge). Criteria for determining the 'proper places' are not always immune to pressures for change.

When songs and ceremonies are performed according to a ritual calendar, it may be necessary to create new compositions at certain times of year. In San Juan Pueblo, a Tewa-speaking community of New Mexico, new songs are composed each year for the Turtle Dance (*okushare*), held after the winter solstice, and for the Gourd Dance (*pogonshare*) or Basket Dance (*tunshare*), one of which is performed before the installation of the summer chief. The composers, appointed on the basis of their musical talent, may elect to recycle portions of earlier songs, perhaps altering words or melody. Whatever is borrowed must remain in its original position within the conventional form of five parts in the sequence *AABBA*.

The various respects in which ritual practices emphasize composition during performance or reproduction of compositions provide valuable evidence of the social relationships that the rituals are designed to maintain among humans, spirits and divinities. Without the composition and performance of ceremonies, humans would never have learnt to live in communities or to create larger political entities.

3. MYTHS OF CREATION AND TRANSMISSION. The importance of composition makes it an appropriate (though not an inevitable) subject of myth and of discourse and writing that draw on the resources of myth. Myths may focus on the acquisition of songs, dances, ceremonies or musical instruments without identifying composers or inventors. In learning to perform sequences of songs and ceremonies, it is not always necessary to learn how, when and by whom they were created. Myths may treat compositions simply as 'texts' with specific uses, or they may account for the creation as well as the uses of the texts.

A powerful rationale for reproducing an existing series of compositions is provided by beliefs that the series preserves the 'flavour' or 'scent' of an ancestor. In the Pitjantjara language of southern Australia *mayu* has the dual meaning of 'sound' and 'flavour', and *inma mayu* is a melodic contour associated with an ancestor who created a series of songs for the benefit of his descendants (*see* AUSTRALIA, §I). In the Aranda language the verb *tneuma* or *tnauuma*, derived from the root *etna* ('name', 'verse'), refers exclusively to the composition of sacred verses by totemic ancestors (Strehlow, 1971, p.126). Upon emerging from the earth, each ancestor called out his own name, then named specific features of the surrounding landscape, animals and humans as they were created. Having gained the power to control all he had named, the ancestor provided his descendants with access to this power by teaching them to sing his 'cycle' of sacred verses. The ordering of songs in the cycle follows the ancestor's itinerary; hence different portions of a large cycle may be owned by members of different social groups. Those who learn to perform the songs and associated ceremonial actions correctly draw upon the energies deposited by ancestors at particular sites. Secrecy is indispensable if the compositions and the art of performance are to be preserved; accurate knowledge of songs and ceremonies is not easily acquired. Singers may first learn a 'false front' (*inma nguntji*: 'untruthful song') before coming to understand the 'true song' (*inma mulapa*).

The manner in which processes of creation and transmission are represented in a people's myths and cosmologies directs attention toward the attitudes and disciplines that are most appropriate in each case. The Navajo ceremonial practitioner Frank Mitchell (1881–1967) compared the reproduction of songs, ceremonies and stories with the agricultural cycle, from seeds through mature plants to new seeds. Since 'the first thing the Holy People did was to make a song and a prayer for the plants on the earth so the earth would be fruitful', these were also the first song and prayer that he learnt.

Compositions are recognized as discrete items when they can be exchanged for other goods. In the Blackfoot Indian myth of the origin of the beaver medicine bundle, the first human owner of the bundle receives a series of songs from beaver in return for prepared animal skins, without making any particular effort to remember the songs. Although subsequent owners are not likely to have learnt the same powerful songs, the medicine songs used in the beaver cult would once have been received from animals or other figures in visions, like all other powerful songs. Regularities in formal structure must have contributed to the relative ease with which Blackfoot songs were learnt in visions (as Nettl has argued). In giving songs to one another, Blackfoot singers perform them as complete units, just as donors are said to have done in visions. The fact that, in visions of the Salish or 'Flathead' Indians, donors almost always repeat a song several times as they move towards the receiver has been interpreted as 'a symbolic reflection of the actual process of composition', though it might also be understood as evidence of 'recalling' or 'recomposing' songs (Merriam, 1964). In the terminology of the Oglala Sioux, 'giving birth to a song' involves two types of transmission: secular songs are 'made' and 'caught', but religious songs must be 'taught' and 'learnt' in visions.

With respect to the products and processes of composition, divinities and spirits may be represented as ideal auditors, donors, sources of knowledge and power, or (less frequently) active composer-performers. In some cosmologies gods find uses for compositions that resemble those of humans. The Quiché Maya *Popol vuh* ('Council book') tells how the tune *Hunahpu Monkey* received its name when the heroic gods Hunahpu and Xbalanque played it in order to call their stepbrothers (later the patron deities of arts and crafts) to dance before their grandmother.

Poet-musicians have portrayed gods as both creators and recipients of instruments and compositional models. In the fourth Homeric Hymn, Hermes gives the lyre he has just invented to Apollo, informing him that the instrument 'teaches through its sound all manner of things that delight the mind' so long as the player 'enquires of it cunningly' (ll.483–5). Pindar's twelfth Pythian Ode (490 BCE) attributes to Athena the art exercised by aulos players in competitions: imitating the wailing of the Gorgon Euryala, she made a 'melody of all voices' for auloi and named it 'the nome with many heads'. Both passages suggest that successful performance requires highly interactive relationships between musician and instrument, musician and model. Likewise, the singer of the sixth Homeric Hymn, hoping to gain victory in a competition, asks Aphrodite merely to 'prepare my song', which still leaves much of the work to him.

The uses of myths and legends about relationships of composers to suprahuman sources of energy and inspiration have not been extensively investigated by scholars. In some cultures, stories of the composer's vocation follow a conventional format, with each new instance replicating the basic myth. The *aşık* of Turkey and Azerbaijan may receive his vocation when an Alevi religious leader and a beautiful woman appear to him in a dream, after which he finds himself able to play the long-necked lute and to create new verses and melodies (*see* TURKEY). The *aşık* receives his subject matter (mystical love) and his motivation before acquiring his technique; in other vocation narratives motivation and technique come before subject matter. Caedmon, the 8th-century poet-singer mentioned in Bede's *Ecclesiastical History of the English People* (iv.24), 'received the gift of singing freely by the aid of God' in a dream but needed to learn from his fellow monks the stories and doctrines he could now convey by means of song.

Vocation narratives serve to perpetuate conceptions of gender roles. Stories of men who are inspired to create songs by love for a woman they have glimpsed in a vision or a picture are far more widespread than any such stories about women poet-singers. The *vidas* of the Provençal troubadours are a rich source of examples (*see* TROUBADOURS, TROUVÈRES, §I, 2). In modern Europe the misconception that women were incapable of musical composition was perpetuated, in part, through the standard plot-lines of composer biographies.

4. TERMINOLOGY AND THEORY. Attributes of compositions are among the most common topics of discourse about music. 'Composition' is an appropriate term when specific parts or elements of songs or instrumental pieces can be enumerated, yet the extent to which musicians speak of 'joining together' or 'coordinating' several components is a cultural variable. Words for such actions as 'making', 'forming', 'finding' and 'receiving' may or may not imply an interest in the construction of the music that is 'made', 'formed', 'found' or 'received'.

In the language of the 'Aré'aré of Malaita Island, the term *supaaha* designates a composition that has two, three or four melodic segments (*ro'u mani 'au* or *toku mani 'au*: 'joints of a piece'). Different ways of connecting sounds (*noroana*) and intervals (*aahoa*) within the segments are identified when musicians tell stories about composers who chose to imitate sounds, intervals or rhythms produced by birds, frogs, humans or other sources of sound.

Technical terms in many languages name the components or factors that must be coordinated in acts of composition, whether simultaneously or in succession, by a group of collaborators or by a single composer. In the Pacific island kingdom of Tonga, a new composition may have three composers (*pulotu* or *fa'u*, depending on the genre), who are responsible in turn for the poetry (*ta'anga*), its melodic and rhythmic setting (*hiva*) and the arm movements that interpret the poetry (*haka*); a composer who can create all three components deserves to be called *punake* rather than *pulotu* or *fa'u*.

Many practices of singing and recitation are based on pre-composed verbal texts that are memorized and performed according to conventional procedures. Vedic recitation (*see* INDIA, §I, 3(i)) is the classic example of this conception. A few of the 1028 hymns of the *Rg-veda* (e.g. 1.130.6, 5.2.11, 5.29.15) compare the composition of verse to the construction of a well-built wagon. It is the poet's responsibility to pronounce 'crafted formulae' (*tastān mántrān*) that are also 'true' (*satyá*). Such language underlines the importance of maintaining the integrity of the pre-composed text in every performance. Conceptions of the appropriate musical procedures for presenting fixed texts vary greatly among the world's religions, as does the technical terminology applied to the texts and to their modes of presentation. Performers who reproduce religious texts may in some instances believe that words and melody were created as a single entity.

Sung poetry is an effective medium in which to describe an act of composition or its outcome. Two eulogies in the ancient Chinese *Shi Jing*: ('Book of odes') identify the composer of poem and tune as well as the person to whom the composition was offered: 'Ki-fu has made [*zuo*] the eulogy [*song*]; its verse [*shi*] is very great, its air [*feng*] is extensive and fine; it is presented to the prince of Shen' (trans. Karlgren; nos.259–60 in the text of the Mao school). Whether Ki-fu created an 'extensive' air to fit his poem or adapted an existing tune, the process of 'making the eulogy' required coordination of verse and air. The ancient Greek lyric poet ALCMAN (*fl c*630 BCE) boasts of having 'devised words and melody by organizing the tongued cry of partridges' (frag.39). In the initial strophe and antistrophe of his third Olympian Ode (476 BCE), Pindar speaks of 'blending' the melodies of phorminx and aulos with the setting [*thesis*] of the verses and of 'discovering a bright and new fashion [*tropos*]' by 'fitting together' a specific metre and tone-system.

Accounts of individual acts of composition may suggest an implicit theory of music, but explicit theories consist of generalizations, supported more often than not with references to examples. The terms in which theorists treat compositional issues are shared to varying degrees with other areas of speculative activity (e.g. cosmology, mathematics, linguistics) and other practices (e.g. architecture, oratory, painting). Implications for musical thought lie close to the surface in such metaphysical statements as the Jewish and Christian doctrine that God 'ordered all things by measure and number and weight' (*Wisdom of Solomon*, xi.21). For many centuries, and in a number of civilizations, an understanding of the universe as composed of harmonious ratios and proportions provided composers of music with powerful incentives and constraints.

If there is one compositional issue that has generated more discussion than any other, it is how to coordinate poetry, song, dance and instrumental parts. Given the difficulty of reconciling the claims of these four components, normative statements about the proper relationship between any two of them are common, with varying degrees of emphasis on priority (as in 'Prima la musica, poi le parole') or on interdependence. According to Plutarch (*Symposiakon*, 747*c*–748*b*), dancing and sung poetry 'are fully associated and the one involves the other', most notably in the genre *hyporchēma*; such statements need not imply that the two components have equal weight.

Theories of music invariably treat more than one level of temporal organization. The section on music in the famous *Nātya-śāstra* attributed to the sage Bharata (*see* INDIA, §I) opens with statements about coordinating song (*gāna*), instrumental music (*vādya*) and acting (*nātya*) into a unity and combining notes (*svara*), time-cycles (*tāla*) and words (*pada*) to produce *gāndharva* (the art named after the celestial gandharvas, as Greek *mousikē* was named after the Muses). Whatever its point of departure, any theory specifies a number of components of larger entities and recognizes constraints on possible combinations. Mental capacities deemed indispensable to composition and performance may be explicitly acknowledged or simply taken for granted by theorists. According to Dattila, whose treatise overlaps in content with the *Nātya-śāstra*, *gandharva* is 'a group of notes well measured through rhythmic beats [*tāla*] and set to words [*padasthah*] when rendered with [due] intentness [*avadhāna*]' (trans. Lath). As one of the conditions of compositional activity, 'intentness' is comparable to 'intuition' or 'understanding' (*synesis*) in the theory of ARISTOXENUS (2nd half of 4th century BCE). Both terms denote a capacity that enables musicians to coordinate several factors.

Aristoxenus devised a set of terms with which to analyse speech (*lexis*), melody (*melos*) and bodily movement (*kinesis*), progressing in each case from points (letters, notes, cues) to conjunctures (syllables, intervals, figures) and groups (words, systems). His *Harmonic Elements* and *Elements of Rhythm* enumerate the pertinent variables of 'melodic composition' (*melopoiia*) and 'rhythmic composition' (*rhythmopoiia*). The consequences of Aristoxenian theory for the musical cultures of Europe and the Near East are incalculable, not least in the treatment of tonal organization and rhythmics as separate branches of musical knowledge.

The chapters on melodic composition in the *Kitāb al-mūsīqī al-kabīr* ('Great book on music') of AL-FĀRĀBI(*d* 950) and in the *Micrologus* of GUIDO OF AREZZO (*d* after 1033) have long been seen as fundamental contributions to the music theory of the Near East and Europe respectively. The conventional analogy between letters and notes, syllables and intervals is treated very differently in the two works. Guido, who compares the construction of verse with that of vocal melody in general, extends the analogy to poetic feet and written neumes (*see* NOTATION, §III, 1), then to lines of verse and melodic phrases. Composers of melodies should aim for 'harmonious correspondences' among neumes and phrases that are sufficiently differentiated; visual metaphors are appropriate to the perception of such correspondences, as in Guido's likening a melodic inversion to the reflection of a face in a well.

Al-Fārābī, comparing the composition of verses with that of the melodies to which they are sung, does not suggest that melodic segments are analogous to groups of syllables. Rather, he emphasizes determinations that limit both the number of notes or letters and their natural orderings in entities of various sorts, from which poets and composers learn to make appropriate selections. Distinctive attributes of melodic segments, according to al-Fārābī and many of his successors, include the extent to which a given segment is necessary or ornamental, and whether it enhances the salience or the subtlety of a melodic line. Once a composer has created a melody, the musicians who learn and remember it should know how to make suitable alterations, planning them in advance or introducing them at the moment of performance. Responsibility for conception and revision of melodies is divided between the sexes in a remark that al-Fārābī attributes to the great musician ISḤĀQ AL-AWSILI (767–850): 'Melodies are texts created by men and improved [in some sources, 'edited'] by women'.

The uses for which compositions are designed have considerable bearing on which components are named and which, if any, are notated. In remembering the names or reading the notations, musicians bring into play their habits of associating whatever is named or notated with other aspects of composition. Musicologists have underestimated the extent to which notations of poetry can convey information about rhythm, melody and form to musicians with the requisite training and experience. As they read a text intended for singing, performers may

recall or create appropriate rhythms, melodic contours and formal divisions. Music historians unfamiliar with the original conventions of performance can sometimes make inferences about musical structure from close analysis of poetic texts, as have been shown in a groundbreaking study of the Chinese *Shi Jing* (Picken, 1977).

Systems of SOLMIZATION may assist musicians in remembering songs or in mastering patterns that are useful in composition during performance. Syllables can represent musical sounds symbolically (as in most solmization systems) or iconically (when such phonetic oppositions as tense/lax and interrupted/continuant are employed to imitate sounds produced on drums, bells, gongs, chordophones or aerophones). The availability of names for individual sounds and for larger units increases the degree to which controls can be exercised in teaching and in rehearsal. There is little need for names in performance genres where the interaction of ensemble members is governed more by behavioural norms than by any appeal to explicit rules or formal schemes. At the opposite extreme stands the ideal of a fully 'regulated' music, in which discrete elements and units are arranged according to canonical standards. Music that is 'regulated or composed' is normally cultivated alongside other, less restricted idioms, as Johannes de Grocheio observed with respect to Parisian musical practice in the 13th century.

5. COMPOSITIONAL RESOURCES. In many times and places musicians have been expected to know not only a repertory of compositions but also *how* to compose. Musicians who learn and remember compositions may also learn how to revise them. A repertory of compositions may serve as a repertory of 'models', each of which calls for specific types and degrees of elaboration or recomposition during performance. Other models are abstractions derived from aural and tactile experience, with or without the assistance of speech or writing. Resources that become familiar to composers through experience may also include conventional formulae, figures, styles and scenarios as well as individual sounds and intervals. Composers often need to acquire a command of the movement patterns by which specific rhythmic and melodic figures are obtained from instruments.

Whether it is stored in a musician's memory or realized in performance, a model summarizes a set of constraints that applies to one class of compositions or performances, which is often subsumed within a larger sequence or cycle (e.g. the minuet and trio within a four-movement symphony). Any model is 'composite' in certain respects, and some components are likely to be marked as more amenable to variation and rearrangement. Music theorists adopt various strategies in deciding which components and procedures require names and which are best left unnamed. The history of the pedagogical uses of models forms a large part of the prehistory of musical analysis. Melodic models figure prominently in early musical notations, such as the *grāma-rāga*-demonstrations of the Kuḍumiyāmalai inscription (7th or 8th century CE) in South India and the model antiphons of medieval European tonaries (*see* TONARY, §3, and NEUMA, §1).

The great diversity in human attitudes towards composition makes it impossible to formulate general (that is, cross-cultural) criteria for distinguishing between 'pieces' and highly prescriptive 'models'. To realize a model, or to recompose an existing piece, musicians must make adjustments so that all components, whatever their provenance, will fit together in an appropriate manner. Players of the Sardinian *launeddas* (a triple clarinet; *see* SARDINIA) are judged by their ability to create subtle transitions between each small melodic unit (*noda*, from Latin *nota*) in a conventional sequence (*iskala*). Each size of *launeddas* has its own name, its own tuning (*cunsertu*) and its own *iskala*, the basis of composition during performance.

Poet-singers may or may not be expected to create new models that allow for variation in performance. In Fulani praise-song (*mantoore*), a new model (*taakiyaare*) is distinguished by its title, lyrics and performance roles; the 'song-as-presented' (*fijirde*) results from variation (*sanja*) of the model. Different verbs are associated with each of these nouns: one 'makes' or 'comes up with' a *taakiyaare* and one 'brings' the *fijirde*.

Some of the simplest models are terms that denote conventional sequences of actions and help musicians to remember ways in which these actions can be performed. In the funeral songs (*buñansan*) of the Diola-Fogny of Senegal, soloists 'begin', then proceed 'to speak' or 'to praise' before 'killing' (i.e. terminating) the solo section, an act that cues the ensemble to 'sing out the melody'. Another type of model isolates two or more components that must be performed simultaneously. The Banda-Linda term *àkɛnə* (literally, 'husband' or 'male') designates a simplified version of any vocal melody or any part in an instrumental ensemble (*see* CENTRAL AFRICAN REPUBLIC). Each *àkɛnə* is, in effect, a formula that can be played or sung in a limited number of ways as it combines with other formulae.

More complex sets of models incorporate a number of structural levels. The professional *īggīw* of Mauritania must master a repertory that is organized according to the overall progression of any conceivable performance and requires musicians to select beginnings, continuations and conclusions from the appropriate categories. Male players of the *tidīnīt* (lute) learn a sequence of four or five 'routes' (*dhuur*, sing. *dhar*; literally, 'back of a dune') which must be played in a prescribed order following either the 'black way' or the 'white way'. The pieces (*eŝwaar*) and motifs (*raddāt*) associated with each 'route' serve as resources from which musicians compose their performances. At all levels the progression moves from the 'blackest' entities (connoting youth, strength, war, honour) to the 'whitest' (connoting maturity, refinement, love, pleasure); hence every performance invokes many of the longstanding correlations made by Arab theorists between modes and seasons, humours, moral qualities and so on (*see* ARAB MUSIC, §I, 1–3, and MAURITANIA).

Learning such units as the Sardinian *nodas* or the Mauritanian 'routes' and motifs entails learning the correct, or permissible, sequences in which to perform them. The Korean instrumental genre *sanjo* (literally, 'scattered melody-types'), developed in the 19th century as a large-scale framework for improvisation (*chŭkhŭng ŭmak*), likewise places numerous constraints on the ordering of melodic and rhythmic units (*see* KOREA). In the late 20th century the *sanjo* of a specific performer on a given instrument may resemble a fixed composition more than a tightly constrained improvisation. The same observation is often applied to the *ceòl mór* ('great music', also known since the 19th century as PIBROCH) of the Scottish highland bagpipe, in which variations of a theme

(*urlar*) may once have been performed in a flexible order but are now played in a fixed sequence.

The primary function of such models as the Sardinian *iskala* and the Korean *sanjo* is to outline the basic structure of one performance. Models of this type, comprising several sections in a prescribed order, have often provided a focus for competitions, as in the cases of *pibroch* and of the ancient Greek *nomoi*. Other types of competition have favoured newly composed songs that met certain specifications (for examples, *see* PUY and MEISTERGESANG, §6). In numerous instances prescribed sequences of melodic formulae and melody types have gradually taken on the attributes of fixed compositions.

Collections of models that are too extensive to be treated in full on a single occasion have been organized in a number of ways, many of which involve conceptions of mode. Some modal systems furnish a limited number of categories for classifying existing pieces according to specific features, such as octave species, AMBITUS and FINAL; other systems are designed as collections of melody types that provide guidelines for new compositions and performances (*see* MODE, §I, 3, IV, 2, V, 4(i) and V, 4(ii)). A single system may be structured to serve both purposes. A set of categories is easily associated with other sets containing the same number of entities (e.g. four seasons or humours, seven planets, 12 months). Each member of a large open-ended collection of melody types needs its own 'personality', a bundle of features that distinguishes it from its neighbours. These may include an affinity with particular poetic metres and topics as well as a vocabulary of characteristic melodic turns and a sequence of contrasting melodic registers. Some bundles of features and options are likely to be far more extensive than others, with the consequence that they yield up more of their secrets to the most experienced musicians; this is notably the case with the great rāgas of south Indian music (e.g. *śankarābharanam*).

Proper names provide an efficient means with which to invoke the 'personalities' of modal entities and to specify appropriate sequences (as in rules of the form '*y*, if used, should follow *x* and precede *z*'). Systems that treat mode more as category than as type have less need for proper names; in such systems names are more commonly derived from locations in a general scale (e.g. the medieval European *protus*, *deuterus* etc., modelled on the Byzantine OKTŌĒCHOS).

For a troupe preparing a performance of Beijing opera, the compositional process (*buju*, 'arrangement of the parts') begins with a decision to use one or both modal systems (*erhuang* and *xipi*) and perhaps one or more secondary modes, according to the nature of the dramatic action. Next, one metrical type (*banshi*) is selected for each group of verses, with appropriate adjustments and with attention to the overall sequence of metrical types. The resources made available by these decisions are then employed in composing the specific melodies to be sung by each character.

Large repertories of models can be arranged so as to offer musicians a choice between four or more categories, each of which contains its own beginnings, continuations and conclusions. The Persian *radīf* ('row') is a tightly organized repertory of melody types and relatively fixed pieces which, like *sanjo*, exists in different versions for specific instruments (*see* IRAN, §II). Most versions are subdivided into seven primary 'systems' (*dastgāh*) and five secondary systems (*āvāz*), each with its own sequence of smaller units. The *radīf* is at once a set of 12 categories and a collection of melody types, some of which are strongly associated with specific poetic metres. Competent performers, having studied the entire *radīf* over a period of several years, are capable of making effective connections between the units they choose to perform on a given occasion; in this respect the *radīf* may be considered a vast composition designed for pedagogical purposes.

Compositions that remain recognizable in any competent performance have also been organized into large cycles subdivided by tonal category (e.g. the six suites that make up the Tajik-Uzbek *shashmaqām*; *see* CENTRAL ASIA, §II, 3). To distinguish such cycles from repertories of models is not a simple matter, especially when the cycles allow for improvisation at specified points (e.g. the Arab *nawba* or *wasla*; *see* ARAB MUSIC, §I, 6(iii)). In Iraq the term *maqām* designates a vocal genre with sections in a number of different modes (which are also called *maqāmāt*). This feature makes the five suites (*fusūl*, sing. *fasl*) of the Baghdad tradition somewhat analogous to the seven primary systems of the Persian *radīf*, except that a *fasl* is regarded as a work designed to be performed as a whole. Nonetheless, current practice is to arrange the modal components into new sequences while adhering to the traditional ordering of formal types. In contrast to the five *fusūl*, which are secular, cycles used in religious ceremonies have retained a prescribed sequence of modes.

In the 20th century, tendencies to treat large cycles as fixed compositions were more pronounced than inclinations to assemble older models for use in improvisation. Historically these have not been mutually exclusive answers to the question of how musical resources are understood to have been organized by earlier generations of musicians. Like the invention of a new genre, the organization of a collection of models or a repertory of pieces is a compositional achievement frequently attributed to specific individuals, as in the lists of redactors included in 13th- and 14th-century manuscripts of the Armenian *sharakan* (*see* ARMENIA, §II, 2). Conceptions of the 'pre-formation' of musical resources may change rather drastically for many reasons, such as a change in patronage when a court practice becomes the 'national heritage' of a modern state.

6. COUNTERPOINT. Modern European conceptions of composition, which are largely a product of the Ars Nova and Renaissance, were made possible by the development of an art and theory of COUNTERPOINT based on the older theory and practice of DISCANT. The underlying idea is the creation and notation of a detailed plan for coordinating the actions of two or more performers, each of whom sings or plays one part within a polyphonic texture. One of the fundamental conditions, a notation capable of specifying the precise durational values as well as the pitches of each part, was an achievement of the 13th century. Each step in the gradual development of increasingly precise notations created new possibilities for imagining and eliciting specific responses from performers. Although early counterpoint was largely a singers' art, most contrapuntal techniques were readily transferred to instrumental ensembles, mixed ensembles of voices and instruments and instruments that allow one player to perform multiple parts. The possibility for one instrumentalist to emulate the coordinated interactions of a group counts as one of the most distinctive achievements of

European musical culture. The elaboration of contrapuntal theory, the refinement of notational practices and the cultivation of specifically instrumental idioms were closely interrelated developments.

In the 14th century the act of making and notating a polyphonic 'work' came to be recognized as a specialized use of the procedures for adding one or more parts in counterpoint with a TENOR. By the late 15th century some of the men who produced such works were called 'composers'. The challenge of controlling the note-relations between tenor and discant (and between this duet and any additional parts) proved conducive to experimental attitudes, sustained through a number of stages. Possible stages might have included devising and elaborating a plan, communicating it to performers, hearing their realization, making revisions and writing out performance instructions in mensural notation. Writing invites criticism and revision, whether the object is a notated composition, a repertory list or a treatise on the rules of counterpoint.

Two well-known remarks of Guillaume de Machaut display a concern with the integrity of the artefact as notated (*chose faite*, apparently Latinized in the 15th century as RES FACTA). Machaut's plea that his three-voice ballade *Nes que on porroit* be read from notation 'as it is made, without adding or taking away' anything (*Voir dit*, letter 10), implies that performers who introduced changes in one or more voices might damage the delicate balance achieved through the poet-composer's control of relationships among the parts. Machaut's statement that he was not accustomed to sending out 'something I make' (*chose que ie face*) before hearing it (*Voir dit*, letter 33) suggests that he was inclined to make further refinements after trying out one or another combination of voices.

Various implications of the distinction between singing that results in counterpoint and composition based on the rules of counterpoint were a major concern of theorists in the 15th and 16th centuries. Prosdocimus de Beldemandis specifies that the rules for note-against-note two-part counterpoint given in his *Contrapunctus* (1412) apply to the sung as well as the written varieties, both of which presuppose experience in singing plainchant. A logically superior distinction occurs in Tinctoris's *Liber de arte contrapuncti* (1477): counterpoint can be 'made in the mind' or 'made in writing'. Neither term excludes instrumental performance, and the counterpoint performed on a given occasion might have been worked out and preserved by either (or both) means. Scholars have offered conflicting interpretations of the distinctions drawn by Tinctoris between a notated artefact (*res facta*, *cantus compositus* or *compositio*) and 'singing upon the book' (*cantare super librum*). Only the former has 'parts', which were notated in succession but were presumably composed with attention to the overall progression of consonances and dissonances. As defined in Tinctoris's *Terminorum musicae diffinitorium* (possibly written *c*1472–5, published 1495), a *cantus compositus* is 'produced through the relation of the notes of one part to another in multiple ways' (trans. Blackburn, 1987, p.254). According to a remark in his *Proportionale musices*, the 'primary' part, which serves as the 'foundation of relationships', is normally the tenor but sometimes the upper voice. Tinctoris does not seem to have assumed that counterpoint produced by singing upon the book would inevitably fall short of the standards achieved in the best written counterpoint, though other writers (e.g. Nicolò Burzio, *Musices opusculum*, 1487, ii.6) were convinced that 'the counterpoint of singers' bore little relation to 'the rules of composition'. Theorists who attempted to formulate such rules ran the risk of underestimating the extent to which their formulations misrepresent compositional practice.

In praising the achievements of two generations of composers, Tinctoris equated the composer's dependence on models with Virgil's indebtedness to Homer. The models were 'works' (*opera*) that exemplified the most up-to-date 'style of composing' (*componendi stilus*). Access to such works was immeasurably increased as, from 1501, they were distributed in printed as well as in manuscript form (*see* PRINTING AND PUBLISHING OF MUSIC, §I, 2). Historical consciousness based on evaluation of notated compositions and on narratives of a gradual perfection of technique left ample room for discussion of 'deficient' practices, such as the unwritten counterpoint that was subject to 'chance' and to 'unforeseen' combinations of notes (*see* SORTISATIO). Composition was often contrasted with modes of performance in which the rules of counterpoint were ignored or but loosely observed. Gaffurius (*Practica musice*, 1496, iii.15) advised 'the composer of songs' that an immobile tenor or baritone part was not an appropriate option, since only perfect consonances reached by contrary motion would delight the discriminating listener. The very name of the 'canon' (*see* CANON (i)), referring to the 'rule' by which singers could produce polyphony from a single notated part, emphasizes the distance separating this compositional genre from its largely unwritten predecessors (e.g. ROTA and RONDELLUS).

We do not know how many 16th-century musicians shared Coclico's belief, which he attributed to Josquin des Prez, that experience in singing extemporaneous counterpoint provided indispensable preparation for composition (*Compendium musices*, 1552). Zarlino made a somewhat contrary claim: singers lacking experience in the composition of counterpoint should not attempt to improvise an additional part to a notated piece; the 'thousand errors' committed by unskilled singers in improvisation would become evident as soon as the added parts were notated, though trained musicians could recognize the errors by ear (*Le istitutioni harmoniche*, 1558, iii.64). Coclico insisted that the rules of composition permit more licences than those of improvised counterpoint. His viewpoint is consistent with the capacity of notations to expand a musician's awareness of options, not least the option of writing 'against' a given model or set of rules.

Demands for originality coupled with respect for models were met in a variety of ways. An extensive range of possibilities lay implicit in the idea of composing additional voices to a pre-existing melody (CANTUS PRIUS FACTUS or CANTUS FIRMUS) and in the complementary idea of fashioning a contrapuntal work on a newly invented tenor. In the 15th and 16th centuries the possibilities were most fully explored in polyphonic settings of the Mass Ordinary as a cycle of movements and in the motet. Conceptions of the composer's field of action were profoundly modified by techniques presupposing a potential equality among all voices. From the late 15th century until the present the term IMITATION

has designated the transfer of an identifiable melodic unit from one voice to one or more of the other voices, as when one segment of a cantus firmus is presented by each voice in turn (*see also* FUGA). The term acquired a different meaning with the technique of composing a mass 'in imitation of' an earlier work, retaining some of its counterpoint; this is now known as PARODY (i) technique. (Other ways of reworking existing compositions are considered in the articles ARRANGEMENT, BORROWING, CONTRAFACTUM, INTABULATION, TRANSCRIPTION and TROPE (i)).)

An awareness of innumerable compositional possibilities is evident in the major 16th-century musical treatises, most notably in Zarlino's *Le istitutioni harmoniche*. Zarlino defined the 'subject' as that part of a composition 'from which the composer derives the invention for making the remaining parts', adding that the varieties of subjects are infinite in number (*Istitutioni*, iii.26). He also spoke of an 'almost infinite' number of possible cadences and of 'many ways' in which composers might evade a cadence (iii.53). To follow the preparation and evasion of cadences, or the changes in a subject as it passes from one voice to another, calls for mental agility on the part of performers and listeners, who may need to remember and compare passages of diverse time-lengths (e.g. extended or abbreviated versions of a subject).

Students of composition must have learnt to remember and mentally combine the separate parts that they read from choirbooks, partbooks and the notated examples in treatises (see illustration). Experience at reconstructing a polyphonic whole while reading each voice separately would have contributed to the development of the intellectual skills that are apparent in AUTOGRAPH composing-manuscripts of the period around 1450–1625 (some three dozen of which are listed in Owens, 1997, pp.126–30). This evidence does not bear out Lowinsky's thesis that composers of imitative vocal polyphony began, early in the 16th century, to use a SCORE in which all voices are vertically aligned. Some manuscripts show composers working with two voices at a time, keeping one voice in mind as they notated or corrected a second, then proceeding to write out another duet. The order in which parts are notated on a page or on one opening of a choirbook varies considerably, as do the formats adopted in the surviving sketches, drafts and fair copies (*see* SKETCH). Manuscripts containing different versions of one piece do not always use the same format. The only constant is the apparent absence of any need for vertical alignment of parts in notations of vocal polyphony, except when vocal works were arranged for keyboard performance. Corrections entered in partbooks indicate that composers sometimes lost count of the rhythmic unit. It is reasonable to assume that notations made by composers and students on erasable tablets (*cartelle*) used the same formats as the surviving sketches and drafts.

The invention or selection of a subject and the 'distribution' or elaboration of all the parts became major concerns of compositional theory, treated with varying degrees of reference to doctrines of rhetoric. Contrapuntal procedures were increasingly differentiated in terms of the 'styles' appropriate to each compositional genre; seven vocal genres and the instrumental ricercare are discussed in Pontio's *Ragionamento di musica* (1588), the main source of Cerone's treatment of this topic in *El melopeo y maestro* (1613). For example, a 'grave' or 'learned' style of counterpoint might be obligatory, optional or impossible in a given genre. A compositional interest in subtle combinations and contrasts of chordal and imitative textures is particularly evident in madrigals of the 16th century.

Three-voice setting of a subject from Zarlino's 'Le istitutioni harmoniche' (Venice, 1558)

Heinrich Glarean may have been the first to insist that a musician who invents a new 'theme' (i.e. tenor) should not be considered inferior to one who adds three or more voices to a pre-existing tenor (*Dodecachordon*, 1547, ii.38); his point was echoed and intensified by Francisco de Salinas (*De musica libri septem*, 1577, vi.1). In arguing that an inborn talent (*ingenium*) is essential, whether one invents 'a natural tenor' or composes a mass, Glarean extended the semantic field of the verb *componere* to cover the making of Gregorian chant (and, by implication, all unaccompanied melody). He attributed the perfection of chant to the discipline shown by its composers as they 'displayed learning joined with piety'; with this ideal in mind he urged composers of polyphonic works to refrain from immoderate exhibition of their talent (*ostentatio ingenii*). Yet when forced to choose, as in his encomium to Josquin, Glarean preferred talent and painstaking industry to learning and judgment, and he attributed Josquin's pre-eminence to his native disposition (*indoles*).

Glarean was one of several 16th-century writers who linked doctrines of composition to interpretations of music history. In comparing two applications of talent or genius for composition, he broached a topic that was richly developed over the next two centuries: the confrontation of 'ancient' and 'modern' musical poetics. To what extent was a compositional practice based on counterpoint compatible with the ancient conception of music as a 'composite' of harmony, rhythm and words? Competing answers to this question greatly enlarged the range of compositional options with respect to texture, many of which were justified with appeals to one or another conception of 'genius'.

The art of polyphonic composition could be seen as essential to the cultivation of genius, as in Hermann Finck's remark on the *diversitas ingeniorum*: 'every composer has a certain individual and peculiar judgment' (*Practica musica*, 1556, trans. Lowinsky, 1964, p.491). Contrapuntal technique could also be seen as an 'unnatural' restraint on human expressive capacities, as in the critique of polyphony that was articulated by Girolamo Mei and carried forward by the members of the Florentine Camerata. The ideal of a texture in which the energies of a single melodic line would not be compromised by other lines with contrasting ranges, contours and rhythms was realized in Italian monody of the early 17th century and in opera. The polarity between bass and vocal line in monody resulted from novel applications of some basic principles of two-part counterpoint. The renewal of musical technique effected through an intense preoccupation with speech rhythms initiated a long series of such renewals, which by the early 20th century had affected almost all vernacular languages of Europe.

A talent or genius for composition was generally regarded as an exclusively male attribute. In the preface to the first of her three collections of madrigals (1568), Maddalena Casulana decried 'the vain error of men, who so much believe themselves to be the masters of the highest gifts of the intellect, that they think those gifts cannot be shared equally by women' (trans. Bowers, 1986, p.140). The 'vain error' had its foundation in the training of choirboys, who were taught singing, counterpoint and, in favourable cases, composition by their male mentors. It was amplified through the discourse that developed as polyphonic music was published and as the merits and defects of compositions were assessed. Prejudice against women composers remained strong until well into the 20th century (*see* WOMEN IN MUSIC).

7. WORKS, STYLES AND IDEAS. In the preface to his *Geistliche Chor-musik* (1648), Schütz recommended the study of the 'incomparable works' (*unvergleichliche Opera*) composed by the 'canonized Italian and other classical authors, old and new'. The recommendation fits well with Schütz's argument that exercises in strict counterpoint ('without Bassum Continuum') furnish indispensable preparation for composition in the concerted style. Both components of this pedagogical programme proved to be remarkably durable and have often been seen as complementary. Analysis of model works, pinpointing some of the main compositional decisions, originates in the German treatises on *musica poetica* produced between the late 16th and early 18th centuries (*see* ANALYSIS). Works of 'canonized Italian authors' became available to German students of composition through the early 17th-century anthologies of Bodenschatz, Schadeus and Donfrid.

What Schütz called 'the style of church music without Bassum Continuum' was a richer, more tractable medium than the reinterpretations of 16th-century polyphony that emphasized the absence of expressive figures (*see* PRIMA PRATICA and STILE ANTICO). Monteverdi's celebrated distinction treats first and second practices as appropriate means to different ends, with no suggestion that competence in the second presupposes rigorous training in the first. Neither practice remained wholly unaffected by the other. For example, in the church music that Monteverdi composed in the *prima pratica*, melodic lines may develop momentum as a sequential descent continues beyond the point where 16th-century norms would require a reversal of direction (ex.1). Nonetheless, the identity of a *prima*

Ex.1 Monteverdi: Messa da cappella (1650), ed. G.F. Malipiero

pratica or *stile antico* depends on deliberate avoidance of a host of options (such as instrumental parts that do not merely double the voices). Although the immensely influential 17th-century classification of church, chamber and theatre styles linked compositional technique to social milieu and function, none of these large categories was restricted to a single area of technique, and each allowed for reference to other milieux. The *stile antico* was one particularly important option for church music, narrower in scope than Schütz's 'style without Bassum Continuum'. STILE RAPPRESENTATIVO, in contrast, was a comprehensive term for several styles used in monody. The term emphasizes the relationship of composer and performer to listener: a 'representation' succeeds only when listeners are moved.

Conceptions of a 'timeless' art of counterpoint were not easily reconciled with projects orientated towards representation of the affections (*see* AFFECT, THEORY OF THE). One solution was to reject the notion of timelessness and treat the *stile antico* or the *prima pratica* more as a

survival than as a foundation. Another approach attempted to circumscribe the permissible extensions of the strict style (*contrappunto osservato*). All such extensions might fall under the heading of *contrappunto commune* (as in part 2 of Diruta's *Il transilvano*, 1609), or they might be carefully enumerated in the form of figures (*see* FIGURES, THEORY OF MUSICAL), as in the treatises of Christoph Bernhard. Each of Bernhard's figures was 'a certain way of employing dissonances', and each style of counterpoint was confined to a limited number of figures: four in the *stylus gravis*, another 15 in the *stylus luxurians communis* and eight more in the *stylus luxurians theatralis* (for illustration, *see* COUNTERPOINT, ex.20). Different lists of figures, extending beyond dissonance treatment, were drawn up by other 17th- and 18th-century writers (*see* RHETORIC AND MUSIC, §I).

As contrapuntal theory based on two-part writing was supplemented or replaced by harmonic theory in 18th-century practices, figures that Bernhard had described as irregular resolutions of dissonances were subsumed within familiar progressions of seventh chords. Figuration became an art of ornamenting the interval-progression of any voice in a composition whose harmonies were determined by the bass (*see* GENERALBASS and CONTINUO). The expressive meanings of figures owed as much to their rhythmic and gestural implications as to contrapuntal and harmonic considerations.

The fact that names for many figures were borrowed from manuals of rhetoric need not imply that the specific functions of musical figures resembled those of their namesakes in oratory. More important than the names assigned (which vary considerably among the sources) was the general idea that a musical work, like an oration, should be designed and presented in a manner that would elicit and shape intense responses from listeners. With respect to musical terminology, the most enduring results of the recognized affinity between orator and composer-performer were distinctions between a subject or theme and its elaboration, and sets of three or more terms for stages in the compositional process or for the successive parts of a composition (ultimately including the 'exposition', 'development' and 'recapitulation' of sonata form). A composer's decisions concerning stylistic levels have also been compared to those of an orator, as in the final chapter of Burmeister's *Musica poetica* (1606), where the basic distinction between 'grand' and 'modest' allows both for a 'middle' and, when justified by changes in the text, a 'mixed' style. Some versions of this distinction have focussed, like Burmeister's, on the frequency of dissonances, while others have placed greater weight on the social distance between 'elevated' and 'popular' styles.

The proliferation of styles in the 17th and 18th centuries extended the composer's range of options to include the possibility of frequent stylistic contrasts within a single work. Opera, in particular, offered virtually unlimited opportunities for dramatic juxtapositions of styles, such as the scene in Monteverdi's *Il ritorno d'Ulisse in patria* (1639–40) in which each of Penelope's suitors woos her in a different style. As a result, the operatic repertory of the past four centuries constitutes a comprehensive anthology of styles and techniques. The major genres of instrumental music from the late 17th century to the 20th (sonata, concerto, string quartet etc.) also challenged composers to design coherent sequences of textural and stylistic oppositions. Relatively prescribed orderings of movements in instrumental cycles yielded, over time, to increasingly intense demands and desires for originality. Despite their prominence in 17th- and 18th-century writings, analogies between music and rhetoric do not fully account for the great variety of situations and interactions represented in opera (and emulated in instrumental music).

A 17th-century opera and a published set of sacred concertos or trio sonatas are 'works' in rather different senses of the term, reflecting the constraints of the milieux in which they were produced. Commercial opera, as developed in Venice, depended on the collaboration of composers with librettists, singers, impresarios and stage designers. The work as presented on a given occasion remained subject to further alterations, and the system of production left ample room for collaborative works involving two or more composers (*see* PASTICCIO). A published set of concertos or sonatas was a collection, perhaps organized by some kind of plan but not necessarily intended for performance as a cycle. Performers, listeners and students of composition might or might not come to know the collection as a whole.

The term 'opus' was first used for such collections as Lassus's posthumously published *Magnum opus musicum* (Munich, 1604) containing 516 motets. Viadana was among the first composers to assign opus numbers to several of his collections according to their order of publication (e.g. op.5, 1597; op.28, 1612: *see* OPUS (i)). This practice came to be more common for sets of instrumental works, the most famous of which in the 17th century were Corelli's six *opera*. Countless performers and composers must have known each sonata or concerto in one or more of Corelli's collections, all of which went through numerous editions.

Works explicitly assembled for purposes of compositional pedagogy offered systematic guidance to various problems of contrapuntal writing. Two early examples are G.B. Vitali's *Artificii musicali* op.13 (1689) and Johann Theile's *Musikalisches KunstBuch* (1691, according to a manuscript copy of *c*1735–7 in the hand of J.G. Walther). The achievement that dwarfs all other efforts in this direction is the great sequence of works extending from J.S. Bach's *Orgel-Büchlein* (begun in 1713) through his *Art of Fugue* (published 1751) – taking in as well the two-part inventions and three-part sinfonias, *Das wohltemperirte Clavier*, the canonic variations on *Vom Himmel hoch* BWV769 and the *Musical Offering*. Bach's mastery in revealing so many effective avenues through which to address such an extensive series of compositional problems has never been equalled.

Two of the earliest musical applications of the verb *durchführen* ('develop') occur in Bach's titles for the *Orgel-Büchlein* and the inventions and sinfonias: the former offers 'instruction in developing a chorale in numerous ways' and the latter shows keyboard players 'a clear way . . . not merely to catch good *inventiones* but to develop the same well'. Both undertakings presuppose the student's competence in realizing a thoroughbass, which was the starting-point of Bach's pedagogy. Even in the earliest stages he looked for evidence that a student was capable of inventing 'ideas' (*Gedanken*), as C.P.E. Bach told Forkel in a letter of 13 January 1775. In Forkel's biography of J.S. Bach (1802) this prerequisite to instruction in composition became 'the capacity to think musically'. Forkel speculated that Bach himself had 'learnt

to think musically' by modifying 'ideas and passages' designed for the violin to make them suitable for the keyboard; from this experience Bach had acquired the ability 'to draw ideas from his own imagination, not from his fingers'. Forkel's point might be expanded to incorporate Bach's deep interest in instrumental adaptations of vocally conceived figures, an interest shared by many of his contemporaries.

From the 18th to the 20th centuries discussions of 'musical thinking' have referred to many kinds of composition and performance (including, for example, accompaniment). According to C.P.E. Bach, a teacher of accompaniment should 'demand, as it were, an accounting of every note, by raising objections, to be dispelled [by the student] through reasons why, for instance, this or that note can function in *this* way, *not another*' (*Versuch über die wahre Art das Clavier zu spielen*, ii, 1762, p.7). An accompanist whose every decision can be justified is well prepared for composition, in this conception. Mozart evidently felt himself capable of justifying every note in *Die Entführung aus dem Serail* if, as reported by Niemetschek, he responded to Joseph II's complaint of 'terribly many notes' by saying that his work contained 'precisely as many notes as are necessary'. The criteria to which such statements refer are largely those of the work itself. This strong conception of a work's requirements was at once a cause and a consequence of Mozart's intense engagement with each of the styles and genres he encountered.

The creation of an autonomous art of instrumental music in the late 18th century opened an immense field for developing musical ideas within self-contained works. A musical work, in this new conception, has been fully thought out by its composer, and the end result of the composer's thinking calls for interpretation or 'rethinking' on the part of performers and listeners, who fail to understand the work if the composer's choices strike them as arbitrary. Each musical idea in the work is a small network of relationships that can be reconfigured in unpredictable and potentially meaningful ways as it is connected to other ideas. The work sustains multiple interpretations as performers and listeners apprehend and experience the processes of alteration and connection set up by the composer.

One aspect of this new relationship between composer and public was underlined by Theodor Körner in his essay 'Über Charakterdarstellung in der Musik' (1795): 'the conceptual universe of [the composer's] public is enriched through his creation'. Ways in which to experience a work's originality remained one of the principal topics of music criticism from the late 18th century to the 20th. Reviewing the first performance of Haydn's 'Clock' Symphony, no.101, on one of Salomon's subscription concerts in the Hanover Square Rooms, a London critic avowed that 'Nothing can be more original than the subject of the first movement; and having found a happy subject no man knows like Haydn how to produce incessant variety, without once departing from it' (*Morning Chronicle*, 5 March, 1794). As in this instance, critics have often directed attention to general principles and to the composer's reputation, with little or no reflection on processes specific to the work at hand (perhaps on the assumption that general principles provide sufficient guidance to listeners). The range of interpretative options available to listeners and performers became increasingly evident with repeated performances of chamber works in domestic situations and of symphonies in public concerts. Exceptionally challenging works were understood to require repeated hearings, as E.L. Gerber noted with respect to Mozart's compositions (1790). In the late 18th century this was a rather novel demand, modelled on the repeated readings or viewings that were taken for granted by connoisseurs of literature and the visual arts. E.T.A. Hoffmann, in his famous review of Beethoven's Fifth Symphony (*AMZ*, xii, 1809–10), equated 'a deep examination of the inner structure of Beethoven's music' with a reader's discovery of the inner coherence of a play by Shakespeare.

The work-concept that was first articulated around 1800 with respect to instrumental music was ultimately extended to most categories of sacred and secular music, including opera and oratorio. The formation of operatic and concert repertories (*see* CANON (ii)) created an intricate background against which new works were composed and evaluated. The polarity between interpretation of classics and creation of original works gradually reduced the available space for recomposition as a creative endeavour, the primary exceptions being composers' revisions or arrangements of their own works. The values attached to the work-concept in 19th-century European musical culture were most powerfully exemplified by Beethoven's compositions and by widely diffused images of Beethoven as the archetypal creative artist.

Many of the attitudes adopted by composers, performers and listeners towards the great works of the past and towards new compositions are associated with the idea of ABSOLUTE MUSIC. Different versions of this idea have treated various factors as 'external' to musical experience. Moreover, claims on behalf of the autonomy of musical works have carried different implications, depending on the values assigned to 'autonomy' in one or another set of circumstances. The complex stratification of European musical culture in the 19th and 20th centuries ensured both that all such claims would be challenged from a number of perspectives and that arguments for musical autonomy would continue to attract supporters.

The proliferation of aesthetic controversies may have helped composers to discover and create unique identities. Tensions between aesthetic or political dichotomies and compositional problems proved fruitful in numerous instances. Liszt, in a letter to Wilhelm von Lenz (2 December 1852), distinguished between works 'in which traditional, conventional form contains and directs [Beethoven's] thought' and those 'in which the thought stretches, breaks, re-creates and shapes the form and style to suit its needs and inspirations'; in Beethoven's wake the composer of genius must overcome this duality and restore 'the notions of authority and liberty' to their 'original identity'. Liszt argued that the dialectic of authority and liberty holds fewer dangers in the arts than in politics, seeing the exercise of authority by artists of genius as wholly beneficial to society. This point was vigorously contested in the intense debates over 'Wagnerism', which began in the 1870s and continued well into the 20th century. In European musical life of the 19th and 20th centuries, works designed for public performance were strongly associated with images of the composer as a public figure. The writings and public statements of composers acquired an unprecedented importance, and much discussion of works focussed on the reciprocal

obligations of composers and listeners. Doctrines of tonality and musical form addressed issues involving both compositional craft and listener response.

Claims that a work, or a body of work, has effected a synthesis of disparate elements or opposing tendencies became a familiar topic of discourse on music, as did prophecies envisaging some such synthesis. In a letter to his friend V.A. Bulgakov (15 November 1856), Glinka declared himself 'nearly convinced that it is possible to unite Western fugue [i.e. academicized counterpoint] with the requirements of our music by bonds of legitimate marriage'. Many composers who have seen themselves as outsiders vis-à-vis the West have made similar statements of their hopes and intentions, replacing the 'Western fugue' of Glinka's sentence with other techniques or conceptions (e.g. 'development of musical ideas') which they wished to assimilate for their own purposes. Some marriages have been happier than others and have withstood repeated challenges to their legitimacy. In the USA one such marriage produced jazz, a remarkably successful fusion of African and European compositional practices.

8. Modernity. By the end of the 20th century musicians in every part of the world had engaged themselves with Western ideals and techniques of composition, often with the aim of creating original works for public performance or for distribution as recorded sound. Western techniques were also employed in making arrangements of compositions initially designed for different modes of performance. A tendency to treat compositions as fixed texts, capable of transmission by means of notation or sound recording, was strengthened by the national movements of the 19th and 20th centuries, as well as by expanding networks of commerce and communication.

Desires for compositions that would symbolize a nation's identity and aspirations have been expressed by countless participants in national movements and by culture ministries in both established and newly independent nations. Such terms as 'folk music', 'traditional music' and 'cultural heritage' refer, more often than not, to repertories that belong to a nation or one of its regions. The organization of a musical heritage normally involves notation of one or more repertories, portions of which are then recycled in new works and arrangements. The compositional genres adopted for nationalist projects extend from the most ambitious (e.g. opera, oratorio, ballet) to those that are fully accessible to amateur performers. Nationalist composers have dramatized vast stretches of their nation's history in works that juxtapose contrasting styles, genres or ensembles, each with its own associations; one such work is the *Jaya Manggala Gita* ('Song to the Victory of Happiness and Welfare') of Kanjeng Radèn Tumenggung Wasitodiningrat (*b* 1909), first performed in 1952 on the seventh anniversary of Indonesia's Proclamation of Independence (see the detailed outline in Becker, 1980, pp.39–49). The dissemination of nationalist compositions most often stops at the nation's borders; among the notable exceptions are works of Villa-Lobos and Silvestre Revueltas.

The global diffusion of Western pedagogical methods resulted in extensive use of notations in the production and distribution of compositions and arrangements. In the People's Republic of China, for example, the promulgation of 11 model operas in the decade between 1966 and 1977 presupposed an unprecedented reliance on scores; singers and instrumentalists were neither expected nor permitted to devise their own versions of prototypical tunes, as they have continued to do in other Chinese operatic genres. In no nation have novel uses of musical notations wholly supplanted older ways of gaining competence in composition and performance, and the increasing availability of notations has led many composers to assess their limitations and explore various alternatives. Compositional uses of equipment for electronic generation and processing of sounds have shed new light on older ways of controlling the complex timbres available from human voices and from so-called 'acoustic' instruments.

Recording technology made it possible to reproduce and distribute improvised compositions, some of which acquired the status of 'classic' works and were transcribed for the use of students. This practice, central to the criticism and pedagogy of jazz, is also found elsewhere; six recordings made by the blind Chinese musician Abing (1893 or 1898–1950) were notated and taught in conservatories as works given a final form by their composer, who may have intended to produce performances that others might choose to emulate rather than works that others might wish to reproduce.

Original works and arrangements acquired new uses and meanings as they began to be distributed through recording and broadcasting as well as through printing. Most works circulated through these media have carried the names of their authors, though in the case of recordings the names of composers are often overshadowed by those of performers. Claims of authorship are now supported in much of the world by copyright agreements. The production of works designed for recording or broadcasting has given rise to new forms of collaboration among musicians, sound technicians and executives of corporations (as in the case of rock music). If some compositional aims are best pursued through the mediation of computers, others require performers capable of responding to complex instructions (drawn, in some instances, from a composer's interaction with computers). The efforts of John Cage and others to invent 'compositions that were indeterminate of their performances' have elicited a long series of creative responses from musicians, dancers and visual artists within and beyond the West. Musicians who act on the instructions given by Stockhausen in his texts *Aus den sieben Tagen* of 1968 (e.g. no.11, 'Play or sing a vibration in the rhythm of the limbs of a fellow player ...') may or may not produce music that they or others could re-create on a subsequent occasion.

In the most general terms, a 'modern' composer is one who must choose from an expanded range of options, encompassing not only stylistic alternatives but also the attitudes one may adopt towards existing musical resources and towards the conflicting demands of various interested parties (including those who control the networks of patronage and distribution). The availability of new options may prompt reflection on those that no longer lie close to hand. Inquiry into the potential coexistence of older and newer ways of making music has taken many forms, linking scholarly investigation of the history, theory and ethnography of music to composition and performance. Bartók in Hungary, Hajibeyov in Azerbaijan, Ephraim Amu in Ghana and José Maceda in the Philippines are but four of the many 20th-century composers whose music was profoundly affected by their

involvement in research and their insight into the dilemmas posed by culture contact.

The extent to which modern composers have laid claim to creative autonomy distinguishes them from the great majority of their predecessors. While we ought not assume that musicians in 'pre-modern' societies never had occasion to replace one set of procedures with a radically different set, such actions became more frequent in the 20th century. Maxims enunciated in Stravinsky's *Poétique musicale* (1942) warn against temptations that seldom arose for pre-modern composers (e.g. 'a mode of composition that does not assign itself limits becomes pure fantasy'). This conception treats composition as a form of research, in which alternatives to any existing set of presuppositions may be formulated and tested. A new work may explore a unique repertory of elements related by affinities and disjunctions of various kinds.

The technical resources available to Western composers were extended in numerous directions at the same time that composers working outside the West sought to adapt earlier Western procedures for their own purposes. Innovative approaches to the organization of compositional resources have been described as 'techniques', 'methods', 'systems', 'musical languages' and the like (as in Schoenberg's 'method of composing with 12 notes' and Messiaen's *Technique de mon langage musical*, 1944). Most such formulations have found at least as many detractors as admirers. In no earlier century were so many compositional doctrines committed to writing and burdened, at times, with appeals to historical 'necessity'. Narratives of ineluctable progress became one of the most widespread types of discourse about music during the 20th century, used all too often for purposes of intimidation, yet serving as well to motivate the creation of profoundly original works. The historicism of 20th-century musical life was continually nourished by compositions that suggested novel interpretations of older music.

A general history of musical composition in the 20th century might focus on ways in which composers responded to perceptions of their responsibilities towards predecessors, contemporaries and members of future generations. Such perceptions on a composer's part did not always match those of other interested parties, and some of the greatest musical achievements of the century (e.g. the 15 string quartets of Shostakovich) were produced by composers who had learnt to resist political pressures. Accounts of a composer's formation often emphasize a strong relationship with the music of one or more predecessors: Kurtág's remark that 'my mother tongue is Bartók, and Bartók's mother tongue was Beethoven' is representative. Such remarks need not be interpreted as symptoms of what the American literary critic Harold Bloom termed 'the anxiety of influence'. Assimilating a predecessor's oeuvre much as one gradually masters one's mother tongue may reveal a rich field of possibilities, with ample space for creative activities that are not constrained by a need to contend with competitors. A non-agonistic conception of musical composition seems implicit in Sofiya Gubaydulina's statement that she does not 'construct' her works but 'cultivates' them.

Throughout the 20th century musical composition retained its longstanding importance as a primary medium in which to represent and enact social relationships, ranging from the most aggressive to the most cooperative. In a time when warfare, famine and other social upheavals cut short or disrupted millions of lives, the enduring links between composition and ritual appear to have been strengthened, both through works that probe the potential meanings of existing or imagined rituals (as in Stravinsky's *The Wedding*, 1922, and Britten's *War Requiem*, 1962) and through the creation of new performance genres. One of the enduring responsibilities of musicians – to reveal unsuspected, or forgotten, links among multiple dimensions and domains of human experience – has been well served by a substantial number of 20th-century composers. Their achievements enable us to imagine, and work towards, a musical future in which all human beings are encouraged to cultivate their creative capacities.

STEPHEN BLUM

Composition pedal. The name given to the foot-operated lever of an organ that takes off or brings on predetermined stops, usually by operating on the draw-stop rods. J.C. Bishop was the inventor, though a counter-claim by his former master, Benjamin Flight, was dismissed by the Society of Arts in 1809. The composition pedal replaced the earlier 'shifting movement' which had comprised a foot-lever operating directly on the ends of the sliders in such a way that on depression the stop was taken off, and on release a spring returned the slider to the playing position. According to the builder Jordan's trade-card of about 1720, its purpose was to put stops 'off and on by the feet, simply or together, at the master's discretion, and as quick as thought, without taking the hands off the keys'. Hopkins, in *The Organ* (1855), used the term 'single-action' to describe the composition pedal that 'either draws out or thrusts in a given number of sliders' or draw-stops, and 'double-action' for the pedal that did both. Such accessories were as popular by the late 1820s (John Abbey's small organ for the Paris Exhibition of 1827 had seven) as their pneumatic, electro-pneumatic and electric equivalents have been ever since. In the USA they are usually called combination pedals.

PETER WILLIAMS/NICHOLAS THISTLETHWAITE

Compound interval. Any INTERVAL that is greater than an octave; the sum of a simple interval (i.e. one less than an octave) and one or more octaves. A 9th can be called a 'compound 2nd', a 10th a 'compound 3rd', and so on. The ordinal numbers used to name intervals generally do

not exceed '12th' (though the double octave is sometimes called a 15th). The expression 'compound 6th' is regularly used to name the interval made up of an octave plus a 6th; it can equally well refer to the intervals made up of two octaves plus a 6th, three octaves plus a 6th etc.

□

Compound stop. A stop with more than one rank, that is in which two or more pipes sound when each key is pressed. *See* ORGAN STOP. *See also* MIXTURE STOP.

Compound time [compound metre]. A METRE in which each beat is divided into three rather than two (the latter giving SIMPLE TIME). The beat is a dotted note, which cannot be expressed in the denominator of the time signature. The denominator therefore represents the next note-value down, which is one third of a beat. Hence 9/8 (i.e. 3+3+3 quavers to the bar) is the compound version of 3/4, as 6/4 is of 2/2, and so on. Doubly compound metres (e.g. 27/32, the double compound of 3/8) have traditionally been expressed as compound metres with triplet figuration, for example, in the final variations and coda of the second movement of Beethoven's Piano Sonata op.111.

□

Compton, John (Haywood) (*b* Newton Burgoland, Leics., 20 June 1876; *d* Ealing, 6 April 1957). English organ builder. After a six-year apprenticeship he joined, in 1898, Brindley & Foster of Sheffield, with whom he remained for three years as voicer, finisher and tuner. In 1901 he entered into partnership with Thomas Musson at Nottingham. Acting on his own he built a new organ at Selby Abbey in 1906; but this was immediately destroyed by fire, as was his workshop in Nottingham the following year. After World War I the Compton company acquired the premises of August Gern at Chiswick, London, and in 1930 built a factory at Chase Road, Willesden, London. The company closed in 1964.

Compton built electric-action organs with considerable use of extension. There was, during his time, much criticism of this practice, in which he was influenced by Thomas Casson, Robert Hope-Jones and others; he sought to avoid these objections by careful selection of pitches from the various ranks and by adequate provision of chorus work. The compactness of his system was found to be ideal for cinema organs and some of his most successful and characteristic work was in this genre.

Compton's work was notable for the elegance and sophistication of his electrical engineering, and for various experiments in tone production, including the use of remote off-unison harmonics (not just the familiar Tierce and the rarer Septième, but also the 9th, 11th and 13th partials). His larger schemes included far more daring use of upperwork than any of his British contemporaries.

He built notable organs in London for the Shepherd's Bush Pavilion (1923), the Liberal Jewish Synagogue, St John's Wood (1924), St Luke's, Chelsea (1929), and for the BBC studios at Broadcasting House and Maida Vale, and also at Downside Abbey (1931) and the Southampton Guildhall (1937). His last major work was the organ for St Bride's, Fleet Street, London (1957). After his death in 1957, and that of his lifelong colleague James I. Taylor in the same year, the company lost its sense of direction and succumbed to operational difficulties.

Computers and music. Computer technology exerts a powerful and ever-increasing influence on the world in which we live. The personal computer in particular holds the key to a wealth of processing possibilities that could scarcely have been envisaged less than a generation ago. In terms of music applications the sheer diversity of digital functions makes it increasingly hard to present a balanced perspective within a brief dictionary article. In the following sections distinction will be made between applications that have an essentially passive role in the communication of music information, such as the conventional audio compact disc, and those such as the CD-ROM which involve a more conscious process of musical interaction.

I. Introduction. II. Composition. III. Music theory and analysis. IV. Historical research. V. Ethnomusicology research. VI. Music publishing. VII. Music education. VIII. Psychology research.

I. Introduction

The term 'computer' is normally reserved for a processing system that satisfies certain minimum functional requirements. Specifically, the central processing unit must be able to process alphanumeric information (text and numbers) in some standard form of digital coding, to communicate directly with a memory bank of sufficient capacity to hold both a program and also its immediate data, to support the ordered use of both arithmetic and logic instructions, and to service links to the outside world for the input and output of information as well as devices which may be directly attached to the computer in order to enhance the operation of the system as a whole, for example a disc-based data storage unit.

Two important considerations have to be addressed in this context: what kind of musical functions are amenable to the processes of digital computation, and how is it possible to convert all the various forms of music data that may be encountered into a machine-readable form? Computers have been used for all manner of applications, from the synthesis of new sounds and the analysis of music in notated form to desktop music publishing and studies in music psychology; from analysing the ways in which we respond to musical stimuli to the processes of music performance itself. One constantly recurring issue is the nature of the relationships between a scientific tool

that operates entirely within a framework of predetermined functions, and a range of human activities that in many instances reflect some of the most accomplished feats of human creativity.

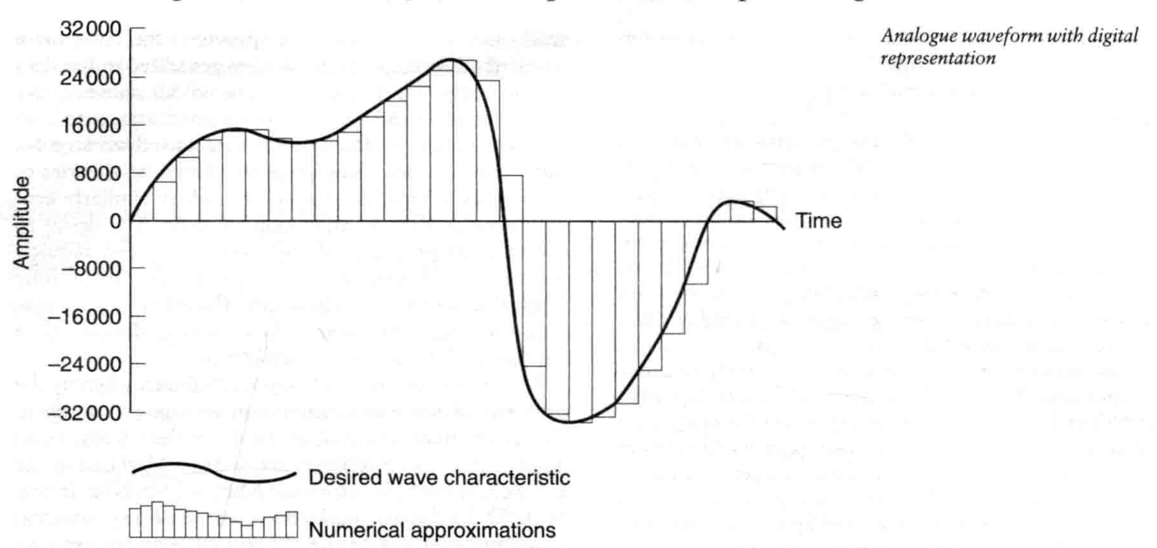
There are indeed pitfalls for the unwary, but it is important to remember that the quality of the results obtained from computer systems is entirely dependent on the programming and engineering skills of those who design and operate them. As the discipline matures, so does our understanding of what may be possible in the future. Although the pace of technological change since the previous edition of this dictionary appeared in 1980 has been quite remarkable, there are good reasons to suppose that the next few decades are unlikely to prove so capricious. Whereas the main thrust of developments has hitherto been closely tied to increasing the raw power and accessibility of computers, their capacity to perform complex mathematical and engineering operations is no longer a primary issue. The key to real progress now lies almost exclusively in our capacity to apply such resources for musically useful ends.

Of all the creative arts music provides arguably the most significant challenges to those who seek to translate its characteristics into a machine-readable form. This has involved the design of a number of non-standard computer interfaces and the development of an extensive range of special coding techniques. The need for such tools has decreased largely because of the upsurge of general interest in multimedia applications. Whereas in the early 1980s computers both large and small lacked facilities for audio input and output, and at best offered only rudimentary graphics tools, the modern personal computer provides sophisticated colour graphics resources, and high-quality audio facilities have become the rule rather than the exception. Although advanced research applications are still for the most part best left to the specialist composer, performer or musicologist, a number of the techniques described below are readily accessible to the home computer user with musical interests, amateur or professional.

II. Composition

1. Early efforts. 2. Principles of digital audio. 3. Sound synthesis and processing. 4. Systems applications.

1. Early efforts. From modest beginnings as a highly specialized area of creative research, for the most part isolated on the margins of post-World War II developments in electronic music, the technology of computer music has advanced to the point where hardly a single aspect of this medium remains untouched by its influence. Analogue devices are progressively being replaced by digital equivalents throughout the entire communications industry. In the case of the music synthesizer and its derivatives, such design changes transformed the industry in less than a decade, the process of conversion being all but complete by the early 1990s. In addition, the increasingly powerful processing capabilities of computers have stimulated the exploration of new horizons in musical composition, from the initial formulation of creative ideas to the production of finished works.



The use of the computer as a tool for composition goes back almost to the dawn of commercial computing. In 1955 Lejaren Hiller and Leonard Isaacson investigated the use of mathematical routines to generate music information at the University of Illinois at Champaign-Urbana. Probability routines, inspired by Hiller's earlier work as a chemical engineer, provided the basis for a series of composing programs that generated music data in the form of an alphanumeric code, subsequently transcribed by hand into a conventional music score. Less than a year later, in Europe, Xenakis started work on his own series of composing programs based on theories of probability known as 'stochastics', which similarly generated music data as alphanumeric code. The desire to combine the processes of score generation and acoustic realization led him in due course to develop a fully integrated system that eliminated the intermediate transcription stage, the music data passing directly to a synthesizer for electronic reproduction.

The techniques of digital sound synthesis, whereby the processes of audio generation itself are directly consigned to the computer, also date back to the 1950s, most notably to the pioneering work of Max Mathews at the Bell Telephone Laboratories in Murray Hill, New Jersey. In 1957 he began work on a series of experimental programs which with the support of other researchers have been developed into an extended generic family of programs known collectively as the MUSIC*n* series (e.g. MUSIC4BF, MUSIC5, MUSIC11). With the increasing power and accessibility of computers in recent years, such software-based methods of music synthesis have gained significantly in popularity. Modern MUSIC*n* derivatives such as CSOUND, developed by Barry Vercoe at MIT, are available in versions adapted to a variety of computers from sophisticated work stations to personal computers.

2. Principles of digital audio. In order to appreciate how such synthesis tools can be used for creative purposes, it is necessary to understand some basic principles of digital audio. All methods of digital recording, processing and synthesis are ultimately concerned with the representation of acoustical functions or pressure waves as a regular succession of discrete numerical approximations known as samples (see illustration).

The reproduction of a digital sound file requires the services of a digital-to-analogue converter which sequentially translates these sample values into an equivalent series of voltage steps. These are then amplified and passed to a conventional loudspeaker for acoustic conversion. Such procedures are regularly encountered in a domestic environment whenever one listens to a conventional compact disc or the sound output from a CD-ROM. In the digital recording of acoustic material acoustic signals are captured by a conventional microphone to produce an equivalent voltage function. This in turn is passed to an analogue-to-digital converter which continuously samples its instantaneous value to produce a regular series of numerical approximations.

Two factors constrain the fidelity that can be achieved by a digital audio system. The first, the rate at which the individual samples are recorded or generated, determines the absolute range of audio frequencies that can be reproduced. As a simple rule of thumb, the upper frequency limit, known as the Nyquist frequency, is numerically equivalent to half the sampling rate; thus a system recording or reproducing an acoustic function at 20,000 samples per second can achieve a maximum bandwidth of only 10kHz. In practice, the usable bandwidth is limited to about 90% of the theoretical maximum to allow the smooth application of special

Analogue waveform with digital representation

filters that ensure that any spurious high-frequency components that may be generated at or above the Nyquist frequency are eliminated. In the early days of computer sound synthesis, technical constraints often severely limited the use of higher-order sampling rates, with the result that the available bandwidths were often inadequate for good-quality music reproduction. Modern multimedia computers are capable of handling sound information at professional audio sampling rates, typically 44,100 or 48,000 samples per second, thus allowing the entire frequency range of the human ear (about 17–20 kHz, depending on age) to be accurately reproduced. Older systems, however, are often restricted to much lower sampling rates, which are generally adequate only for speech applications.

The other factor determining fidelity is the numerical accuracy or quantization of the samples themselves. A number of technical expedients have been developed to improve the basic performance of conventional analogue-to-digital and digital-to-analogue converters. However, these devices are constrained by the numerical accuracy of each individual sample, which in turn is determined by the number of binary bits available to code each value as an integer. This requirement to use finite approximations raises the possibility of numerical coding errors which in turn degrade the quality of the resulting sound. 16-bit converters, which allow quantization errors to be restricted to a tiny fraction of 1% (about 15 parts in a million), represent the minimum acceptable standard for good-quality music audio. Converters with a reduced resolution of just eight bits per sample are becoming increasingly rare.

If a digital synthesis system is to work in real time while generating acoustic functions at 44,100 or 48,000 samples per second (or twice this rate in the case of a stereo system where samples for each sound channel have to be generated separately), all the background calculations necessary to determine each sample value will have to be completed within the tiny fraction of a second that separates one sample from its successor. Although many modern computers can meet such demanding operational criteria even for quite complex synthesis tasks, until the late 1980s such resources were rare, even at an institutional level. As a result many well-established software synthesis programs, including the MUSIC*n* series and its derivatives, were designed in the first instance to support a non-real-time mode of operation. Here a delay is deliberately built into the synthesis process such that the computer is allowed to calculate all the samples for a complete musical passage over whatever period of time actually proves necessary. The samples are stored in correct sequence on a computer disc, and once this sound file has been computed in its entirety the samples are recovered and sent to the digital-to-analogue converter for conversion and reproduction. In the early days of computer music the delays between the start of the calculation process and final audition of the results were often considerable, forcing composers to take a highly empirical approach to the composition process. As computing power increased, these delays dropped from a matter of hours to minutes or even seconds, thus leading finally to the possibility of live synthesis, where the program is able to calculate the samples fast enough for direct output.

3. SOUND SYNTHESIS AND PROCESSING. Fundamental to most software synthesis systems is the provision of a basic library of functions that may be used as the building-blocks for a particular sequence of synthesis operations. Many of these functions simulate the hardware components of a traditional analogue studio, such as oscillators, filters, modulators and reverberators, although an increasing number of more specialist functions have been developed over the years to model particular instrumental characteristics, such as the excitation of the human voice-box or the vibration of a string. In the case of MUSIC*n* programs, each integral grouping of these components is identified as an 'instrument', broadly analogous to the individual instruments of a traditional orchestra. These 'instruments' collectively form an 'orchestra', ready to receive performance data from an associated 'score'.

Since these instruments are simulations that are no more than ordered statements of computer code, the opportunities for varying their design and application are extensive. The only real constraints are general ones imposed by the computing environment itself, for example the maximum number of instrumental components that can be accommodated in the memory at any one time,

and the overall processing performance of the system. It is possible, for example, to synthesize finely crafted textures by directly specifying the evolution of each spectral component in terms of its frequency, amplitude and duration. Such a strategy involves considerable quantities of score data and the simultaneous use of a number of instruments, one for each component. Alternatively, highly complex instruments can be constructed with the capacity to generate complete musical gestures in response to a simple set of initial score commands.

Although software synthesis methods are not nearly as well known to the music community at large as the custom-designed hardware systems that predominate in the commercial sector, their significance should not be underestimated, given the steadily increasing power and availability of the personal computer. With the rapid development of information systems such as the Internet, an increasing number of powerful synthesis programs can be located and downloaded for local use by means of a simple modem and telephone link. Since many of these facilities are being made available at little or no charge, their impact on future activities, professional and amateur, is likely to be considerable.

The origins of the all-digital synthesizer, like those of the personal computer, date back to the 1970s and the invention of the microprocessor. The fabrication of a complete computer on a silicon chip led to the development of new types of processors designed for all manner of applications, including digital synthesis and signal processing. This prospect was specially attractive to commercial manufacturers, since the superior performance of custom-designed hardware opened up possibilities of live synthesis from digital circuits which in many instances required less physical space and were ultimately cheaper and more reliable than their analogue counterparts. Developments in this context were further stimulated by the introduction of the Musical Instrument Digital Interface (MIDI) in 1983 as a universal standard for transferring performance information in a digitally coded form between different items of equipment such as music keyboards, synthesizers and audio processors (*see* MIDI). It quickly became apparent that major composition and performance possibilities could be opened up by extending MIDI control facilities to personal computers.

What has distinguished the commercial MIDI synthesizers from all-software synthesis methods such as those described above is the set of functional characteristics associated with each design. One of the earliest all-digital synthesizers, the Yamaha DX7, which appeared in the same year as MIDI, relies exclusively on the techniques of frequency modulation for its entire repertory of sounds. These techniques are based on research originally carried out by John Chowning at Stanford University in the 1970s using a MUSIC*n* software synthesis program. The use of a custom-designed processor facilitated the registration of patents that forced other manufacturers to develop rival hardware architectures, each associated with a unique set of synthesis characteristics. Methods employed have ranged from additive synthesis, where composite sounds are assembled from individual frequency components, to phase distortion techniques that seek to modify the spectra of synthesized material during the initial process of generation. The latter shares some features with FM techniques, where one wave-form is used to modulate the functional characteristics of another.

The synthesis of sounds from first principles is subject to a number of constraints. Although particularly evident in cases where hardware features limit the choice and use of synthesis methods, such difficulties are also encountered in software-based environments, even those that permit skilled users to write their own synthesis routines from first principles rather than relying on library functions provided with the program. The root of the problem lies in the character of many natural sounds which can prove exceedingly hard to replicate by formulaic means, such as the transient components associated with the attack of an acoustic trumpet or oboe. In the commercial sector, the ability to imitate instrumental sounds is especially important, and impediments to the production of a realistic repertory of voices have inspired a number of manufacturers to pursue an alternative method of synthesis known as sampling. This is essentially a three-stage process of sound capture, optional intermediate processing and resynthesis, starting with the selection of suitable source sounds that are first digitized and then loaded into a memory bank as segments of numeric audio data. A variety of processing techniques may then be employed to control the processes of regeneration, ranging from the insertion of a simple loop-back facility to allow sounds to be artificially prolonged, to sophisticated facilities that allow multiple access to the data for the purposes of transposition upwards or downwards and the generation of polyphonic textures. Although commercial samplers, like synthesizers, incorporate custom-designed hardware to meet the specifications of individual manufacturers, their general architecture comes very close to that encountered in a conventional computer. Whereas the methods employed in the design of the digital synthesizer clearly developed from earlier work in software synthesis, the progression in the case of sampling techniques has undoubtedly been in the reverse direction. As a result, many software synthesis programs, including the MUSIC*n* family, now provide sophisticated facilities for the processing of externally generated sound material, and such modes of operation are gaining in popularity.

The blurring of a clear distinction between systems that rely on proprietary hardware and those that do not becomes even more evident when consideration is given to the wider spectrum of digital tools that have become available for manipulating and processing sound material of any origin, natural or synthetic. These range from simple editing facilities, which are little more than the digital equivalent of a razor-blade and splicing block, to more complex tools, which enhance the content of sound material by added reverberation, echo or chorus effects, or directly modify its spectral content by means of subtractive techniques such as filtering. The resources available for such applications range from self-contained processing units, which can be manually operated by means of controls on their front panels, to sophisticated computer-based facilities, which make extensive use of interactive computer graphics.

4. SYSTEMS APPLICATIONS. As a result of the adoption of the MIDI communications protocol as a means of networking synthesis and processing devices at a control level, many of the techniques described above can be physically integrated as part of a single system. This consolidation has been taken a stage further with the development of matching communication standards for the high-speed transfer of the audio signals themselves in

a digital format between different items of equipment. The personal computer is proving increasingly important in this context as a powerful command and control resource at the hub of synthesis networks, in many instances handling both MIDI and audio information simultaneously. The personal computer has proved particularly attractive as a programmable means of controlling the flow of MIDI data between devices, and a variety of software products are now commercially available. One of the simpler modes of operation involves generating MIDI data for a sequence of musical events by means of a keyboard, the computer being programmed to register the pitch, duration and amplitude (a measure of the key velocity) for each note in a data file, and the time at which each event occurs. Reversing this process allows the performance to be reproduced under computer control, using either the original synthesizer voice or an entirely different one.

More elaborate sequencing procedures involve the layering of several performance components for a number of synthesizers using MIDI tracks in parallel, and/or direct editing of the MIDI data using graphic editing tools. Significantly, MIDI data is not concerned with detailed specification of the actual sound, merely with those characteristics that describe the articulation of its component elements in terms of note-events. A useful parallel may be drawn with the basic note elements of a musical score, for procedurally it is only a small step to the design of software that can generate traditional score information directly from MIDI data. The functional characteristics of programs specifically designed for the production of high-quality music scores are discussed in §VI below, but it should be noted that most sequencing packages provide at least basic facilities for reproducing MIDI data in common music notation, and in some the visual layout of the score is quite sophisticated.

Sequencing software represents only one aspect of the range of computer-based tools that are now available for use with MIDI equipment. These extend from composing tools, which directly generate MIDI performance data for instantaneous performance, to special editing facilities, which temporarily reconfigure the MIDI communication link in an exclusive mode in order to address and directly modify the internal voice-generating algorithms that determine the functional characteristics of a particular synthesizer. Such has been the impact of this universal protocol that most synthesis systems, whether commercial or institutional, as well as software synthesis programs such as CSOUND, make some provision for MIDI control.

The progressive merging of hardware and software technologies means that it will soon not be possible to make any useful distinctions between hardware products such as synthesizers and audio processors and the all-purpose computer workstation with the capacity to service every conceivable music application. The increasing accessibility of powerful resources for music-making has created opportunities for everyone to explore this medium of expression, though how much music of lasting significance it will produce remains to be seen.

III. Music theory and analysis

1. Introduction. 2. Analytical applications. 3. Performance applications.

1. INTRODUCTION. Computer applications in music theory and analysis can be broadly divided into two related fields of activity: the analysis of notated music and the analysis of music performance, in terms of both performance actions and the nature of the acoustic product. The harnessing of such powerful technology as a tool for studying the creative output of others has reaped many rewards but also some disappointments, mainly as a result of misplaced expectations as to what computer-based models of human activity can achieve. During the early years of commercial computing, linguists confidently predicted the development of programs that would automatically and reliably translate text from one language to another. Yet such goals remain elusive, not for any lack of basic computing power but more fundamentally from continuing difficulties encountered in devising programs capable of dealing with the contextual factors that alter the meanings of words or phrases from one situation to another. In a similar vein, some music researchers made overambitious claims as regards the possibility of developing computer programs that could generate works 'in the style' of a particular composer by applying theories of probability to a representative database of existing works. Today analysts have a much better understanding of the issues involved in modelling creativity, but it is perhaps inevitable that many projects remain distinctly speculative.

Those engaged in computer-assisted literary studies have an advantage in that their data already exists in a form that can be input directly to any conventional computer as a continuous string of alphanumeric characters according to one of the internationally recognized coding conventions, for example the American National Standards Institute (ANSI) character set, which is widely used for word processing applications. Unfortunately music notation does not readily lend itself to conversion into machine-readable form. Although it is possible to devise alphanumeric equivalents for all the pitches and durations in a conventional music score, matters quickly become complicated once account is taken of the need to time-stamp these note-events in terms of elapsed beats from the start of the score, and moreover to provide a means of reducing chords and polyphonic textures to a single alphanumeric character string. Further important decisions then have to be taken as regards what other notational aspects should be coded alongside such basic note-event information, for example bar-lines, clefs and all manner of graphic marks that may indicate important details of expression and articulation.

Since manual coding procedures are extremely time-consuming and error-prone, it is highly desirable that all the information likely to be required for any computer-based analysis of a given repertory be coded at the same time. Although some coding systems allow layers of information to be added to the primary database, such methods are best avoided. In an attempt to provide a more stable working environment, a number of general-purpose coding conventions have been proposed over the years, notably DARMS (Digital Alternate Representation of Musical Scores), which has attracted a number of disciples. Any coding system that attempts to be all-embracing, however, requires conventions that are necessarily complex and at times unwieldy. The creation of a committee to establish an ANSI coding standard for music data has provided a focus for international deliberations, but much work remains to be done.

The uncertainties over appropriate machine-readable representations of music have proved a major impediment to computer-assisted analysis, and it is thus perhaps inevitable that many of the more successful projects have concentrated on musical repertories that are notationally fairly straightforward, and have often relied on highly selective coding conventions devised by the researchers themselves. The development of advanced computer graphics facilities has led to the manufacture of optical scanning devices that can accurately recognize music symbols and thus provide a means of automatic transcription directly from the score. Although considerable progress has been made in the production of image-decoding software, such advances are constrained by precisely the same factors that have to be addressed in the design of alphanumeric coding systems; that is, what aspects of the score need to be converted into a machine-readable form, and what form this data should take. Another approach that has found increasing favour is a by-product of the development of the Musical Instrument Digital Interface (MIDI) for the transmission of performance data between digital synthesizers (*see* MIDI and §II, 3 above). Using little more than a simple MIDI link between a keyboard synthesizer and a desktop computer, and the services of a general-purpose music sequencing program, it has become possible to transcribe music material directly into a usable digital code, with the added advantage of immediate facilities for both visual and aural proofing of the data, the former being provided via the computer screen, the latter by the synthesizer itself.

2. ANALYTICAL APPLICATIONS. In seeking to divide applications of computer-assisted analysis into separate categories it is important to recognize that many of the basic data-handling procedures relate to more than one type of application. What determines the success of a particular line of inquiry is not so much the means employed to extract data in a computer-readable form but the use that is actually made of this digital representation of musical information. One of the earliest uses of the computer as a tool for analysis, still central to many areas of research, involves the identification of recurrent features that can usefully be subjected to statistical analysis. A number of projects concerned with aspects such as the frequency and disposition of particular notes or groupings of notes in a corpus of works have been facilitated by the ability of the computer to carry out repetitive data analysis tasks reliably at extremely high speed. The relatively simple, linear construction of the vocal music of the medieval and Renaissance periods has proved particularly attractive for this type of stylistic research, leading to applications such as tests for authenticity based on known features of melodic, harmonic or rhythmic construction, the matching of text with music in terms of underlay and, in a more experimental context, empirical reconstructions of missing parts in music manuscripts. Ethnomusicologists have applied similar techniques to the study of folksong and other primarily monodic genres. Notwithstanding the increased complexity associated with Western music after 1600, repertories such as the trio sonatas of Corelli and Bach's *Wohltemperierte Clavier* have also proved amenable to statistical analysis, and progress has been made with repertories from both the 19th and the 20th centuries, for example Schubert's lieder and the works of Webern (see §IV, 4 below).

Projects that use the computer merely to extract statistical information are only speculative in so far as the researcher is free to interpret the resulting data according to his or her own criteria. A number of analyses of repertories have nevertheless sought to apply computational procedures in a more pro-active way, where important processes of decision-making are built into the analysis process itself. Particular prominence has been attached to the application of linguistic theories to the study of music, and a number of researchers have sought to develop musical models that have features in common with those developed for the study of language. It has thus been possible to develop analysis techniques that draw on structural models such as rule-based grammars or alternatively explore the meaning of musical ideas and constructs, in some instances extending to the study of perceptual features, sonology serving as the musical equivalent of phonology.

It is here, most notably in the case of rule-based grammars, that the processes of re-synthesis are most commonly applied as a practical test of the theoretical model, in terms of both small-scale features that characterize the evolution of component musical ideas and larger-scale aspects such as overall structure. The processes of analysis are thus much more closely prescribed than those employed in applications of a purely statistical nature, for they seek to identify and codify primary structural features that can then be used as the basis of a generative model. Such models are by their very nature imperfect, since we do not yet understand the workings of the human mind sufficiently to be able to model the genius of others. Advances in the cognitive sciences, notably in the field of artificial intelligence, have led to progress in the construction of analysis software that can reveal important clues as to what objectively distinguishes the music of one composer from that of another (see §VIII below).

Rule-based analysis methods presuppose that the processes of composition are bound by underlying structural principles that can be described in algorithmic terms. Many objections can be raised to the use of such deterministic approaches in the study of musical creativity, but it has been argued that by identifying those characteristics that are amenable to quantitative analysis it becomes easier to identify those that are the result of altogether more complex processes of human decision-making. At this level it becomes possible to establish links with computer-based research into musical meaning. Here progress in a musical as opposed to a linguistic context has been altogether more measured, not least because music functions at a variety of contextual levels, and it is thus very difficult to define precise terms of reference for investigations that are based on semantic principles. One useful starting-point has been the comparison of the results of rule-based modelling with different source repertories to determine why what may be grammatically correct in a particular context is not necessarily aesthetically pleasing. Such tensions between objective and subjective criteria both constrain and usefully inform the whole field of computer-assisted analysis.

3. PERFORMANCE APPLICATIONS. It is necessary to strike a balance between the ease with which basic score information can be input by means of a MIDI facility and

the ultimate superiority of a comprehensive coding system such as DARMS, which has the capacity to handle almost every conceivable score detail. Interest in the former input method has been greatly enhanced by a recognition that the direct coupling of a musical interface to the computer facilitates another type of computer-assisted analysis, one concerned with the study of the performance of a work rather than simply its visual representation as a score. Here the small timing errors that inevitably occur when keying in a score become the focus of attention. A critical consideration in this context is the practical means employed for registering performance information as MIDI data. In terms of physical appearance there is little to distinguish a conventional MIDI keyboard from an acoustic piano. To a concert pianist however, the synthetic 'feel' of the former will materially affect the quality of performance data thus registered. What is required here is an acoustic instrument equipped with sensors, which can detect performance actions but not actively interfere with them during the period of their registration. The Disklavier, manufactured by Yamaha, provides just such a combination of a conventional piano with MIDI recording and playback facilities, and similar engineering projects have led to the manufacture of a range of sensors for use with string, woodwind and brass instruments.

The analysis of instrumental performance characteristics points the way to potentially the most challenging sphere of computer-based music analysis, that concerned exclusively with the sonic result. Psychologists have long been concerned with the reception and interpretation of musical sound, but only recently have suitably powerful and sophisticated tools become available for the detailed extraction of component features from composite sound images. Here the processes of analysis and re-synthesis have found a number of intriguing applications, for example as the basis for automatic accompaniment systems that can accurately track the performance of a soloist. Although such advanced techniques of acoustic analysis are still relatively new, they hold important keys to future investigations into the finer details of performing practice, and their signficance must not be underestimated.

IV. Historical research

Computer applications in music cannot work in any homogeneous way because the possible topics of interest – composition, performance, source filiation and dissemination, lives of musicians (individually or collectively), details of musical content, the perception and understanding of music, the physical aspects of sound, organology and so forth – are so heterogeneous. Almost any topic covered in this dictionary may be a potential object of study involving the use of a computer. Indeed the significantly expanded scope of this edition of the dictionary is a tribute to the value of computers, which have stimulated publishing and bibliographical management enormously since the 1980 edition.

1. Common issues and usage paradigms. 2. Bibliographical and thematic search tools. 3. Full-text resources. 4. Tools for the study of monophonic music. 5. Tools for the study of polyphonic music. 6. Databases of acoustical material. 7. Databases of graphic information. 8. Other electronic resources. 9. General issues.

1. COMMON ISSUES AND USAGE PARADIGMS. Some issues of content and access are common to all kinds of research project. These include the medium of intended access (paper, CD-ROM, Internet delivery etc.); whether, if the means of dissemination is electronic, access is provided to all of the data or only to selected parts; whether the data are searchable and, if so, by what criteria; whether the database is designed for periodic updating; and whether the results of one application can be fed to another for further processing. Quality issues also abound: how were the data gathered? how rigorously have they been verified? how well are they maintained? are they designed for extension and elaboration to answer new kinds of questions in the future?

From a procedural perspective the most fundamental point of distinction among computer-assisted studies is whether they seek to produce (and therefore are likely to store and manipulate) textual, statistical or audible results; that is, whether they are concerned with verbal data, symbolic representations of musical material or acoustic material. All are relevant to studies in music history principally because they enable the creation of large databases of selected materials.

2. BIBLIOGRAPHICAL AND THEMATIC SEARCH TOOLS. The most broadly accessible computer-based sources are bibliographical ones. Most readers will be familiar with electronic catalogues used by libraries and with electronic indexes of various kinds. Thematic-search algorithms, however, have a long history that extends back through at least the 19th century to idiosyncratic but highly serviceable systems for encoding and searching hymn and folk tunes. Around 1900 these often depended on the use of TONIC SOL-FA, a relative-pitch representation scheme developed in England. Many bibliographical tools now exist only in electronic form because of their enormous bulk. Before the age of electronic communications such resources might have been compiled at one location but would not have been accessible to users at other fixed locations. Such tools are now a common part of the 'virtual' world of scholars and musicians.

Among large-scale collaborations, the most notable are the Répertoire International des Sources Musicales (RISM) and the Répertoire International de la Littérature Musicale (RILM). In the case of RISM the computer was initially used to manage text data relating to the worldwide cataloguing of musical sources. RISM, which now consists of multiple databases, sets a benchmark for all projects that integrate identifying textual and musical information. Searches of the RISM A/II series database, for example, a multi-field index of several hundred thousand musical manuscripts from the period 1600–1825, have revealed unexpected coincidences between works attributed to major composers (e.g. Mozart) in one source and to minor or anonymous composers in other sources.

Other ambitious projects in music bibliography, such as Lincoln's work with the published sources of the 16th-century madrigal and motet and LaRue's survey of sources for the Classical symphony, have similarly focussed on identifying, through the creation of musical concordances across large repertories, the composers of works that are unattributed in one source. Such projects have other motives as well, such as discovering correlations of basic musical content that may have been obscured by surface difference (caused by transposition, ornamentation, instrumentation and so forth).

Computer representation, control and output of musical data have also facilitated the creation of a large number of thematic indexes. Although conversion of the data to a common format remains a goal for the future,

the simple availability of printed reference works has been an enormous boon in the location and identification of sources. It has contributed to an ever greater appreciation of the extensive activities and accomplishments of many previously little-known composers.

A still unresolved issue in thematic searching is the definition of musically sensible methods of query. One-dimensional text-based search protocols produce many false results. Here the problem of generalizing musical information asserts itself: queries demand specificity in the formulation of the question, but different kinds of music may have few features in common. In melodic searches, for example, contour information (generalization) is valuable for queries related to recognition and to overcome the apparent differences introduced by transposition. It is also important in psychological research. Contour information can be misleading, however, for bibliographical searches where exact pitches may be essential, and for source studies where enharmonic differences in notation may signal evidence of divergence in scribal opinion. For some searches rhythmic and/or metrical information is desirable, where for others it is considered incidental. The growing tendency is to allow users the opportunity to select their own search strategies. In David Huron's ThemeFinder tool several thousand extracts from instrumental works of the 17th to the early 20th centuries may be searched at seven levels of detail in order to accommodate diverse motives for queries.

3. FULL-TEXT RESOURCES. The ability to make rapid electronic searches of encoded texts adds value to works previously accessible only in printed form. Computer searches of the complete texts of dozens of works can sometimes be made with a single command. The biggest full-text database in musicology is concerned with the history of music theory: Thesaurus Musicarum Latinarum (TML), a compendium of several hundred Latin writings on music theory from the 6th to the 16th centuries. In TML, notation is represented using abbreviations for the standard Latin nomenclature (*brevis*, *longa* etc.), and notational patterns can thus be searched by these descriptive labels. TML is a collaborative project directed and managed by Thomas Mathiesen at Indiana University.

Multiple encodings of both text and music of the writings of Zarlino occur in a repository on CD-ROM, the first issue of an intended series called Thesaurus Musicarum Italicarum. Designed by the Dutch musicologist Frans Wiering, it contains scanned images, fully encoded texts (including Zarlino's numerous interpolations of Hebrew, Greek and other ancient languages with non-Roman alphabets), text-authority tables (for example to facilitate finding the same surname with multiple spellings), digitized images of drawings and music examples that are, where possible, presented in three ways – as scanned images, as DARMS encodings (*see* PRINTING AND PUBLISHING OF MUSIC, §I, 6) and as MIDI files (see §§II and III above). This multi-format multimedia tool seems likely to set another benchmark for many years to come.

Another kind of textual study is that in which details of the source itself are encoded together with its content. In Pinegar's study of the Notre Dame repertory, for example, the Latin abbreviations that differentiate the transcription styles of various anonymous scribes are encoded to facilitate grouping of sources by transcriber.

4. TOOLS FOR THE STUDY OF MONOPHONIC MUSIC. The encoding of complete musical works in large quantities is a daunting task. The first accumulation to be made widely available was the folksong archive designed by and encoded under the direction of Helmut Schaffrath (1942–94). These materials, which originally concentrated on songs in German-speaking lands and adjacent regions, are encoded in one field only of a text database. Information about place of origin and other details can be retrieved together with (or, if the user desires, separately from) the work's encoded melody. The Essen folksong collection (so called after its original home at the Essen University Hochschule für Musik) grew to encompass materials from many other parts of the world (China, Australia, Israel, Poland, Central and South America etc.). The musical data has been translated into several other formats and various kinds of queries can be made. The project is now maintained by Ewa Dahlig at the Polish Academy of Sciences in Warsaw.

A considerable number of projects concerned with various chant repertories have made extensive use of the computer for data representation and control. Partly because of our ignorance of its interpretation, chant is simpler to handle in the computer than most other repertories: it is legitimately monophonic, we often do not know how to assign precise durational values to neumes, and it has no issues of instrumentation or ornamentation. In short, there is relatively little that is secure enough to encode. Nonetheless, the encoding of chant and folksong materials has facilitated numerous studies of significant interest related to centonization, investigating, for example, how tune families are related. Only through recursive study (the successive feeding of results to new queries) can such questions become refined and persuasive answers found.

5. TOOLS FOR THE STUDY OF POLYPHONIC MUSIC. The largest project devoted to the creation of databases of standard repertory (in the form of machine-readable scores and parts) was initiated by Walter B. Hewlett in the early 1980s. Now maintained by the Center for Computer Assisted Research in the Humanities at Stanford University, the databases contain hundreds of works, chiefly from the 18th and 19th centuries, by composers such as Bach, Handel, Haydn, Mozart and Beethoven. The encodings, which attempt to preserve all essential details relating to notation, sound and source idiosyncracies, are eventually translated into several formats different from that in which each is initially captured in order to support diverse application types (*see* PRINTING AND PUBLISHING OF MUSIC, §I, 6).

Another potential source of score databases resides in the large number of collected editions that are now created from machine-readable material. That these resources are not generally regarded as electronic reflects confusion about rights and obligations and the absence of a common format for electronic distribution. Sometimes the format is not even a common one within the edition (e.g. Verdi, Mozart). Encodings undertaken with electronic distribution as the primary or only means in mind tend, regrettably, to concentrate on out-of-copyright editions, thus ignoring discoveries, re-readings and re-attributions of the past 75 years. Greater collaboration and cooperation would be of enormous benefit to scholars and performers of the future.

Among more specialized projects, the work of John Stinson and his Australian colleagues in encoding several thousand polyphonic works of the 14th century (in the SCRIBE project) has demonstrated how many different goals can be pursued in parallel. The encoded materials have produced scores for performance, have preserved important information about the original disposition of the notation and have been used in analytical projects of various kinds. An ambitious approach to questions of authorship and attribution was taken by Lynn Trowbridge in a project concerned with a corpus of roughly 100 works from the Renaissance. Through complete encoding (in DARMS, with extensions for mensural notation) and extensive statistical evaluation, Trowbridge was able to assess the disparate claims for Binchois, Busnoys, Du Fay and Ockeghem.

Efforts to define those traits that differentiate one composer's style from another's are approached in a totally different way in the work of David Cope, a composer at the University of California at Santa Cruz. Cope's program Experiments in Music Intelligence (EMI) identifies and stores small, recurrent melodic, harmonic and rhythmic traits (called 'signatures') and recombines them to create new works in the style of a designated composer. Among the composers whose styles EMI simulates are Palestrina, Bach, Mozart, Chopin, Prokofiev, Joplin and Rachmaninoff. Employing the same principles, EMI has also succeeded in composing imitations of such diverse repertories as Broadway ballads and Balinese gamelan music. When EMI's signatures are combined with general information about the 'parent' works, micro-chronologies of style change can be traced at a level of precision that has not previously been possible.

6. DATABASES OF ACOUSTICAL MATERIAL. With the advent of digital recording, stored performances have come to constitute another potentially important source of 'data' for computer applications. The analysis of musical performance based on recordings shares some obstacles with the nascent art of analysing computer-generated music: streams of acoustical material are not so easily segmented and structured as the score-based data on which manual analyses have for so long depended.

The aim in performance analysis is usually to document idiosyncrasies or progressive changes of interpretation. The aim in the analysis of electronic music is more fundamental: to establish basic concepts for understanding highly experimental and heterogeneous repertories. MIDI files that represent real-time performances, in the manner of piano rolls, may also capture such performance information as deviation from a general pulse.

Acoustical information that is disembodied from complete works is also proving to be useful. One database of the sounds of orchestral instruments is sufficiently grounded in numerical parameters to facilitate its rapid incorporation into protocols for perceptual research. MIDI files and other representations of sounding works have been used to experiment electronically with tempos and tempo changes, orchestration and dynamics. Such experiments may focus not only on the ordinary variables of potential performance but also on the implementation of past theories of musical performance – proportional notation in Renaissance music, ornamentation in the Baroque, prescriptions for tempo rubato in the Romantic period and conducting preferences preserved in the recorded repertory.

Access to acoustical information is sometimes most valuable when it is provided through documents consisting mainly of text. Thus, Sanford's performed examples of Baroque ornaments (1995) are more informative than written descriptions of them would be.

7. DATABASES OF GRAPHIC INFORMATION. The establishment of databases of graphic information has been encouraged by two factors: the quick access provided by the World Wide Web and the need for collectors of information to store and manage images. Graphic capture has been used in the discipline in all the same ways as photography: to store and compare handwriting samples and watermarks; to create digital catalogues of musical instruments and other artefacts; to preserve the original appearance of material later transcribed and printed; and to study anomalies of musical notation.

A growing use of digital images is that which makes available whole libraries of actual music – sheet music, scores, parts, manuscripts, early prints and so forth. The camera is indifferent to the subject. These serve the traditional purpose of providing detailed information suitable for study or performance, but they can also be arranged to serve the purpose of browsing: the user can scan hundreds of sources in search of a particular one, which can be recognized by image where words alone would not be conducive to a match. By scanning large quantities of material, users may also gain insight into whole repertories of which they have little knowledge. It is not currently possible to search databases of graphic images without verbal or numerical handles of some kind. Graphics files have proved to be a useful addition to pedagogical software for music history, theory, appreciation and organology.

8. OTHER ELECTRONIC RESOURCES. It is difficult to foresee which of the computer's roles in music research may be most important in the future. A widespread belief in the sciences – that electronic journals will supersede paper ones – has yet to catch hold in most humanities and performing arts disciplines. Yet some early entries in the field of music are very respectable: *Music Theory Online*, initiated by Lee Rothfarb in 1994, appears at frequent intervals with articles by a large number of reputable scholars. The electronic *Journal of the Society for Seventeenth-Century Music*, initiated by John Howard in 1995 and edited by Kerala Snyder, has also taken maximum advantage of the supplementation of text with graphics and sound. The online availability of *Doctoral Dissertations in Musicology* (from 1997) has greatly speeded up access to information on research in progress. All three resources are accessible via the World Wide Web.

9. GENERAL ISSUES. As databases grow larger and more accessible, issues related to authorization of use become increasingly pressing. The obstacles are not specific to music applications but they are particularly difficult to answer because of the diversity of data types and the possibility of myriad degrees of completeness. Many machine-readable resources of potentially great importance remain unavailable for legal or administrative reasons. Intellectual property issues discourage the development of certain kinds of applications that are technically feasible.

Electronic publications remain invisible to those who do not have access to computers. Print technology was relatively stable and predictable for almost 500 years, but computer technology changes at frequent intervals, and it is by no means clear what will succeed the World Wide Web. Despite such uncertainties, functional applications promise to change the nature of scholarship – for example by bringing historical, theoretical and acoustical data into single applications (e.g. Craig Sapp's multimedia extensions to ThemeFinder), by removing the need for time-consuming repetitive tasks, and by facilitating the visualization of material that in the past could only be experienced temporally.

V. Ethnomusicology research

Explorations into the possible uses of computer technology in ethnomusicology are still very much in their infancy. Until the late 20th century attitudes toward computers within the discipline were at best ambiguous; as symbols of modernity, they clash with the preoccupations with 'authenticity' and 'exotic' cultures that still permeate much ethnomusicological thinking. But it is also true that the kinds of issue that typically engage ethnomusicologists – the relationship between musical style and social context, processes of musical change, the construction of meaning in music – cannot easily be accommodated to the statistical correlations and simulations facilitated by computer technology. With developments in the realms of digital sound processing and of hypermedia, however, new areas of exploration have emerged. More compatible with the concerns of the discipline, these possibilities are being embraced with greater enthusiasm by the ethnomusicological community.

1. Computers as analytical tools. 2. Digital sound processing. 3. Hypermedia.

1. COMPUTERS AS ANALYTICAL TOOLS. One of the first attempts to use computer technology in ethnomusicological research was the CANTOMETRICS project, headed by Alan Lomax in the 1960s. In order to establish cross-cultural correlations between stylistic musical features and aspects of social structure, Lomax and his team created large cross-cultural data banks of musical examples derived from over 200 different cultures. Cantometrics has been strongly criticized for its essentialized conceptualization of culture and for its decontextualization of musical meaning. Even where correlations have some degree of universal validity, the conclusions are so general that they hardly seem to justify the effort required by the methodology.

Computer-assisted analytical procedures have been more successful, however, when used in conjunction with 'traditional' field methods. Scholars have complemented in-depth field research with the use of extensive databases: Hae-kyung Um, for example, has been able to establish correlations between the demographic profile of Korean migrants in the former USSR and aspects of their attitudes toward Korean musics and the musics of the host communities. A methodological approach of this type permits researchers to extend the geographical validity of their ethnographic data, to encompass related communities visited for relatively short periods.

Ethnomusicologists have also used computer technology to help analyse specific musical systems. Pioneer research in this sphere was conducted in the 1980s by James Kippen and Bernard Bel, who drew on the principles of generative linguistics in their study of the North Indian *tablā* repertory. Accepting the notion that a certain musical rationality governs decisions made by performers, they attempted to determine the 'grammatical' rules acquired intuitively by *tablā* players to produce culturally acceptable variations of *qā'idas* (fixed theme-and-variation tablā compositions), from which further variations are derived through permutation, repetition and substitution. Using these rules, they created a computer program that generated *qā'ida* variations as a means of gaining insight into the compositional procedures used in tablā performing practice. While musical styles can be identified by a set of conventional features, a performer's competence is often judged in relation to his or her ability to break the rules successfully. This raises the question as to whether it is possible to construct a computer program that is capable of distinguishing between conventional motifs and creative innovation.

2. DIGITAL SOUND PROCESSING. The development of accessible and user-friendly software packages for the digital processing of acoustic signals has been greatly welcomed within ethnomusicology, particularly as an aid to editing field recordings. It is specially useful for restoring historical field recordings, and a number of archives are digitizing their collections of wax cylinders, making them more widely available. Digital sound processing has also had an impact on the transcription of field recordings. The Music Mapper, one of the first computer applications to facilitate transcription, was designed in the late 1980s by Katherine Vaughn; Emil H. Lubej subsequently developed the EmapSon, a software package that produces a sonagram capable of isolating distinct pitches in polyphonic musics. Although most ethnomusicological transcription up to the end of the 20th century was done aurally, computer-assisted transcription will probably become the norm in the near future.

3. HYPERMEDIA. In ethnomusicology, as in other disciplines, developments in hypermedia have had a significant impact. CD-ROM and on-line databases of collections in music archives and libraries are proliferating, and many include links to sound files and other material of ethnomusicological interest. All the leading ethnomusicological societies have websites, which provide worldwide links to other relevant sites. A number of on-line journals (*Ethnomusicology On-Line*, *Music and Anthropology*, *Oideion*) have appeared since the mid-1990s; although these publications are typically linear in format, they allow authors to illustrate texts with recordings and video clips, as well as with the graphic forms common to printed media.

Ethnomusicologists have found hypermedia to be particularly well-suited to the presentation of descriptive ethnography, and many have created personal webpages to provide additional ethnographic information – such as sound files, transcriptions of interviews, life histories of informants, maps, photographs and video clips – to complement their publications. A few ethnographic sites are self-contained entities, such as the website/CD-ROM *Venda Girls' Initiation Schools* (designed by Suzel Ana Reily and Lev Weinstock). Based on John Blacking's field data, the project was conceived as a 'virtual field site', to provide users with a variety of media through which to glimpse Venda ritual life in the later part of the 1950s.

Ethnomusicologists have also been exploring the educational potential of hypermedia. A series of interactive hypercard stacks created by Richard Widdess provides students with an excellent introduction to ethnomusicological debates on musical transcription. An interactive website designed by C.K. Ladzekpo introduces students to African music and dance; along with informative commentary on a wide variety of musical styles, practical exercises explicate the complexities of African polyrhythmic structures. A website on the fiddler Clyde Davenport (designed by Jeff Titon) provides an interesting illustration of how the researcher's musical perceptions of stylistic affinity can contrast with those of the tradition-bearer. The internet too has become a field of ethnomusicological inquiry, as a growing number of young researchers investigate the formation of musical communities in the virtual spaces of listservs and chatrooms.

VI. Music publishing

1. Traditional methods. 2. Databases. 3. The Web. 4. CD-ROM publishing.

1. TRADITIONAL METHODS. The publication of music in traditional print form involves first encoding the music and then editing its graphics image to produce scores and/or parts (*see also* PRINTING AND PUBLISHING OF MUSIC, §I, 6). There are many ways to enter the music, but none is so perfected as to render editing of the visual image unnecessary. In this model, the music remains in a fixed form.

In classical music great progress has been made since the mid-1980s in publishing the large collected editions that represent the core of our knowledge of the standard repertory. Those who leaf through the volumes of the Neue Bach Ausgabe or the Neue Mozart Ausgabe, begun in the 1950s, can witness the transformation of publishing from the elegant fonts and layouts of traditional music typography through a range of early systems for computer typesetting of music. Many bizarre results can be seen in the music examples of books published in the 1980s and early 90s, when several dozen systems for music typography were in gestation and users were often so triumphant in controlling the process of music typography that they seem not to have noticed how many compromises were made in appearance, legibility and the visual grammar of common notation that had for so long been taken for granted.

Although most popular music prints and a substantial amount of classical music published in Europe and North America are now produced electronically, relatively little use is currently made of the full potential of computer technology to modify and update files endlessly, that is, to produce an endless stream of versions of music.

The publication of music by computer remains a laborious task. Substantial human labour is required either to input manually the codes that represent the music or, if the music is 'acquired' with the help of an electronic keyboard or an optical scanning system, to correct the errors of the provisional output. Electronic tools to search for features of style, analogous to those used for searching text files, are not yet widely available.

2. DATABASES. In some cases, generally confined to the scholarly community, the codes used to produce printed scores and parts are made available directly to users through a database. Any code that adequately represents the repertory in question can be used for this purpose. The data may represent complete musical works with little textual or explanatory material (as in the case of the MuseData repertories encoded by the Center for Computer Assisted Research in the Humanities at Stanford University). It may constitute only one field of a database concerned primarily with textual or explanatory material (as in the case of the RISM A/II database).

Some of these encodings may have been designed for a purpose other than printing (e.g. for analysis) but may be exportable to a program that facilitates notational display (e.g. Humdrum data, which is encoded for analysis but can be exported to and displayed in theprogram called MUP). Database programs are valuable when the quantities of material are vast and/or when a continuing need to revise or expand the content can be foreseen.

3. THE WEB. A third mode of publication in which the computer plays a role is that facilitated by the World Wide Web. The Web can be used as an interface to databases and electronic archives of various kinds. Bit-mapped images of printed pages of music are currently the most popular medium for use on the Web. The fluidity of environment that both encouraged and crippled many programs and projects involving the production of printed music in the 1980s now characterizes Web access software: the outcomes of battles waged far beyond the control of musicians, music-lovers and music scholars will determine whether the uniform interface now used to make material available on the Web will endure.

The Web has the ability to link sound and graphic files with text. Thus online journals in music, such as *Music Theory Online* and the *Journal of the Society for Seventeenth-Century Music*, can provide samples from recordings or examples of methods of performance as audio files that can be heard while the online text is being read.

Web publications are subject to the same liabilitiesas printed ones under national and international laws relating to intellectual property, but the subject of jurisdiction in virtual space is problematical. In addition, many potential providers of material are ignorant of all such laws. Credits, acknowledgements and statements of ownership are easily separated from the content to which they pertain. Laws covering intellectual property vary from one country to another. The ultimate disposition of material in the 'virtual space' provided by the Web has yet to be determined. When a user has the technical capability of modifying material, the provider's claim to ownership, which rests on a 'fixed form', can be diminished (*see also* COPYRIGHT).

4. CD-ROM PUBLISHING. The publication of databases and software on CD-ROM resolves the issue of preserving and distributing information in a 'fixed form'. Hence commercial enterprises may prefer this method of publication (or its technically upgraded successors) for some time to come. The capability of CD-ROMs to provide links to indexed points on sound CDs has stimulated the proliferation of music-appreciation titles. Specific single works can be packaged with a textual apparatus explaining a composer's background, the musical genre of the work and some analytical details (all possibly illustrated with paintings, diagrams or other graphic material).

When audio sound is linked with database software, a novel kind of archiving can be achieved. For example, in the CD-ROMs produced by the IDEAMA project (a

collaboration of the Center for Computer Research in Music and Acoustics at Stanford University and the Zentrum für Künste und Musiktechnologie in Karlsruhe), a historical archive of electronic music is coupled with its own catalogue.

VII. Music education

1. Classroom software. 2. Multimedia resources. 3. Web resources.

1. Classroom software. In addition to the training in computer music technology that followed inevitably from the growth of mass-produced studio and stage equipment, computers found a place in broader music pedagogy as agents of instruction, particularly in universities. Early developments, a number of which were based on the open-ended PLATO system (University of Illinois, from 1959), took advantage of the repeatability of computer programs and their ability to judge answers as straightforwardly correct or incorrect. The most typical application was to aural training, particularly in the recognition of intervals and chords.

Such programs became more widely available by the mid-1970s as computer systems decreased in cost and size, and constructive attempts were also made to develop 'courseware' (i.e. software for teaching) in other musical fields such as melodic dictation and part-writing. There was, and remains, considerable duplication of effort in the development of such drill-and-practice courseware between different institutional centres of activity. In part this may be said to have arisen from differences of pedagogical opinion, but it is also true that the advent of microcomputers (notably the Atari ST, which had built-in MIDI facilities, and the Apple II) made the development of the most basic courseware feasible for many who were primarily musicians rather than computer scientists.

Among later and more complex rule-based courseware, the PALESTRINA program for the Apple Macintosh (D.E. Jones, Dartmouth College, 1987) was impressive in its ability to diagnose errors in two-part species counterpoint exercises, giving detailed and immediate feedback to the student as to the rule(s) that had been transgressed. A program of this nature embodied a level of development expertise that could not readily be reproduced to meet the pedagogical priorities of individual institutions. The dissemination of music courseware even of this quality was restricted, however, not merely because of the limited number of potential users, but also in many cases because of a form of consumer resistance known as the 'not-invented-here syndrome', representing a lack of pedagogical flexibility on the part of instructors and course designers.

Concern for better communication led to the foundation of organizations such as the Association for Technology in Music Instruction (USA, 1975–) and the support of university music education under the Computers in Teaching Initiative (UK, 1989–99). Taken together, interest groups of these kinds can be said to have fostered not only the development and dissemination of courseware, for example under the Teaching and Learning Technology Programme (UK, 1992–), but also its embedding in educational practice. In an explicit change of emphasis, the European Academic Software Awards programme gave primacy to embedding in the late 1990s, reflecting a widespread departure from the idea of using the computer as a substitute instructor, towards making best use of technological resources alongside teachers, libraries and other services within a total learning environment.

In practice, embedding courseware has implications not only for course design but also for classroom technique. This was true even of stand-alone programs designed to support specific learning tasks: PALESTRINA, for example, had a repertory of stylistic criticisms that it could apply to exercises that were technically correct, and these could be used as a starting-point for class discussion of subjective questions of style and technique, perhaps leading in turn to a broader consideration of the value of rule-based theories for the historiography of musical composition. Similarly, in courses on post-tonal analysis the use of a computer program rather than pen and paper to identify pitch-class sets (many systems for this were developed) allowed the pedagogical focus to shift rapidly from a technical to a conceptual level. Stand-alone programs designed to support skills used in Schenkerian analysis were also developed (e.g. J.W. Schaffer, University of Wisconsin, Madison, 1990; A. Pople, M. Pengelly and K. Kirkpatrick, University of Lancaster, 1996).

The embedding of open systems demanded a different approach that was likely to involve both students and teachers in some kind of development work to suit local needs or simply as hands-on training in the use of technology. The most prominent of these systems included C-SOUND (B. Vercoe, MIT, 1986–), the LISP KERNEL (J. Rahn, University of Washington, 1984–) and the COMPOSERS DESKTOP PROJECT (several universities including York, Keele and Huddersfield, together with private individuals, 1987–). Most of the resulting pedagogical applications were in the field of electro-acoustic composition, for which technology training was in any case clearly desirable. Open systems for music analysis included MORPHOSCOPE (M. Mesnage, Brussels, 1994–) and the HUMDRUM TOOLKIT (D. Huron, University of Waterloo, Canada, 1994–). Brinkman's comprehensive guide to PASCAL programming for musical purposes (1990) originated in his courses at the Eastman School of Music and was intended to facilitate similar teaching elsewhere.

By the mid-1990s degree programmes in music technology had multiplied around the world. Among courses in computer applications outside composition, the course in computer applications in musicology developed at the University of Utrecht was notable on account of its outstanding course materials (F. Wiering, 1989). The use of computer technology in pre-university music education and lifelong learning was encouraged by major electronic instrument manufacturers, who put significant resources into the support of educational projects in a number of countries.

The advent of widely affordable multimedia systems facilitated the development of further kinds of courseware and learning resources. Music was a natural subject for educational multimedia because of the many possible interactions of sounds, text, pictures and/or video involved. Whereas ordinary multimedia titles, delivered on CD-ROM, were bound to include music on the CD-ROM itself, music courseware had the facility to rely on the use of normal audio CDs. These could be played through a computer from its CD-ROM drive, while coordinated educational material ran simultaneously from another storage medium such as a hard disk.

2. Multimedia resources. Unlike the vast majority of earlier courseware packages which were issued by insti-

tutions and small companies, a considerable number of multimedia titles making use of CD audio were produced commercially by companies such as Warner New Media and Voyager. Outstanding among these was a guide to Beethoven's Ninth Symphony, incorporating material devised and written by the musicologist Robert Winter, with the audio tracks included on the CD alongside the text and graphics (1988). This and a few other titles were later reissued with greater market prominence by the Microsoft company in tandem with other packages in the genre of 'infotainment', for example about dinosaurs. A principal characteristic of such packages was their use of hypertext links, providing a means by which users were free to follow a chain of concepts as if at random through a system of instant cross-referencing. Taken to extreme, this was akin to reading a book piecemeal by means of its index; developers generally took care also to include conventional fixed paths through the material in order to convey such constructions as historical narratives and chronological descriptions of musical passages.

Many less commercially ambitious CD-ROM guides were produced by individuals and teams working in educational institutions. Like most if not all of the Voyager and Warner releases, these were typically developed using readily available if unsophisticated software such as Apple's HYPERCARD, Allegiant's SUPERCARD and Asymetrix's TOOLBOOK. Dedicated packages were also produced to allow musicians with no programming experience readily to prepare educational materials that were presented in coordination with the continuous playback of audio CDs through a computer system (e.g. M. Pengelly and A. Pople, University of Lancaster, 1996). Packages such as HYPERCARD were also used to develop teaching materials that did not require continuous audio, and as the basis for a new generation of aural training packages, few of which made serious pedagogical advances on their precursors.

3. WEB RESOURCES. It was clearly to be expected that such materials, like earlier couseware, would be used for self-paced instruction, possibly within structured courses but certainly at times and in places convenient to the individual learner. This emphasis on the user's choice and discretion was greatly augmented through the rapid expansion of the World Wide Web as a form of international self-publication in the mid-1990s. To the reader, Web-based materials seemed to follow modes of presentation familiar from stand-alone multimedia titles, but their delivery came in fact through quite different technology, embodying seamless communication across continents between networked computers. The quantity and range of material on offer was virtually beyond human comprehension, and the normal method of serendipitous access was known as 'browsing'. At the same time, small-scale configurations of material could be structured with a view to communicating linked concepts in a coherent order, if this was desired.

As it matured, the Web seemed likely to satisfy a number of key requirements for educational software. It was easy for readers to use, it enabled students and teachers to accumulate, develop and share material, and with the aid of powerful search facilities it enabled information to be located even when its existence was merely surmised and its whereabouts unknown. It provided access to library catalogues and online journals, thus linking coherently with earlier forms of information delivery. It could simulate stand-alone multimedia courseware and support structured courses, but in such a way that the reader could at any point seek information further afield with minimal distraction from the task at hand. Against this, it seemed that international copyright laws, which had been slow to keep pace with the practices of Web-page authors, might severely restrict the quantity of materials available if suitably amended and enforced. Moreover, it was not always feasible for students to distinguish high-quality sites from others that might mislead or misinform them, and the scale of the Web made it impossible for teachers to assess in advance the material their students might see with this in mind.

Above all, the last years of the 20th century saw the computer reach the status, in the richer countries of the world at least, of an everyday item of consumer technology. Its educational uses reflected this in their increasing division between open systems making use of readily available and easily used software, and dedicated systems which in many cases had reached the stability of successive upgrades and an established user base. It seems likely that within a short period of time the use of computers in music education will be completely unremarkable.

VIII. Psychology research

Developing computer technologies have made a significant impact on both the conduct and the nature of enquiries into music psychology. In traditional laboratory work this grew out of a general recognition that synthesized sound was able to provide well-regulated stimuli for research into psycho-acoustics and other fundamental aspects of listening. This was exemplified in the classic experiments by Shepard (1964) which relied on sounds unobtainable by other means. By the early 1980s it was common for the presentation of such stimuli to be controlled by computer for methodological reasons, allowing investigators greater rigour in the exclusion of confounding factors in perception, by such means as generating randomized orderings of stimuli and maintaining constant time-intervals between the presentation of successive items.

From around the same time there was significant growth in the availability and sophistication of computer-controlled musical instruments, eventually coordinated through the MIDI standard. These devices enabled psychologists to begin to address criticisms that many laboratory experiments had done no more than investigate phenomena so far removed from typical listening behaviour as to be irrelevant to processes of musical thought. Musical extracts could now be presented in a form that might reasonably be taken to represent 'real' music played by humans on conventional instruments, while allowing the investigator to maintain precise control over potentially salient features such as momentary variations in speed, intonation, timbre and dynamic level. Conversely, the deployment of such nuances in human performance of music could itself be studied through the analysis of data obtained from individual performances on instruments linked directly to computers, as seen in the work of Clarke (1984–5; 1995) as well as others on expressive microtimings.

For scientists and theoreticians working in artificial intelligence (AI), a discipline that seeks to model human thought and behaviour using computers, music as a domain of enquiry has never been as important as the machine understanding of logical reasoning, natural

language or the visual world. Nonetheless, AI researchers of the calibre of Marvin Minsky, Terry Winograd and Stephen W. Smoliar are among those who have contributed to the subdiscipline of AI-music. Winograd's study of harmonic syntax (1968) remained impressive for decades after its publication and was paradigmatic in its synthesis of elements from traditional music theory and structuralist grammatical theory within the then current algorithmic approach to computation.

Many subsequent projects were likewise indebted to the relative ease with which pre-existing theories of music could be expressed as formal rule-based systems. It was perhaps in consequence of this that such newer developments in mainstream music theory as were overtly cognitive in orientation were frequently overlooked by AI-music researchers. Similarly, the frequent choice of restricted but well-understood corpora as a focus of investigation, such as J.S. Bach's chorale harmonizations, was brought about by a desire to build on the existing body of informal meta-level musical knowledge, following the paradigm of an 'expert system'. Since the output of expert systems must be testable against what can be produced by humans, it was common for the goal of such research to be the composition by computer of short musical works intended to fall within clearly recognizable styles.

A number of teams and individuals contributed to the development of this line of investigation. Kemal Ebcioğlu (1992, pp.295–333) produced a complex system of rules and heuristics that allowed a computer to harmonize chorale melodies in the style of Bach. Baroni and his co-workers (1984) produced rule-based grammars by means of which a computer could generate passable imitations of Lutheran chorale melodies and Legrenzi arias. Researchers such as Steedman (1984–5), Giomi and Ligabue (1986) developed generative grammars that could model jazz improvisation. Longuet-Higgins and his team (1976, 1983–4, 1989) computed rhythmic and metrical descriptions from sequences of pulses, as if to model human perceptions of these phenomena. James Kippen and Bernard Bel sought to discover a rule-system underlying improvised variations in North Indian drumming: first by analysing the performances of master drummers to derive a grammar, second by computing new variations in accordance with the grammar, and finally by submitting these computer compositions to expert appraisal in order to fine-tune the grammatical rules.

Many others contributed to the development of associated concepts and techniques, but not all who worked on projects of this kind found it necessary to reach the stage at which their theoretical designs were implemented as working computer systems. Some researchers published descriptions of projects planned or in progress; for others, the stimulus of the computer as a metaphor for human thought processes, open to question though this might be, was sufficient to guide them towards highly developed formal descriptions that were to all intents and purposes an end in themselves. The most complex of such systems (e.g. Laske, 1986; Leman, 1995) constituted detailed structural descriptions of the knowledge that was presumed to underpin musical styles or activities.

If the properly psychological claims of such work were at best debatable, something of the converse applied in work that made use of 'artificial neural networks', since these were held explicitly to model the physical workings of the human brain. This 'connectionist' technique was regarded as a breakthrough in mainstream AI research when it was formulated in the late 1980s in the wake of debates about whether knowledge resides principally in rules or in procedures. Whereas a rule-based system requires the basis of a computer's decision-making to be made manifest, and normally to be specified down to the last detail by the human researcher, a neural network is set up in an open-ended fashion and 'trained' to accomplish the task of generating appropriate outputs from specific stimuli, during which process the network organizes itself in ways that are not fully specified by the investigator.

The procedures deduced by a trained neural network are amenable to forensic scrutiny and are typically found to be analogous to formal rules proposed by humans, albeit with serendipitous features that allow networks to react sensibly to unforeseen stimuli and to behave with some of the vicissitudes of human thought. Bharucha and his co-workers (1987–8, 1989) used self-organizing networks to model the cognition of the scales and simple chords of both Western and Indian music, while Gjerdingen (1989–90) developed a network capable of recognizing a wide range of musical events in the early keyboard sonatas of Mozart. Peter Desain and Henkjan Honing (1992) worked within a broadly connectionist ethos to develop systems for the investigation of metric and rhythmic cognition that could accommodate variable expressive nuances of timing rather than relying on undifferentiated symbolic pulses.

AI research in music seems bound largely to follow the trends of its parent discipline rather than to pursue an agenda set by the broader musical community. But as technology progresses, computers and human beings are likely to become more equal as partners in the composition and performance of music, even beyond the leading centres of research and development. This being so, the nature and plausibility of artificial intelligence will come to assume an even greater significance.

Conant, Isabel. *See* POPE, ISABEL.

Conati, Marcello (*b* Milan, 26 April 1928). Italian musicologist. He studied conducting at the Milan Conservatory under Antonino Votto and Carlo Maria Giulini and took diplomas in the piano (1953) and composition (1961) at the Parma Conservatory. He was active as a repetiteur and conductor, 1954–61, and was assistant conductor and production assistant at the Zürich Opera House, 1961–71. He began teaching stagecraft in 1971 at Piacenza Conservatory and at Parma Conservatory (1975–98). From 1971 to 1978 he was researcher and archivist at the Istituto di Studi Verdiani in Parma and he taught musical dramaturgy and theatre techniques at the Scuola di Musicologia e Pedagogia Musicale in Fermo, 1991–4.

Together with Robert Cohen and Elvidio Surian Conati founded the Répertoire International de la Presse Musicale (RIPM) in 1980, and in 1984 was appointed director of the Centro Internazionale di Ricerca sui Periodici Musicali (CIRPeM) in Parma. His research has focussed on Verdi and 19th-century Italian opera, with particular attention to dramaturgy, performing practice, reception and critical success. He has also examined oral musical traditions, undertaking research in the Apennines around Parma. He is on the editorial board of the journals *Musica/Realtà* and *Diastema* and was editor of the *Rivista italiana di musicologia* (1993–7).

Concarini, Vittoria. *See* ARCHILEI, VITTORIA.

Conceição [Cõceyção], **Diego da** (*fl* 17th century). Portuguese composer and ?organist. It is not known how he was related to ROQUE DA CONCEIÇÃO. He is known only by a few pieces in the latter's manuscript anthology of 1695: *Livro de obras de orgão juntas pella coriosidade* (*P-Pm* 1607, Loc G.7; ed. in PM, xi, 1967). They comprise a *batalha* (no.48 in the edition), a *meyo registo* (no.49) for the right hand, and a group of versets in the 8th tone. The versets are predominantly fugal in style, and were probably intended for alternatim performance with the psalms: Some of the versets are among the most notable pieces in the book, as is the *meyo registo*, in which the divided keyboard seems to have been deliberately used to produce contrasts of colour.

KLAUS SPEER/BERNADETTE NELSON

Conceição, Manoel Lourenço da [Lourenço de Souza, Lourenço da Conceição de Sousa, etc.] (*d* ?*c*1738). Portuguese organ builder. Little is known of his biography, although documentary evidence suggests that he was one of the 'good men from Vilar', a canon of the Order of S João evangelista. Conceição is first mentioned in chronicles written by the organist of S Cruz, Coimbra, which state that sometime between 1694 and 1719 (but probably after 1700) 'Padre Lourenço Conceição repaired the organ and added some new registers'. At the time this instrument was perhaps the most important in Portugal. Between 1719 and about 1733 Conceição worked at Oporto Cathedral, building a large organ for the gallery and, later, two smaller instruments for the chancel. Of these, the epistle organ was rebuilt in 1869 by António José dos Santos. The gospel organ survived until both instruments were rebuilt by Flentrop (1969–71). Unusually, Conceição's original gospel organ contained no wooden pipes, suggesting that he worked in accordance with Spanish traditions. Other instruments built by Conceição include an organ for the church of the Misericórdia, Viana do Castelo in 1721, which survived until 1826, and an instrument for the church of the Third Order of S Francisco, Oporto, which survived until 1779. He may also have built an organ for the Carmelite convent at Tentúgal. Many of the small organs which survive in the north of Portugal could have been the work of this builder.

It is thought that Conceição left the religious order about 1725 and that he may have died by 1738, when one of his organs in Oporto Cathedral was tuned and enlarged by Teodósio Hember [Henberg, Hensbers, etc.], suggesting that the original builder was no longer available for work.

W.D. JORDAN

Conceição [Cõceição], **Roque da** (*fl* 1695). Portuguese organist and ?composer, possibly related to DIEGO DA CONCEIÇÃO. His name appears in the title of a manuscript anthology, *Livro de obras de orgão juntas pella coriosidade de P.P. Fr. Roque da Cõceição Anno de 1695* (*P-Pm* 1607, Loc. G.7; ed. in PM, xi, 1967). Of the 67 compositions in this volume only a few are attributed to composers (including Pedro de Aráujo and Diego da Conceição); it seems reasonable to suppose that some of the others are by Roque da Conceição. The collection contains a mixture of large-scale organ works and short versets intended for alternatim performance with plainchant.

KLAUS SPEER/BERNADETTE NELSON

Concentus (Lat.: 'harmony'). A term of wide application in medieval and early-modern music theory (for its use in antiquity *see* ROME, §I, 3(i)). Although it is compounded of the prefix *con*-(together) and *cantus* (song), it was used as the native Latin translation of the Greek *harmonia*. Its normal meaning was always 'musical sound' in general, but sometimes (increasingly in the 15th and 16th centuries) it was narrowed to the idea of 'simultaneous and distinct musical sound', embracing the particular meanings of 'harmony', 'polyphony', 'a simultaneously sounding interval'. In Aaron's *De institutione harmonica* (1516), *concentus* effectively represents the modern concept of 'a chord'. The word was also used as an equivalent of *cantus*, meaning 'a composition' (not necessarily polyphonic), 'an example' in a textbook, even (in Gaffurius, *Practica musice*, 1496) 'the highest part' of a composition.

A few unusual meanings deserve mention. Ramis de Pareia (*Musica practica*, 1482) used *totus concentus* (the whole harmony) as a periphrasis for 'the octave'. Faber Stapulensis (*Elementa musicalia*, 1496) used *concentus* as a translation of the Greek *harmonia* in its most precise sense, meaning 'mode'. Some German writers, notably Ornithoparchus (*Micrologus*, 1517), used *concentus* to distinguish the melody of plainchant proper from the *accentus* of liturgical recitation.

JEFFREY DEAN

Concentus Musicus of Vienna. Austrian ensemble founded in 1953 by NIKOLAUS HARNONCOURT.

Concert (i) (Fr.). A term variously used in France, and in Paris in particular, to refer to pieces of music from the mid-17th century and throughout most of the 18th. The earliest surviving music so described – the manuscript *Concerts à deux violes esgales* of Sainte-Colombe – probably dates from the 1670s. This usage may derive from the use of 'concert' for a musical event (*see* CONCERT (ii)): 'concerts spirituels', occasions on which music was performed, took place well before 1650, which according to Jacques de Gouy (preface to the *Airs à quatre parties sur la paraphrase des psaumes de Godeau*, 1650) were attended by 'very important people'; Antoine Furetière (*Dictionnaire universel*, 1690) defined a 'concert' as 'an assembly of musicians who sing and play instruments',

harkening back to the 'Assemblée des honestes curieux' hosted by Chambonnières in the 1640s.

The term 'concert' seems to have been applied exclusively to instrumental works consisting of separate 'pièces'. Examples include Charpentier's manuscript *Concert pour quatre parties de violes* (1680–81), Montéclair's *Sérénade ou Concert divisé en trois suites de pièces* (1697) and his *Concerts pour la flûte traversière avec la basse chifrée* (1720–26), and François Couperin's *Concerts royaux* (1722, so named because they were composed for the private entertainment of Louis XIV), *Les goûts réünis ou Nouveaux concerts* (1724) and his *Concert instrumental sous le titre d'Apothéose . . . de Lully* (1725). They were composed and performed alongside works called 'sonata', 'suite' or simply 'pièces' by some of the same composers, including Charpentier and Couperin, as well as Marin Marais, E.-C. Jacquet de la Guerre, J.-F. Rebel, J.-F. Dandrieu and L.-A. Dornel.

Later *concerts* weathered fashionable variations as 'concerts de chambre' (J.J. Mouret's two collections of trios, from 1734 and 1738) and 'concerts de simphonie' (see those of Jacques Aubert, 1730–1; Etienne Mangean, 1735; Michel Corrette, *c*1737; and Antoine Dauvergne, 1751), to indicate the size of the instrumental forces envisaged. The title of Aubert's collection, *Suites de concerts de symphonies en trio*, attempts to cater for all occasions, even 'à grand choeur comme les concertos'. The definition in Diderot's *Encyclopédie* (1751–65) of 'symphonie' blurs any remaining distinctions, embracing as it does both all instrumental music – including sonatas and concertos – and works with both instruments and voices such as operas.

The collections of *concerts* mentioned above are scored on two to four staves; while some are idiomatically conceived for a certain combination of instruments, most, as the composers suggest in their secondary titles and *avertissements*, can be played by pairs of violins, viols, oboes or flutes as well as by mixed ensembles, and continuo. Dieupart's *Six suittes de clavessin* (1701) are, he says, capable of being 'mise en concerts' just as many of the works in Couperin's two collections, while 'appropriate for all kinds of instruments', can equally be performed by solo harpsichord. When Rameau published his *Pièces de clavecin en concerts* the *Mercure de France* (March 1741) described them literally as 'composed for harpsichord alone' which with violin and viol form a quartet. Whereas a treble instrument is invited to take over the right-hand keyboard part in the earlier works of Dieupart and Couperin while the harpsichord switches to realizing the bass, in Rameau's 1741 collection the harpsichord part is for the first time considered inviolate. This is also likely to be the case in C.-F. Clément's *Nouvelles pièces de clavecin* (no copy survives), which were advertised in the *Mercure de France* (June 1755) as for harpsichord, with violin and bass accompaniment, 'mise en concert'.

The term 'concert' seems never to have been used in Paris to mean the same as the Italian word 'concerto'. As early as 1726 the violinist J.P. Guignon and the flautists Michel Blavet and Gabriel Buffardin all performed their own works, as concertos, at the newly established Concert Spirituel. In 1727 J.B. de Boismortier became the first French composer to publish works called 'concertos', followed by Corrette in 1728.

Concert (ii). The word's origins are uncertain, but like 'concerto' it may derive from the Latin *concertare* ('contend, dispute') and *consortium* ('society, participation'), although it may also be linked with the primary Italian meaning of *concertare* ('to arrange, agree, get together') and the English 'consort'. It came into use in the 17th and 18th centuries to denote contexts where people performed music together.

Until the middle of the 19th century, 'concert' could mean either private or public occasion, in a home or in a hall. Mozart, for example, often spoke of a 'Konzert' in his letters to describe evenings of informal, domestic music-making where all present were performers. Since about 1840 the term has been used only for public and non-theatrical events, but in a wide variety of contexts, both formal and informal. In the middle of the 20th century the term was extended to presentations of jazz, rock and popular music generally.

1. THE TERM. By definition, the modern concert makes music the centre of social attention. This was an innovation, since until the 17th century music was presumed to accompany another social activity; simply to listen to music, on a formal and regular basis, was unusual. The concert thus differs fundamentally from ceremonies or services and from entertainments where the role of music is auxiliary. In early English concerts, 'For the first time an audience gathered to listen to music as such – a public of music lovers to which anyone who was propertied and educated was admitted' (Habermas, 1962). Roger North made a similar point in *The Musical Grammarian* (*c*1728): 'But how and by what steps Music shot up into such request, as to crowd out from the stage even comedy itself, and to sit down in her place and become of such mighty value and price as we now know it to be, is worth inquiring about'.

Nevertheless, serious listening had existed before the rise of formal concerts, most prominently in churches and in courts. While music is the focal point of a concert, that does not necessarily mean that an audience obeyed an etiquette of complete silence and stillness. Informal social practices continued in some concerts, for example in tavern performances in the 18th century, at 'promenade'

1. Concert in S Petronio, Bologna, by members of the Accademia dei Gelati for the feast day of St Anthony of Padua, 1676, in the presence of the major ecclesiastical and civic authorities and their guests: miniature from 'Le insignia degli Anziani del comune', ix (I-Bas)

concerts in the 1830s and 40s and more recently, and at band concerts during the 20th century. A strict social etiquette became the norm in concert life around the middle of the 19th century, linked closely to the new aesthetic of the time.

Concert performance of full-length opera has bridged the two major areas of musical life, though only occasionally during the 18th and 19th centuries. For example, Handel performed *Imeneo* during his trip to Dublin in 1741 and Mozart's *La clemenza di Tito* was given at the New Rooms, Hanover Square, London, in 1810. The Società Filharmonica of Milan presented several operas, including in 1835 Rossini's *La Cenerentola*, with Verdi at the keyboard. During the 20th century concert performance has become more common, done chiefly to revive works that are not part of standard repertory, or in association with a recording, or in circumstances where staging would be economically or physically prohibitive.

The concert first appeared in parts of Italy, Germany and England during the 17th century and by 1800 was a basic component of musical life in almost all European and American cities. During the 19th century some concert institutions evolved into a ritual of a lofty, spiritual nature that became central to civic and cultural life. By the end of the 20th century concerts had spread all around the globe, taking root particularly firmly in certain Asian countries, notably Japan and India.

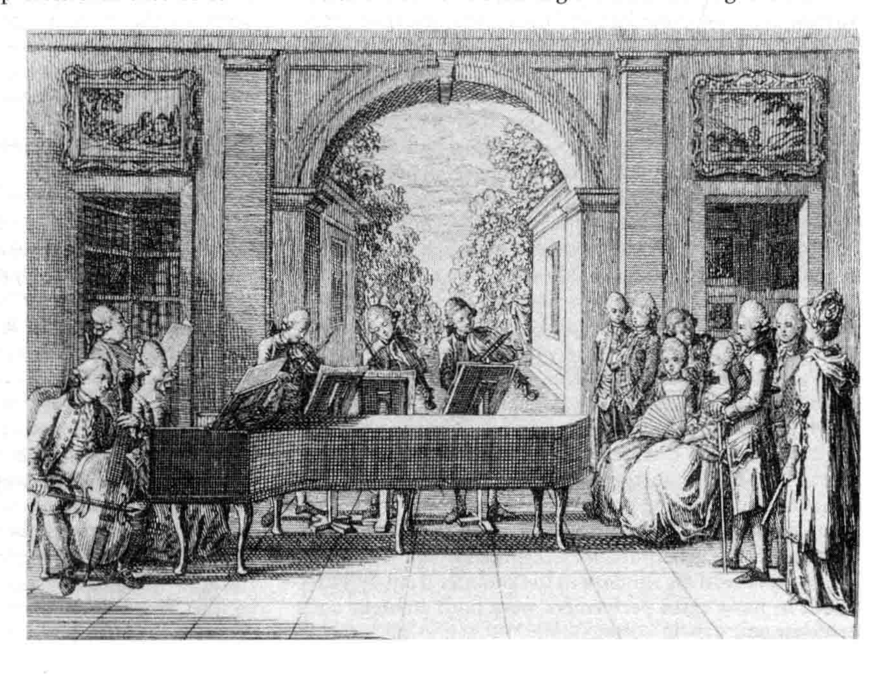
2. ORIGINS. The concert developed out of informal occasions where music co-existed with other social activities. Courts offered music after dinner; taverns sponsored musicians in their rooms; cathedrals featured works by master composers in services where the music was on view. Concerts emerged from such performing traditions in a gradual process during the 17th and early 18th centuries.

An important early concert series took place in Lübeck during the 1620s and 30s. Called the Abendspiel, later ABENDMUSIK, it was an hour's performance following evensong, first in the small Marienwerkhaus, then in the Rathaus, in Advent and at the end of Trinity. Although the performance followed the service, it was defined as a separate event and by 1700 chorus and orchestra were sometimes involved. The audience was made up chiefly of merchants who came to town for the main market of the week. Similar kinds of concert subsequently developed in other cities in Germany and Switzerland.

In Italy oratorio performances arose in the same period, forming part of Counter-Reformation endeavours to revivify the church. Such concerts separated out from liturgy gradually, for their early examples in Rome and other cities formed part of services or were accompanied by a sermon, held chiefly on Fridays and Sundays during Lent. Sometimes special chapels ('oratories') were built. From the start, oratorios were the special resort of the best performers and the most learned amateurs, and by

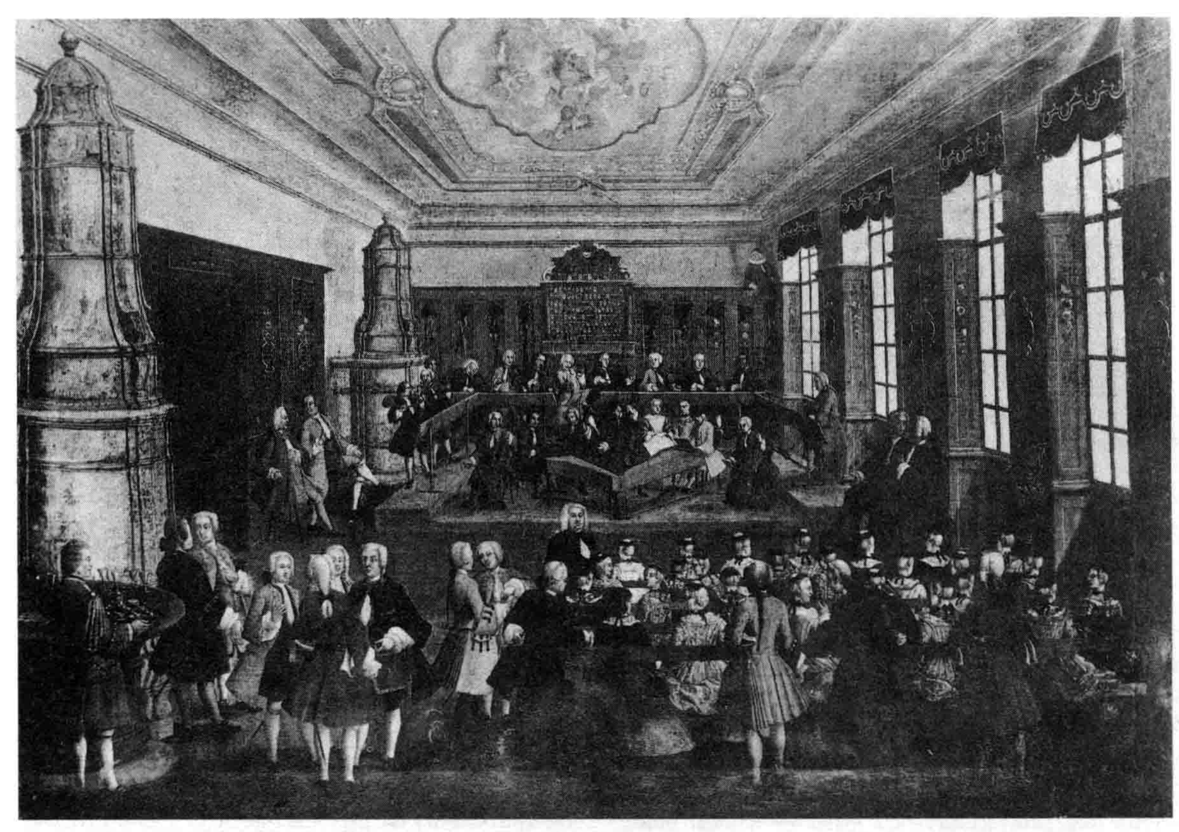
the end of the 17th century they were no longer linked to sermons or liturgy. The genre came to resemble opera closely.

England led in the development of secular, commercial concerts, which originally took place in taverns and public rooms. Concerts flourished in London because the political instability between the 1640s and the 1730s kept the government from enforcing monopolies over non-theatrical music. The collapse of court and church music during the Civil War and the favouring of French music after the Restoration led musicians to give public concerts; listeners were charged a fee for regular events, an outgrowth of the long practice of offering gratuities to performers. Such events seem to have developed as early as the 1650s in Oxford and the 1660s in London, where the most prominent such musicians were Ben Wallington at the Mitre Inn in 1664 and John Banister in his rooms in 1672. The York Buildings, established in 1676 near Charing Cross, became the most important concert venue. Probably the most celebrated series of concerts took place in the rooms of the prominent coal and book dealer Thomas Britton in Clerkenwell until his death in 1714. The most important commercial concerts, the model for efforts elsewhere in Britain, was the series begun by C.F. Abel and J.C. Bach in 1764 and administered by others, most prominently the Earl of Abingdon, up to 1793, as well as the Salomon and Professional concerts of the early 1790s for which Haydn wrote his London symphonies.



3. THE 18TH CENTURY.

(i) Music societies. The most common type of concert during the 18th century was given by a local music society. Called either society, academy or *collegium musicum*, these clubs were made up chiefly of amateurs, but their musical direction usually came from professionals who worked variously as church musicians, music teachers or dancing-masters. The organizations usually grew out of groups of players who had met informally. During the 17th century they began constituting themselves as societies and holding public concerts, and in some cases they evolved into professional ensembles in the 19th century. The earliest incorporated were those in Frankfurt in 1713 and in Hamburg, under Telemann's direction, in 1723. In Paris the principal ensembles of this kind were the Concert des Amateurs (1769) and the Concert de la Loge Olympique (1780). The academy that had the longest prominent such history became the Leipzig Gewandhaus Orchestra. Having begun on an informal basis by 1700, it drew its members chiefly from the university and its musical head from the Thomaskirche; in 1743 it was named the Grosses Concert, in 1781 it was constituted as a series of public concerts, and by 1850 all its players were professionals.



While generally the players included only men, by the early 18th century a few women participated, and many attended public events. The societies were not strictly bourgeois in their members or their publics, since many of them drew landholders and better-educated craftsmen. The best-known societies appeared in north and central Germany, especially in Hamburg, Lübeck and Leipzig, but music societies were also strong in Switzerland, Bohemia, Austria and Scandinavia. During the 18th century they sprang up in many parts of Britain and France. The Académie de Musique established in Nantes in 1727, for example, not only held public concerts, but also performed at the installation of the mayor and the procession to the cathedral on its saint's day.

(ii) Courts. The music societies were second only to courts as a network by which new works circulated around Europe. Performances by court musicians gradually shifted into concert halls within large cities. During the 18th century the personal rule of monarchs gave way to bureaucratic structures and public political activity, and urban institutions began to replace palaces as the focus of social and cultural life among the upper classes. Concerts were given by various combinations of amateurs and professionals, depending on the size and quality of court music establishments.

The founding of the Concert Spirituel in Paris in 1725 was a milestone in the shift of court musicians from Versailles to Paris resulting from the waning of court life

3. Concert in the Shoemakers' Guild, Zürich: painting attributed to J.R. Dälliker, mid-18th century (private collection)

after the 1680s. The series existed by virtue of a licence from the Académie Royale de Musique permitting concerts to be held on the 34 holy days when theatre performances were forbidden. The concerts were justified ecclesiastically by the performance of choral motets by Michel-Richard de Lalande and his successors at the court. Most of the repertory was secular – instrumental works, solo and ensemble, and opera airs, many of them Italian – and the motets were abandoned during the 1760s when they came to be regarded as antique in style. The Concert Spirituel became the nation's central concert series, offering the most recent vocal and instrumental works by leading Italian and German as well as French composers. It controlled all other concert activity in the city on a monopolistic basis until its abolition in 1791. When the term 'Concert Spirituel' was borrowed in Madrid, Vienna and Moscow (among other places), the repertory was more consistently sacred.

German courts began opening their concerts to the public in the last two decades of the 18th century. The widow of Frederick the Great did so after his death in 1787, and Friedrich Wilhelm II and his successors continued that policy. The Bavarian court did the same in 1784, beginning a series of subscription concerts to which both nobles and bourgeois were admitted, and where works by Mannheim composers such as Christian Cannabich dominated the repertory. Parks, which were also being made public, began to serve as concert locales; in the duchy Burgsteinfurt in Westphalia, for example, events were held on Sundays in the summer from 1775 to 1806. In most cases performers were both amateur and professional.

(iii) The benefit concert. The benefit concert was one of the most important types of concert activity between the late 17th century and the early 20th; in the period between 1780 and 1860 it was more numerous in many cities than any other type. Called by a variety of names (*Akademie* in German-speaking areas), the benefit derived from the practice in the theatre by which a major performer obtained the revenues from one performance a season. Such a concert was sponsored by a musician, generally no more than once or twice a year, for his or her profit or loss, and concerts intended to raise money for charities often had similar design. The patrons of the sponsoring musicians, at whose homes he or she had taught or performed, were expected to buy tickets and perhaps to attend.

A benefit concert always presented a variety of performers, both vocal and instrumental, usually with an accompanying ensemble, and often featured a performer of greater fame than the sponsor. As such, the benefit differed fundamentally from the RECITAL, since performing alone or with only an accompanist was virtually unknown until the late 1830s. The programmes at benefit concerts tended to be made up chiefly of numerous short works, focussed on opera selections and virtuoso numbers. Sonatas, chamber works and music of a serious nature were rarely heard at these events except in concerts offered by more learned performers.

Touring musicians put on similar kinds of concert. A performer would arrive in a town armed with letters of recommendation to musicians and amateurs of note, and by this means would be helped to find a hall, obtain performers, print a programme and attract an audience.

4. *Playbill for Wilhelmine Schröder-Devrient's benefit night at Covent Garden, London, 3 July 1833*

This was the procedure adopted by the Mozart family during their travels. In his autobiography Spohr illustrated particularly well how this was done in the first decades of the 19th century.

(iv) Subscription concerts. The practice of publishing music through subscription was adapted by musicians to concert-giving. A prominent performer or a society would sell a series of concerts as a package, with payment expected before the first event, an arrangement widely prevalent throughout the major European countries. Most local musical societies operated on this basis. An important subscription series was that put on by J.C. Bach and C.F. Abel in London in 1765. Individually managed subscription concerts then led to collaborative undertakings; the Concert of Ancient Music (1776) and the Professional Concert (1785) were administered similarly by boards of gentlemen. The orchestral societies of the 19th century grew directly from these practices.

(v) House concerts. During the 18th century and the first half of the 19th, there were performances in aristocratic or bourgeois homes that verged upon being public concerts. It was common for musicians to perform in salons and the music was in some cases the focus of the occasion. In the late 18th century noted connoisseurs – Baron Alvensleben in London, Baron van Swieten in Vienna and Alexandre Le Riche de la Pouplinière in Paris, for example – put on regular salon concerts at which new or visiting performers were evaluated. Between the 1820s and the 1840s musicians put on concerts in the homes of major patrons, advertising in the press and charging visitors for tickets.

(vi) Programmes. Before the mid-19th century concert programmes usually consisted of a series of short items set in a clearly defined order. Programmes tended to be longer than was normal later, and sometimes included individual movements taken from larger works; but they derived from consistent practices of musicianship. The basic principle was variety, the need to alternate genres, types of performer and vocal with instrumental. Practices tended to be strict in this regard: it was rare for two arias for soprano or two symphonic works to be given in immediate succession (fig.5). The Gewandhaus concerts, for example, followed a format of genres strictly in the late 18th and early 19th centuries: each half of the programme would offer an overture, an aria, a solo instrumental number and finally a vocal or choral finale, either from opera or oratorio.

Vocal music held pride of place, as in musical culture generally during the 18th century. Programmes made up solely of instrumental works were unusual, and in most cases given only because of a lack of adequate singers. Nevertheless, instrumental idioms grew in prominence within concert repertories during the 18th century, as the Italian concerto and the German symphonic genre grew in scale and became increasingly popular. In Britain, for example, concerti grossi by Corelli, Geminiani, Handel and Avison were heard at all musical societies. The

MUSIC ROOM,
JANUARY 7. 1765.

ACT I.

OVERTURE Paftor Fido, with Horns.	Handel.

OVERTURE with Horns.	Abel.
SONG in the Fairies. Hark how the Hounds and Horn.	Smith.
CONCERTO VII.	Corelli.
SOLO Violin. Mr. Malchair.	Ferari.
CONCERTO VI.	Stanley.

ODE to CONTENTMENT.

RECIT. Accompanied.
Sweet Contentment, Heav'nly bright,
Worfhipp'd through the Realms of Light!
Void of thee what's Wealth or Power
But the Pageants of an Hour?

Pride ne'er taftes thy foft Repofe,
Pomp and Grandeur are thy Foes:
Yet within the Mofs-grown Cell
Thou with Poverty can'ft dwell.

AIR.
See yon humble Swains advance,
Beat the Ground in jocund Dance:
Hark! the merry Milkmaids fing,
" All beneath the gladfome Wing,
" Wide beams forth th' eternal Ray,
" All who would be happy may.
" And howe'er we change the Name,
" Virtue and Content's the fame."

SONG in the FAIRIES.
Hark! how the Hounds and Horn,
Chearly roufe the flumb'ring Morn,
From the Side of yon hoar Hill,
Thro' the high Wood echoing fhrill.

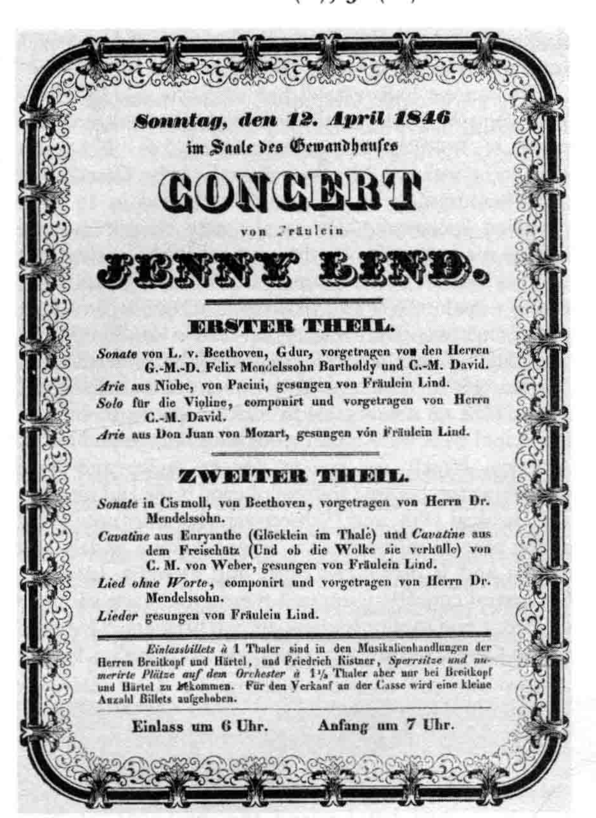
5. *Programme for a concert held at Holywell Music Room, Oxford, 7 January 1765*

growing prominence of instrumental music brought higher expectations for performing ability within both societies and courts. In some cases (in Edinburgh in the 1790s and Boston in the 1820s, for example), societies were hurt seriously by conflict over preference for amateurs and professionals.

One major innovation in 18th-century concert life was the practice of performing old works in substantial numbers. While older works had persisted in the repertories of some churches for a century or more, they were not seen as a common repertory and there was indeed no term of denomination for them. England took the leadership in this area around 1700 with the invention of the term 'ancient music', first for music of the 16th century and then, by 1776, for any works more than about 20 years old. The Academy of Ancient Music, founded in 1726, performed a rich and unique repertory dominated by Byrd, Tallis, Palestrina, Marenzio and Purcell, as well as Handel and Pepusch. In 1776 the Concert of Ancient Music offered a more recent repertory that was focussed on works by Handel but also included music by Corelli, Geminiani, Avison, the Elizabethan masters and a variety of English and Italian composers.

Much more limited, but still significant, tendencies appeared elsewhere during the 18th century. In France the motets of Lalande and his successors, especially Mondonville, survived until the 1760s in programmes of the Concert Spirituel, as did the operas of Lully at the Opéra. In Germany, C.H. Graun's passion *Der Tod Jesu*, first performed in Leipzig in 1755, remained in the repertory with a prominence comparable to that of Purcell's *Te Deum and Jubilate* in England.

(vii) Oratorio concerts. Handel reshaped the Italian idiom of the oratorio for performance in the theatre and did not depart from such locales. A performing tradition grew up around his oratorios, odes and masques that had roots within services begun in the early 18th century at cathedrals and churches to raise funds for charities, especially hospitals. Purcell's *Te Deum and Jubilate* was performed widely in the first half of the 18th century, most prominently at the Festival of the Sons of the Clergy in St Paul's Cathedral. Handel's settings of the *Te Deum*, and then in the 1750s his other choral works, appeared at the annual festivals in the cathedral cities, first in public halls and by the end of the century in churches. Oratorio concerts were established in almost all major cities in Britain by the 1790s and included Haydn's *Creation* in their repertories soon after its first performance in 1798. Relatively few composers took up the oratorio until the mid-19th century, and a limited number of Handel's works were performed after his death, chiefly *Messiah*, *Judas Maccabaeus*, *Alexander's Feast* and *Acis and Galatea*. But excerpts from a wide variety of his works appeared often on concert programmes.



Performing Handel's oratorios spread all around the Western world by the end of the 19th century. The first performances outside Britain were in Vienna, where the Tonkünstler-Societät performed *Judas Maccabaeus* in 1779 and other works in the late 1780s and 90s. Early Handel events in Germany were in Berlin in 1786, Halle in 1803, Thuringia in 1810 and Elberfeld in 1817; these last evolved into the Lower Rhine Festival, at which Mendelssohn conducted between 1833 and 1847. The first major American institution of this kind, the Handel & Haydn Society, was founded in Boston in 1815. The first in France was the chorus of the Société des Concerts du Conservatoire from the inception of the series in 1828.

4. The 19th and early 20th centuries. The concert world underwent an upheaval during the first half of the 19th century because of the drastic expansion of its commercial bases. Along with the social changes of the time, the invention of lithography, the improvements in pianos and other instruments, the building of larger halls and opera houses and the development of aggressive marketing and sales techniques led to an outpouring of music designed to attract a much larger public than before. Much of the music consisted of virtuoso numbers and medleys from the best-known operas, works from which excerpts were performed by virtuosos in concerts and salons and then adapted for amateurs to play or sing at home. In the process the concert world took on capitalistic institutions on a far larger scale than before. Learning from piano manufacturers and publishers, Liszt and Paganini made fortunes on their concert tours, as did the most important later performers.

(i) Virtuoso concerts. Virtuoso performance increasingly became the centre of attention in concert life. In the playing of such men as Hummel, Paganini, Thalberg, Liszt and Chopin, soloists with idiosyncratic music personalities captured the attention of audiences at a more intensive level than their predecessors had. Between 1828 and the end of his career in 1834, Paganini achieved an unprecedented public exposure by repeatedly filling opera houses in London, Paris and other cities. In 1831, for example, he gave 18 concerts in London, 49 in the English provinces, 23 in Scotland and 22 in Ireland. Liszt took on equally arduous, better planned concert tours between 1839 and 1847, from Scotland to Moscow to southern Italy; his relationships with his manager Gaëtano Belloni and his publisher Maurice Schlesinger presaged modern concert management.

The programmes performed by these and other virtuosos grew out of the conventions of the benefit concert, enlisting other musicians so that they might offer a varied musical fare (fig.6). Opera excerpts were central and alternated with virtuoso numbers, themselves often medleys of songs from a recent opera. The recital by a single solo performer (*see* Recital) did not become a common practice until the 1850s. While Liszt began performing alone in 1837, musicians such as Charles Hallé who defined the recital as a musical institution focussed their attention on classical works far more than the virtuosos active before 1850.

(ii) Orchestral concerts. The most important new institution established throughout Europe and America in the 19th century was the professional orchestra. Usually made up of the best players in each city, often the first-desk players in the opera, the orchestras evolved out of pre-existing music societies or court concert groups, or from new organizations directed by the musicians themselves. Besides the Gewandhaus Orchestra, the most important ensembles developed in national capitals, usually founded and governed by musicians: the Philharmonic Society of London (1813), the Société des Concerts du Conservatoire in Paris (1828), the Gesellschaft der Musikfreunde in Vienna (1842) and the Berlin PO (1882). In the USA, the major orchestras, notably the Philharmonic Symphony Society of New York (1842) and the

6. Programme of a concert at the Leipzig Gewandhaus, 12 April 1846, with Jenny Lind, Mendelssohn and C.-M. David

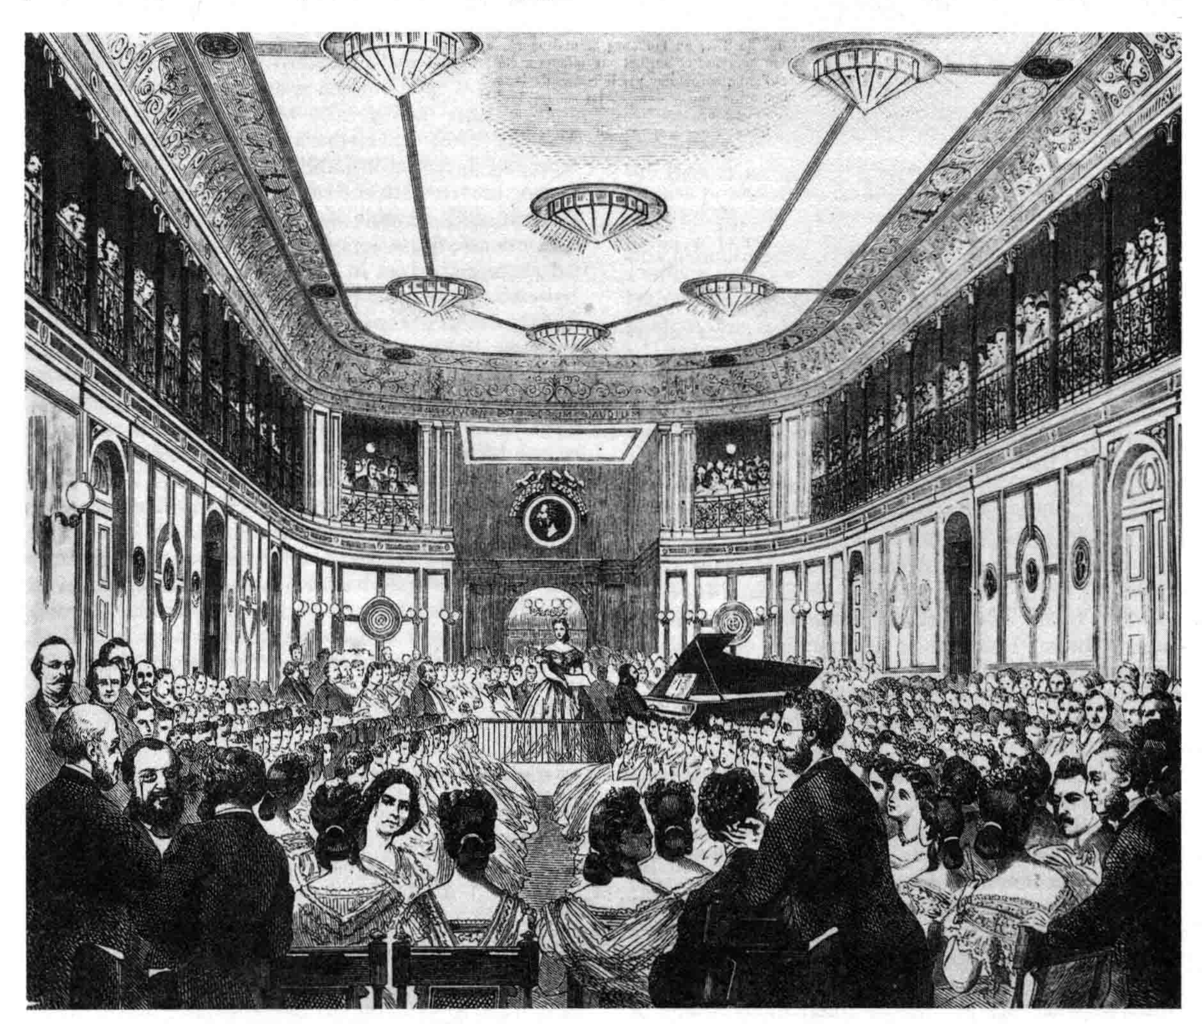
Boston Symphony Orchestra (1881), were founded and directed chiefly by wealthy patrons.

Though orchestral ensembles are often called 'symphony orchestras', during the 19th century about half of any programme tended to be vocal music. Symphonies of Haydn, Mozart and Beethoven were usually played at the start or the end of programmes; though increasingly revered as models of great music, they were ultimately less popular than the arias and scenes from operas and oratorios that stood prominently in the middle of the programmes. Excerpts from operas by Rossini, Donizetti and Bellini appeared at many orchestral concerts, and their names or busts often went up on the walls along with those of the revered Viennese composers. Until the very end of the 19th century, programmes resembled those of the late 18th in their large number of pieces and their relative length, as compared with practices of the 20th century. In London, the Philharmonic Society continued normally performing ten works or excerpts until the 1870s.

Nevertheless, orchestral concerts were the most important context within which there was a massive change in the repertory from contemporary music to classical. At the Gewandhaus concerts, for example, among the performances of all works (not simply individual pieces), the proportion by living composers declined from over 70% in the 1820s to little over 20% in 1870. By that time the proportion of performances of works by dead composers grew to over 50% at almost all orchestral concerts. What emerged was an international canon of great works, accepted all over Europe, quite different from the separate national repertories that had existed in the 18th century. The term 'classical music' was used throughout for this music. While the works of Mozart and Beethoven stood at the core of this repertory, many other composers were represented – Corelli, Gluck, Viotti, Cherubini, Weber and Spontini, for example, and in addition Rossini, Bellini and Donizetti.

The classical repertory that emerged in concerts of the early and middle decades of the 19th century had strong continuity in unbroken performing traditions. There was little revival of music, since the great majority of works performed had remained in performance at least occasionally, or were related to some that had. Some 'historical' concerts were put on, however, most prominently by Fétis in Paris in the 1830s. During the 1870s music from the Renaissance and Baroque periods was brought back in many concerts, even by *a cappella* ensembles within orchestral concerts. By 1900 concert programmes had reached a form that was to be basic in many respects for the 20th century. With recitals, chamber music concerts and orchestral concerts increasingly separated, orchestras now performed shorter programmes of fewer works than before, in the most generic form, an overture, a concerto and a symphony. Vocal works became less common in orchestral programmes; singers and choruses now gave concerts more commonly on their own.

(iii) Chamber music concerts. The chamber music concert developed in close relationship to the orchestral concert, since the repertory was from the start focussed upon the works of Haydn, Mozart and Beethoven. This repertory appeared in public concerts at an early date. During the late 18th and early 19th centuries duos, trios, quartets and quintets were performed within public concerts offering a variety of musical forces, from solo singers to orchestras. In Vienna, for example, from 1804 Ignaz Schuppanzigh led a quartet in the Augarten Concerts and the events of the Gesellschaft der Musikfreunde. But from the 1830s, concerts took place that were focussed on smaller instrumental groups, called 'chamber music' or 'musique de chambre', most prominently in London, Paris and Berlin. Leaders of the most important ensembles were John Ella in London, Pierre Baillot in Paris and Karl Möser in Berlin.



Performed chiefly by more learned musicians, chamber music concerts had a specialized public. In London the Beethoven Quartet Society performed even the composer's then little-known late works. Songs and piano pieces were nonetheless also often included; the Monday Evening Popular Concerts in London (1858) always had piano solos or songs, sometimes even sentimental ballads.

(iv) Choral concerts. The Handelian tradition of the 18th century expanded in the 19th into much more varied concerts and repertory. Not only did many composers now write in the idiom, but choruses participated with orchestras in performing diverse programmes of symphonic, operatic and choral works. Moreover, while in the 18th century choral concerts had been usually given by expanded church choirs, amateur choral societies of a secular nature now became numerous. The Männergesangverein in Vienna, for example, founded in 1843, was prominent among the German-language choruses that combined folk and art songs with oratorios. In Britain and America the glee club emerged from the earlier organizations for singing catches and madrigals.

(v) Concert halls. During the early 18th century concerts were performed in spaces designed to accommodate a variety of activities, chiefly meetings and balls, and normally holding no more than 300 people. In the middle of the century, halls designed specifically for concerts began to be built, usually with larger capacity. The Holywell Music Room, erected in Oxford in 1748, was designed for concerts, though still of a traditional size; the Hanover Square Rooms in London, built in 1775, could hold 600 people, as did the Concertsaal des Junghofes built in Frankfurt in 1756. In Berlin, the Concertsaal of the masonic lodge 'Royal York', built in 1803, held 1000 people, and the hall of the Sing-Akademie, put up in 1826, could accommodate 1200.

From the 1830s many concert halls were built and managed by piano manufacturers and music publishers, essentially for virtuoso and benefit concerts. Such firms as Erard, Pleyel and Herz constructed halls in Paris, and the publishers Breitkopf & Härtel played a similar role in Berlin and other German cities. During the late 19th century the London office of the Bechstein piano firm took the leadership in establishing halls in close conjunction with their shops and the management of touring performers. By the 1890s a pianist could easily engage a firm such as Bechstein to have instruments ready at each stage of a tour in Europe or America.

The concert halls established after the middle of the 19th century displayed the lofty role that concerts had come to hold in European cultural life. The most important was the Musikvereinsaal of the Gesellschaft der Musikfreunde in Vienna. Constructed in 1870, it occupied a central place on the new Ringstrasse, the avenue made possible by the removal of the ancient city wall; as such, it was not simply a place of recreation but rather a major civic and national institution. Similar in prominence were the Royal Albert Hall in London (1871), the Zürich Tonhalle (1891) and the Jahrhunderthalle in Breslau (1900). The capacity of over 6000 at the Royal Albert Hall set a new scale in concert spaces. Numerous municipal halls were built throughout Europe and North America, largely for use as concert halls; and local orchestras too became sources of civic pride and identity. The classical 18th- and 19th-century repertory now stood as the core of musical taste, accepted more widely and firmly, and it demanded quiet and attentive listening. Orchestral concerts witnessed the rise of a new etiquette of silence and motionlessness among listeners; 'One goes to the Conservatoire with religious devotion', a French

7. Concert featuring Carlotta Patti in the old Gewandhaus, Leipzig: wood engraving, c1865

writer said as early as 1846, 'as the pious go to the temple of the Lord'.

(vi) Programme notes. During the 18th century a visitor to an opera or oratorio performance could purchase a wordbook. Notes on the works began to appear in wordbooks or in programmes during the 18th century, most prominently in Germany (see Salmen, 1988). In England Sir George Smart did the same for the Amateur Concerts in 1821 and John Ella in particularly extensive form for the Musical Union in 1845. Notes became standard at concerts in the second half of the 19th century. George Grove was a prominent and prolific English contributor of analytical programme notes, chiefly for the Crystal Palace from the 1850s; Donald Tovey's notes, written originally for the Reid Concerts in Edinburgh, represent the classics of the genre.

(vii) Concert management. Concerts obtained their own impresarios during the late 19th century. Before 1850 musicians or businessmen had arranged concert tours only in isolated cases, since it was presumed that a touring performer would best handle all arrangements himself. The initial leadership for concert management came out of the advice given by instrument manufacturers and music publishers such as Maurice Schlesinger to the musicians with whom they worked. The star system begun during the 1830s, and the long, concentrated tours that it made possible brought in profits such as only opera singers had accomplished previously. By the 1850s managers had begun to organize concerts for touring musicians, most of all in England and America. By the 1880s concert agents had established a new kind of authority for themselves within the concert world, as the equivalent to the impresario in opera.

Albert Gutmann in Vienna and Hermann Wolff in Berlin were important early agents, controlling both the careers of major performers and the schedules of the leading concert halls. The railways were a key to their efforts; in 1884 Gutmann was able to bring the Meiningen court orchestra to Vienna for a series of concerts under Hans von Bülow. Such figures were not simply businessmen; Gutmann, for example, identified the promise of the young Artur Schnabel and obtained a patron for his education. By 1914 an international industry of concert management had developed.

(viii) Children's concerts. Child prodigies performed from time to time during the 18th century, but it is unlikely that many children attended concerts. During the early 19th century it became increasingly common for children to perform in public, as music teachers began to put on events for their students and pupils at the new conservatories were often only 14 or 15 years old. Mass singing programmes put these concerts on a much larger scale. In France, from the 1840s, the nationwide Orphéon put on festivals where 1000 children might sing. In Germany the early gymnasiums presented concerts: in 1847, for example, in Conradsdorf, Silesia, the local Kantor presented a 'jugendliches Volksliederfest'. Concerts by adult players designed for children developed more slowly. There was a 'Young People's Concert' in Cincinnati, Ohio, as early as 1858, but regular educational series (such as the Robert Mayer Concerts in London) arose chiefly in the early 20th century, most notably in New York, London and Vienna.

(ix) Expansion of the public. During the second half of the 19th century the concert public expanded greatly within the middle and working classes. The main impetus to increased concert-going was the near-universality of the piano in middle- and upper-class homes, which by this time was spreading to less affluent groups. While the rage for virtuosos closely tied to domestic music-making died down in the 1850s, the continuing growth of musical education stimulated musicians to establish concerts for a much wider public.

New orchestral groups were established, to give concerts aimed at a public less affluent than those who attended the costly and fashionable series given by the leading ensembles. The most prominent of these new groups were the Euterpe Concerts in Leipzig (*c*1830), the Crystal Palace in London (1854) and in Paris three separate series – those of Jules Pasdeloup (1861), Edouard Colonne (1873) and Charles Lamoureux (1881). Vienna was strikingly late in acquiring a new orchestra, the Concert Orchestra of 1899.

(x) Social broadening: bands and choruses. The band concert arose as an institution within concert life at this time, given impetus by the opening to the public of royal and aristocratic parks and the expansion of military bands during the Napoleonic Wars (*see* BAND (i), §III). Military ensembles brought a high level of musical professionalism to wind instruments; in England, for example, the Royal Military School of Music at Kneller Hall trained army players many of whom later became principals in the best London orchestras. Band concerts acquired a social etiquette not unlike that of 18th-century concerts and opera houses, where casual social contact occurred even though music was the main focus of attention. The bandstand, which evolved in France during the Revolution, gave a distinctive architectural style to these occasions.

In many instances, band concerts developed into major cultural and social institutions. In the USA during the late 19th century the Marine Corps Band gave weekly performances at the White House, the military barracks and the Capitol; J.P. Sousa, who directed it from 1880 but left in 1892 to form his own band, was counted among one of the leading figures in the nation's musical life. Bands performed repertory from both the opera and concert music; when Sousa took over, he was surprised to find that 'here was not a sheet of Wagner, Berlioz, Grieg, Tchaikovsky, or any other of the modern composers who were attracting attention throughout the musical world'. By the same token, in such countries as France and the USA, major orchestras performed, indoors, marches composed originally for bands.

Choruses and bands brought into concert life people from the lower-middle and working classes who had formerly had little to do with it. From the 1830s music teachers in many countries brought music education to a wider segment of the population. By the end of the century most countries had choral or choral-orchestral festivals with large numbers of performers, who sang the better-known oratorios and an expanding repertory of new works. In France the Orphéon movement began in the 1830s, as a government programme of choral societies among workers; in Britain the Tonic Sol-fa movement was established. Equally important was the widespread founding of choruses, brass bands and even orchestras on local initiative. Most small cities and towns in the early 20th century had several such organizations, made up of

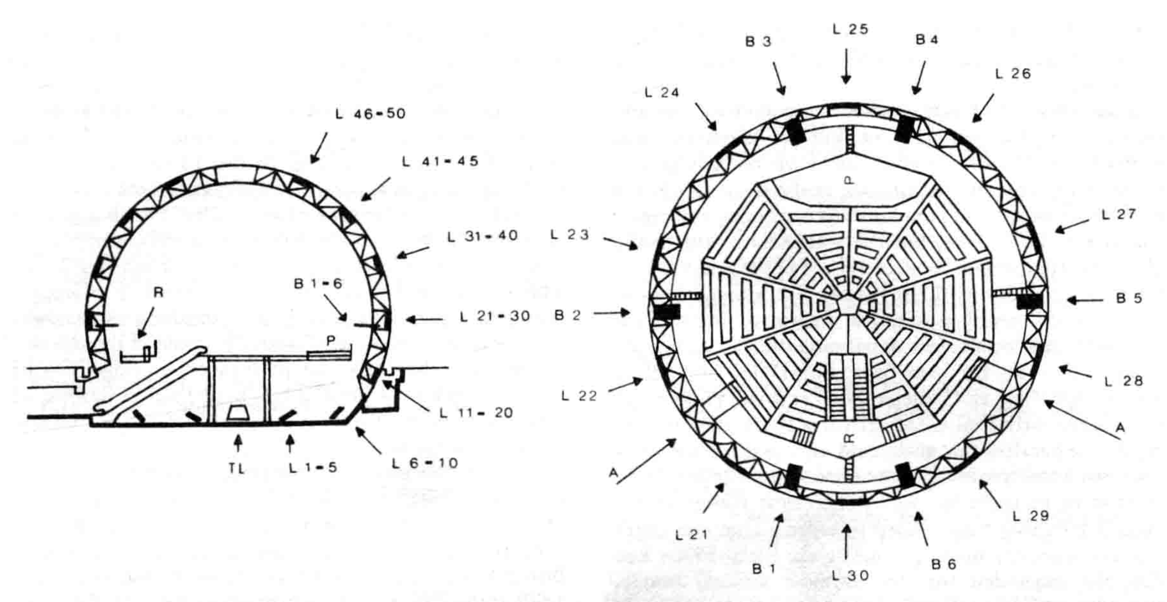
people outside the upper or even the middle classes. Their activities were stimulated by competitive festivals.

The growth of such groups was particularly strong in industrial towns, especially in northern England and western Germany. Factory owners often helped foster cultural pursuits that might induce a happier work force, but the initiative came chiefly from the workers' communities and does not seem to have sprung from emulation of the educated classes. Musical ensembles and the larger organizations around them became focal points of local life, but regional and national festivals and competitions grew up that made them well known nationally. Like the military bands, working-class ensembles performed transcriptions of opera overtures and symphonic works as well as popular songs and marches. In Germany and Austria, bands and choruses played active political roles, chiefly in the socialist movement; this happened less in England, although major unions had music societies that provided an important cultural unity within social gatherings of the union and the local community.

5. After 1945.

(i) Mainstream concert life. During the period between the Revolution of 1848 and World War II, concert life flourished: there was a relative continuity in repertory, taste and social locales within which there was some remarkable music-making in a public context. Cities tended to be close-knit and easily accessible, integral communities within which concert life served as one of the citizens' main pleasures. This was underpinned by links between domestic and public music: many people played at home what they heard in halls. New music, though increasingly controversial and less and less performed on the whole, still was often given and entered into creative interaction with the classics.

Much of this changed in the later 20th century. Air travel, television, motorways and the opening up of new cultural media harmed some aspects of concert life while helping others. Some small communities that once sustained bands, choruses and orchestras disappeared or lost the musical focus of their cultural life. But the central feature – symphony orchestras performing a standard, well-defined repertory, chiefly of music from the Viennese Classics to the early 20th century, in large concert halls in the major cities – prevailed until the 1980s. Since 1945 the presence of new music within the generality of concert programmes and the taste of the public underwent a marked decline. Orchestral and chamber music concerts, in particular, came increasingly to draw on a repertory of the past in a way that only a few specialist organizations had formerly done.



At the same time, significant innovations came about in the second half of the century, most prominently in the realms of early music and new music. Further, the level of performance improved in general, because conservatories set increasingly high standards and because recording companies (whose activities underpinned the finances of many orchestras) made new demands of technical excellence.

(ii) New music. It was as much an innovation to put on a concert exclusively of new music around 1900 as it was to put on one of old works alone in 1776. This new kind of concert sprang from the new avant garde that developed in music, as in other arts, at the turn of the 20th century. In the 1880s composers under the leadership of German Wagnerians began holding concerts devoted to new works and addressed specifically to the audience sympathetic to such music. Schoenberg helped Alexander Zemlinsky on an important such series in 1903 and then in 1919 established the Societät für Privat-Aufführungen, to which the press was not admitted. The International Society for Contemporary Music was set up by a more varied group of musicians in 1922.

Concerts devoted to new music became more widespread and significant within musical life after 1945. Funding for avant-garde works was provided by numerous organizations, most prominently state radio stations in Europe and universities in North America. Among the new music centres to develop were the Darmstadt Festival, the Donaueschingen Festival (Baden-Baden), the Domaine Musicale in Paris and the League of Composers in New York, as well as university programmes in several cities

9. Plan (right) and section through the spherical auditorium designed by Stockhausen for the Osaka World Fair, 1970, showing the positions of the seating, musicians' podium (P), 6 soloists' balconies (B), control desk (R) and 50 loudspeakers (L) arranged in 7 concentric circles: diagram from the score of 'Spiral' (1973)

such as Princeton, New York, Buffalo, Chicago and San Diego.

Several new music concert groups that built substantial new publics outside the universities were those linked to other art worlds. John Cage exercised powerful leadership in this development, in Europe as well as in the USA. Here 'concert' no longer necessarily signifies the performance of integral, printed works before a silent, seated public, but rather the creation of what has been called a musical 'environment', where performers and perhaps listeners take part in shaping the music. Cage's colleague David Tudor was a pioneer in using electronic sound and 'found objects' to design these experiences.

(iii) Early music. World War II was a watershed for early music as much as new music. Interest had arisen during the late 19th and early 20th centuries in music from before 1700, more among small circles of advocates than in the concert world. In England the main leader in the movement was Arnold Dolmetsch, who after holding an important concert in 1891 in Prince's Hall, Piccadilly, offered performances chiefly in his home in Dulwich. Few of the early ensembles held regular public concerts, and the most prominent performers – the harpsichordist Wanda Landowska, for example – tended to be singers or keyboard players with performing styles similar to traditional practices.

After 1945 the field benefited from easier travel, the expansion of the record industry, the interest of foundations in supporting concerts and the advance of musicological research. Leadership in mounting concerts of early music in the 1950s came chiefly from London, New York, Vienna and The Hague, as new instrumental and vocal ensembles began giving regular series of concerts and touring internationally. Noah Greenberg founded the New York Pro Musica in 1953, achieving a wide public new to medieval music with *The Play of Herod* (1958) and television appearances. Leading early ensembles in Europe were Musica Reservata, the Deller Consort, the Brussels Pro Musica Antiqua, the Prague Madrigal Group and the Schola Cantorum Basiliensis. Among the performers who emerged in the 1960s were the harpsichordist Gustav Leonhardt, David Munrow (founder of the Early Music Consort of London), the eminent recorder player Frans Brüggen and Nikolaus Harnoncourt (head of Concentus Musicus of Vienna). By 1990 early music had become a major component of the concert world, with performers who often worked in new music as well. Historically aware performing practice and instrumentation has had a strong impact on concert life generally and in many cases mainstream performing groups have begun following the same principles.

(iv) Jazz and rock. The shift of jazz and rock music into concert settings between the 1930s and the 1950s marked an expansion in the range of concert activity. Idioms that had evolved in dance halls and nightclubs at first seemed foreign to the concert hall, because of the seemingly functional role of the music and casual manner of musical and social practices; but in each case the idiom changed in ways that made the term 'concert' seem appropriate. Such repertories had appeared periodically in concert halls before the 1930s, but presented chiefly as a curiosity. Between 1935 and 1945 first swing and then bebop became sought after by a new set of white aficionados and critics in the USA who argued the seriousness of the two idioms. The concert usually cited as the breakthrough for jazz was one given by Benny Goodman in Carnegie Hall, New York, on 16 January 1938; another major event was Eddie Condon's performances of bebop at New York Town Hall in 1942, when his rhythmic sophistication attracted Peggy Guggenheim's patronage. The shift into the concert hall continued with performances in Philharmonic Hall, Los Angeles, tours by Charlie Parker and Dizzy Gillespie during the 1940s and then those by Dave Mulligan, the Dave Brubeck Quartet and the Modern Jazz Quartet in the 1950s. In the 1960s college engagements opened up new possibilities for jazz concerts, and the closure of clubs in the 1980s and early 90s made jazz even more focussed upon the concert hall. Jazz

concerts became numerous and prominent in Europe; festivals began as early as 1948 in Paris and 1953 in Frankfurt.

Rock music, like jazz, shifted from dance halls and nightclubs to the concert stage, but did so earlier in its evolution and with a greater focus on recordings and radio. Soon after the rise of rock in the early 1950s, the performers became so popular that they began putting on concerts in large halls, but the weakness of the sound effects compared with those on record or the radio limited the number of events. Elvis Presley was among those to overcome this problem with the theatrical nature of his presentations. Popular folk music took the lead in concerts along with rock, for Joan Baez, Bob Dylan and others began appearing at Carnegie Hall and the Hollywood Bowl in the early 1960s. The arrival of the Beatles in 1964 greatly expanded the scale and the market for rock concerts, notably with the use of baseball stadiums. Their manner of presentation was nonetheless rooted in the nightclub in that they tended to wear a common outfit and use standard lighting. During the early 1970s Led Zeppelin expanded the use of light strobes, smoke, projections and fantastic, individualized costumes, techniques that San Francisco promoters had devised in dance halls such as the Fillmore Auditorium. During the 1980s heavy metal groups made such effects a major focus of their concerts.

6. The spread of concert life. The widening of public concert activity beyond its original bases in western Europe has occurred in conjunction either with population movements, touring musicians or diplomatic and cultural contacts. Concerts came to eastern Europe through touring musicians, originally singers or opera companies who from the middle of the 18th century were brought to courts and cities east of Berlin or Prague, and who also gave private performances. By the early 19th century in Moscow the court theatre held concerts on religious feast days, when opera and drama were forbidden, in the Assembly of the Nobility. Instrumentalists also were attracted to Russia: John Field and J.W. Hässler spent extended periods there. Liszt had a major impact in spreading concerts widely in eastern Europe in his tours of 1842–3 and 1847, travelling across Hungary, Romania, Russia and Turkey. Anton Rubinstein led in the establishment of the orchestral concerts of the Russian Music Society in 1860, and the Moscow PO was founded in 1883. By the same token, numerous musicians trained in such cities as Kiev and Odessa went to play in orchestras in western Europe and America.

In Latin America, musical life was focussed chiefly upon performances in churches, private homes and opera houses. But in most countries concert institutions followed during the early 19th century, becoming established, for example, in Buenos Aires (1822), Mexico City (1824) and Bogotá (1847). Concert tours to these countries grew at the end of the century in close relationship with the prominence of opera in Buenos Aires and Rio de Janeiro.

In North America, concerts came with the movement of population, at first most notably in Canada, where the music society, made up chiefly of amateurs, followed the English and French models. As early as the 1770s the Gentlemen's Subscription Concerts was formed in Quebec; in 1818 the Harmonic Society was directed by Charles Sauvageau in Toronto. In Quebec the Société Symphonique de Québec, the first independent orchestra, was formed in 1903.

Concerts arose similarly in the colonies in the towns and cities, still quite isolated, where professional musicians earned their living more by teaching and selling music than by performing. In the 1830s and 40s the building of roads and railways stimulated the growth of concert life on a far greater scale. First British and then German performers built up ensembles and audiences and thereby came to work as performers on a full-time basis. The Germania Society, a touring ensemble of recent immigrant musicians, ended up establishing its members in careers along the East Coast. The scale of the country necessitated the early rise of business management of concert tours, on a much larger scale than in Europe, as can be seen in the travels of Leopold Meyer, Ole Bull and Jenny Lind.

Western concerts arrived in Japan after the resumption of foreign contact in 1843, chiefly through the invitation of musicians by the government. The first Western concerts in Japan were in parks by American, Russian or British brass bands. The Tokyo Music School, founded in 1879 as the Office of Musical Study and renamed in 1887 (now the Tokyo National University of Fine Arts and Music), sponsored an orchestra that provided the focus of Tokyo musical life until the 1920s. A variety of American, British and German musicians were invited to train musicians and participate within concert life.

The principal orchestra in Japan was founded in 1927 as the New Symphony Orchestra under the direction of Hidemaro Konoe. Made up of professional players, it established the first subscription concert series in Tokyo. Joseph Rosenstock, who became conductor in 1936, expanded both public and repertory, performing more music from the Baroque and Classical periods and introducing such new works as Bartók's *Music for Strings, Percussion and Celesta* in 1939. In 1951 it became linked to the Japan Broadcasting Corporation (NHK) and was named the NHK SO.

Orchestral concerts grew to a much greater extent than did opera in Japan. The Tokyo SO was established in 1946; there are also prominent orchestras in such cities as Osaka and Kyoto. Concert life burgeoned later in the century; after the widespread construction of concert halls in the 1980s there were 1512 in use by 1990. In 1979 around 2000 classical music concerts were held; by the 1991–2 season, 8432 concerts took place, including 3792 in Tokyo and Yokohama (only one quarter by foreign ensembles). Traditions distinctive to Japan include the performance of Beethoven's Ninth Symphony at the end of each year; it was given 158 times in the last six weeks of 1991.

Further information on concert life and history may be found under the relevant headings in city articles.

WILLIAM WEBER

Concertante (It.; Fr. *concertans*, *concertant*). A term, derived from the present participle of the Italian verb *concertare* ('to arrange', 'to agree', 'to get together'), generally signifying music that is in some sense soloistic, with a contrasting element, or 'concerto-like'. In the Baroque period it was sometimes used, more or less interchangeably with CONCERTATO, to describe a group of mixed musical forces, generally vocal and instrumental or comprising a larger ensemble and a smaller one. Early dictionary explanations can be confusing at best. For instance, Pepusch (cited by Strahle), among others, defined a concertante part as one which plays throughout and not just in sections. This comes into focus only if we recall the custom of soloists playing along in tutti sections as well as in those parts intended for them. In the second half of the 18th century it was principally used adjectivally, to qualify such terms as symphony and quartet. The SYMPHONIE CONCERTANTE (Fr.; It. *sinfonia concertante*) is a work in the new symphonic style with two or more solo instruments, in fact a multiple concerto (rather than a symphony with solo parts); the form was popular, particularly in Paris, from about 1767 until the early 19th century, and examples by Haydn and Mozart remain in the standard repertory. Towards the end of the 18th century the term 'concertante' was widely used substantively in this sense: William Jackson (i) (*Observations on the Present State of Music in London*, 1791) described the concertante with three, four or five principal performers as the 'most pleasing of all instrumental compositions' then in vogue. Jackson's observation undoubtedly reflected current English usage in including works otherwise called 'symphonie concertante'. Around this time K.F. Baumgarten's 'Concertante' achieved success in London, but more familiar names are represented in revivals of J.C. Bach and in new or recent works of Pleyel and Haydn. Used of the string quartet (*see* QUATUOR CONCERTANT), it implied that the parts were of equal importance; this usage too was specially evident in Paris in the late 18th century. As applied to the keyboard sonata with string accompaniment the term distinguishes an essential, melodic string part from an optional one, and is thus comparable to 'obbligato' but stronger. In the 19th century the term was sometimes used, as in Spohr's 'concertante quartets', to signify in chamber music a concerto-like emphasis on one instrument (by analogy with the symphonie concertante), and thus in a sense opposite to its earlier meaning. The term continued in use in the 20th century, sometimes in compositions in a neo-classical mould. Examples include Tippett (Fantasia concertante), Irving Fine (Toccata concertante), Foss (Allegro concertante), Mennin (Sonata concertante), Rochberg (Duo concertante), and Stravinsky (Duo concertante, Danses concertantes), besides examples of 'sinfonia concertante' or its variants (Berkeley, Diamond, Enescu, Martin, Szymanowski, Walton).

Concertato (It.: 'concerted'). (1) A style, as in *stile concertato*, implying the interaction of diverse musical forces. The concertato style is most characteristic of Italian and German church music in the first half of the 17th century. The forces used need not be lavish, ranging from a handful of solo voices with organ to soloists, multiple choirs and instruments. Successive portions of the text are set in sharply contrasting textures and styles: solo, tutti, antiphony, imitative polyphony, homophony, passages for instruments alone, etc. Emotionalism and ornamentation may characterize writing for solo voice(s), and there may be affective or dramatic treatment of the harmony. The interaction of voices or groups of voices in CORI SPEZZATI, dialogue and imitative polyphony contributed to the development of the style, but the emergence of the continuo was crucial, here as in so many early Baroque innovations. Concertato style appears in many genres: madrigal (e.g. Malvezzi, *Intermedii*, 1589, published 1591), psalm (e.g. Rovetta, *Salmi concertati*, 1626), mass (e.g. Bartolini, *Messe concertate*, 1633) and motet (e.g. G.B. Crivelli, *Il primo libro delli motetti concertati*, 1626), though motets in concertato style were more likely to be called 'sacred concertos', following Andrea and Giovanni Gabrieli's *Concerti* (1587). Thus Schütz called his collections of concertato motets *Kleine geistliche Concerte* (1636, 1639), and as late as 1650 was using another Gabrielian term, *Symphoniae sacrae*, for works essentially of the same genre. Some German examples, such as Schütz's *Saul, Saul, was verfolgst du mich?*, develop a dramatic, almost operatic intensity. In the chorale concertato, successive phrases of the chorale melody provide the thematic basis of the interaction between forces. In the later Baroque there was a tendency for the sections to separate into discrete movements, heralding the emergence of the cantata.

(2) Another term for the concertino group in a concerto. Vocal soloists are sometimes designated *coro concertato* as distinct from the *coro ripieno* or *cappella*.

(3) Bukofzer proposed that the term 'concertato' be applied to all sacred vocal music of the 17th century. However, contemporary usage indicates that *stile concertato* denoted a performance idiom, and that the objective

'concertato' could be applied to genres, as for example in the 'concertato motet', or (as Palisca preferred) the sacred concerto.

See CONCERTO.

ANTHONY F. CARVER

Concert de la Loge Olympique. Parisian concert series, previously known as the Concert des Amateurs and renamed in 1780. *See* PARIS, §IV, 2.

Concertgebouw Orchestra. Symphony orchestra founded in Amsterdam in 1888. *See* AMSTERDAM, §3.

Concert Hall Society. American, later European, record company. It was founded in 1945 by David Josefowitz, a violinist and conductor, to sell 78 r.p.m. vinyl records of unfamiliar repertory by mail-order subscription. The first 18 sets, consisting mostly of two or three discs, appeared during 1946 and offered 20th-century music as well as varied classics. The performers were mostly chamber ensembles (Stuyvesant Quartet) and soloists (the pianist Robert Goldsand). A big success of the first year was Vivaldi's *Four Seasons* conducted by Henry Swoboda (one of the first two recordings of the work). A separate retail catalogue was developed on LP in September 1949, and the LP format was extended to the subscription series the next year. Most of the subscription discs, which were issued until 1951, eventually appeared in the retail series. Swoboda, Clemens Dahinden and Victor Desarzens conducted the Winterthur City Orchestra in the early years. A new low-priced mail-order series aimed at a more general audience and partly drawn from the existing catalogue was begun as Musical Masterpiece Society in 1953. By 1955 this label was established in France, and in 1956 Josefowitz sold the US firm and moved to Europe. Already in 1956 he had issued open-reel stereo tapes in the USA. By 1959 a formidable record club was operating in Europe and elsewhere under the names La Guilde Internationale du Disque (GID) and, in Britain, Concert Hall. While many lesser conductors were employed, a few recordings were also made with Pierre Boulez, Paul Kletzki, Josef Krips, Lorin Maazel, Igor Markevich, Pierre Monteux, Charles Münch, Paul Paray and Carl Schuricht at either the beginning or the end of their careers; some of these were licensed to US labels. The firm went out of business with the retirement of Josefowitz in 1981.

JEROME F. WEBER

Concertina (Fr. *concertina*; Ger. *Konzertina*; It. *piccola fisarmonica*) [squeezebox]. A bellows-blown, hexagonal- or octagonal-shaped, FREE REED instrument, with buttons parallel to the bellows on both sides (thus different in appearance from the accordion, which is rectangular and has its buttons or keys perpendicular to the bellows. For an illustration of the free reed of a concertina *see* REED, fig.3*c*). Three different types cut across two national traditions.

1. English concertina. 2. Anglo concertina. 3. Duet concertina.

1. ENGLISH CONCERTINA. Also known as 'Wheatstone English' concertina. The term 'English' refers both to national origins and to a specific type within the English tradition; 'Wheatstone' designates the inventor and leading manufacturer. The English concertina was developed by the physicist SIR CHARLES WHEATSTONE (1802–75) in the late 1820s in response to widespread interest in free-reed instruments. The earliest sketches for it appear in Wheatstone's 1829 patent for another free-reed instrument, his slightly earlier *symphonion* (invented about 1825), which was a mouth-blown, harmonica-like instrument with buttons on its sides. Thus the concertina was an offshoot of the symphonion, its bellows replacing the latter's blowing mechanism.

The Wheatstone English concertina is a fully chromatic instrument on which a single button produces one pitch regardless of the direction of the bellows, with a range – for the treble concertina – of *g* to either *c''''* (48 buttons) or *g''''* (56 buttons). Tenor, baritone and bass concertinas have the same compass starting from *c*, *G* and *C* respectively. (There is also a treble-tenor, which combines the ranges of those two, and an almost toy-like piccolo.)

The layout of the buttons is ingenious.Fig.1 shows a 48-button treble: all notes on lines of the staff appear in the left hand, those in the spaces in the right; the two vertical rows in the centre give the notes of C major, the outer rows, the sharps and flats; the duplication between *e*♭/*d*♯ and *a*♭/*g*♯ is a relic of the instrument's early meantone tuning, which began to give way in about 1860 (after drawing criticism from Berlioz in the second edition of his *Grand traité d'instrumentation et d'orchestration modernes* (1855), where, however, he praised the concertina's timbre).

With the beginning of commercial production by Wheatstone & Co. in the early 1830s, the English concertina quickly found a home in upper- and middle-class drawing-rooms; the Wheatstone sales ledgers, preserved with the Wayne Collection of Concertinas at the Horniman Museum, London (formerly at Belper, Derby), contain the names of many titled buyers. The repertory consisted largely of arrangements of opera highlights and other popular songs of the day. On the concert stage, the instrument's breakthrough came in 1834, when GIULIO REGONDI, the leading concertina virtuoso of the period (and a well-known guitarist), first performed in Ireland, and followed that up with the instrument's first gaudy success at the 1837 Birmingham Music Festival. For much of the remainder of the century, both Regondi and Richard Blagrove (*see* BLAGROVE) kept the instrument in the spotlight, even forming a well-received concertina quartet in 1844.

The concertina's rising popularity was matched by its growing repertory: an 1860 catalogue issued by the London publisher J.J. Ewer lists almost 450 items for the instrument. Most of these works, which range from easy-to-play arrangements for amateurs to original, virtuoso show-stoppers, were written by concertinists themselves, most notably Regondi and Blagrove. In addition, during the 1850s and 60s a number of 'mainstream' composers contributed to the repertory; John Barnett, Julius Benedict, George Macfarren, Bernhard Molique and (in the 1870s) Edouard Silas provided the concertina with concertos, sonatas, chamber works and rather lovely character pieces. Exx.1 and 2 provide an idea of the expressive and

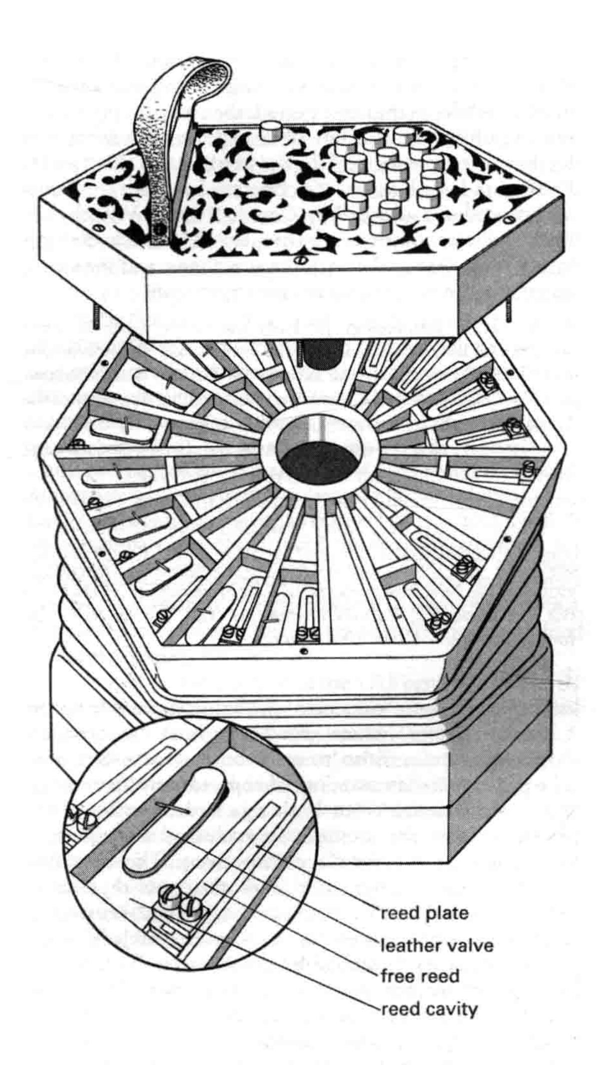
Ex.1 Barnett: *Spare Moments, no.1* (bars 5–13)

technical range found in these works. While Barnett's work shows the lyric, singing quality of which the English concertina was capable, Regondi's demonstrates its virtuoso capabilities: thick (finger-knotting) chords, rapid single-note passages and quasi-contrapuntal combinations of the two.



By the closing decades of the century, the concertina's career as a 'serious' instrument was on the wane, a victim both of lukewarm critical reception (George Bernard Shaw, who had nothing but praise for the instrument, was a notable exception) and of socio-economic circumstances: with the advent of mass-produced concertinas introduced in the 1860s by Louis Lachenal & Co., which had the effect of making cheaper instruments readily available, the concertina was coming to be associated mainly with the 'folk', both urban (on street corners and in music halls) and rural (in the Morris dance revival). Its changed status was evident everywhere: in the concertina bands of the northern industrial towns (for which there were annual competitions); in the ways in which Charles Ives (Orchestral Set no.2, third movement, 1915–*c*1929) and Percy Grainger (*Shepherd's Hey*, 1908–13, and *Scotch Strathspey and Reel*, 1901–11) used the instrument; and even in fiction, where the concertina fell in social stature from the hands of the villainous, but highly cultivated Count Fosco, who renders Rossini on it in Wilkie Collins's *The Woman in White* (1859–60), to those of the 'ne'er-do-well' Bob Hewitt in George Gissing's *The Nether World* (1889) and the drunken, unlicensed dentist who plays 'lugubrious airs' in Frank Norris's *McTeague* (1899 – set as an opera, with the concertina sound produced by a synthesizer, by William Bolcom in 1992). Even in these more humble settings, the English concertina was challenged by two other types: the 'Anglo' and the 'duet'.

Only since the 1980s has the English concertina enjoyed a small revival in art-music circles, with more than a dozen pieces exploiting the instrument's full potential: among them, Rien Snoeren's Baroque-like *Tempesta* for unaccompanied concertina, Alla Borzova's jazz-influenced *Pinsk and Blue* for concertina and piano, and Alistair Anderson's *On Cheviot Hills*, for concertina and string quartet, with its evocation of the folk music of Northumbria.

2. Anglo concertina. The Anglo ('Anglo-continental' or 'Anglo-German') concertina is the British adaptation of the square-shaped, diatonic, German *Konzertina* ('Chemnitz' concertina) developed by Carl Friedrich Uhlig in the mid-1830s (and depicted in John Everett Millais's painting *The Blind Girl*; 1856, Birmingham City Museum and Art Gallery). Here each button produces two pitches, one as the bellows are pulled out, another when they are pushed in. On a basic 20-button Anglo concertina the buttons are arranged in two rows on each side, each of five buttons. The two rows are tuned a 5th apart (e.g. C/G, G/D or, more rarely, B♭/F), with the only 'chromatic' note allowing for secondary dominants. A 30-button Anglo has an extra row of buttons on each side, providing a range of accidentals and other useful notes (fig.2). Concertinas are sometimes custom-made, and Anglo players may commission instruments with 40 or more buttons, arranged according to their requirements to provide a wider range of chromatics and 'alternative positions' for some of the diatonic notes for increased

Ex.2 Regondi: *Remembrance* for unaccompanied baritone concertina

2. *Diagram of an 'Anglo' concertina with one casing raised to show the working parts*

flexibility. Sometimes a 'drone' button may be added, which plays the key note on both the push and the pull.

Having arrived in England around the middle of the 19th century, the Anglo first gained favour among street musicians. Later it came to be favoured by folk music performers (particularly in the south of England and in Ireland); indeed, it was an Anglo concertina player, William Kimber of the Headington Morris dancers (Oxfordshire), who helped bring about the revival of English folk music and Morris dancing at the beginning of the 20th century. The Anglo has gained currency in some popular music of South Africa, where it has the nickname 'squashbox'.

Ironically, the original German *Konzertina* on which the Anglo was modelled eventually enjoyed its greatest success in North and South America: in the polka bands of the mid-western United States, and – with modifications and a change of name to BANDONEON (after Heinrich Band who developed the instrument in the 1840s) – in the tango orchestras of Argentina. The bandoneon also figures in the works of Gordon Mumma, David Tudor and Astor Piazzolla, who, as he redefined the nature of the tango, raised the technical and expressive potential of the bandoneon to new heights.

3. DUET CONCERTINA. The duet concertina was first described by Wheatstone (who called it the 'double' after its ability to play melody and accompaniment) in a patent of 1844. Like the English concertina, it is fully chromatic. Three features set it apart from both English and Anglo concertinas: it has a large range, which could vary from three-and-a-half to five octaves (*C–c''''*) depending upon the number of buttons (up to 81); the buttons are laid out so that the right and left hands are each entirely self-sufficient and take treble and bass registers respectively, with about a one-octave overlap; it is therefore possible to play melody and accompaniment on the duet concertina in a piano-like fashion. The duet concertina was adopted particularly in the British music hall, where Alexander Prince (*d* 1928) and Perci Honri (Percy Thompson, 1874–1953) played their transcriptions of Wagner's overture to *Tannhäuser* and Sullivan's ballad *The Lost Chord*, and in the Salvation Army, which even developed its own version of the instrument.

Lately there has been renewed interest in the concertina. Festivals in both England and the United States draw hundreds of players; the journal *Concertina & Squeezebox* provided a lively forum from 1983 to 1996, while the *International Concertina Association Newsletter* continues to appear on a quarterly basis, the *Free-Reed Journal* as an annual; and a small number of British manufacturers have revived the art of making first-class instruments (of all three types). Although most of the activity has been folk-music related, the English-system concertina has attracted the attention of a number of art-music composers, while a few performers and scholars have turned to the instrument's Victorian concert and salon tradition, shedding light on its development and recreating its music on period instruments.

ALLAN W. ATLAS

Concertino (i) (It., diminutive of 'concerto'). The group of soloists in a Baroque concerto grosso. A concertino comprising the most common constituents of a Baroque trio sonata was made popular by the title-page of Corelli's op.6: *Concerti grossi con duoi violini, e violoncello di concertino obligato, e duoi altri violini, viola e basso ... ad arbitrio, che si potranno radoppiare*, 'Concerti grossi, with a concertino that must consist of two violins and a cello, with [a ripieno of] two more violins, a viola and a bass, whose number may be multiplied if so desired'. (The continuo instruments are not mentioned.) Associated wind and string instruments form the concertino in four of Bach's Brandenburg Concertos. Without archaic effect concertinos have been used in post-Baroque works, for example the string quartet in Elgar's Introduction and Allegro for strings. Stravinsky detached the quartet from the main string group and called it 'concertino' in his Concerto in D (1946). For an appraisal of the contribution of Geminiani to the development of the concertino group, see P. Walls: 'Geminiani and the Role of the Viola in the concerto grosso', *Liber amicorum John Steel*, ed. W. Drake (Stuyvesant, NY, 1997), 379–413.

ARTHUR HUTCHINGS

Concertino (ii). A work with solo instrument, or instruments, less ambitious in scale than a concerto, often with few movements, or cast in one movement with changes of speed and character. This meaning corresponds with *sinfonietta*. German practice, however, is to use the term *Konzertstück* to designate such a work as Weber's Clarinet Concertino. Among works of the miniature concerto type are Hindemith's Concertino for trautonium and strings, and Milhaud's *Concertino de printemps* for violin and orchestra. The title seems to have come into new vogue during the 1930s.

ARTHUR HUTCHINGS

Concertmaster. In American usage, the LEADER of an orchestra.

Concerto (Fr. *concert*; Ger. *Konzert*). An instrumental work that maintains contrast between an orchestral ensemble and a smaller group or a solo instrument, or among various groups of an undivided orchestra. Before 1700 the term was applied to pieces in a variety of forms for an even greater variety of performing media, voices as well as instruments; it was also used in the sense of 'ensemble' or 'orchestra'. Not until the beginning of the 18th century was it applied consistently (though not exclusively) to works in three movements (fast–slow–fast) for soloist and orchestra, two or more soloists and orchestra (concerto grosso) or undivided orchestra.

In the late 18th century and during most of the 19th and the solo concerto was a prominent form of virtuoso display, while, in the same period, the concerto grosso fell out of public favour; some of its aspects were subsumed by the short-lived form of the SYMPHONIE CONCERTANTE. During its long history, the concerto has built on forms and procedures adopted by Corelli, Torelli, Vivaldi, J.S. Bach and later composers, particularly Mozart, to develop into a form that ranks with the symphony and the string quartet in the range of its artistic expression.

1. ORIGINS.

(i) Terminology. 'Concerto' probably derives from the Latin *concertare*, which can mean both 'to contend, dispute, debate' and also 'to work together with someone'. The primary Italian meaning of *concertare* is 'to arrange, agree, get together', but both this and the other Latin definition (they are not mutually exclusive) were in use in the course of the form's development. Thus the first known musical application, 'un concerto di voci in musica' (Rome, 1519), clearly refers to a vocal ensemble, a 'getting together' of voices. A mixed ensemble of voices and instruments is implied by the description of the first *intermedio* for the marriage of Francesco de' Medici (1565): 'La musica di questo primo intermedio era concertato da . . .' (there follows a list of instruments). Here and in many later instances the word *concertato* can be approximately translated as 'accompanied'; the meaning 'ensemble' or 'orchestra' survived throughout the 17th century. Thus Trabaci (*Il secondo libro de ricercate*, 1615) referred to a 'concerto de Violini, o Viole ad Arco'; and from 1671 G.M. Bononcini described himself on title-pages as 'del concerto de gli strumenti dell'altezza serenissima di Modana' (a member of the Duke of Modena's orchestra).

About the beginning of the 17th century writers began to recognize the other latinate meaning of 'concerto', that is, 'strive, contend with'. Michael Praetorius (*Syntagma musicum*, iii, 1618) offered this more erudite definition; and Bottrigari (*Il desiderio, ovvero De' concerti di varij strumenti musicali*, 1594) also showed himself to be aware of the term's etymology. It is unclear how widespread was the acceptance of this definition at this time, however.

(ii) Early use of the term: the vocal concerto.

(a) Italy. The term concerto was originally used to refer to vocal and mixed vocal and instrumental forms. The earliest publication to have used it is the *Concerti di Andrea, et di Gio. Gabrieli* (Venice, 1587), which contains church music and madrigals in six to 16 parts. Performance by combinations of instruments and voices is implied in the preface, and these pieces are typical, in their short

cadence-aimed motifs and frequent changes of grouping (flexible in the smaller works, fully antiphonal in the larger pieces), of much music for large forces that went under the name 'concerto'. The motets by Giovanni Gabrieli in this collection are little different from those of his *Sacre symphoniae* of 1597; in the early period there was often no clear distinction of usage between 'concerto' and the Greek-derived 'sinfonia'.

A similar practice is implied in the *Intermedii et concerti* for the wedding of Ferdinando de' Medici, the publication of which (Venice, 1591) gives directions for the use of instruments. Most informative in this regard was Praetorius, who provided numerous and elaborate instructions for concerto performance (*Syntagma musicum*, iii), and whose own music was crucial in transmitting the Italian practice to German-speaking lands.

Early concertos for small forces, such as Lodovico Viadana's influential *Cento concerti ecclesiastici* for one to four voices and continuo (Venice, 1602, but composed in the mid-1590s), represented the adaptation of similar principles of limited forces. The connection is shown quite clearly in Fattorini's *Sacri concerti a due voci* (1600), whose second edition (1602) has four-part ripienos added with instructions for their use.

Throughout the first half of the 17th century, 'concerto' was a common term for Italian vocal music accompanied by instruments, applied with special frequency to church music. Works that use the term, or the entirely equivalent adjective 'concertato', include Simone Molinaro, *Concerti ecclesiastici a due et a quatro voci* (1605); Balbi, *Partitura delli concerti ecclesiastici* (1606); Ercole Porta, *Giardino di spirituali concerti* (1609); G.P. Cima, *Concerti ecclesiastici* (1610); Giulio Belli, *Concerti ecclesiastici* (1613); Francesco Milleville, *Concerti* (1617); Ghizzolo, *Messa, salmi . . . concertati a cinque, o nove voci* (1619; two choirs, with piano–forte effects and ripienos); Valerio Bona, *Otto ordini di letanie . . . concertate a doi chori* (1619); Milanuzzi, *Armonia sacra di concerti* (1622); Tarquinio Merula, *Il primo libro de motetti sonate concertati* (1624); Giovanni Rovetta, *Salmi concertati* (1626); Michel'Angelo Grancini, *Sacri fiori concertati* (1631); G.B. Faccini, *Salmi concertati* (1634); Guglielmo Lipparino, *Sacri concerti* (1627, 1635); and Cavalli, *Musiche sacre concernenti messa e salmi concertati* (1656). Some such works continue the large-scale antiphonal tradition of the Gabrielis, but most are for smaller forces, such as Banchieri's *Primo libro delle messe e motetti concertato con basso e due tenori nell'organo* (1620). The continuo is a constant element, and sometimes the substitution of an instrumental part for a vocal one, an integral part of concertato practice, is explicitly permitted, as in Banchieri's *Vezzo di perle musicali* (1610).

Among published secular concertos are Milleville, *Il primo libro de'madrigali in concerto* (1617); Monteverdi's seventh book of madrigals (1619); P. Lamoretti, *Primo libro de'madrigali concertati* (1621); Banchieri, *Il virtuoso ritrovo academico . . . con variati concerti musicali* (1626); G.G. Arrigoni, *Concerti di camera* (1635); Martino Pesenti, *Il quarto libro de madrigali . . . alcuni concertati con violini* (1638); Filiberto Laurenzi, *Concerti ed arie* (1641); and Biagio Marini, *Concerto terzo delle musiche da camera* (1649).

Occasionally works otherwise entitled are described as concertos within a publication, for instance in Franzoni's *Apparato musicale di messa, sinfonie, canzoni, motetti* (1613), Porta's *Sacro convito musicale* (1620; 'dovransi i presenti concerti cantar a battuta larga') and Allevi's *Terzo libro delle compositioni sacre*, for two to four voices (1668; 'questo terzo libro de' spirituali concerti'), a late application of the term to Italian vocal music.

(b) Germany. In Germany all forms of the sacred concerto were developed by a large number of composers, Protestant as well as Catholic. The new Italian concerto practice became known in Germany through the writings and musical works of Michael Praetorius. The first four parts of his *Musae Sioniae* (1605) are subtitled 'Geistliche Concert Gesänge', and these and other works reflect the influence of the Gabrielis in their use of opposing groups of voices and instruments. Viadana's *Concerti ecclesiastici*, for solo voices and basso continuo, which were reprinted in Germany, were also much emulated in technique and form by composers such as Praetorius and J.H. Schein.

Praetorius was the first of his generation to combine elements of Italian practice with German traditions to create works combining polychorality and continuo-accompanied solo singing, as in his *Polyhymnia caduceatrix* (1619), containing mostly large-scale choral concertos for vocal soloists and choirs of instruments and voices. Also in 1619, the first publication of sacred music by Schütz appeared: the *Psalmen Davids sampt etlichen Motetten und Concerten*. Schütz used both 'concerto' and 'motet' for his polychoral works, but those that incorporate elements of solo vocal writing are only called 'concerto'. In the wake of these publications the *geistliches Konzert* became the central form of Protestant church music. The direct successors of these pieces are to be found in works published in the 1620s by Samuel Scheidt, Daniel Selich and Melchior Franck; and Praetorius's influence can be traced even beyond the middle of the century.

Schütz's *Kleine geistliche Concerte* (1636–9) reflect an interest in Italian secular music, for example that of Monteverdi (e.g. the seventh book of madrigals, 1619) and Caccini. Indeed, his *Symphoniae sacrae* (1629, 1647, 1650) contain reworkings of pieces by Monteverdi and Grandi. The first volume contains concertos for one to three solo voices with instruments; these differ, in their freedom and flexibility in the use of voices and instruments and in their declamatory text setting, from the works of composers who emulated Viadana. Most significant is the increasing independence of the instrumental ensemble. In the third part of *Symphoniae sacrae* the works for up to four solo voices, two obbligato violins (or equivalent) and up to two four-voice choirs of singers and instruments exemplify Schütz's approach to the concerto form, combining expressive monody, exchange between solo and tutti, and contrast between solo vocal and instrumental passages and polychorality.

In the subsequent generation both this larger-scale construction and the smaller-scale *kleines geistliches Konzert* remained influential. However, the German vocal concerto began to take on aspects of secular chamber music (more wide-ranging use of the instrumental ensemble) and opera (the use of da capo form). Some composers (e.g. Christoph Bernhard) incorporated aria-like settings of free poetry in between the settings of biblical text, thus creating cantata-like works. Even so, others, such as Dedekind and Schelle, continued to compose unified

sacred concertos, setting biblical texts only, until the end of the 17th century; Weckmann's concertos were also important in the development of the form in the last part of the century, incorporating as they do elements taken over from cantata and oratorio as well. In this sense the term 'concerto' continued to be used for multi-movement works for many years afterwards, including for a number of Bach's church cantatas.

2. THE INSTRUMENTAL CONCERTO: ORIGINS TO 1750.

(i) Preconditions and ancestry. The instrumental concerto came into being in the last two decades of the 17th century. As originally conceived, the genre was a progressive offshoot of the sonata designed for performance by a string orchestra. Performance with only one instrument per part was rarely precluded but did not influence the basic conception. Orchestras on the modern pattern, with doubled string parts, began to emerge around 1670, notably in Rome and Bologna. From the start, the style and form of the concerto accommodated differences of status (between salaried and hired players) and ability (between advanced players and the rank and file) among the members of the orchestra, breaking with the more egalitarian tradition of the sonata.

Large ensembles need large – which often means reverberant – performing spaces. It was normal in early orchestral music, represented by the sonatas and sinfonias (the terms are synonymous) of the 'school' of S Petronio, Bologna, under its successive *maestri di cappella* Cazzati (1657–71), Colonna (1674–95) and Perti (1696–1756), to prefer a robust style that brought into prominence only one instrument at a time. The imitative interplay of the traditional sonata was replaced by a homophonic texture employing thematic requotation, brilliant passage-work and *concertato* dialogue as substitutes for contrapuntal elaboration. The many sonatas with one or more obbligato trumpets written at Bologna from the 1660s onwards by such composers as Cazzati, Gabrielli and Torelli exemplify this new style, which is directly ancestral to that of the concerto. Indeed, several Bolognese trumpet sonatas contain passages for solo strings indistinguishable from those in early concertos. Moreover, the highly characteristic thematic repertory of the natural trumpet, based on permutations of the major triad, the diatonic scale and the repeated note, was taken over unaltered into string writing, imparting a new vigour and directness. The first concertos might with justice be called 'trumpet sonatas without a trumpet'.

(ii) The two models: Roman and North Italian. Since the layout of string orchestras in Rome and in northern Italy (Venice, Milan, Bologna etc.) differed, correspondingly different approaches to the scoring and structure of the concerto developed in the two localities. Despite considerable cross-fertilization and hybridization of the two types, they remained distinct up to the end of the Baroque period. In Rome the core of the orchestra was a 'concertino' of two violins, cello (or lute) and continuo – identical with the players needed for a trio sonata (who were often employed as a group by a princely court). Complementing them was a larger body (termed 'ripieno' or 'concerto grosso') made up of the same instruments, freely doubled, plus contrabasses and, usually, violas; this ripieno was commonly recruited from freelance musicians. Roman concertos, therefore, normally employed four distinct violin parts.

In contrast, north Italian concertos were usually written for a simple orchestra in four parts. Where required, principal (solo) violin or cello parts were added to the corresponding ripieno parts (a second principal violin was usually drawn, like the first, from the ranks of the first violins). The most common type of string concerto after 1700, the *concerto a 5*, employs principal violin, two violins, viola and cello (the continuo is either identical with the cello or separate). If the Roman model can be said to treat the ripieno as an extension of the concertino, the north Italian concerto prefers to treat its soloists as offshoots of the ripieno. This difference explains why the former adhered closely to the sonata tradition, whereas the latter struck out along new paths.

Among the earliest Roman concertos were probably those written by Corelli (1653–1713), 12 of which were published in 1714 as his Concerti grossi op.6. Works of the same kind were certainly in existence by the early 1680s, when Georg Muffat heard them, but at that stage they were probably modelled very closely on the trio sonata. The published works, which Corelli revised in his last years, reveal some additional sources of influences – the solo violin sonata (shown by the preference for a five-movement plan), the trumpet sonata (seen in the concertato dialogue opening the first Allegro of the 12th sonata) and the north Italian concerto (as in the brilliant semiquaver figurations for the first concertino violin later in the same movement). Nevertheless, their description as 'amplified' trio sonatas, with effects of light and shade supplied by the ripieno, remains a useful simplification. Corelli's careful distinction between 'church' concertos (with 'abstract' movements) and 'chamber' concertos (with dance movements), paralleling the same division in his sonatas, was rarely observed by his successors and imitators in Rome, who included Giuseppe Valentini (1681–1753), Francesco [Antonio] Montanari (*d* 1730), Giovanni Mossi (*fl* 1716–33) and P.A. Locatelli (1695–1764). However, the Roman concerto – or, at least, Roman-style instrumentation – gained a new lease on life by being transplanted abroad, first to Germany and then to England.

Quantz (1752) identified Giuseppe Torelli (1658–1709) as the inventor of the concerto. There is little doubt that the six *concerti a quattro* published alongside six *sinfonie a tre* in Torelli's op.5 (Bologna, 1692) were the first works of their kind to appear in print. Moreover, they conform to the earliest published definition of the concerto, in Mattheson's *Das neu-eröffnete Orchestre* (1713), by having a dominant first-violin part, as opposed to the more contrapuntal style of the companion sonatas (sinfonias). Whether or not Torelli composed the first purely instrumental concertos, his were indisputably the first to circulate in print. Even more significant are Torelli's *Concerti musicali a quattro* op.6 (Augsburg, 1698). This set of 12 concertos includes two containing short passages for solo violin and one with similar passages for two violins. As in all concertos before Vivaldi, the solo passages are decorative rather than structural in function. In a preface Torelli explained (the need for the explanation is itself historically significant) that where 'solo' is written, only one instrument should play; elsewhere, as many as three or four players per part are acceptable.

Other sets of concertos published before 1700 include the concertos (appearing alongside sinfonias) in the

Brescian composer Giulio Taglietti's op.2 (1696) and the *Concerti grossi a più stromenti* op.2 (1698) by the Lucchese composer Giovanni Lorenzo Gregori. The latter works, musically very mediocre, are noteworthy for their collective title (*Concerti grossi* could be translated as 'Concertos for full band') and for the fact that, in the last movement of the fourth concerto, separate parts are provided for the solo violin and the orchestral first violins. The significance of the second feature is that it introduced the option of using orchestral violins, rather than merely continuo, to accompany the soloist.

In 1700 the Venetian composer Tomaso Albinoni brought out a landmark collection of sonatas (*sinfonie*) and concertos, op.2. The six concertos advance beyond Torelli by observing the three-movement (fast–slow–fast) plan regularly and adopting some of the stylistic mannerisms of the contemporary operatic sinfonia. Albinoni's *Concerti a cinque* op.5 (1707) go still further, reintroducing fugal texture (but now in combination with solo writing) and providing examples of lyrical slow movements – these had previously favoured simple chordal textures, sometimes enclosing a central section with rapid solo passage-work. Albinoni normally provided a separate volume for the principal violin, but the independence of this part from the orchestral first violins varies greatly from work to work, never dictating the structure. Other Venetian composers (Giorgio Gentili, op.5, 1708, and Benedetto Marcello, op.1, 1708) took a similar approach.

(iii) The Vivaldian revolution. The earliest concertos of Albinoni's fellow citizen Antonio Vivaldi (1678–1741), written in the years leading up to the publication of his epoch-making collection *L'estro armonico* op.3 (1711) mark the first regular use, in the outer fast movements, of ritornello form. This form, adumbrated by Torelli but never clinched, is an adaptation of a scheme already in use for a few decades in the 'A' sections of da capo arias. The ritornello – one or more ideas constituting a refrain played by the full ensemble – is used to establish the opening tonality and subsequently to affirm the various other tonalities reached in the course of the movement; the alternate sections (episodes), scored for the solo instrument with a generally light accompaniment, accomplish the structurally important modulations and supply contrasting themes or figurations. Since the number of ritornello statements is not prescribed (in slow movements, the number of its statements may even be reduced to two, framing a central solo portion), the form is extensible almost without limit. Normally, however, the ritornello statements number between four and six, of which a central group visits, in succession, a series of related keys (beginning with the dominant or relative major and nearly always including keys offering modal contrast). Ritornello form was in fact the first musical form routinely to present the same material in the major and the minor mode at different points in the movement. Leaving aside their structure, Vivaldi's concertos introduced an exciting new musical language full of simple, strong effects such as the orchestral unison, hitherto little employed outside opera. His solo parts in the fast movements set new standards of virtuosity and, to a limited but growing extent, started to offset the mandatory rapid passage-work with lyrical moments that prefigure the 'singing allegro' style of the later 18th century. All these features speedily became part of the universal language of the concerto – and, through stylistic osmosis, also of other genres. Vivaldi's nine published collections of concertos, supported by hundreds of other concertos circulating only in manuscript, were suited to performance in many different locales, including churches, theatres, banqueting rooms, concert halls and music societies. Their appropriateness for so many functional contexts – sacred or secular, ceremonial or recreational, public or private – lay behind their immense popularity. Not by chance, the rise of the concerto coincided exactly with that of music publishing in north-western Europe; each proved greatly beneficial to the other.

Vivaldi's style continued to develop after op.3. Opp.4, 6 and 7, all published before 1720, crystallize still further the formal and stylistic traits introduced in *L'estro armonico* (ironically, in view of its great historical impact, op.3 evidences these traits often rather unclearly, since the collection is overlaid by eclectic features, including the use of four violin partbooks, Roman style). During the 1720s Vivaldi wrote several 'allusive' (i.e. picturesque or programmatic) concertos, of which *Le quattro stagioni* op.8 nos.1–4 (RV269, 315, 293, 297) are the most highly developed examples. These import into purely instrumental music a repertory of onomatopoeic and pictorial effects that had long existed in opera, a genre to which Vivaldi dedicated himself assiduously from 1713 onwards. Strangely, his programme concertos had no real successors within their own genre (except, perhaps, for Locatelli's *Il pianto d'Arianna*), although they certainly exerted considerable influence on music in such other genres as the symphony and oratorio. In his last concertos, written towards 1740, Vivaldi adopted some of the *galant* mannerisms of his younger rivals.

Most of the favoured styles of treatment of the slow movement in the Baroque concerto are present in Vivaldi's concertos. At one extreme, we encounter fully scored movements employing standard ritornello form (albeit on a reduced scale), besides the simple 'frame ritornello' mentioned earlier. The other extreme is represented by movements for one or more soloists, accompanied only by continuo and usually cast in binary form, that would be perfectly in place in a sonata (the middle movement of *Il gardellino* op.10 no.3 (RV428) is a good example). Through-composed slow movements, with full or reduced scoring, are also common, although close inspection reveals that many such movements are in a binary form lacking the normal repeats. In solo concertos the emphasis of the solo part is predominantly lyrical; it is usually notated in 'outline' form in the expectation that the performer will, through improvised embellishment, produce a more flowing, expressive and individualized melody.

(iv) Typology of the Baroque concerto. All the main types of concerto (leaving aside the Roman concerto as already described) were cultivated by Vivaldi. The most common type, totally dominant after 1710, was the concerto for one solo instrument and string orchestra, or 'solo' concerto. Originally, the principal part was entrusted only to a violin – and the violin remained by far the most popular choice – but in the three decades following *L'estro armonico* most other instruments acquired a repertory of solo concertos. Those for the cello, oboe and transverse flute are particularly extensive. Only the double bass and the viola, it seems, were excluded (the latter not wholly, however, since Telemann left one example of a viola concerto).

Concertos for two solo instruments, either of the same kind or of different kinds, are, in structural terms, basically identical with solo concertos. There remains the problem of how to combine the two soloists in the solo episodes. Four solutions are favoured: (1) the two instruments team up in parallel 3rds or 6ths; (2) they play alternately, dialogue fashion; (3) they play in imitation or some other kind of counterpoint; (4) one instrument plays a melody, while the other provides accompanimental figuration.

Concertos for more than two solo instruments follow the same pattern. The potential for giving the solo instruments (especially when wind instruments) independent or semi-independent parts in the tutti sections is often exploited. This feature, seen in Vivaldi but more particularly in his German imitators (J.S. Bach, Telemann, Pisendel), looks forward to the orchestration of the Classical symphony. No satisfactory short form of description for concertos with multiple soloists exists in English (the Germans have *Gruppenkonzert*, literally 'ensemble concerto'). Following Quantz, many present-day writers use 'concerto grosso' indiscriminately for any concerto with more than one soloist, but this practice is best avoided since it too often conflicts with the general usage of the period and proves confusing (using the same term for the Baroque concerto *tout court* is even less justifiable).

Concertos for a group of solo instruments (generally between three and six) with continuo but without orchestra were written in some quantity by Vivaldi and occasionally imitated by others – for example, by Boismortier in France and J.S. Bach in Germany (in his Third and Sixth Brandenburg Concertos). In German sources such works often masquerade as sonatas, although their characteristics are entirely concerto-like. The distinction between 'tutti' and 'solo' (hence of ritornello and episode) is maintained by interpreting the former as the entire ensemble, the latter as a subgroup, either constant or variable in its composition. The ultimate reduction of the performing ensemble was to a single instrument, as seen in Bach's Italian Concerto for solo harpsichord (1735), many aspects of which had been worked out in the same composer's much earlier harpsichord and organ transcriptions of concertos by Vivaldi and others.

Finally, one should not ignore the tenacious survival, mostly in Italy, of the *concerto a quattro* (sometimes known as the 'ripieno' concerto), a linear descendant of the genre's prototype. Such works are stylistically very heterogeneous. They sometimes adopt a complex contrapuntal language and, freed from the necessity to gratify a soloist, contain concentrated thematic development; on the other hand, they may appropriate the simpler, treble-dominated style of the contemporary sinfonia.

(v) Italy, after Vivaldi. Italian composers contemporary with, or slightly older than, Vivaldi (Albinoni, E.F. Dall'Abaco, F.A. Bonporti) rarely accepted his formal innovations completely, although they were influenced by his musical idiom in general and by the virtuoso character of his solo parts. The first Italian 'Vivaldian' was the minor Bolognese composer Giuseppe Matteo Alberti (1685–1751), whose op.1 (1713) distils – albeit in rather jejune, stereotyped form – the essence of the solo concertos in *L'estro armonico*. The most significant Italian composers for the genre during the last phase of the Baroque period were P.A. Locatelli and Giuseppe Tartini (1692–1770). Born in Bergamo but trained in the Roman school, to whose practice his first set of concertos (op.1, 1721) conforms, Locatelli internationalized (one could as easily write 'modernized' or 'vivaldianized') his style after settling in Amsterdam in 1729. His solo concertos published in 1733 as *L'arte del violino* op.3 are significant in two respects. First, they contain exceptionally long, polythematic opening ritornellos that prefigure those of the Classical concerto. Second, their fast movements all have an extended written-out cadenza (or 'capriccio'), a feature that shows the growing importance of this device, encountered earlier in a few violin concertos by Vivaldi. The concertos of Tartini, who was born in Istria but spent most of his life in Padua, are noteworthy for the cantabile quality of their solo line, their highly symmetrical phrase structure (anticipating Classical style) and their characteristic way of accompanying a solo violin on the orchestral violins (in two parts) alone. Tartini's activity as a teacher provides an important connecting link between the Baroque and Classical concerto. The production of concertos by composers of the Neapolitan school was low in comparison with northern Italy, but not negligible; those by Leonardo Leo (1694–1744) and Francesco Durante (1684–1755) are especially fine.

(vi) Germany, before Vivaldi. Several general features characterize the German concerto. Because the genre was imported from outside, its evolution was more discontinuous, more inclined to make bold leaps than in its country of origin. The German cultural preference for contrapuntal rigour and thematic economy favoured the moderation of technical difficulties and the close integration of principal and subsidiary musical material – features associated above all with J.S. Bach but shared in some degree by most of his German contemporaries. The popularity at German courts of French instrumental music, typified by the *ouverture*, led to considerable hybridization; Bach's First Brandenburg Concerto, which begins as a three-movement concerto but ends as a suite, is no isolated case. The substitution of rondo (*rondeau*) form for ritornello form, occasionally seen in Bach and Telemann, is another French-inspired feature. Lastly, the wider cultivation (and manufacture) of wind instruments in Germany, as compared with Italy, left its mark on the choice of solo, and sometimes also orchestral, instruments.

At the head of the line stands Georg Muffat. The five sonatas of his *Armonico tributo* (Salzburg, 1682), capable, according to the composer's instructions, of being performed as concertos by observing the 'solo' (S) and 'tutti' (T) cues marked in the parts, were reworked as six concertos and partnered by six further compositions to make up the 12 concertos of his *Ausserlesene Instrumental-Music* (Passau, 1701). Benedict Anton Aufschnaiter, Muffat's successor as Kapellmeister at Passau, published at Augsburg in 1703 a set of sonatas, *Dulcis fidium harmonia symphoniis ecclesiasticis concinnata* op.4, that, by their use of two solo violins, resemble concertos. All these works stand in the Roman (i.e. Corellian) tradition. The vital link with the north Italian concerto was made by the Swiss (or possibly Bavarian) amateur composer Henricus Albicastro (Heinrich Weissenburg), whose sole published set of concertos (op.7, *c*1705) unites the progressive formal and technical features of Torelli's and Albinoni's works with the dense contrapuntal writing and rich harmony of the south German school (Schmelzer, Biber, Muffat). J.G. Walther's transcriptions for organ of

concertos by Torelli, Albinoni, Gentili and other Italians, made in Weimar around 1710, attest the growing popularity of the concerto in Germany.

(vii) Germany, after Vivaldi. Vivaldi's first concertos struck Germany like a whirlwind; almost overnight, a generation of native composers began to imitate him. One of the earliest was Telemann (1681–1767), who, despite avowing a dislike for the genre, wrote close on 100 concertos in an incredible variety of instrumental combinations, large and small. Telemann's approach was individual and eclectic. More often than not, he retained an introductory slow movement (something by no means general in Germany), and his fondness for binary form similarly harks back to sonata models.

More purely Venetian in inspiration are the concertos of the Dresden composers J.D. Heinichen (1683–1729) and J.G. Pisendel (1687–1755), both of whom spent some time in Venice during the 1710s and moved in Vivaldi's orbit. The merit of being the first German composer to publish concertos (Amsterdam, *c*1721) belongs to the Kapellmeister at Eichstätt, Joseph Meck (1690–1758), whose style is thoroughly Vivaldian. Other prominent names are those of Christoph Graupner (1683–1760) at Darmstadt, J.F. Fasch (1688–1758) at Zerbst, J.M. Molter (1696–1765) at Karlsruhe and G.H. Stölzel (1690–1749) at Gotha. One should also remember the many Italian musicians who worked at German courts, notably E.F. Dall'Abaco (1675–1742) at Munich and Fortunato Chelleri (*c*1690–1757) at Kassel.

J.S. Bach fits comfortably into this picture. There are echoes of Torelli in some of his 'self-imitating' melodic lines (for example, in the first solo entry in his Concerto for two violinsBWV1043). Mostly, however, he departed from Vivaldian norms only when following some ingenious plan of his own (as when he reduced the middle movement of the Third Brandenburg Concerto to a single bar containing only two chords). He was familiar with the genre well before the appearance of *L'estro armonico*, some of whose works are included among his 16 keyboard transcriptions of *c*1713. The Prelude of his Third 'English' Suite (*c*1715) demonstrates his already perfect mastery of ritornello form. Although individual concertos were probably written in his Weimar years, most extant examples come from the Cöthen period (1717–23), when, exceptionally, his duties revolved around secular music. In later life Bach returned to the precedent set by the Fifth Brandenburg Concerto, writing a series of concertos for one or more harpsichords, all of which were intended for performance at the Leipzig collegium musicum. These, and their successor works within the Bach circle, established the primacy of Germany in the domain of the keyboard concerto.

Germany carved out another special niche in the shape of the flute concerto. Vivaldi's pioneering op.10 concertos (1729) spawned a huge progeny in north and central Germany. Best known and most numerous are those of Quantz (1697–1773), but Hasse (1699–1783), Scheibe (1708–76) and the Swedish-born Johan Joachim Agrell (1701–65) are other important names. The late Baroque flute concerto exemplifies in the highest degree the *galant* sensibility that reigned supreme in northern Europe in the mid-18th century.

(viii) France. Like the opera, cantata and sonata genres before it, the concerto was an exotic plant that took a while to become acclimatized to French musical culture. Not until the 1730s did it take firm root. To do so, it needed to make several compromises with native taste. The style of melodic ornamentation remains French (ornamentation is applied to individual notes rather than to whole phrases), slow movements are most often conceived as *airs tendres*, and alternatives to ritornello form (especially binary form) are common in the fast movements. The earliest concertos published in France were a group of four, largely Corellian in inspiration, in the op.7 of the Neapolitan immigrant Michele Mascitti (1664–1760) and a set of six concertos, op.15, for the unlikely combination of five flutes with optional bass by J.B. de Boismortier (1689–1755); both publications appeared in Paris in 1727. More conventional collections, by Michel Corrette (1709–95) and Jacques Aubert (1689–1753), date from 1728 and 1734 respectively. About 1735 J.-C. Naudot (*c*1690–1762) brought out a set of flute concertos in imitation of Vivaldi's. The first French concertos to match the best of the Italians for substance and technical accomplishment were the 12 for solo violin by J.-M. Leclair (1697–1764), equally divided between op.7 (1737) and op.10 (1745). Leclair had an almost Bachian gift of developing, rather than merely restating, the material of his ritornellos. Of his French contemporaries, only Boismortier and Corrette continued to write concertos in any quantity after 1740. The surprisingly small number of concertos in relation to sonatas owes something to the continued popularity of the *ouverture* and its variants but even more to the rapid rise of the concert symphony, the dominant orchestral genre in Paris by 1750.

(ix) The Netherlands and Sweden. Although publishers based in Amsterdam (Roger, Le Cène, Mortier, Witvogel) played a key role in disseminating the concerto in the first half of the 18th century, the composers represented in their catalogues were overwhelmingly Italian and German. The most significant Dutch-born composer of concertos was Willem de Fesch (1687–?1757), three of whose collections (opp.2, 3 and 5) were issued by Roger; a further set, op.10 (1741), was brought out by Walsh in London after de Fesch settled there in the early 1730s. Like several English and some German composers, de Fesch inclined towards Roman style and scoring but north Italian form. The other noteworthy Dutch composer of concertos was the gifted amateur musician Count Unico Wilhelm van Wassenaer (1692–1766), whose *Concerti armonici*, published anonymously in The Hague in 1740, were formerly attributed speculatively either to their publisher, Carlo Ricciotti, or to one of a number of composers, including Pergolesi. These remarkable works, all with four violin parts, join a Roman fullness of scoring to Neapolitan lyricism.

Musically speaking, Sweden, like the whole of the Baltic region, was under strong German influence in the 18th century; its musical community included many Germans and their descendants. Despite the widespread cultivation of concertos in Sweden, to judge from surviving sources, only one important native composer, Johan Helmich Roman (1694–1758), contributed to the genre – and that sparingly. Roman inclines most strongly to Vivaldi, although echoes of Handel can also be heard.

(x) Britain. The British public was introduced to the concerto for the first time in 1704, when John Walsh brought out, in the July issue of a periodical publication, the last concerto of Albinoni's op.2. A trickle of concertos

of the north Italian type – imported from Roger, 'pirated' by Walsh, acquired by visitors to Italy or brought in by immigrant musicians – had arrived by 1714, when Corelli's Concerti grossi op.6 burst upon London. The impact of Corelli's concertos in Britain was comparable to that of Vivaldi's op.3 elsewhere. Their sobriety and solidity struck a chord in a culture that still took its values from 17th-century consort music. The Vivaldian type of concerto, dominant elsewhere outside Rome, did not quit the scene but led an uneasy existence alongside, and to some extent mixed up with, the Corellian type, which generally enjoyed the status of senior partner. Vivaldi's concertos were mistrusted by many for their emphasis on virtuosity (easily viewed as 'freakishness'); even solo concertos tended to rein in their exuberance.

The first concertos composed in England were possibly those of the German immigrant J.C. Pepusch (1667–1752). Some of them, including works with recorder or flageolet (both instruments were especially popular in England), predate his published set (op.8, *c*1718). In the 1720s the first native composers emerged – Robert Woodcock (1690–1728) with his *XII Concertos* (1727) and William Babell (*c*1690–1723) with his op.3 (1730). In the next decade immigrant musicians strengthened their grip. The Concerti grossi op.2 and 3 (both 1732) of Corelli's pupil Francesco Geminiani (1687–1762), resident in England since 1714, reaffirmed the spirit, and approached the popularity, of his master's concertos. Geminiani gratified the British liking for 'full' harmony by transferring the viola to the concertino group. The op.3 (1736) of Pietro Castrucci (1679–1752), another pupil of Corelli, is cast in the same mould.

Geminiani's greatest successor was his rival Handel (1685–1759), who had hitherto shown little interest in the genre. His op.3 set of 1734 (the misnamed 'Oboe Concertos') was his first, not entirely satisfactory, response. The definitive answer came in 1739, when Handel wrote his Twelve Grand Concertos op.6, a perilously heterogeneous but wonderfully inventive collection in which Corellian, Vivaldian and totally original formal elements are applied to music whose stylistic allegiance moves freely between the church, the ballroom and the opera pit. No other collection provides a better conspectus of the Baroque concerto in its totality. Op.6 shows how risky it is to draw conclusions about the nature of a collection from the number and nomenclature of its partbooks. At first sight, these are typically Corellian concertos, with a three-part concertino and four-part ripieno. Closer inspection, however, reveals one entire work (no.6) and several individual movements without any solo content; other movements feature a single violin soloist exactly as in a solo concerto. Handel's most original contribution to the genre was his invention of the organ concerto, originally conceived as entr'acte music at performances of his oratorios. The two sets with opus number, op.4 (*c*1738) and op.7 (posthumously issued in 1761), supplemented by a few extra works, make up a sizable corpus to which Handel's many English followers, who included Henry Burgess, William Felton, Thomas Chilcot and John Stanley, also contributed. The sketchiness of the solo parts in many of Handel's published organ concertos (with entire movements marked to be extemporized 'ad libitum') throws into relief a conflict of interest that inevitably arose whenever a composer was also a virtuoso on the featured instrument. By simplifying the notated solo part, Handel left space for the improvised filling and embellishment by which he, as soloist, would establish his superiority (in a similar spirit, Vivaldi often wrote complex arpeggiated figurations for the solo violin as block chords).

As the rest of Europe passed via the *galant* style to the early Classical style, composers of concertos in Britain remained by and large faithful to Baroque models. Neither the op.3 of Francesco Barsanti (Edinburgh, 1742) nor the otherwise accomplished op.3 of Pieter Hellendaal (London, *c*1758) advances beyond Handel. Several native composers, including Charles Avison (1709–70), Richard Mudge (1718–63), Michael Festing (*d* 1752) and Capel Bond (1730–90), kept alive the popularity of the concerto in London and the provinces but produced little of enduring value.

(xi) The significance of the Baroque concerto. Its stimulus to the development of instrumental technique (and, indirectly, instrumental design, as illustrated by the progressive lengthening of the violin's fingerboard) was only the most obvious of the concerto's achievements. More strongly cultivated throughout Europe than either the *ouverture* or the operatic sinfonia, and much more widely available in published form, it shaped the nature of orchestral sound and orchestral playing in their first hundred years of existence. It acted as an effective vehicle for bringing new instruments (for instance, the transverse flute) and new performers to the attention of a mass public in almost all European countries. It bridged (even as it widened) the gulf between the virtuoso and the rank-and-file player by providing a type of music in which each could find a place. Its wide acceptance contributed to the growing internationalization (on a largely Italian basis) of style and taste. Briefly, in the second and third decades of the 18th century, it energized the whole of Western art music by proposing new styles, forms and textures that, because of their radical simplicity, offered immense scope for further creative development. It was the first purely instrumental genre to exert a strong influence on vocal music, both sacred and secular, and in so doing raised the profile and reputation of instrumental music in general. The textural opposition between tutti and solo and the thematic opposition between ritornello and episode provided models of contrast that influenced all larger, sectionalized forms.

The surprisingly rapid replacement of the concerto by the concert symphony as the dominant orchestral genre in the middle of the 18th century has not been adequately explained in musicological literature. Indeed, the nature of the relationship between sinfonia (symphony) and concerto between 1700 and 1750 remains an insufficiently explored area. Unlike the symphony, the concerto did not adopt sonata form but instead continued in the second half of the century to rely on its tried and tested ritornello form, although certain increasingly common features such as the reprise of the material of the first solo towards the end of the movement are evidence of convergence between the two forms. In fact, the division between Baroque and Classical is invisible, structurally speaking, in the concerto.

3. The Classical period.

(i) Composition, performance, dissemination. By mid-century, the solo concerto had effectively supplanted the concerto grosso as the favoured form; works of this type

were widely cultivated in Italy, Germany, France, England and elsewhere. During the 1760s and early 70s, the most popular solo instruments were the violin and flute, although concertos were also written for the full range of string and wind instruments as well as harp, guitar, mandolin and more exotic instruments (including the *lira organizzata*, five concertos for which were composed by Haydn for the King of Naples in 1786). By the late 1770s and 80s, however, the piano had become the most frequent soloist. The increase in the popularity of the keyboard concerto is documented by the Breitkopf thematic catalogues, which in 1762 included 177 violin concertos and 105 keyboard concertos; between 1766 and 1787, the number of newly listed concertos amounted to 270 for the violin but 393 for keyboard.

The circumstances surrounding the composition, performance and dissemination of concertos varied. Not all of them were intended for a single audience, or for professional and semi-professional musicians. C.P.E. Bach's concertos H471–6, written for amateurs, were advertised as 'differ[ent] from the other concertos of this composer in so far as they are more adapted to the nature of the harpsichord, are easier both in the solo part and the accompaniment, are adequately ornamented in the slow movements and are provided with written-out cadenzas'; later Bach wrote, 'Among my works, especially those for keyboard, there are only a few trios, solos and concertos that I have composed in complete freedom and for my own use'. Many of Wagenseil's concertos were written in the first instance for private performance by the Imperial family in Vienna (although they eventually circulated through commercial music publishers; in 1762 the Mozarts purchased more than 20 Wagenseil concertos from Viennese music dealers). The 'Advertisement' for Thomas Arne's posthumously published concertos recommends the work not only to 'all Ladies and Gentlemen' performers, but also to 'every skilful Professor ... to cultivate among their pupils an elegant and masterly stile of performance'. Some concertos were first performed at public concerts (this was especially true at the Concert Spirituel in Paris); many others, however, were given in more restrictive settings, often as part of a court entertainment, or privately, at domestic concerts (this was apparently the case with Mozart's concerto K449, composed in 1784 for his pupil Barbara Ployer). Additionally, concertos were performed between the acts of oratorios (notably in London, following the tradition established by Handel) and occasionally operas or other theatrical productions; in Italy, in particular, they were given in conjunction with celebrations of the Mass.

This diversity of intended audience, performer and venue is reflected not only in the style of the works themselves but also in the make-up of the concerto ensemble. Many, such as J.C. Bach's op.1, call for a minimal accompaniment of two violins and bass; others, such as Mozart's mature concertos, are scored for a full complement of strings and wind. It is difficult to say if concertos were performed more frequently by their composers or by other executants; in Vienna at least, just under half of all documented concerto performances during the 1780s and 90s were given by other performers. Most concertos distributed in northern Europe were available in printed editions; in Germany and Austria, circulation in manuscript copies was more usual.

(ii) Italy. The Italian concerto, cultivated notably by Giuseppe Tartini, Pietro Nardini (whose playing was praised by Leopold Mozart in 1763), Luigi Boccherini and Giovanni Giornovichi (active in Paris), represents a tradition based primarily on binary forms and sonata-like procedures (Freeman, 1985–6). Giornovichi in particular is credited with introducing the romance as the most characteristic concerto slow movement, and for popularizing the rondo finale (White, 1986); his *galant*-style concertos include occasional formal novelties, among them solo openings to the first movements of nos.3 and 16, and joined second and third movements in nos.7 and 13. While Giornovichi's concerto first movements closely approximate to sonata form, the violin concertos of Mysliveček are more old-fashioned: the second tutti of the four-ritornello concerto in D major begins with the opening theme, although it largely serves a closing function in the dominant; and the third tutti is a transition, cadencing in the submediant before leading to a recapitulatory solo, beginning in the tonic minor, that omits the 'head theme'. Mysliveček's concertos were not widely disseminated, but may have influenced Mozart, who became acquainted with them in Vienna in 1773.

(iii) Germany. The north German violin concerto is associated primarily with J.G. Graun, a pupil of Tartini, and Franz and Georg Benda, the flute concerto with Quantz and the keyboard concerto with Christoph Nichelmann, whose 16 keyboard concertos were composed between 1740 and 1759, and in particular with C.P.E. Bach, who between about 1733 and 1788 composed numerous concertos, mostly for harpsichord (a double concerto for harpsichord and piano dates from 1788; Bach's ten surviving concertos for non-keyboard instruments are all transcriptions of keyboard originals). Bach's keyboard style is usually brilliant, the themes arresting and, as in his symphonies, the movements sometimes follow without a break; occasionally material from one movement recurs in another, as in H474 and 475. His first movements, like Nichelmann's, elaborate on the ritornello forms favoured by Vivaldi and J.S. Bach, where the soloist is left relatively free to present thematic material different from that of the tuttis; at the same time, both introduce elements reminiscent of binary forms. The approximately 15 keyboard concertos by J.W. Hertel (who additionally composed concertos for violin, cello, flute, oboe, trumpet and bassoon), on the other hand, are novel for their inclusion of a recapitulation combining both the opening ritornello and the first solo – this after three tonally stable tuttis, in the tonic, dominant and submediant, and three solos including, in the E♭ concerto, a stable solo in the submediant, immediately preceding the return to the tonic.

Tartini's violin concertos also influenced the first generation of composers at Mannheim, particularly Johann Stamitz; his sons Carl and Anton, however, as well as Holzbauer, Fränzl, Cannabich, Toeschi and Eck, were increasingly inclined to the French models of Gaviniès and Devienne, which chiefly consisted of a sonata-based Allegro and a rondeau of lighter character and smaller dimensions – although they are more conservative in style than contemporary Mannheim symphonies (see Ward Jones, 1969–70). Stamitz's earlier concertos, however, are based on the ritornello principle, with three or four tuttis in various keys; many of his final movements are rondos. Wind instruments were particu-

larly favoured at Mannheim: it was for the Mannheim instrumentalists Wendling, Ramm, Punto and Ritter that Mozart composed the Sinfonia Concertante K297*b* (Paris, 1778, lost).

(iv) France. In France, where works for violin dominated, no new concertos were composed between Leclair's second set (1745) and Pierre Gaviniès's six published in 1764 (a single violin concerto in E major also survives), although concertos, chiefly by foreign composers such as Pugnani, Ferrari and Johann Stamitz were popular. Gaviniès's concertos follow a four-tutti, three-solo plan, with the second tutti in the dominant and the third modulating from the submediant to the tonic; the song-like solos, restrained in their virtuosity, are variable in their relationship to the tuttis, sometimes relying on themes first given out by the orchestra, but often including new material. The most important later French concertos are Viotti's, 19 of which were composed in Paris: the early nos.1–10 for performance at the Concert Spirituel in 1782–3, five in 1783–9 while Viotti was based at Paris and Versailles (in the service of Marie Antoinette) and four works, all in minor keys, written during his tenure, from 1789, at the Théâtre de Monsieur (later Théâtre Feydeau). Ranging in character from the *galant* to the operatically dramatic, Viotti's ritornello-based concertos are brilliantly conceived for the soloist but only rarely include discursive or developmental passages; there is little engagement between violin and orchestra, which for the most part is straightforwardly accompanimental, with limited wind participation. At the same time, Viotti's concertos are stylistically modern in their abrupt modulations and mode changes. Among the early concertos, the opening tutti frequently modulates, presenting a contrasting theme in the new key before returning to the opening idea as closing material; recapitulations frequently vary in the order of their material and content, sometimes including new themes (no.2) or omitting significant material from earlier in the movement (no.1); it is only from no.5 that a double return is standard. Slow movements are generally in binary form; finales are rondos. The E minor concerto, no.16, begins unusually with a slow introduction which returns at the recapitulation in doubled time values. Mozart apparently knew this concerto; about 1789 he composed additional trumpet and timpani parts for it (K470*a*).

(v) England. In England, Baroque traditions – including the composition of concertos for organ, a precedent set by Handel – survived in the works of Avison, whose concertos are based on the model of the Corelli concerto grosso, and Thomas Chilcot (1756, 1765), which derive their keyboard technique and structure from Alessandro Scarlatti's sonatas. Arne's six concertos (published posthumously, *c*1787) are more modern in their phrase structure but variable in their movement-to-movement formal designs: two concertos (nos.1 and 5) have slow introductions; three (nos.1, 4 and 6) include minuet and variation movements: and two (nos.2 and 4) have jigs. For the most part, Arne's concertos are ritornello-based: the G minor, for example, includes five tonally stable tuttis and four solos, all of which modulate, except the last; this non-modulating solo is also the only section of the movement that does not begin with the head theme. Abel's concerto op.11 no.3 – one of only a handful by him – also represents a hybrid: the opening tutti makes a strong half-cadence, but the first solo, although it includes a new theme, remains in the tonic. Successive sections include a passage of extended keyboard virtuosity and a third solo that begins in the dominant with new material, before working its way to the submediant; the intervening tuttis recapitulate the opening ritornello, reproducing the closing material in the tonic only at the very end of the movement.

J.C. Bach's three sets of concertos for harpsichord or piano (op.1, 1763; op.7, 1770; op.13, 1777) represent a departure for the English concerto: composed after the Italian style, they are characterized by fluent melodies and clearly defined themes, distinctive secondary themes presented in the dominant by the soloist (beginning with op.7) and modulating free fantasy sections following the central ritornello, as well as full recapitulations (an exception is op.7 no.2, where the recapitulation begins with the 'new' theme). Op.7 no.6 includes other typical features, including a medial ritornello confirming the dominant and repeating much of the opening tutti, with a prominent half-cadence; a free fantasy solo that leads to the submediant; and a recapitulation, at first shared by soloist and orchestra but then dominated by the keyboard (although not recapitulating the new theme from the first solo) that leads to a final, concluding tonic tutti. Later generations of English concerto composers, including J.B. Cramer, were influenced not only by J.C. Bach but by other similar concertos, including a set of six by J.S. Schroeter (op.3, *c*1774; Mozart composed cadenzas to four of Schroeter's concertos). Cramer was also influenced by Mozart (he had performed K414 as early as 1785 meetings of the Anacreontic Society); by the late 1780s, other Viennese works, by Kozeluch and Vanhal, were readily available from English music dealers. At the end of the century, the most prominent composer of concertos in London may have been Dussek, the majority of whose keyboard works were composed there after he fled Paris at the time of the French Revolution. Characterized by frequent remote modulations and expressive chromaticism, they are brilliant virtuoso vehicles, foreshadowing developments in the 19th century. Particularly characteristic is the sprawling G minor concerto op.49 (published 1801) with its gesture-rich orchestral introduction.

(vi) Austria. In Vienna, the most important early composer of concertos was Wagenseil, who wrote numerous works in the genre. One concerto (Scholz-Michelitsh 262) in particular already adumbrates some aspects of the form adopted by later Austrian composers, including a 'new' theme specifically assigned to the soloist, the use of distinctive closing material and a recapitulation that follows the first solo rather than the orchestral exposition. Although the opening tutti of Wagenseil's concerto only hints at an imperfect cadence, it includes at least four different ideas; and, like Mozart's mature concertos, the central fantasy section and recapitulation must be understood as a lengthy solo – the form of the movement is not a Baroque-like alternation of ritornello and solo, but a form more closely approximating the sonata style of Mozart's concertos of the 1780s. Wagenseil's pupil Josef Antonín Štěpán also figures prominently in the history of the Viennese concerto; his output includes 38 works for solo keyboard and two for two keyboards. Unusually, eight of his concertos begin with minor-key Adagio introductions, for soloist and orchestra, substituting for an opening tutti (in one case, the concerto in B♭, the introduction is in the relatively distant D minor). Early

concertos include three or four tuttis, on the model of Wagenseil; later ones have three tuttis and look towards the sonata-style concerto of the 1780s. Haydn's early concertos include works for keyboard, violin, cello, violone, baryton, flute, bassoon and horn; a particularly fine work is the horn concerto of 1762 (HXIId:3), with its atmospheric slow movement exploiting the horn's lowest register. By and large Haydn's early concertos are conservative in style, similar to those of Wagenseil and the younger Georg Reutter, although they also show the influence of C.P.E. Bach (see, for example, the organ concerto HXVIII:1, 1756, which includes a strong move to the submediant and a modulating ritornello leading back to the tonic; the binary form second and third movements, however, recall an older style); the late Trumpet Concerto (1796) is a fully realized example of the end-of-century sonata-based concerto.

(vii) Mozart.

(a) Repertory, influences. Unquestionably the most important late 18th-century concertos are those of Mozart: his surviving works include five for violin (K207, 211, 216, 218 and 219, 1773–5), one each for bassoon and oboe (K191, 1774, and K314, ?1777) and 23 for keyboard (from K175 toK595, 1773–91, including K242 for two and three keyboards and K365 for two keyboards); a concerto for trumpet (K47c, 1768) is lost. The early concertos show diverse influences, including the Italian style of Nardini and Pugnani, the south German concerto represented by the works of Agrell and Leffloth (which were readily available in Salzburg at the annual book fairs), and works from as far afield as the concertos of John Stanley, the Amsterdam edition of which was distributed by Leopold Mozart's Nuremberg publisher, Haffner. Among local Salzburg composers, Anton Ferdinand Paris, Anton Cajetan Adlgasser and Michael Haydn all composed concertos before *c*1770; of Leopold Mozart's numerous works in the genre, only a concerto for two horns (1752) and one of five for flute (1755) survive.

A dominant influence was Wagenseil; the proto-sonata principles found there, sometimes including internal repeats in first movements, were later applied by Mozart in his concerto transcriptions of sonata movements by C.P.E. Bach, Eckard, Honauer, Raupach and Schobert (K37 and K39–41, 1767), all of whom, except Bach, were German expatriates in Paris at the time of Mozart's visits there in 1763 and 1764. A similar set of transcriptions, after sonatas by J.C. Bach, was prepared about 1771–2. The Salzburg orchestral serenade, a multi-movement work traditionally performed to mark the end-of-year ceremonies at the Salzburg Benedictine University or to celebrate important occasions such as weddings and namedays, was similarly influential; traditionally these works included three or four symphonic movements and three or four concerto movements. Leopold Mozart was the prime local exponent of the orchestral serenade; by 1757 he had composed more than 30 works of this type, although only one survives, a serenade in D that includes the famous trumpet concerto as well as a trombone concerto. Mozart's earliest independent concerto movements are also found in serenades, including K63 (oboe and horn) and K100 (violin). Mozart continued to write concertos in his serenades of the 1770s, among them K185, 203, 204 and 250 (all for violin); K320, the so-called 'Posthorn' serenade includes a concertante that Mozart performed independently at his Burgtheater concert on 23 March 1783. Related to both the serenade and the concerto traditions are the Concertone for two violins (K190, 1773) and the Sinfonia Concertante for violin and viola (K364, 1779–80).

(b) Form. The form of Mozart's mature concertos has been a subject of continuing debate. Some authorities describe the first movements as based on the ritornello structure of the 'pre-Classical concerto', inherited from the Baroque and adapted to the newer style, including four tuttis and three solos. More recent thinking derives Mozart's concerto form from the model of the operatic aria, a tradition grounded in 18th-century music writings: Koch in 1793 described the concerto as an imitation of an aria – although this refers more to the expressivity of the works rather than, necessarily, form or structure. These differing accounts reflect ambiguities in descriptions of concerto found in 18th-century treatises. Vogler (1779) described the form of the concerto as identical to the sonata, except that the two parts are not repeated; similar sonata-based derivations are described by Galeazzi (1796) and Kollmann (1799). Scheibe (1745), Quantz (1752), Kirnberger (1771–4) and Türk (1789), however, saw the form in terms of ritornello structures. Koch was of two minds: his 1793 *Versuch* describes a four-tutti form with a third modulating solo, based on the model of C.P.E. Bach; in his 1802 *Lexikon*, however, where Mozart is the model, he advocated a three-tutti sonata-form model.

The classic formulation is Tovey's, who described Mozart's concertos as a realization of the concerto principle in sonata form (1936). The tuttis do not function exclusively, or even primarily, as structural pillars around which concerto movements are built, but as contrasting sonorities, projecting points of tonal departure and arrival: the three tuttis represent the establishment, through texture, volume and sonority, of the tonic, while at the same time presenting important thematic material and serving as a foil to the later entrance of the piano; the arrival and consolidation of the dominant; and, at the end of the movement, the strongest possible confirmation of tonic and closure. It is incorrect to describe Mozart's concertos as having a recapitulatory fourth tutti: the material at the return is almost invariably shared between soloist and orchestra; except possibly in K467 there are no extended, purely orchestral passages comparable in scale to the beginning, medial or final tuttis; and the expressive function of the commingling of tutti and solo functions at the recapitulation is intended to represent the rapprochement of the participants, not antagonism. These principles of construction – in which the character and ordering of the material reflects specific structural concerns – appear to have been worked out first in Mozart's vocal music (Feldman, 1996). However, the various aria types usually equated with the concerto are traditionally described as 'bithematic ternary' or 'sonata form' arias; accordingly, the basic idea behind each type is the sonata. By and large, the sonata principle of the early arias and concertos remained valid for the Viennese works as well, while the dramatic form of the aria moved decisively away from the earlier model (Webster, 1996).

Within this larger complex, the first movements of Mozart's concertos follow a pattern consistent in its outlines, and the movements can be divided conveniently into a number of large structural units: (1) an opening ritornello, including a first theme, extended to a perfect cadence in the tonic, an active half-cadence on the

dominant, a more lyrical group (up to *c*1778 this lyrical group tends to appear again in the first solo, as the principal theme of the second group; after that date there is usually a different solo second theme) and a concluding group; (2) the first solo, reiterating the first theme, followed by an orchestral flourish confirming the tonality, a modulation to the dominant with new material from the soloist, a flirtation with a stable new key followed by a secondary group, and an extension to a perfect cadence in the dominant and a coda; (3) a medial ritornello usually based on one of the *forte* passages of the opening ritornello; (4) a free development-like section representing the first part of the second solo and usually including two parts, the first a drive to a distant key (often the relative minor), the second culminating in a retransition to the tonic; (5) a recapitulation, incorporating the second part of the second solo, largely following the first solo but omitting the modulation; and (6) a concluding ritornello, using material from the medial ritornello and interrupted by a cadenza (Leeson and Levin). The specific thematic details, and their arrangement, vary from work to work. Even some of the basic principles of construction are subject to occasional change: the opening ritornello of K449, for example, is the only example among Mozart's concertos to include a modulation (first to the relative minor and then to the dominant where, uniquely, distinctive 'secondary' material is presented), while in K488 the first solo is thematically identical with the opening ritornello and does not include a new theme in the dominant for the soloist although new material is presented, first by the orchestra and then the soloist, in the medial ritornello.

Second and third movements are less fixed in their structural patterns. Romance-type movements, such as that of K466, occur as second movements, as do binary types (albeit of considerable complexity), rondos (K491) and variations (K450, 456, 482). Variation movements are also found as finales (K453, 491), as well as sonata forms (K175, original finale, and the violin concerto K207), although the more usual pattern is the sonata rondo (notable examples include K271, 456, 459 and 482). Mozart's treatment of the form is not static, and significant developments take place between his first independent keyboard concerto and his last; while adhering to basic structural principles, no two concertos are exactly alike in structure and rhetoric.

(c) Mozart's contribution and beyond. Beyond formal design, Mozart's significant contributions to the development of the concerto include novelties of piano figuration and texture as well as a new conception of the relationship between soloist and orchestra. Developments in figuration can already be traced in the earliest solo concertos: K238 marks a break from K175 by including a greater variety of left-hand textures, while a noticeable increase in difficulty is apparent in the concertos from 1784 and later (Mozart himself described K450 and 451 as concertos 'to make the performer sweat'). This difficulty derives in part from Mozart's greater simultaneous use of the full range of the keyboard and the ways in which material is divided between the hands (compare, for example, similar passages in K456 and 467; ex.1). Perhaps the most significant development, however, is Mozart's generous orchestral writing; the orchestra does not merely accompany *en masse* but also takes part in dialogue, sometimes corporately, sometimes individually – both as antagonist and

co-protagonist – with the soloist. This trend is markedly expanded in the concertos from 1784 on – the symphonic character of the concertos from K450 is unmistakable – and in particular in K482, 488 and 491, where the wind instruments achieve parity with the strings as part of the ensemble. Koch in 1793 described the concerto as 'somewhat similar to the ancient tragedies, in which the actor expresses his feelings not to the audience, but to the chorus which, in turn, links itself intimately to the action, thus qualifying itself to take part in the expression of feelings' (*Versuch*, iii, 32); and Kollmann in 1799 wrote that 'The best specimens of good modern Concertos for the Piano-Forte, are those by Mozart, in which every part of the accompaniments is interesting, without obscuring the principal part' (*Composition*, 15).

Mozart's new conception of the relationship among soloist, orchestra and audience is expressed not only in the dialogues and participation of the orchestra but also in his continuo practice. Unlike other 18th-century concertos, where the keyboard soloist has two functions – as continuo player in the tuttis and soloist elsewhere – Mozart's soloist typically has three: within the large solo sections of his concertos, orchestral outbursts are often accompanied by a soloistic continuo that does not literally duplicate the orchestral basses, projecting a solo personality even in these apparently accompanimental sections; expressive manipulations of continuo writing and meaning can be found in K271 and K450 among others. In this respect Mozart's works look forward to concerto styles of the 19th century where continuo function disappears, as does the general character and expressivity of his works

which, like the last three symphonies, are sometimes described as 'alienating', a reflection of Enlightenment ideals or a critical response to contemporary thought.

Mozart's keyboard works dominated concerto performance and publication in Vienna from 1785 to about 1810, a period when concertos by Kozeluch, Hofmeister, Paul Wranitzky, Gyrowetz, Gallus, Viotti, Dussek and Sterkel were advertised in the Viennese press; several older keyboard concertos were also available, including works by Schuster, Zimmermann, J.C. Bach and Beecke, as well as violin and flute concertos by Carl Stamitz, Giornovichi, Cambini, Zimmermann, Hofmann and Eck, among others. Few of these works strictly follow the Mozartian model. Sterkel's C major concerto op.20 includes new lyrical material in the opening ritornello and development, but not the first solo, and returns to the tonic well before the recapitulation. Similarly, Vanhal's D major keyboard concerto op.14 (1789) gives the new theme in the dominant to the first oboe rather than the keyboard soloist; it also includes a strong cadence to the submediant in the development. Neither is characterized by the diversity of orchestral participation typically found in a Mozart concerto. Beethoven's two piano concertos (no.2, op.19, begun before 1793 and later revised; no.1, op.15, 1795, also revised) are modelled on Mozart's. The C minor (no.3, op.37, *c*1802), however, represents an attempt to move beyond the 'classical' form, at least dramatically. A reviewer in the *Allgemeine musikalische Zeitung* described it as 'one of the most outstanding ever written'. It is noteworthy as the only concerto in which Beethoven modulates forcefully and substantially in the orchestral introduction – a procedure Tovey described as 'symphonic' and an experiment that Beethoven abandoned in nos.4 and 5.

4. The 19th century. During the 19th century the concerto was a pivotal and defining form in musical culture. Conflicting tendencies within audience tastes and compositional ambitions played themselves out through the concerto, a form that by 1800 was a synthesis of traditions dating back to the Baroque (such as the use of the ritornello) and Classical sonata form. It was nevertheless ideally suited to express the ambitions of early Romanticism, through its exploitation of possibilities inherent in the juxtaposition of soloist and orchestral forces. But in 1880 August Reissmann, editor of the respected and popular multi-volume *Musikalisches Conversations-Lexikon*, lamented that the widespread 'misuse' of the concerto form was primarily responsible for hindering the spread of a 'refined aesthetic taste' in music within the public. The contemporary concerto repertory seemed to be dominated by works empty of content; it had become prisoner of salon-style artifice in expression and a formulaic and mechanistic construct of virtuosity. Despite the examples of Mozart, Beethoven, Mendelssohn and Schumann, it had failed to live up to the highest ideals of form and spirit associated with instrumental music. The question is whether this widespread and conventional assessment of the bulk of the works produced throughout the century, based on the distinction between superficial and entertaining virtuosity and higher musical values – a veritable cliché of concerto criticism from Schumann to the present – should be accepted at face value, in the precise terms suggested by the critics themselves. 20th-century taste, as mirrored in conservatory training and concert programmes, absorbed and accepted the dismissive verdict of the 19th-century observers; the result has been the banishment of the vast majority of 19th-century concertos from the concert stage. That group of works actually contains many concertos deserving of re-examination and performance. The barrier to the revival of many fine concertos, some of them by performer-composers with few other compositions of note to their name, has been the legacy of a 20th-century puritanical rejection of the popular aesthetic tastes of 19th-century audiences as well as the undeniable difficulty and time commitment required on the part of soloists (who can expect little in the way of reward or praise for extending their repertoire) to learn such works.

(i) Beethoven's legacy. By 1880, three distinct types of concerto had come into being – the virtuoso concerto, the symphonic concerto and the narrative concerto – though many individual works possessed aspects of all three. Despite Reissmann's pessimistic diagnosis, the trajectory of the 19th-century concerto had been decisively influenced by Beethoven; the persistent comparison to Beethoven only heightened the sense of decline in quality. Practically all subsequent forays into the concerto genre hark back to Beethoven's innovations. The opening of Piano Concerto no.4 in G op.58 (1806), using the solo piano, the drama of rhetorical exchange between orchestra and soloist before the first orchestral tutti of no.5 in E♭ op.73 (1809), the monumental plan of the first movement of no.3 in C minor op.37 (*c*1800) and the distinctive figuration and interplay between soloist and orchestra, particularly the startling use of orchestral timbres with the solo line in the Violin Concerto in D op.61 (1806), served as models and benchmarks for subsequent generations of composers and listeners. In the case of the Violin Concerto (which Beethoven adapted for the piano in 1807), since its popularity receded quickly after its first performance and was revived by Joseph Joachim only at mid-century, its influence was somewhat delayed. In Beethoven's piano concertos the balance between solo instrument and orchestra seemed ideal; the prominence given to the solo instrument as dramatic protagonist never detracted from the coherence and formal logic of the three-movement concerto structure with its convention of a sonata-form first movement, a slow song-form second movement, and either a fast rondo or modified sonata allegro final movement. Beethoven was a pioneer in controlling and integrating the dialogue between orchestra and soloist. The orchestra was not reduced to background accompaniment; the soloist was not primarily engaged in decorative elaboration and variation designed purely to show off technical proficiency.

(ii) The place of virtuosity. Despite the respect accorded Beethoven by succeeding generations, the evolution of the cult of the virtuoso in the three decades after 1815 more often than not overwhelmed the Beethovenian model, as Schumann never tired of pointing out in his criticisms of the 1830s. From the 1820s, the virtuoso concerto flourished as the favourite vehicle for the display of the full range of instrumental technique. A concerto was performed in orchestral concerts held in larger spaces than the solo recital. It was subject to considerable journalistic attention. The orchestral accompaniment could provide an innocuous but helpful frame or an imposing if not monumental sonic backdrop to the soloist's arsenal of pyrotechnics. The three-movement

form inherited from the 18th century ensured that the soloist would have the opportunity to show velocity, dexterity, grace and accuracy in the finale, lyricism and intimacy of expression in the middle movement, and dramatic power, gravity, profundity and a wide palette of sound and register in the opening movement. A.B. Marx, writing in 1839, conceded that the bravura dimension of the solo line needed to be in the foreground of a concerto, even though the orchestra, from time to time, could and should assert a role of greater musical importance.

By the mid-1830s the popularity of the concerto as a vehicle of virtuosity had sparked a reaction (led by Schumann) against an anti-Beethovenian use of the concerto for the exhibition of empty and often predictable, patterned and formulaic rhetoric designed to accommodate dazzling prowess, particularly on the violin and piano. Schumann made a distinction between mere passage-work and the 'free and poetic' use of a solo instrument's potential to elaborate material when juxtaposed with an orchestra. Inspired improvisation and flights of fancy were the only justifications for what appeared to be bravura solo episodes and figuration; Chopin's two piano concertos from 1829–30 (in E minor and F minor) became the models of how virtuosity could be aesthetically legitimated. Furthermore, Schumann argued, the orchestra should function as more than an observer of virtuosity and should suffuse the music in an 'artistic' manner, using its own complex and diverse sonic qualities.

This line of criticism was a symptom of the tension inherent in the concerto form between the allure of the solo part as a vehicle of virtuosity and the pretensions to higher aesthetic ideals derivative of compositional conventions and formal procedures associated with the quartet, the solo sonata and symphony. One solution was to subordinate or supplant the sonata structure and extend the model of the single-movement solo piano fantasy using solo and orchestral forces. Some composers were inspired to shape the concerto even more explicitly along Beethovenian lines in the direction of the symphony. The Brahms D minor Piano Concerto op.15 (1854–8), despite its great demands on the soloist, is perhaps the pre-eminent example of the anti-virtuoso counter-tendency audible in the symphonic concerto. His B♭ Piano Concerto op.83 (1878–81) even has a scherzo, making it a four-movement work, like a symphony. Henry Litolff's Piano Concerto no.3 op.45 (*c*1846), entitled *Concerto symphonique*, is a less familiar but once highly respected symphonic concerto, one of five such works he composed.

The symphonic trajectory in concerto writing spurred a transformation in the character of solo piano writing. The solo piano part was designed increasingly to match the sonority and power of the orchestra. The orchestral character of the piano writing in the Brahms and Tchaikovsky concertos can be traced back to Beethoven's innovations, such as the use of double octaves in the 'Emperor' Concerto. Clara Wieck Schumann's Piano Concerto op.7 in A minor (1836) is an early example of the employment of the solo piano in an orchestral manner; it anticipates Brahms's style of piano writing in his concertos.

(iii) Narrative elements. By the mid-19th century, as a result of the innovations of Liszt and the early Romantic pursuit of instrumental music as a medium through which the poetic, epic and dramatic could be expressed, the narrative concerto developed, sometimes written in one-movement form and often possessed of an explicit extra-musical programme. Berlioz's four-movement *Harold en Italie* op.16 (written in 1834, published in 1848) for viola, in which the solo instrument personifies the hero in a detailed narrative, and Weber's *Konzertstück* op.79 (1821) are two contrasting examples. The one-movement Weber work was among the earliest and most influential 19th-century innovations in concerto form since its poetic, illustrative programme defines its striking sequential and expository dramatic structure, whereas the Berlioz retains the scale and ambitions of symphonic composition. Richard Strauss's *Don Quixote* op.35 (1897), a set of 'fantastic variations' for cello and orchestra, is an example of a later contribution to this category of narrative concertos. It has been argued that Beethoven's Piano Concerto no.4 in G is structured along the lines of the Orpheus legend. Another memorable narrative concerto is John Field's Piano Concerto no.5 in C (1817), entitled 'L'incendie par l'orage': in it the solo piano (supported at times by a second piano in the orchestra, calculated to augment the soloist in the creation of sound effects) functions together with the orchestra and alone to emulate a storm and catastrophe, which is then followed (as in Beethoven's Pastoral Symphony) by a 'Hymn of Thanksgiving', an Adagio in C which is in turn followed by a rondo. Concertos with quite general programmatic designs, particularly tied to evoking national characteristics, became popular later in the century. Alexander Mackenzie's 'Scottish' Piano Concerto op.55 (1897), Litolff's Concerto no.2 (1844), subtitled 'Nationale' (based on Dutch folk material) and Edouard Lalo's *Symphonie espagnole* op.21 (1874) and *Concerto russe* op.29 (1879) for violin are notable cases in point.

The narrative dimensions of the 19th-century concerto, including the appropriation of rhetoric and theatrical gesture as devices without an explicit programme, can be directly traced to the intimate connection between opera and concerto writing in the 18th century, particularly in Mozart. The suggestion of recitative, aria and an operatic scene was often explicit. In Spohr's Violin Concerto no.8 in A minor, op.47 (1816), entitled *Gesangsszene* ('in modo di scena cantante'), the violin takes on the role of the voice in both aria and recitative. The influence of bel canto is evident throughout the first part of the 19th century, as the concertos of Chopin and Paganini reveal. In these several ways the concerto in the 19th century provided composer, performer and audience with an ideal formal paradigm of music as a mirror of the struggle for individuality and subjective expression in the contemporary social and economic context. Mood, expression, the stirrings of the soul and even a sense of melancholy could be realized as a solo instrument worked against, resisted, displaced, led and triumphed over orchestral sound. The concerto's solo instrument functioned as a metaphor of the individual's engagement with the conflict between freedom and order.

(iv) Role in concert life. The popularity of the concerto after 1830 was a consequence of the explosion in the number of public concerts and the growth of urban life and literacy that brought an expansion in music education, music journalism and the teaching of instruments within the European and North American middle class. The concerto attracted the keen enthusiasm of auditors who themselves played, as the popularity of the student violin

concertos by Fritz Seitz (1848–1918) suggests. It defined the standard of consummate instrumental proficiency. Amateurs, much as in 20th-century spectator sports, marvelled at the public professional display of uncanny facility and brilliance by one voice, and particularly at how that single voice could hold its own against the orchestra. By the end of the century, the expansion of the market for pianos led to the subsidy by manufacturers of tours to new markets using famous soloists playing concertos, as in the cases of Hans von Bülow and Anton Rubinstein: Chickering, Steinway and Bösendorfer sponsored tours in America and Russia. Bülow took Tchaikovsky's Piano Concerto no.1 (1875) to America, where its première took place in Boston.

The concerto thus became a crucial avenue for advancement in the careers of virtuosos. As Adolf Ruthardt observed in 1888, the purpose of the piano concerto went beyond offering 'interesting and easily understood content, based on compelling, clear and coherently presented and developed themes'; rather, it had to 'give sufficient room to the performing artist to display his prowess, his technical apparatus and his individuality (particularly in the sense of spiritual inspiration) so that these attributes could be seen in an illuminating and even electrifying light'. The 'nature and advantages of the piano as a solo instrument' had to be in the foreground. Composer-performers wrote their own concertos. Ignaz Moscheles composed eight, of which only the G minor op.60 (completed in 1820 and embodying elements of recitative) held its own in the second half of the century; his op.93 in C minor, subtitled 'Pathétique', has been noted for its pianistic innovativeness. Anton Rubinstein composed five piano concertos of which three, op.45 in G (1853–4), op.70 in D minor (1864) and op.94 in E♭ (1874) are worthy of note. Such pianists as Amy Beach, Moritz Moszkowski, Ferdinand Hiller, Emil Paur, Eduard Schütt and Hans von Bronsart all wrote concertos for their own use, as did the cellists David Popper, Friedrich Grützmacher, Victor Herbert, Jules de Swert, Julius Klengel and Bernhard Romberg. The virtuoso concerto in the 19th century was also expected to communicate novelty in instrumental sonority, the latest in virtuosity, idiomatic usage and expressive range. Initially, as audible in the piano concertos of Mendelssohn and Chopin, technique meant primarily digital dexterity and complex and rapid figuration in a manner reminiscent of Mozart.

(v) The violin. The first important Romantic virtuoso violin concertos were those of Pierre Rode, Rodolphe Kreutzer and G.B. Viotti (his Violin Concerto no.22 in A minor, written around 1797 and published in 1803, a favourite of Joachim's). However, Ludwig Spohr's 15 violin concertos, composed between 1802 and 1844, were among the most influential works in this genre from the first half of the century. They became recognized as exemplary idiomatic expressions of the use of the violin. Spohr's concertos reveal aspects of all three types of concerto; no.12 in A, op.79 (1828), for example, combines the operatic narrative with the symphonic. Spohr's efforts clearly reflect Beethoven's influence. The 19th-century virtuoso violin concerto truly came into its own with Paganini's six concertos, written between 1815 and 1830, of which the first two, in E♭ (but usually performed in D) and B minor, from 1826, are the most famous. Paganini extended the use of the full range of the G and D strings, single and double harmonics, left-hand pizzicato and double stops. His example was followed by Heinrich Ernst, whose daunting and brilliant F♯ minor *Concerto pathétique* op.23 (1851) remained in the essential repertory of young violinists (including Joseph Szigeti) well into the 20th century. Notable successors to Paganini's concertos include the ten concertos by Charles de Bériot (1802–70) and the seven by his pupil Henri Vieuxtemps, written between the late 1830s and the late 1870s. Later in the century the virtuoso violin concerto found its most elegant realization in the hands of Henryk Wieniawski who wrote two great concertos, op.14 in F♯ minor (1853) and op.22 in D minor (1862); the latter was particularly influenced by the 1861 Concerto no.5 in A minor of Vieuxtemps. The amalgam of virtuoso display, ambitious compositional intent and symphonic ideals characteristic of Spohr found a more extensive and sophisticated realization in Joachim's Concerto 'in ungarischer Weise' in D minor, op.11 (1861), in which a grand compositional scale is merged with the theatre of technical brilliance and stamina.

The most influential and distinctive mid-century violin concerto, one that reconciled the apparent conflict between virtuoso display and compositional seriousness, was the Violin Concerto in E minor, op.64 (1844), of Mendelssohn. Not only did Mendelssohn dispense with the orchestral introduction, link all three movements into a continuous whole and displace the first movement cadenza so that it preceded the recapitulation, but he also demonstrated how the use of a solo instrument could create a uniquely Romantic form in which the soloist became the protagonist of musical ideas. Mendelssohn's concerto eclipsed those by worthy contemporaries such as Ferdinand David and Ferdinand Ries. In the wake of its success and the re-emergence of the Beethoven Violin Concerto on the concert stage, composers during the second half of the century sought to escape falling prey to the superficial display of Paganini-style technique by redefining virtuosity. Concertos were written that included frequent opportunities for the display of skill, but these moments went beyond the established expectation of violin technique used by such composers as Wieniawski. New demands were made on the violin that at first seemed atypical and against the grain of the instrument. The two most important late 19th-century virtuoso concertos, both highly symphonic in nature, both in D major and both completed in 1878, were those of Brahms (op.77) and Tchaikovsky (whose op.35 concerto was influenced by Anton Rubinstein's fine Violin Concerto in G, op.46, of 1857). These two works redefined and extended violin technique.

The harmonic inventiveness and intricate thematic elaborations exhibited in those works opened up new vistas for the instrument. Similarly, the highly popular concertos of Max Bruch (no.1 in G minor – the most famous – from 1868, two later ones in D minor and the *Scottish Fantasy* op.46), the concertos of Albert Dietrich, Dvořák (in A minor, op.53, 1880, written for Joachim and influenced by his 'Hungarian' Concerto), Arensky (an underrated work, in A minor, op.54, from 1891), Hermann Goetz, Saint-Saëns (particularly no.3 in B minor, op.61) and Goldmark (a brilliant concerto, in A minor, op.28, of 1877 and one of the most difficult in the repertory, with an extended third movement containing the cadenza) reflect the later 19th-century subordination

and redefinition of conventional virtuosity. End-of-the-century examples of reconceptualized virtuosity include the youthful violin concerto of Richard Strauss (in D minor, op.8, 1882), and the concertos of Busoni (in D, op.35*a*, 1897) and Glazunov (in A minor, 1904), all of which show debts to Beethoven and Mendelssohn.

(vi) The piano. The most important instrument in the history of the 19th-century concerto, however, was the piano. More concertos were published for the piano than for any other instrument. The first important concertos after Beethoven include those by Field, Weber and Hummel. Other concertos popular before 1850 include those of J.L. Dussek, Henri Herz, Norbert Burgmüller, Frédéric Kalkbrenner and Ignaz Moscheles. Adolf von Henselt wrote an important virtuoso concerto in 1847, in F minor. Mendelssohn also composed two important piano concertos, in G minor (op.25, 1831) and D minor (op.40, 1837). However, the concertos by Liszt and Chopin, and the unique Schumann A minor Piano Concerto (op.54, 1841–5), emerged as the key Romantic concertos from the first part of the century. The Schumann concerto is notable for its first movement (originally conceived as an independent work) which is written in fantasy form; it relies on sustained thematic transformation rather than on the conventions of sonata form. The Chopin concertos reflect the influence of Mozart, particularly in the use of extensive flowing solo flights of ornamentation and decorative fancy against a simple changing harmonic background provided by the orchestra. Two of Hummel's concertos, op.85 in A minor (*c*1816) and op.89 in B minor (1819), are worthy precursors of Chopin; of his remaining five only the one in A♭ (1827) has sustained critical interest. Liszt's E♭ concerto (1849) exemplifies his tendency to monothematicism: he amalgamates the separate movements and sections into one continuous work by framing the work with an opening movement whose actual resolution and completion are achieved at the end of the last movement.

Although the influence of the Beethoven piano concertos and their continued presence in the repertory can be seen most clearly in the two concertos of Brahms, throughout the 19th century composer-pianists continued to write works tailored specifically for their own pianism. Nevertheless, this emphasis on the display of technical brilliance did not prevent these composers from attempting ambitious compositional strategies in concerto form. The concertos by Eugen d'Albert (modelled after Liszt), F.X. Scharwenka (whose B♭ minor Concerto no.1 Mahler played for his graduation from the Vienna Conservatory), I.J. Paderewski, Ignaz Brüll, Friedrich Gernsheim, Salomon Jadassohn, Wilhelm Stenhammar and Robert Fuchs have fallen out of today's repertory but point to the large output of high-quality late 19th-century virtuoso concertos. The most popular and highly regarded later 19th-century piano concertos include those by Tchaikovsky (excluding the less well-known no.2 in G, op.55, of 1880 and the even less familiar no.3 in E♭ from 1893, op.75), Grieg (in A minor, op.16, 1868–perhaps the most popular concerto in its time), Saint-Saëns (whose no.2 in G minor, op.22, and no.4 in C minor, op.44, remain the most highly regarded of his five piano concertos), and Dvořák (a large-scale work from 1876 in G minor, op.33, but not noted for any particularly flashy or idiomatic piano writing). Tchaikovsky also contributed to the virtuoso fantasy-style concerto with his less well known two-movement Concert Fantasy op.56 in G (1884). Alkan's massive concerto for piano alone–part of his *Douze études* op.39 (1857) in which the piano takes on all the roles of soloist and orchestra–and his op.10, the *Concerto da camera* in A minor from the early 1830s, can be considered the extreme logical consequence of the virtuoso tradition. Other notable later 19th-century concertos for piano include those by MacDowell (two from the 1880s), Rimsky-Korsakov (1883), Delius (1897–1904), Sinding (1889), Dohnányi (1898) and Reinecke (four, 1873–1900).

(vii) Various instruments. The 19th century witnessed the rapid evolution of the cello concerto. Although the Beethoven Triple Concerto op.56 in C (1804) features the cello, it was the Schumann Concerto in A minor op.129 (1850, first performed in 1860) that set a new standard of how the solo cello could be used with orchestra. Written in three movements but, like the Mendelssohn Violin Concerto, played without a break, it successfully featured the special attributes of the cello and remains more highly regarded than the composer's posthumously published and controversial Violin Concerto (in D minor, 1853). The Cello Concerto in D (1853) by Bernhard Molique, also modelled on the Mendelssohn Violin Concerto, was once held in high esteem. The concertos by Saint-Saëns (particularly no.1 in A minor, op.33, 1872) and Lalo (in D minor, 1876) helped sustain the importance of the cello as a solo instrument in the concerto form. Many worthy 19th-century cello concertos have fallen out of the standard repertory and deserve scrutiny and revival; they include works by Volkmann (A minor, op.33), Raff (D minor, op.193, 1874 – highly praised by Tchaikovsky), Foote (op.33, 1887) and Eugen d'Albert (C, op.20, 1899). Brahms's Double Concerto op.102 in A minor from 1887, written for Robert Hausmann and Joachim, must be regarded as an important contribution to the concerto repertory for the cello, as should Tchaikovsky's Variations on a Rococo Theme op.33 (1876). However, the greatest of all cello concertos is Dvořák's second foray into the genre, in B minor, op.104 (1895), a large-scale symphonic work inspired by Victor Herbert's much shorter second concerto which Dvořák heard in New York in 1894.

Concertos were also written for wind and brass instruments, usually of shorter duration. The example of the Mozart clarinet concerto was followed by Spohr, who wrote four concertos, and Weber, whose two concertos and one concertino for clarinet represent the finest early 19th-century concertos for that instrument. Again following Mozart's lead, Weber produced a concerto for bassoon, op.35 in F (1811). Bassoon concertos were also written by Franz Berwald (F, 1827) and Hummel (F, 1805), who also composed concertos for mandolin (1799) and trumpet (1803). Weber, following up Mozart and Haydn, wrote a Concertino for horn (1815, in E minor). Schumann composed a remarkable F major *Konzertstück* for four solo horns and orchestra (1849). Richard Strauss (following his father Franz's example) wrote his First Horn Concerto, in E♭, early in his career (1883). Rimsky-Korsakov wrote not only a concertino for clarinet and military band but one for trombone as well. The output of multiple-instrument concertos in the 18th-century tradition (in the manner of the symphonie concertante, such as those by Mozart and Haydn) declined as the

century progressed: Spohr's concertos for string quartet (in A minor), violin and cello (in C minor), two violins (in A and B minor) and violin and harp (in C minor and G) inspired few imitators other than Brahms and Bruch, who wrote two concertos, one for viola and clarinet and one for two pianos late in his career (1911). Busoni's massive Piano Concerto in C, op.39 (1904), includes a male chorus; only Beethoven's C minor Choral Fantasy op.80, for piano, chorus and orchestra (1808), can be regarded as a precursor of Busoni's striking achievement.

(viii) The cadenza and formal innovation. A crucial feature of practically all 19th-century concertos was the cadenza, usually placed immediately before the close of the first movement, after the orchestra pauses on a dominant or a 6-4 chord. Cadenzas could also be placed in the third and final movements. This offered an opportunity for the soloist to improvise on the movement's thematic material. In the 19th century, composers increasingly chose to write these cadenzas out. They did not rely on the unequal skills of contemporary performers to improvise. This tendency (e.g. in the Mendelssohn Violin Concerto and Schumann Cello Concerto) reveals the separation of composing and performing as professions during the century. Nevertheless, solo performers were expected to produce their own cadenzas. Certain prominent virtuosos who composed (such as Joachim or Auer) wrote what would later become standard cadenzas for particular works (e.g. the Brahms and Beethoven violin concertos) used by most subsequent performers. Pianist-composers in the 19th century (e.g. Brahms, Saint-Saëns and Busoni) also wrote cadenzas for Mozart and Beethoven concertos. In many 19th-century concertos, the expectation of a cadenza is deflected. The cadenza becomes distributed, fragmented and less highlighted; solo moments, as in the Liszt concertos, become integral aspects of the composition and function more as transition passages, much in the spirit of Beethoven's 'Emperor' Concerto, in which the orchestra eventually participates in the solo episodes in the first and third movements (e.g. the final duet with the timpani). Short cadenza-like moments also occur in the second and third movements, as in the Brahms D minor Piano Concerto and in the Violin Concerto. Some concertos in the 19th century dispensed with the cadenza entirely, as in the case of the Brahms B♭ Piano Concerto.

The placement of a written-out cadenza by Mendelssohn before the recapitulation in his Violin Concerto hints at the many formal innovations in concerto form that occurred during the century. In this work Mendelssohn dispensed with the opening tutti and used the solo instrument to frame not only the exposition but the development and coda as well. The Liszt E♭ Piano Concerto served as a model of an organic structure in which the last movement completes the first; the earlier thematic material recurs and the unresolved exposition of the first movement is brought to a close. This idea is taken up and elaborated on in the Saint-Saëns Cello Concerto in A minor. Grieg's Piano Concerto offers a response to the traditional over emphasis on the first movement: he shifts the balance from opening movement to closing movement; the third movement is the longest and the most complex. The heritage of the Baroque ritornello was challenged by the collapsing of tutti and solo exposition into one, as in the Mendelssohn concertos, and the suppression of the opening tutti idea, as apparent in the Grieg Piano Concerto. In the 1903 Sibelius Violin Concerto in D minor, op.47, the violin opens the work and leads the first subject to a dramatic arrival point, after which there is a cadenza; only then does the orchestra come to the fore, when it introduces the second subject. The Schumann Piano Concerto dispenses with the ritornello idea entirely. Similarly, in the Tchaikovsky Violin Concerto the development of thematic material is the consequence of a novel but unified treatment of solo instrument and orchestra. In the first movement the soloist enters after a brief orchestral introduction, but its expressive material and figuration are not associated with any thematic exposition; that occurs abruptly only in bar 28, with the soloist entirely in the lead. There is ultimately an important tutti in the middle of the movement before the development, but it is in the dominant, although it uses the primary theme; and the cadenza, prepared by a prominent tutti, precedes the recapitulation. A coda using both solo instrument and orchestra closes the movement in place of any final tutti. Similar deviations from late 18th-century tutti-solo patterns of exchange and assignments of role in formal structures were already present in Clara Schumann's A minor Piano Concerto of 1835. The effect was to set aside the convention of using the orchestra as either background or theatrical and dramatic structural frame for the solo instrument; rather, the solo instrument assumes an equality if not dominance in the musical form. One memorable example of the reversal of roles is Mendelssohn's use of a solo, open-string pedal *g* as background for the woodwind statement of the second theme in the first movement of the Violin Concerto.

The expectations of listeners, in terms of the categories associated with symphonic writing – thematic presentation and transformation as well as harmonic logic and formal symmetry – are explicitly broken. Liszt's Piano Concerto in A (1839) is a one-movement work designed not on narrative principles but on a reconsideration of the formal consequences of reliance on first-movement sonata practice. The classical first movement defined the character of subsequent movements, creating a pattern of slow and then final rondo, 'lighter' finales. The shorter works of Chopin (the Variations op.2 on *Là ci darem la mano*, 1827, the *Grande Polonaise brilliante* op.22, 1831) indicate the intention of early Romantic composers to circumvent the expectation derived from a multi-movement structure. The advance beyond Classical and Baroque models took the direction of adaptation not only of symphonic practice (such as the addition of a fourth movement and the tendency to monumental sonorities) but also of the free-fantasy strategy associated with solo keyboard writing, beginning with Schumann's generation. A remarkable and late contribution to the fantasy strategy of concerto writing is Schoeck's Violin Concerto in B♭ op.21, 'quasi una fantasia' (1912). The use of both varied structure and fantasy opened up the possibility that the form of the concerto could integrate the ideas of contrasting motifs and thematic development with narrative logic in which the soloist might be comparable to the protagonist of a novel. This justified a dynamic construct of dramatic form that leads to a grand finale, as well as the use of first-movement thematic materials at the end of the work and a concentration on closely related motivic ideas throughout all movements. In Bruch's famous G minor Violin Concerto, the first movement is itself an extended rhetorical introduction, led by the

violin, to the following two movements, the first of which – although an Adagio – is in modified sonata form. Experimentation in the formal role of the solo instrument during the 19th-century evolution of the concerto led composers to utilize instruments within the orchestral sound as secondary soloists: individual instruments from the orchestra are used alongside the primary soloist, as for example in the horn and cello solos in the piano concertos of Grieg and Brahms, the oboe solo in Brahms's Violin Concerto and the viola solo in Strauss's *Don Quixote*.

5. The 20th century. The essence of the concerto – that of a soloist playing with an ensemble – was one of the 20th century's most inexpugnable inheritances, and the term is even a title in the catalogues of many of the century's most radical composers, including Cage. There must be many reasons for this longevity of the genre, and they would have to include the wish of virtuosos to play new works, the enthusiasm of audiences, the relative looseness of 'concerto' as a formal definition, and the continuing challenge of a musical type which models what happens in music generally: the one communicates with the many.

One of the finest concertos of the early years of the 20th century, and a work that followed the Brahmsian Classical design, was Elgar's for violin (1909–10). The effectively delayed entry of the soloist, the containing of several themes within subjects dramatically opposed as wholes but 'manipulated' in sections – these are only the more easily identifiable of Elgar's constructive methods. His secure control of the classical shape is retained even during the suggestions of improvisatory rhapsody to which the 'accompanied cadenza' contributes. By contrast, the subsequent Cello Concerto is a four-movement work designed with the freedom of a sonata with orchestra. A more or less free handling of the conventions of the Romantic concerto – in terms of form and of the treatment of the relationship between soloist and orchestra – continued throughout the century in the works of Rachmaninoff, Walton and Shostakovich, in some of those of Prokofiev, and in those of their many successors. Rachmaninoff and Prokofiev, with Bartók, were perhaps the last notable composer-virtuosos, and their concertos were written at least in part as vehicles for their executive skills. Many 20th-century concertos were written to the order of outstanding performers other than their composers (Piatigorsky in the case of Walton's Cello Concerto, for example, and Rostropovich in that of Prokofiev's Sinfonia concertante), a circumstance that has often resulted in works remarkable above all for difficulty and bravura.

The violin concertos of Schoenberg (1935–6) and Berg (1935) certainly require enormous virtuosity of the performer, but so they did of their composers. Schoenberg's writing for the orchestra is as brilliant and demanding as that for the solo violin. The work's lyrical invention is prolific yet controlled and unified by the 12-note serial method; the finale contains a long, partly accompanied cadenza, which includes recollections of the previous two movements. In the Piano Concerto (1942) Schoenberg carried this linkage further in returning to something like the all-encompassing single-movement forms of the First Quartet and the *Kammersinfonie* no.1. Berg's Violin Concerto is in two movements, each in two sections, and here 12-note serialism is treated with such skill that it can embrace a Carinthian ländler and a Bach chorale. Serial writing again binds a lyrically expansive form, whose intention was partly programmatic: to some extent Berg provided in the solo part a portrait of Manon Gropius, to whose memory the concerto was dedicated. In a similar way Nielsen had composed the solo line in his Clarinet Concerto (1928) as an expression of the personality of its dedicatee and first performer, Aage Oxenvad. 'Characterization' as a principle of concerto writing was to be pursued in the 1960s and 1970s by Carter and Musgrave (see below).

Schoenberg, Berg and Nielsen were, in their very different ways, alike in seeing their concertos (and other works) as extending 19th-century practice. Even when Schoenberg went to the 18th century for the materials of his concertos for cello (1932–3, after Monn) and string quartet (1933, after Handel), his aim was not to return to the Baroque but to bring the Baroque up to date. On the other hand, the Second Horn Concerto (1942) and the Oboe Concerto (1945) of Strauss show a nostalgic attempt to regain the spirit if not the form of Mozart's concertos. With Stravinsky and Hindemith, and their many followers, the neo-classical tendency took a more radical turn. Hindemith's earliest concertante pieces, the *Kammermusiken* (e.g. no.2 with piano solo, 1924; no.5 with viola solo, 1927), took forms analogous to the Baroque suite, filled with music of fluid, dissonant counterpoint. These works are scored for small orchestras, generally containing more wind than strings, and their solo–ensemble writing follows models of the 18th century rather than the 19th. In the several concertos Hindemith composed between those for violin (1939) and organ (1962), attention is once more fixed on the soloist, the orchestra is of conventional size, and in form and tonality there is a rapprochement with the 19th century.

Stravinsky's neo-classical concertos, from the Piano Concerto (1923–4) to the Concerto in D for strings (1946), consistently keep their distance from the forms, conventions and aesthetics of the 19th century, which is not to say that they are not referred to: Tchaikovsky (admittedly in his more Mozartian guise) is in a sense the object of the piano Capriccio (1928–9), and the Violin Concerto (1931) seems at times to be written 'against' the great D major predecessors that Stravinsky studied before writing it. The short *Ebony Concerto* for clarinet and jazz band (1945) uses the melodic, rhythmic and instrumental techniques of jazz in a manner that had been attempted, more tentatively, in the piano concertos of Copland (1926) and Ravel (1929–31). Something similar was achieved in the reverse direction by Gershwin in his Piano Concerto (1925).

Apart from the solo instrumental concertos Stravinsky composed two concertos for chamber orchestra: those in E♭ (*Dumbarton Oaks*, 1937–8) and D ('Basle', 1946). Like the Violin Concerto, these pieces are Baroque concertos in form and polyphonic conception, but they return still more decisively to Baroque scale: the first of them was likened by Stravinsky himself to the Brandenburgs. Many other composers in the 1930s and 1940s produced concerti grossi and *concerti da camera* on Baroque models, but small-scale concertos were not the prerogative of Paris-centred neo-classicism. Berg's Chamber Concerto for piano, violin and 13 wind instruments (1923–5) has a quite original form: the first movement is for piano and wind, the second is a palindrome with

concertante violin, and the finale employs both soloists; the whole work, obsessed with triple events, develops themes derived from the names of Schoenberg, Berg and Webern. Webern's Concerto for nine instruments (1931–4) has three movements of perpetual, symmetrical variation on a three-note motif. Although the piece was at first planned as a piano concerto, the piano is the foundation rather than the protagonist of the music, and the melody instruments are treated as equal individuals.

This tendency to concertos of equality, seen in the compositions of Stravinsky and Webern, expressed itself in large-scale concertos for orchestra, a genre that gave each section its solo opportunities (as in Bach's Brandenburg nos.1 and 3). Works of this type were composed by Hindemith (1925), Kodály (1939–40), Bartók (1943), Tippett (1962–3) and Gerhard (1965), among others. Bartók's five-movement concerto lacks the close thematic connections of his immediately preceding compositions, but it is a splendid display piece. In terms of concertante writing, the second movement, 'Giuoco delle coppie', is the most notable: it introduces in turn pairs of bassoons, oboes, clarinets, flutes and trumpets, and then mixes them.

Among Bartók's solo concertos are three of the most important 20th-century contributions to the genre. The first two piano concertos (1926 and 1930–31) have five-part arch forms such as were prominent in Bartók's music at the time: each of the central movements is an *ABA′* structure and each finale uses variants of first-movement ideas. Bartók's studies of Baroque music did not lead him to take over Baroque forms (the outer movements of the piano concertos can be related to sonata and rondo patterns), but it did show him how to compose music of brilliant streamlined polyphony, particularly in the Second Piano Concerto. In the central movement of the First Concerto Bartók achieved an unusually close contact between soloist and ensemble by setting the percussively treated piano against an ensemble of wind and percussion. The Violin Concerto (1937–8) again has a finale that can be regarded as a complex variation of the opening movement, and the middle movement is itself a set of variations. There is also an early violin concerto that was published posthumously. The Third Piano Concerto represents a decline in comparison with the other two; and the Viola Concerto had to be constructed after Bartók's death by Serly.

A notable feature of concerto composition after World War II has been the conception of the solo–ensemble relationship as a dramatic one, with each side expressing 'characters' involved in calm discussion, violent argument or independent development. The principal exponent of this technique, which relates to the concertos of Berg and Nielsen mentioned above and also to Ives's Second Quartet, has been Carter in his Double Concerto for harpsichord and piano with two chamber orchestras (1961), Piano Concerto (1964–5), Concerto for Orchestra (1969), Oboe Concerto (1986–7) and Violin Concerto (1990). In the Piano Concerto, for example, the soloist is seen as a capricious individual whom the orchestra and a concertino group attempt to influence. Such characterization of material (a technique that includes differentiation of interval and rhythmic structures) provides a ready means of generating perceptible forms in atonal music, and it has also been used in several concertos by Musgrave, in which the dramatic situation is heightened by the soloist's physical movements within the orchestra. Henze's Violin Concerto no.2 (1971) pushes the technique to the borders of music theatre.

By this stage, the word 'concerto' has lost any residual formal meaning; it could therefore be used simply to indicate a work with one or more soloists: examples include Barraqué's Concerto for clarinet, vibraphone and six trios (1962–8) and Babbitt's Piano Concerto (1985). Barraqué even said that he had chosen his title for its neutrality. But the wide spectrum of late 20th-century concertos also includes works that look back to ideals from the 19th century and from the 18th (Schnittke's Concerti grossi, Davies's ten 'Strathclyde concertos'), works that communicate with the past at the level of language rather than form (Berio's Concerto for two pianos of 1972–3 and his *Concerto II (Echoing Curves)* for solo piano and orchestra of 1988–90), and works that, conversely, are cast in contrasted movements but have little in common with previous concertos in matters of content, such as Ligeti's concertos: his Cello Concerto (1966), Chamber Concerto (1969–70), Double Concerto for flute and oboe (1972), Piano Concerto (1985–8) and Violin Concerto (1989–93). On one level these last works re-run older structural patterns – a balance of slow and fast movements (Cello Concerto), quasi-symphonic four-movement form (Chamber Concerto) and symmetrical five-movement form having Bartókian echos (Piano Concerto, Violin Concerto) – but the material and processes are new. Most essentially, Ligeti has preferred forms which, by contrast with sonata-style dialectic, appear to be self-generating, growing from motifs and rules given at the start. In the same measure, his concertos are not so much dialogues as works in which one instrument (or a pair in the case of the Double Concerto) is at the music's origin, focus or summit.

Many other composers have simply dropped the work 'concerto' and found other names for concertante works that have little in common with the concertos of earlier periods. Some diverse examples are Stravinsky's *Movements* for piano and orchestra (1958–9), Messiaen's many pieces for piano and ensemble (though his last, unfinished composition was a *Concerto à quatre* in several movements with piano, cello, flute and oboe soloists), Boulez's *Domaines* for clarinet and six instrumental groups (1961–8), Stockhausen's *Michaels Reise um die Erde* for trumpet and orchestra (1978–81) and Gubaydulina's *Offertorium* for violin and orchestra (1980).

Concert of Ancient [Antient] **Music.** London concert society founded in 1776. *See* LONDON, §V, 2.

Concerto grosso. Generally, a type of concerto in which a large group (known as the 'ripieno' or the 'concerto grosso') alternates with a smaller group (the 'concertino'). The most common solo group, used in the archetypal concerti grossi of Corelli's op.6, is two violins and cello, a combination also used by Handel; Bach preferred a more varied selection of instruments in his Brandenburg Concertos, only some of which are strictly concerti grossi. The term 'concerto grosso' is often loosely applied to any concertos of the Baroque period except solo ones; the term 'orchestral concerto' is, however, more appropriate to those concertos without a solo group.

See CONCERTO, §II.

□

Concerto Köln. Period instrument ensemble. Based in Cologne, it was founded in 1985 by a group of young graduates from various European music conservatories. It has toured extensively and appeared at many international festivals. It has performed Baroque and Classical operas under different directors. In 1992 it joined with DeutschlandRadio to found the Cologne Festival of Early Music, which has subsequently concentrated on a particular composer each year; these have included J.M. Kraus, Boccherini, Locatelli, Rosetti and Vanhal. Concerto Köln's subsequent recordings of this music have won critical acclaim and many international awards.

NICHOLAS ANDERSON

Concerts Lamoureux. Parisian concert association. *See* PARIS, §VII.

Concerts Pasdeloup. Parisian concert society founded in 1861 as the Concerts Populaires. *See* PARIS, §VII.

Concert Spirituel (Fr.: 'sacred concert'). A concert series founded in Paris in 1725 by Anne Danican Philidor, initially to perform instrumental music and sacred works with Latin texts; later, secular works to French texts were introduced, and the Concert Spirituel (always referred to in the singular) was at the centre of Paris's non-operatic musical life until the series came to an end in 1790 (see C. Pierre: *Histoire du Concert spirituel 1725–1790*, Paris, 1975). The name was revived in 1805, and *concerts spirituels*, consisting of programmes on the Parisian model or simply of sacred music, were given in many European centres in the late 18th century and early 19th.

Concone, (Paolo) Giuseppe (Gioacchino) (*b* Turin, 12 Sept 1801; *d* Turin, 1 June 1861). Italian singing teacher and composer. After a short career as a singer, he turned to teaching and became one of the most influential singing instructors of his time. From 1837 to 1848 he taught in Paris, where he published many books of vocal exercises, some of which are still used. He composed two operas: *Un episodio del San Michele*, produced at Turin on 8 June 1836, and *Graziella*, which was not performed. His output also included songs and duets. After the Revolution of 1848, Concone returned to Turin, where he was organist and *maestro di cappella* at the Sardinian court.

ELIZABETH FORBES

Concord. American record company. It was founded in Concord, California, in 1973. From the mid-1970s, with Norman Granz's Pablo labels, it became the principal outlet for recordings made by older swing and bop musicians, as well as those by young players working in more traditional jazz styles such as Scott Hamilton and Warren Vaché. It also issued recordings made at the Concord Jazz Festival. About 1986 a subsidiary label, Concord Picante, was established for salsa and Latin jazz recordings by such artists as Tito Puente and Mongo Santamaria. Also included in the catalogue are over 40 unaccompanied jazz piano sessions involving soloists such as Kenny Barron, Hank Jones and Marian McPartland. In 1994 it was sold to Alliance Entertainment in New York.

BARRY KERNFELD

Concord String Quartet. American string quartet. Founded in 1971, it won the Naumburg Award for chamber music the same year, which provided for its début at Alice Tully Hall in 1972 and the commissioning of George Rochberg's Third String Quartet. Resident at Dartmouth College, New Hampshire, from 1974, the quartet developed a reputation as a strong advocate of American music, and maintained its original members throughout its career. Mark Sokol (*b* Oberlin, OH, 16 July 1946), first violin, studied with Robert Mann and Dorothy DeLay at the Juilliard School of Music. Andrew Jennings (*b* Buffalo, NY, 3 Nov 1948), second violin, studied with Galamian at the Juilliard School. John Kochanowski (*b* South Bend, IN, 7 Jan 1949), viola, studied at the Interlochen Arts Academy, Michigan, and with Robert Mann and Walter Trampler at the Juilliard School. Norman Fischer (*b* Plymouth, MI, 25 May 1949), cello, studied at the Interlochen Arts Academy and with Richard Kapuscinski at the Oberlin College Conservatory.

Rochberg continued to collaborate with the Concord, writing for the ensemble his Piano Quintet (1975), his Fourth (1977), Fifth (1978) and Sixth (1978) String Quartets (the 'Concord Quartets', recorded by the ensemble), his Seventh String Quartet (1979) and his String Quintet (1982). Other composers who have written for the quartet include Lukas Foss (Third String Quartet), Ben Johnston (*Crossings*) and Jacob Druckman (Third String Quartet). The ensemble was strongly influenced by

the Juilliard Quartet in its energetic and forceful style of playing. It disbanded in 1987.

JAMES CHUTE

Concours Olivier Messiaen. Piano competition held from 1967 to 1971 as part of the ROYAN FESTIVAL.

Concussion bellows [winker]. In an organ, a bellows-like pneumatic, or membrane, usually spring-loaded, which is attached to a wind-trunk or pallet box to help smooth out surges in the wind. It is believed to have been invented by the American builder, W.M. Goodrich, in the 1820s, although J.C. Bishop also claimed its invention.

□

Condell, Henry (*b* London, 1757; *d* London, 24 June 1824). English composer and violinist. He was for a number of years violinist in the orchestras of various London theatres. Six songs by him were published in about 1785. Condell wrote overtures for two French operas adapted and produced by Michael Kelly at Drury Lane: *A House to be Sold* (1802; from Duval's text for Fétis's *Maison à vendre*) and *Love Laughs at Locksmiths* (1803; from Bouilly's text for Méhul's *Une folie*); he also wrote overtures for Dimond's historical play *The Hero of the North* (Drury Lane, 1803) and Fawcett's ballet *The Enchanted Island* (Haymarket, 1804). His other theatrical pieces included J.T. Allingham's farces *Who Wins, or The Widow's Choice* (Covent Garden, 1808) and *Transformation, or Love and Law* (Lyceum, 1810), and Frederic Reynolds's *The Bridal Ring* (Covent Garden, 1810). He also contributed to three collaborations produced at Covent Garden: T.J. Dibdin's *Up to Town* (1811), Charles Farley's *Aladdin, or The Wonderful Lamp* (1813), and the younger Charles Dibdin's *The Farmer's Wife* (1814). Several of these pieces were published, as was his piano sonato, a two-movement work which concludes with a rondo based on 'No my Love no', a popular song from Michael Kelly's *Of Age Tomorrow* (1800). Condell's glee *Loud blowe the wyndes* was awarded a prize at the Catch Club in 1811.

Condon, Eddie [Albert Edwin] (*b* Goodland, IN, 16 Nov 1905; *d* New York, 4 Aug 1973). American jazz banjoist and guitarist and impresario. He first played the ukulele, then the tenor banjo, plectrum banjo, tenor lute and four-string guitar. He worked with the Austin High School Gang in Chicago, and promoted and organized many important sessions, beginning with the McKenzie-Condon Chicagoans in 1927 and culminating in a series of albums for Columbia (1953–7), notably *Jam Session Coast to Coast* (1953). After making a reputation as a hard-hitting rhythm banjoist and guitarist Condon went on to specialize in organizing jam sessions which matched the early jazz repertory with the most accomplished instrumentalists on the New York scene. He also organized a series of jazz concerts at Town Hall and Carnegie Hall (1942–6) and presented one of the earliest jazz programmes on television (1942). He broadcast four jazz concert shows in April 1942 for the CBS network. In 1945 he broadcast a show featuring himself playing and talking with Louis Armstrong, Billie Holiday, Jack Teagarden, Bobby Hackett and many other jazz stars. He frequently led his own band at Nick Rongetti's club, and was co-owner (with Pete Pesci) of his own club, which opened in 1945. Condon was known for his dry wit, and was the co-author of three valuable sourcebooks on jazz: *We Called it Music: a Generation of Jazz* (New York, 1947/*R*, enlarged 2/1988), *Eddie Condon's Treasury of Jazz* (New York, 1956/*R*) and *The Eddie Condon Scrapbook of Jazz* (New York, 1973).

WILLIAM H. KENNEY, III

Conducting (Fr. *direction d'orchestre*; Ger. *Dirigiren*; It. *direzzione d'orchestra*). Modern conducting combines at least three functions: 1) the conductor beats time with his or her hands or with a baton in performance; 2) the conductor makes interpretive decisions about musical works and implements these decisions in rehearsal and performance; 3) the conductor participates in the administration of the musical ensemble. The word conducting acquired its present meaning in the 19th century, as the practice developed in its modern form. Conducting is largely limited to the tradition of Western art music, although other traditions have adopted the practice (e.g. Turkish art music, big band jazz).

The history of musical direction may conveniently be divided into three overlapping phases: the singer-timebeater (15th–16th century); the instrumentalist-leader (17th–18th century); the baton conductor (19th–20th century).

1. History to 1800. 2. History since 1820. 3. Technique.

1. HISTORY TO 1800. The rise of polyphonic music and mensural notation made it advantageous to coordinate singers on different parts by means of a visible beat called the tactus. The tactus marked a unit of musical time, usually (but not always) equivalent to a semibreve. A few 15th-century paintings are said to depict singers beating time, but their interpretation is problematic. A hand that seems to be beating time may be giving cheironomic signs; what seems to be a baton may be a pointer for indicating the notes in a choirbook (fig.1). Writers on music do not mention timebeating until the very end of the 15th century. Adam von Fulda (1490) mentions the tactus, but does not say how to mark it; Ramis de Pareia (1482) recommends that singers mark the tactus to themselves by tapping a foot, hand or finger. Many 16th-century

1. Director of a choir guiding his singers with hand signs: miniature from the Gradual of Matthias Corvinus, French, c1487 (H-Bn lat.424, f.411)

treatises give instructions for displaying the tactus to other singers with vertical motions of the hand and arm. Agricola (1532) writes that the tactus 'is a steady and even motion of the singer's hand . . . by means of which the notes of the song are led and measured. All the parts must follow it if the song is to sound good'. Tomás de Santa María (1565) describes vigorous beats 'in empty space', with the hand stopping at the top and the bottom of its motion. The downbeat may strike a book or another object audibly, and Santa María says that instrumentalists should learn to 'mark the tactus and the half tactus with the foot, since the hand cannot do so while playing'. Other authors complain that this sort of audible time-beating disturbs the performance (Philomathes, 1523; Bermudo, 1555; Friderici, 1618).

Depictions of choirs from the 16th to the 18th centuries often show one man with his hand raised, evidently beating time. Often he holds a scroll of rolled-up paper in the time-beating hand (*see* NUREMBERG, fig.4). Some writers speak of the time-beater holding a small stick ('baculus') but depictions of this are rare. Sometimes it seems to have been the choirmaster or precentor who beat time; in other cases one or more of the singers apparently kept the beat without assuming additional authority.

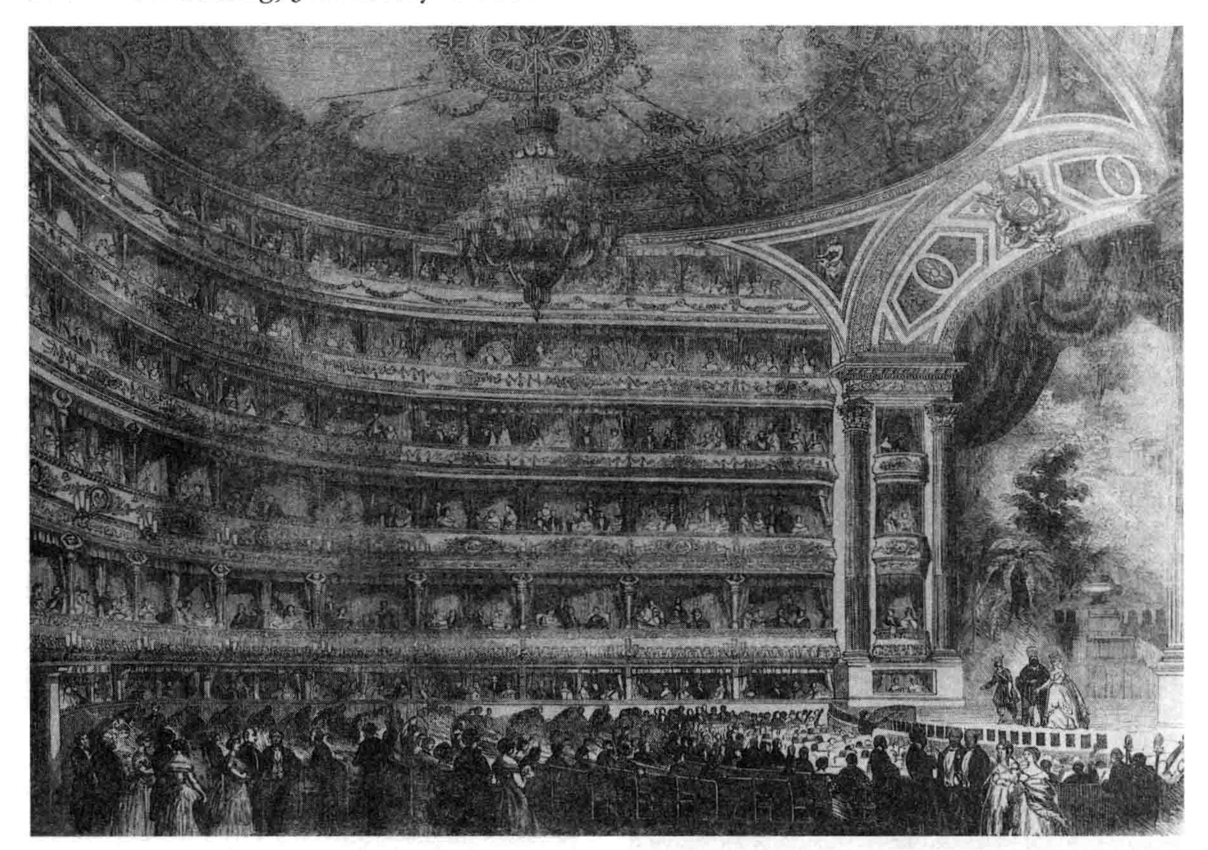
The multiple-choir (*cori spezzati*) practices of the early 17th century made time-beating even more necessary. Viadana (1612) says that the *maestro di cappella* should stand with the first choir, controlling the movement of the music and cueing the entrances of the singers. When the additional, ripieno choirs are to enter, the *maestro* 'raises both hands as a sign that everyone should sing together'. Maugars, describing polychoral singing in Rome in 1639, says that the master 'gives the main beat in the first choir', but in each of the other choirs there is a man whose only job is to watch the director and duplicate his beat so that 'all the choirs sing to the same beat without dragging'. The time-beater, sometimes depicted as a keyboardist rather than a singer, endured well into the 18th century, particularly in church music (fig.3). In their correspondence of the 1770s and 80s Leopold, Wolfgang and Nannerl Mozart still distinguished between the verbs *tactieren* or *Tact schlagen* (time-beating in church music and oratorio) and *dirigieren* (directing with an instrument in opera or concert music).

With the advent of basso continuo practice around the beginning of the 17th century along with the growing size and increasing independence of instrumental ensembles,

2. Director of music using a staff: woodcut from Gregor Reisch's 'Margarita philosophica' (1503)

3. Franz Xaver Richter: engraving by Christophe Guérin, 1785

direction by an instrumentalist gradually became the predominant mode. The practice and the techniques of instrumental direction developed over the course of the 17th and 18th centuries along with the growth of the orchestra. Instrumentalist directors led by example, indicating the beat primarily by the way they played, rather than by visible or aural signs. As Mattheson said in 1739: 'Things always work out better when I both play and sing along than when I merely stand there and beat time. Playing and singing along in this way inspires and enlivens the performers'. The responsibilities of the instrumentalist director eventually extended beyond tempo and beat to include other aspects of performance, like dynamics, articulation, accuracy and affect.



Two instruments were the most suitable for directing an orchestra: keyboard (organ, harpsichord, piano) and violin. Several factors made it advantageous to direct from the keyboard: the keyboard player was often the composer of the music being performed; he often held an administrative post as Kapellmeister or Director; and he coached the singers and accompanied them when they sang. A keyboardist directed by playing the bass line with his left hand and supplying as many notes as necessary in the right hand to be heard by all the singers and instrumentalists (Quantz, 1752). C.P.E. Bach (1753) suggests that if the bass part had long notes, the keyboardist might subdivide them to keep the rhythm going for everyone to hear; he also recommends that the keyboard player raise his hands off the keys between notes, both to produce a more forceful sound and so that the rise and fall of his hands would mark the beat. Other authors describe keyboard players marking the beat by bowing at the waist, flapping their elbows, stamping their feet, standing up and waving their arms or even shouting aloud (Veracini, n.d.; Rochement, 1754; Schönfeld, 1796). They also describe keyboard players directing rehearsals, tuning the orchestra and filling in missing or errant parts from the score (Scheibe, 1745; Junker, 1786). The problem with keyboard leadership was that in several types of orchestral music the keyboard did not participate. In the theatre, ballet music, overtures and instrumental interludes were usually performed with no continuo; and many orchestras played symphonies without a keyboard instrument (Webster, 1990). In the late 18th century keyboard participation declined in other types of music too, so that by 1800 even opera recitatives were sometimes accompanied only by a cello (Rochlitz, 1799). Finally, the keyboard director did not do quite the same thing as the other instrumentalists: he improvised an accompaniment while they played independent, written parts. 'The keyboard director', says one early 19th-century commentator, 'has become a stranger among the other instrumentalists . . . and has little effect on whether the performance succeeds or fails' (Arnold, 1806).

Direction by the leading violinist, on the other hand, became increasingly common during the 18th century. The LEADER, as he was called in England led by means of the strength, clarity and loudness with which he played the first violin part (Reichardt, 1774). The leader also gave visual signals: bowing vigorously to indicate the tempo, moving the neck and scroll of his violin to mark the metre and beating a bar in the air with his bow before the beginning of a movement (Arnold). Sometimes he stood on a raised platform so that the entire orchestra (and, in opera, the singers) could see and hear him.

The notion of 'dual direction' (Schünemann, 1913; Carse, 1940), that the keyboard player and first violinist led simultaneously or shared direction in 18th-century orchestras, is somewhat anachronistic, because it projects a modern concept of conducting onto a period when the functions of the conductor had only just begun to develop. 18th-century sources neither employ the term nor express the concept of 'dual direction' and give no directions for the sharing or dividing of leadership between violinist and keyboard player. Composers directed either from the keyboard or with a violin as appropriate, usually keyboard in vocal music, violin in instrumental music. J.S. Bach, Gluck, Haydn and Mozart are all known to have directed in both ways. The musicians followed the keyboard or the violinist (or the singer or the instrumental soloist), as convenient and appropriate: for the most part they took responsibility for themselves. 'Where an orchestra is arranged so that its members can all see and hear one another, where it is staffed with virtuosos, where the composer has included performance indications in the parts, and where there are sufficient rehearsals, then no further direction is necessary: the piece plays itself like a clock that has been wound up and set running' (Biedermann, 1779). Only towards the end of the century, as specifically orchestral performing practices developed, did a debate over direction materialize: who should direct the orchestra–keyboard or violin?

In northern Germany and in England, where the keyboard continuo survived longest, such writers as Forkel (1783), Busby (*c*1801) and the anonymous 'deutscher Biedermann' (1779) described the confusion that ensued when keyboardists and violinists competed for direction during a performance, and they argued for the keyboard against the pretensions of the violin. However, a succession of treatises, by Reichardt (1776), Galeazzi (1791 and 1796), Arnold (1806), and Scaramelli (1811), confirmed the ascendancy of the violin leader at the end of the 18th century and outlined his ever-expanding duties. He was responsible for selecting musicians, directing rehearsals, determining seating arrangements, setting tempos, understanding the composer's intent and realizing that intent in performance. Successful violin leaders became famous for the achievements of the orchestras they led: Benda in Berlin, Cannabich in Mannheim, Pisendel in Dresden, Pugnani in Turin, G.B. Sammartini in Milan, Giardini, Cramer and Salomon in London, La Houssaye in Paris and many more. Insofar as the orchestra was an autonomous institution in the 18th century, its leader was the first violin.

A notable exception was the Paris Opéra, where, from the mid-17th century until the beginning of the 19th, the music was directed by a time-beater with a baton, who gave visible and audible signals to the singers, dancers and instrumentalists. Lully, in charge of the Académie Royale de Musique until 1687, seems to have directed at the Opéra in this way, although the only evidence is iconographic. An engraving of a performance of *Alceste* in 1674 shows a man (perhaps Lully) standing at the stage apron holding a short stick in his raised right hand (*see* PARIS, fig.13). Another engraving from the same year shows a time-beater (perhaps Lully again) directing singers and instrumentalists in concert with a scroll of paper in each hand (Zaslaw, 1987).

4. Conductor standing next to the stage with his back to the orchestra, at the Royal Italian Opera House, London: engraving from the 'Illustrated London News' (6 December 1856)

By the first decade of the 18th century the *batteur de mesure* had become established as a distinct function at the Opéra. Around 1760 his position was merged with that of the *maître de musique*, suggesting that he had acquired other responsibilities. J.-J. Rousseau described in 1758 how the *batteur* marked the beat, not with vertical movements in the fashion of singer time-beaters, but with a downbeat followed by 'various movements of the hand to the right and to the left'.

Rousseau, along with many contemporaries, complained bitterly about the noise of the downbeat, struck against a music stand or the stage apron; he contrasted this 'continuous disagreeable noise' with Italian and German practice, where the musicians felt the beat and maintained it on their own. The audible beat may not have been as continuous, however, as Rousseau implies (Charlton, 1993). In orchestral numbers time-beating was not necessary at all unless the tempo was very slow, and in recitative the job of the *batteur* was to communicate the free rhythms of the singers to the orchestra, a task accomplished with patterns traced in the air rather than with an audible beat; on the other hand, as late as 1791 the *maître* still beat time audibly in choruses (Framery and Ginguené, 1791).

Although audible time-beating declined, the authority of the *maître* seems to have grown at the Opéra during the last part of the 18th century. The *maître* stood at the stage apron, facing the singers, with his back to the orchestra, beating time and directing with a short, sturdy baton (fig.5). His activities were called 'directing' (*diriger*) or 'conducting' (*conduire*), and he himself became known as the '*chef d'orchestre*'. J.-B. Rey, first *batteur*, then *maître* at the Opéra from 1780 until 1810, began his (regime by instituting a system of auditions and, when his authority was challenged in 1800, succeeded in having the first violinist dismissed (Charlton, 1993). According to one of his supporters, Rey was the 'motor of the whole musical action', taking responsibility not only for rhythm and tempo but also for the character of the music, for phrasing and for the coordination of singers, chorus, dancers and orchestra. By the beginning of the 19th century the *chef d'orchestre* at the Opéra looked and acted in many respects like a modern conductor.

2. History since 1820. 1820 has long served as a watershed in the history of conducting; Ludwig Spohr is said to have introduced the baton at a concert in London that year. Although he probably used a violin bow, Spohr took credit in his *Autobiography* for 'the triumph of the baton as a time-giver'. Spohr had used scrolled music paper when conducting *The Creation* in 1809. Carl Maria von Weber used a manuscript roll to direct concerts in Dresden in 1817 but subsequently switched to the baton.

The rapid shift to the baton suggests the extent to which the craft of conducting was transformed between the 1820s and 1847, the year of Mendelssohn's death. The difficulties and innovations in the orchestral music of Beethoven and the early Romantics, and the increased number and diversity of the instruments in the orchestra, made directing from the first violin desk (fig.6) or from behind a keyboard in the opera pit unsatisfactory. The

need for a central figure visually in charge of the ensemble became widely accepted. The codification of visual signals as the sole systematic means of guiding a performance quickly followed. The evolution of the art of conducting from auditory directives, including clapping, tapping (although tapping the stand at the start lingered on through the century), foot-stamping and shouting, and most of all playing along, coincided with the decline in amateur participation in public performance and the rise in spectator expectations. By the mid-1830s, the greatly expanded urban audience for music demanded higher standards as a consequence of the astonishing and widely travelled virtuosity of Spohr, Paganini, Liszt and Thalberg. More accurate orchestral ensemble, intonation and balance were responses to advances in dexterity and brilliance in solo instrumental playing. Weber and Spohr improved the quality of orchestral playing. Weber re-seated the opera orchestra so that woodwind, brass and percussion were no longer obscured by the violins. Nevertheless, the placement of the conductor at the front of the orchestra with his back to the audience did not become uniform until later in the century.

Throughout the 19th and the early 20th centuries, conducting technique and training remained linked to opera, because of the scale, the number of variables and the demands of the theatrical that frequently worked against coherence on the musical side. Mendelssohn was one of the few early 19th-century conductors without extensive experience in the opera house. The steady growth in the number of public professional and semi-professional orchestra concerts in London, Paris and Vienna encouraged the transference of the image of the virtuoso onto the conductor. In the concert hall the visual aspects of conducting style assumed new significance. The conductor took on the role of a leading stage personality and became the focus of adulation, criticism and applause.

François-Antoine Habeneck was lionized for concerts he gave well into the 1840s; he introduced the Beethoven symphonies (albeit with cuts) to Parisian audiences. Habeneck's conducting won the grudging admiration of Wagner (who nonetheless felt him devoid of genius) although, except towards the end of his career and when faced with large forces, Habeneck still conducted in the old style with a violin bow from the first desk. Habeneck insisted on intensive rehearsals and his tyrannical manner on the podium and reputation as a man of 'iron will and artistic superiority' helped frame a longlasting set of expectations about conductors.

Habeneck was among the first conductors who were not composers. The gradual separation of conducting from composing gave rise to a crisis of confidence within music criticism and the public about conducting; it mystified the skills and technique of the conductor while shifting the focus of attention to mannerisms, style, appearance and issues of interpretation. The first publicity monger and truly stylized baton conductor who did not attain stature as a composer was the flamboyant crowd-pleaser Louis Jullien. He was, as W. Davison remarked, 'ceremonious, grandly emotional'; 'at the conclusion of a symphony' he would 'sink back with demonstrative exhaustion'. Highly melodramatic, Jullien worked in London at the same time as Michael Costa who cultivated another lasting but no less compelling model of the conductor as 'the embodiment of calm, collected, concentrated will without the least show of ostentation'. This pre-1848 generation of baton conductors already displayed the elusive qualities of modern conducting, intangibles that go beyond technical prowess in terms of musicianship or manual dexterity. A conductor was expected to possess an aura, defined by Davison as 'that special, perhaps magnetic, power of holding together and swaying numbers of men'.

The leading figure in the history of conducting during the 1830s and 40s was Mendelssohn. His careful, didactic methods, reflected in his success with ensembles in Düsseldorf, Leipzig, Berlin and England, did much to define rehearsal expectations, orchestral discipline and the aura of the orchestral concert. He approached conducting as if it were a sacred task. Perhaps more than his predecessors, he heard everything on stage (although Clara Schumann reported that he had trouble with the rhythmic displacements in the last movement of her husband's piano concerto) and was noted for his 'elastic and stimulating' movements. He was said to communicate 'as if by an electric fluid', especially through the use of facial gestures and eye contact. Mendelssohn understood the role of the conductor vis-à-vis the audience; as one observer noted, 'the spectator could anticipate from his face what was to come'.

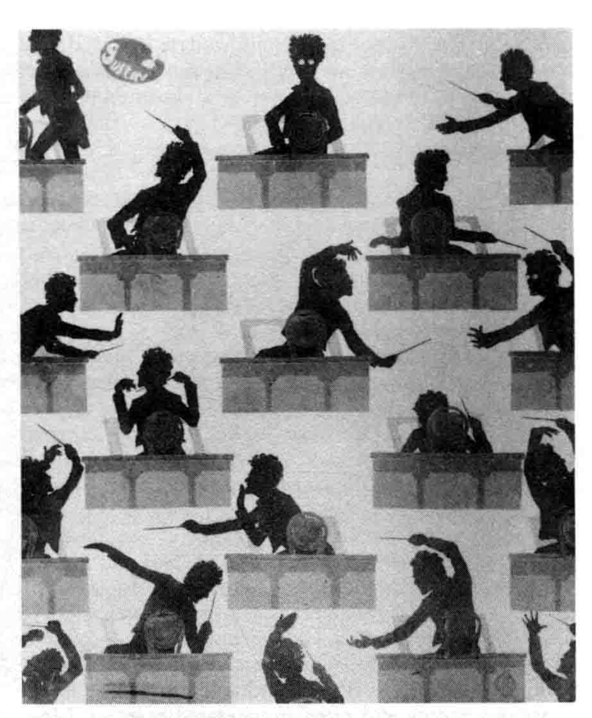
Despite the ubiquity of the baton (usually a longish, thick ebony or light-coloured wooden stick, often combined with ivory, held above the bottom; fig.8) and the rapid expansion in the number of orchestral and operatic performances, at mid-century conducting was not yet considered an independent profession. Spohr, Weber, Habeneck and Mendelssohn remained active as instrumentalists. Conducting as an autonomous craft entered a new phase with Berlioz and Wagner. In 1856, Berlioz wrote the first important modern treatise on baton conducting, *Le chef d'orchestre: théorie de son art.* He made a clear distinction between time-giving and the real art of the conductor, interpretation. Advancing the idea of personal magnetism, he considered the mysterious transmission of feeling a fundamental feature of successful conducting. An 'invisible link' had to be established with the players, the result of an 'almost indefinable gift'. The true conductor exerts an imperial power; without that, he is merely a beater of time. Berlioz outlined a definition of

competence and training still valid today: knowledge of the score, the nature and compass of the instruments of the orchestra, and the cultivation of an inspired point of view. From Berlioz's description it is clear that conducting had become the art of transmitting someone else's music, not only one's own. Throughout the history of modern conducting, from Habeneck and Berlioz to Toscanini and late 20th-century practitioners (Nikolaus Harnoncourt and Roger Norrington), the performance of music from the past, especially the Beethoven symphonies, has remained at the centre of criticism and the formation of public reputation.

In his treatise (which became an appendix to his study of instrumentation and orchestration), Berlioz made suggestions regarding the disposition and control of large forces in the pit and on stage. He set forth the standard patterns of silent time division (arguing against audible time keeping), including complex metre (5 and 7) and a circular triple metre. Spohr published basic beat pattern diagrams in his *Violin Schule* in 1831, but Berlioz's exposition was far more sophisticated. Berlioz's lack of virtuosity on an instrument, in contrast to most of his predecessors and contemporaries, inspired him to perfect his skills as a conductor. He was noted for the use of a baton about 50 cm in length which he held in his right hand. Most accounts of his conducting take note of his enormous energy and often exaggerated gestures. Moscheles said 'he inspired the orchestra with fire and enthusiasm; he carried everything as if it were by storm'. He was patient and considerate of players. He was prescient in understanding that the work of a conductor was not limited to rehearsal and performance: the conductor had to be an organizer, a teacher and a psychologist, and was an entrepreneur and showman whose job it was to infuse the orchestra with 'life'.

After Berlioz, the most influential reconceptualization of the role of the conductor was Wagner's. In his 1869 tract *Über das Dirigieren* he derided most of his predecessors, particularly Mendelssohn, as favouring tempi that were much too fast and treating them with unmusical inflexibility. Tempo selection and control, particularly when conducting Beethoven, were the foundations of the conductor's art. For Wagner, conducting demanded a romantic perspective dominated by the imperative of subjective re-creation whose purpose was to dispense with classicist rigidities. All music had to be imbued with an expressiveness that communicated with the audience. Music at all times needed to be heard as breathing and singing. The conductor's task was overwhelmingly interpretative, driven by a perception of the inner spirit of the music correspondent to the continuous unfolding of narrative and poetic meaning. Rather than enslaving himself to metronome markings and the literal aspects of notation, the conductor had to penetrate the surface of the printed page to transmit in the present moment the spiritual power inherent in music. Wagner gave no technical advice, but his interpretative approach to the Beethoven symphonies indicated a penchant for nuanced and persistent tempo modifications and selective reorchestration. As a conductor he helped to popularize the strategy of ceasing to conduct at moments and allowing the orchestra to play alone. His shifts in mood on the podium also further deepened the mystery of the conductor's art. Sometimes a reserved gentleman, other times a demon, his compelling rapport with the players of the orchestra was palpable to audience members. The mix of subjectivity, personality and power in Wagner's theory and practice of conducting is reflected in the quip of Wilhelm I, who after seeing Wagner conduct a performance of Beethoven's Fifth Symphony, observed, 'now you can see what a good general can do with his army'.

By the 1880s conducting, although still rarely divorced from composition or instrumental performance (as late as 1906 Mahler would express astonishment that the young Klemperer wanted to become a conductor and not a composer), was clearly recognized as a distinct branch of the profession of music. Success as a conductor of music of the past, as in Mahler's case, could eclipse other musical pursuits, particularly in the early 20th-century context of gradual decline of audience interest in new music. Conductors exerted profound influence on 19th-century urban musical culture, as in the cases of Liszt in Weimar (through the introduction of new repertory), Theodore Thomas in New York and Chicago, Hans Richter in Vienna, Edouard Colonne in Paris, Hans von Bülow in Hamburg and Berlin and later Henry Wood in London. Although Bülow was also a famous pianist, he became the dominant conductorial personality of the latter half of the 19th century. With his legendary Meiningen Orchestra he ushered in a new level of



8. Verdi conducting with an ebony baton: cartoon by Ape for 'Vanity Fair' (15 February 1879)

excellence. Orchestral precision had come to equal pianistic virtuosity. The Meiningen Orchestra toured Europe in the 1880s exposing cities throughout Europe to first-rate performances. Bülow took his inspiration from Liszt whom he poetically described as 'playing the orchestra almost as beautifully as he speaks the piano . . . his principle in handling the baton could be summarized as follows: the literal kills but the spirit brings life'. Other notable contemporaries of Bülow who helped establish conducting as an autonomous profession include Hermann Levi, Wilhelm Gericke (who left Vienna to conduct the Boston SO), Felix Mottl, Anton Seidl and Charles Hallé. The centrality of conducting as an independent profession with its own technique can be measured by the extensive entry by Hermann Zopff, the Berlin critic and pedagogue, in Mendel and Reinmann's 1870–80 *Lexikon*. Zopff presented the full range of skills and requirements for the art of conducting, including detailed advice about baton technique. Following Wagner, Zopff underscored the need for more than drill and control of detail; he stressed spiritual command and therefore the interpretative dimension of conducting.

Bülow stood out from his contemporaries because of his brilliance and idiosyncrasies. He treated orchestral concerts as didactic events, addressing audiences directly in an effort to educate them about the music; his wit and sarcasm were legendary and he had the personality of a martinet. Bülow's prominence and his Wagnerian approach to interpretation provoked a reaction against the Wagnerian tradition. Felix Weingartner's landmark 1896 pamphlet, entitled *Über das Dirigieren* (following Wagner), marked the onset of a post-Wagnerian and objectivist phase of conducting. Weingartner attacked Bülow's tempo modifications as arbitrary and called for a new approach to conducting that displayed more literal fidelity to the score and the intentions of the composer. Although Weingartner's treatise was self-serving, he was successful in launching a movement against the cult of the conductor as theatrical personality and extreme subjectivity in interpretation. With the rise and popularization of the discipline of music history, and the concomitant emphasis on historic repertory in concert programmes, a selfconsciousness regarding stylistic adequacy in performance evolved. In the 1860s Brahms was scandalized by Johann Herbeck's insensitive and historically inappropriate approach to the *Messiah*. Weingartner's call for conducting not as a virtuoso display of personality but as an act demanding analytic sobriety and fidelity to text had allies. Charles Hallé took issue, as did Weingartner, with the growing popularity of conducting from memory; in his autobiography (1896), he rejected it as a strategy designed to dazzle the audience. The danger of what was little more than 'a modern craze', was that memorizing the score was actually a trivializing process; the mind is necessarily selective in its recall, resulting in the conductor inevitably simplifying analysis and interpretation. In Weingartner's opinion, conducting from memory served only to 'make a parade of virtuosity that is inartistic' and divert attention from the music to the conductor.

In 1911 Gustav Mahler, a conducting titan in Wagner's image and a beneficiary of Bülow's admiration, died. He had set new standards for performances of opera in which stage and pit were tightly integrated and synchronized. Although intense, extensive and rapid in movement on the podium at the start of his career (fig.10), Mahler

9. *Mahler conducting: silhouettes by Otto Böhler*

demonstrated the superior effectiveness of economy of gesture in his later years, particularly in New York. Mahler's contemporary Richard Strauss succeeded Bülow in Berlin and became a consummate technician. Strauss perfected the use of the baton so that the left hand was used purely for periodic emphasis; not only rhythm, but phrasing, balance and dynamics could be read from the baton. The early 20th-century standard of technique called for a firm planting of the feet together on the podium in front of the orchestra. The body remained basically motionless as the extended right arm and wrist holding the baton were employed in modified beat patterns designed to give the key directives with respect to ensemble, dynamics, phrasing and line. Arturo Toscanini, who exemplified this new, more restrained technique, helped make Weingartner's ideology and the claim to an objective interpretative style the reigning standard of early 20th-century conducting. His baton focussed on the propulsive, continuous flow of sound; he perfected the use of the baton to move and shape pulse and sonority. Strauss and Toscanini pulled back, with smaller gestures, to allow sound, particularly in *forte* passages, to fill the space. In moments of *piano* they did not stoop or crouch as earlier practitioners (and later ones too) were wont to.

Early 20th-century treatises on conducting stress economy of gesture, close analysis of the score, and control of the baton sufficient to indicate inner beats and subdivisions. From Berlioz to 1945, the art of conducting relied on extensive and detailed rehearsal. The performance was less an occasion for demonstrative antics and more the restrained realization of carefully prepared effects. But the new objectivist style by no means diminished the popularity of the conductor as podium personality and virtuoso. By the 1920s the centre of musical culture in Europe and North America had completed its migration from the home to the public arena. Opera house and concert-hall audiences had become accustomed to written

explanatory notes. They acquired a taste for a familiar, older repertory and repeated hearings at the expense of new music. The early 20th-century audience no longer largely consisted of sophisticated amateurs. As Heinrich Schenker predicted in the mid-1890s, the conductor of the future would be increasingly driven to communicate with an audience that could not follow music merely by hearing: he would be compelled to provide visual assistance by decorating and demonstrating. The focus of the audience gradually shifted from listening to the work to watching its realization, following along with the ear. The Wagnerian habit of injecting subjective 'expressiveness' into a piece, supported by Mahler (of whose conducting of Beethoven Schenker deeply disapproved) had evolved into an expectation on the audience's part that the conductor would visualize the act of interpretation for the lay public. The conductor increasingly functioned as a cipher for audiences: the more he seemed able to enact the experience of hearing visually, the more popular he became.

As the 20th century progressed, a golden age of conductors who only conducted ensued, later sustained by the evolution of the broadcast and recording industries. Arthur Nikisch, the conductor of the Leipzig Gewandhaus until his death in 1922, exemplified the early modern type of virtuoso and celebrity. His looks, charm, grace and intensity made him the darling of audiences. The extent to which he was lionized as possessing a magic and poetic touch sufficient to mesmerize player and listener – Hermann Scherchen thought Nikisch unique in his ability to spark and reflect, like a mirror, the myriad of brilliant lights of the orchestra and mysteriously transform them into a unified organic whole – suggested the increased role played by music journalism, concert management and eventually international touring in defining expectations. Throughout the 19th and early 20th centuries the image of and attitude towards conducting paralleled notions about power and leadership and the dynamic of expectations surrounding monarchs, political leaders and orators. In Nikisch's heyday, conductors maintained extended tenures with particular orchestras (such as Willem Mengelberg at the Amsterdam Concertgebouw), but after 1918 conductors of a certain level of fame began to travel regularly. Touring and guest conducting helped strengthen the tendency in technique towards clarity and efficiency; idiosyncrasy in gesture and the use of verbal explanation to gain results became less valued. The demand to see celebrity conductors on the podiums of the great metropolitan orchestras resulted in a legendary cadre: Adrian Boult, John Barbirolli, Thomas Beecham and Malcolm Sargent in England; Bruno Walter, Otto Klemperer, Fritz Busch, Franz Schalk, Hans Knappertsbusch, Clemens Krauss and Erich Kleiber in German-speaking Europe; Václav Talich in the Czech lands; Pierre Monteux and Ernest Ansermet in France and Switzerland; Victor de Sabata in Italy. With the advent of travelling conductors, the monopoly of power traditionally wielded by conductors over individual orchestras and concert programming began to weaken.

Two members of this mid-century élite, Wilhelm Furtwängler and Toscanini, have continued to exert influence on conducting style. Furtwängler was noted for expressive, free and flexible but penetrating performances. He was not known for baton precision but for an outstanding capacity to show structure, phrasing, balance, line and subtle emphasis. He exemplified a conception of modern conducting as an interpretative craft explicitly influenced by philosophy, literature and culture; he was influenced by Schenker and was intent on communicating the underlying logic of composition. Toscanini was celebrated as the ultimate technician, ruthless in rehearsal, noted for accuracy, directness, the ideal of fidelity to literal indications in the score (even though he indulged in cuts and orchestral retouchings), crystalline texture and electric performances; he was the tyrant *par excellence* who abused the players, shouting and exploding in rage. Toscanini was brilliantly marketed and became the outstanding star conductor in the age of modern recording and broadcast. Furtwängler and Toscanini, like most conductors in the mid-20th century, concentrated essentially on older repertory with only selective allegiances to contemporary music (e.g. Toscanini to Puccini and Respighi, Furtwängler to Strauss, Monteux and Ansermet to Stravinsky, Erich Kleiber to Berg). Specialization even within the standard historic repertory emerged. Serge Koussevitzky, who was not notable for his technique, developed a rich Franco-Russian sound with the Boston SO; his successor Charles Münch became best known for his French repertory. Koussevitzky was unusual in his broad commitment to new music, particularly by American composers.

In the USA, the most influential conductors after 1933, apart from Toscanini, were Fritz Reiner, George Szell and Leopold Stokowski. Stokowski reseated the orchestra even beyond the increasingly common placement of both violin sections together on the left, experimented with free bowing, abandoned the baton, and created the lush sound of the Philadelphia Orchestra. His love of publicity was legendary and his efforts to reach popular audiences, particularly through cinema, were often criticized. Stokowski's innovations, his lavish orchestrations of Bach and his staunch advocacy of contemporary composers and American musicians suggest his astute sense that the very adoration of the conductor by the modern audience could be exploited on behalf of music's popularity, as Leonard Bernstein was to do later in the century. Stokowski's technique reflected a recurrent 20th-century desire to circumvent the limitations of the baton by abandoning it, using the right hand and the fingers in a free manner as if to show more convincingly how sound can be sculpted and moulded. In Stokowski's baton-less conducting one can see the effect of the remarkable advance in the post-war era in the proficiency of orchestral musicians; the conductor's role as time-beater and ensemble-keeper recedes; the conductor gives upbeat patterns and replaces them with the mesmerizing visualizations of phrasing, registration and expression independent of the bar line.

The influx of European conductors, especially around World War II, transformed American orchestral practice and conducting habits. Szell, Reiner and Artur Rodzinski continued the objectivist traditions of superlative ensemble and attention to detail and developed some of the world's finest orchestras in Pittsburgh, Chicago and Cleveland. Reiner perfected the art of conducting through the use of small gesture and restricted motion. The visual contrast between sonic power, clarity and tension and the minimalist display of control over pace and dynamics was part of Reiner's magic. Drive and muscular tension, as well as precision in balance were Szell's forte. Both

conductors concentrated on a restricted range of repertory, with only token contributions from the 20th century, Bartók in Reiner's case and Martinů in Szell's. Dimitri Mitropoulos, who used no baton and had a prodigious memory (the finest in modern times) as well as profound interpretative gifts, suffered, in contrast, on account of his advocacy of new and unfamiliar repertory and his failure to emulate the tyrannical methods, elegant refinement and authoritarian image of Szell and Reiner. Reiner, Koussevitzky, Monteux, Jean Morel and Leon Barzin became noted pedagogues and trained many post-war American-born conductors. Leading post-war European teachers include Hans Swarowsky in Vienna and Ilya Musin in Leningrad. Major figures of international reputation after 1945 include Ferenc Fricsay, Sergiu Celibidache, Hans Rosbaud, Georg Solti and Carlo Maria Guilini. In the Soviet Union, a tradition of great conducting flourished, influenced primarily by German theory and practice, in the towering figures of Aleksandr Gauk, Nikolay Golovanov and Evgeny Mravinsky.

Ironically, the development of baton technique took its greatest step forward as a result of the requirements of modernist music. Schoenberg once remarked, when a conductor claimed not to be able to understand one of his scores, 'Why does that occur to him only with my music?', implying that the conductor was no better at conducting Beethoven. The pitch recognition requirements of serial composition, the layered textures of orchestral works (e.g. in Varèse and Ives) and the rhythmic complexity evident in 20th-century music from Stravinsky to Carter forced a dramatic advance in the basic level of technical proficiency. The attainment of rhythmic accuracy and proper intonation demanded a new order of training and preparation and led to the use of a much shorter baton, and extensive skills in independent cueing and time indications using each hand. The conducting craft required to lead an ensemble in 20th-century repertory efficiently is therefore extraordinarily subtle and intricate, even though operetta, *bel canto* and recitative conducting pose some of the most daunting technical challenges to baton technique.

During the 1960s and 70s, recording and television enhanced the status of conducting as a truly global and glamorous pursuit. The careers of Leonard Bernstein and Herbert von Karajan best exemplify the cosmopolitanism of 20th-century conducting. Karajan brought to an apex the tradition of concentrating on a limited repertory and working with very few ensembles, mainly the orchestras of Vienna and Berlin. Conducting with his eyes closed, he perfected the notion of the conductor as cult figure, using all possible media, exploiting the fashion for a stylized image and cultivating modern techniques of marketing. Bernstein set a new example by being distractingly but purposefully athletic on the podium; he was a magnetic teacher and gifted composer who successfully bridged the worlds of popular and classical music both European and American. His decisive role in the post-1960 advocacy of Mahler indicates the extent to which conductors could influence, through recording, repertory for the public at large.

Towards the end of the century the period-instrument movement and new scholarly methods in the reconstruction of performing practices helped accelerate specialization. The international concert circuit led the public and critics to accept the reductive notion that national identity is essential to valid stylistic interpretation; Russian orchestras and conductors seem best at Russian music, Hungarians and Czechs at their nation's composers and so on. Similarly, 20th-century music has developed its own group of advocates and specialists. Among conductors at the close of this century, only Pierre Boulez has equalled the 19th-century tradition of composer as conductor. Despite the explosion in numbers of fine orchestras and conductors some observers believe that the era of great star conductors has passed. The standardization of the repertory, the marginal status accorded to new music, the variety and number of recordings now available (recent and dating from before 1945), the refined quality of recorded sound and the diversity of interpretation documented by sound reproduction have made originality vis-à-vis the standard repertory harder to formulate and justify.

The evolution of conducting technique remained stable from the late 19th century until the advent of recording, which increased the capacity of all performers to hear themselves. Listeners were able to compare sounds heard in live performances with recorded sound. Recording completed the evolution of international technical standards. It also brought about a touch of unfortunate uniformity; before recording, apart from written accounts of performances, listeners had no easy way of comparing one conductor or orchestra with another. Crucial to modern technique is the capacity to alter sound to fit broadly accepted notions of stylistic adequacy. In addition to specialization along nationalist lines and in Classical and Baroque music, the conductor after the mid-20th century is faced with interpretative benchmarks in the form of recorded precedents. Daniel Barenboim, for example, cites the influence of Furtwängler, a conductor he witnessed only as a teenager, whose legacy retains currency through recordings. The paucity of fresh interpretative insights may in fact lie in the extent to which conducting has been separated from other aspects of music and culture. Although many conductors at mid-century (e.g. Szell, Klemperer and Furtwängler) tried their hand at composition, few after 1970 besides Boulez and Bernstein became established as composers. Some conductors continue careers as instrumentalists (e.g. Barenboim and Vladimir Ashkenazy), but most do not. Scholar/performers or conductors with highly developed intellectual and literary interests (in the sense of Berlioz, Bülow and Ansermet) are rare. In the contemporary context, the significance of the conductor's role in training a professional orchestra to play well–that is, accurately, in tune and together in standard repertory–is indispensable only in new and unfamiliar music, as the success of the conductorless ensemble Orpheus suggests (although the first serious experiments at conductorless orchestras, such as Persimfans in Moscow, took place in the 1920s). The reading skills of the modern orchestra are unparalleled. Accounts of early examples of orchestras' reading of new music (e.g. in Vienna under Hans Richter, when Hugo Wolf heard *Penthesilea* read) suggest that modern standards are incomparably higher. The canonic orchestral repertory has become integral to the training of all instrumentalists.

Beyond recording, the aeroplane, film and video and, finally, trade unions and the attendant economics of orchestral concert life have exerted a profound impact on modern conducting technique. The ease of travel has

made guest conducting more significant than long permanent posts. Herbert von Karajan was an exception, and it is evident, as in the historical example of Mengelberg and the Concertgebouw, that a particular orchestra over time can read the non-standard personal gestures of their conductor and his intentions, so that unique modes of communication suffice. Szell developed a special rapport with the Cleveland Orchestra but could not readily replicate it when working with the New York PO. For most professional conductors, however, the international circuit demands the use of a visual language that translates easily and quickly. This has had the effect of restricting the range, not only of repertory but also of interpretation. The rapidity of communication between conductor and orchestra mirrors the high cost of rehearsal time, now a dominant factor as a result of the regulation and rising cost of compensation and working conditions for orchestral musicians. The ideology of podium dictatorship has been replaced with one of collegiality and collaboration. What Mendelssohn, Berlioz, Bülow, Mahler, Toscanini, Furtwängler and Koussevitzky (who rarely guest conducted) achieved in almost unlimited and painstakingly detailed rehearsals in the post-war era, has to be achieved in a matter of a few hours with a minimum of verbal explanation and exclusively by gestures using baton, left hand, eyes and body. Celibidache, who opposed recording and resisted the contemporary demands of the profession (and remained fiercely independent in his interpretative approach), once quipped that the young, modern conductor had one rehearsal and a hundred concerts, whereas he demanded one hundred rehearsals for one concert. Simple as these explanations may be, the modern conductor must from the first rehearsal mould sound and direct it efficiently.

The theatrical and visual dimension of conducting in the age of recorded sound, however, has become indispensable to the conductor's craft. It will no longer suffice, as Schenker predicted, for the conductor to prepare an interpretation and lead it discreetly. This is permitted only for old masters; the aged Klemperer, Karajan or Lovro von Maticic. Audience expectation requires the balletic and energetic self-presentation pioneered by Bernstein in his early years and perfected by Riccardo Muti, in whose work grace and musicality merge in an alluring visual display. The apogee of the technical virtuosity expected of the modern conductor in terms of the visualization of sound and line is evident in the styles of Claudio Abbado, Lorin Maazel and Carlos Kleiber, son of the great Austrian mid-century maestro. Kleiber's appearances are few and his repertory is limited, but he has perfected the use of space to show registration, a three-dimensional visualization of sound, not merely vertical and horizontal strokes, and a remarkable independence of right and left hand. Strauss's admonition to a young conductor to keep his left hand in his pocket would appear anachronistic today. Even Furtwängler and Toscanini relegated most of the expressive aspects of conducting to the left hand and used the body sparingly. In modern conducting, the burden has shifted from preparation to the moment of performance and the capacity of the conductor to put nuance on the stage in terms of dynamics, articulation and balance, with the hands alone. The conductor's role in the cases of less proficient but commercially successful practitioners often deteriorates into a decorative display over the music, indicating events rather than creating them, following lines rather than shaping them, and celebrating sonorities as opposed to encouraging and sustaining them. Although Monteux admonished conductors not to conduct for the audience, in an age dominated by television and film, the visual impression the conductor makes has become far more influential than might seem reasonable.

The repository of recorded performance has strengthened the ideology of fidelity to the score and the notion of accurate interpretation. Modern treatises on conducting now refer to comparative study of recordings as a result of the capacity to scrutinize in close detail the recorded archive of performances. Furthermore, claims to historical authenticity bolstered by modern scholarship have lent credence to arguments first proposed by Weingartner and advocated polemically by Toscanini, even though the notions of definitive performance, fidelity to text and authenticity have been challenged on convincing philosophical and historical grounds. The prevailing interpretative strategy remains far removed from the point of view championed by Wagner, even though conductors such as Fritz Steinbach (Bülow's successor in Meiningen) and, later, Hermann Abendroth continued to pursue a more flexible, free and highly differentiated approach well into the mid-20th century. Conductors tend either to follow conventions established by reassertion through recordings and uphold the interpretative practices to which audiences have been most accustomed, or to insert arbitrary nuances in a desperate attempt to suggest originality. These habits, as Wagner and Berlioz aptly realized, are inadequate, and not consonant with the expectations of composers (save those in certain schools of 20th-century composition intent on specifying everything and leaving nothing to the whim of the performer). Conducting remains ideally, as Strauss observed, a mix of fidelity to intention and text and inspired improvisation. Since most conductors are distant from contemporary music as performers or composers, the sources for convincing improvisation have narrowed considerably, especially under the weight of indelible recorded precedents that define the patterns of reception by critics and audiences.

3. TECHNIQUE. At the end of the 20th century stick technique and podium manner had become more standardized than at any point in the history of conducting. The rise of formal training at college and conservatory levels, the influence of international competitions and local apprenticeship programmes, the impact of recordings and film in the establishment of a conducting 'common practice', the impact of the international conductor as a generator of commerce and the concomitant reduction of expensive rehearsal time have all combined to codify the functions and skills of the modern maestro. These purely technical skills coexist in several forms and begin with first choices.

(i) Score study and text preparation. As a consequence, particularly, of the early music and performing practice movements of the 1940s–90s, and the associated rise to prominence of the scholar-conductor (Mackerras, Harnoncourt, Norrington, Christie, Gardiner, Jacobs, McGegan, Hogwood and others), conductors are increasingly concerned about textual accuracy. Accordingly, serious conducting begins with a choice of score that reflects the highest state of current scholarship. Scholars and publishers are required to provide answers to problems of variant,

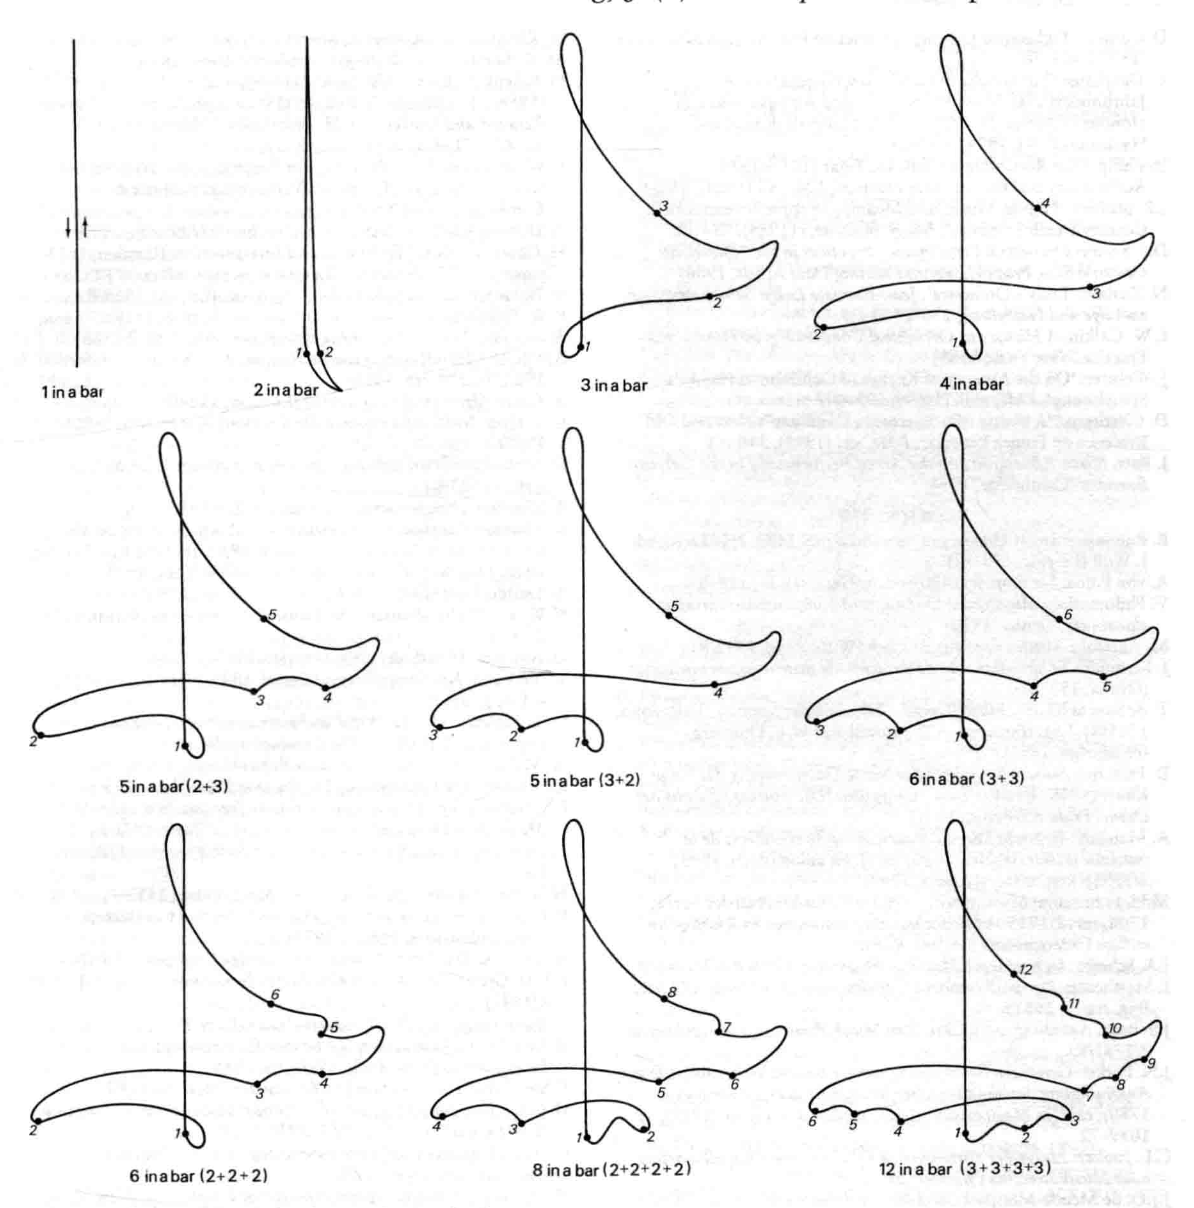
incomplete and error-ridden editions. While it was perfectly acceptable 100 years ago to retouch Handel, Chopin, Schumann and even Beethoven, wholesale re-writing of Musorgsky and Bruckner was the norm, and issues of period performance were rarely raised, today, many conductors look to a more rigorous attitude to the composer's assumptions regarding the performance of his music. This is reflected in the procedures of a conductor's preparation.

Working from a reliable text, and often after examination of other source materials, a conductor may study the score through harmonic and rhythmic analysis, possibly at the keyboard. A conductor must make informed choices about blend and balance, line and partwriting, bowing and articulation, dynamic, shade and colour. These choices will derive from personal judgment after close score study, will be marked and entered in the players' parts and will inevitably be adjusted in the process of rehearsal, especially if they come into conflict with orchestral traditions, accepted wisdom and the reality of creating sound; dynamic markings, for example, are relative and become meaningful only in relation to the sound produced by the particular orchestra.

(ii) Rehearsal strategies. In both the symphony hall and the opera house, high costs place a severe limitation on rehearsal time. The time is past when music directors such as Celibidache, Koussevitzky, Mengelberg and Mravinsky could require nearly endless rehearsal periods; few guest conductors can demand the same. Accordingly, the professional conductor is increasingly defined by the efficient use of rehearsal. Rehearsal strategies vary widely. Many conductors will play a work from beginning to end and then return to correct deficiencies. Some will begin correcting errors and phrasing from the start. Many will call out errors as the work is in progress and some will stop and demand changes at every instance. At the second rehearsal, highly skilled conductors often work from a list of problems revealed at the first; in the process, they may select significant sections from within the music, the solution of whose problems will then apply broadly across the work and in that process establish a model, so conserving time and creating musical coherence. When giving a première, many conductors invite the composer to assist in the rehearsal process (or vice versa, as in the relationship between Ozawa and Messiaen), although that role is usually restricted to correcting wrong notes, advising over tempos and the like. Time constraints have increased the pressure to convey intent visually rather than orally and conductors would be ill-advised to make lengthy speeches about the spiritual import of a particular passage or his conception of a work.

(iii) Hands and baton. Conducting is almost universally a right-hand practice (Penderecki and Runnicles are rare exceptions). Roughly speaking, the right hand, often extended with a baton, illustrates time; the gestures of the left are used to suggest line and intensity, to cue entries and release, to illuminate crescendos and decrescendos and to shape the broader contours of the music. The modern baton, a white length of wood or plastic, serves to clarify and magnify the gestures of the hand; its use is entirely optional, largely traditional and frequently serves primarily to mesmerize the audience which has come to expect it. The baton has no inherent musical properties. Batons have often been very long: 60 cm or more were not unknown to such conductors as Henry Wood, Charles Munch and Adrian Boult. Half that length or less is now standard. Most batons have a cork to absorb sweat, or similar butt, and are gripped lightly there or just above it.

Some conductors work without a baton, or use it only sparingly. Boulez and Stokowski (after 1929) appear never to have used a stick, considering it a distracting antagonist. Mitropoulos also worked without a baton; he has said (1954):



> I believe that there is some kind of communication through the expression of the hands of what you feel ... I think I can express myself better with my hands ... I make an appeal, I mean, when I try to reach, to reach the soul of my musician who plays the solo, let us say, at that moment, and it's just a kind of gesture that I couldn't do with my baton and naturally I could use my left hand just, but I have two hands to use and I feel happier that I can reach for somebody's soul.

Whether or not they use a baton, most conductors also use a podium to raise the effective display of their hands. Modern podiums are usually between 15 to 30 cm in height.

(iv) The beat: tactus and ictus. The beat and the preparatory intake of breath establish tempo, character, style and power. The impact of that preparatory event is crucial; widely employed in opera, the breath of preparation assists singers and wind players especially to prepare entry and quality of sound, and it is usually audible. The preparatory beat, given simultaneously, appears metrically at the point of maximum usefulness. It may occur as a conventional upbeat leading to a standard downbeat, or it may take the form of one or two 'bars for nothing'. There can be no fixed rule for the metrical placement of such preparatory events; they are bound to the music they animate. Scherchen, Rudolf, Leinsdorf and many others have written about how to open a work that begins at an awkward or irregular metrical point. There is invariably more than one practical solution to such a problem, but any remedy will ordinarily lie within the province of the beat pattern itself.

In the course of the 20th century, beat patterns became largely standardized and capable of being understood by musicians around the world. The idea of *tactus* represents that of fixing the central pulse of a passage in a regular and identifiable beat pattern. The notion of *ictus* is to place within that pattern visible beat points which articulate that pulse and give some guide to the character of the music. This is achieved in many ways, such as a bounce or flick of the wrist, its stasis and release, or the raising and lowering of the baton point itself. The *ictus* of a Wagner legato will be profoundly different from that of a Skryabin staccato.

There is one geographic distinction in the placing of pulse. In British and North American schools, conductors and orchestras are trained to play 'on the beat'; that is, to produce the sound at the actual moment when the baton strikes the appropriate rhythmic juncture. Many continental European conductors, especially those trained in German opera houses, practise a subtle variant of this: they train their orchestras to sound not on, but just after the visible beat. This is most often used in slower music of an elevated lyricism, where the early-warning apparatus of the conductor's gestures can provide a remarkable flexibility, rubato and shapeliness of line. Furtwängler, Klemperer, Knappertsbusch, Talich, Karajan, Carlos Kleiber and Maazel have been among the masters of this special technique.

10. Basic conducting patterns (after drawings by David Atherton)

(v) The beat patterns. The basic movements of the stick are vertical and lateral; where there is only one beat or two beats to the bar it is vertical only. Fig.10 shows the generally accepted direction of the beat. Attempts to show this on paper have often been made but are not particularly convincing, since the nature of the motion varies according to circumstances. The underlying principle is that the stick does not move in a series of jerks but in a fluid, continuous movement, which so to speak bounces off each point in the diagram. The way in which this is done varies according to whether the music is slow or fast, legato or staccato, and so on. Where there is only one beat in a bar the bounce must be considerable in order to reach the point at which the next beat begins.

Subdividing the beat may be necessary in a rallentando or where there is particularly elaborate figuration. The purpose of such subdivision is clarity. The contrary process may also occur, e.g. in a quick movement in 4/4 the presence from time to time of a basic rhythm of two in a bar may make it more convenient to beat two instead of four. Strauss, who disliked giving more beats in a bar than were strictly necessary, did this constantly, even to the extent of beating parts of the prelude to *Tristan und Isolde* in two instead of in six.

Conductors Guild. American organization founded in 1975 under the aegis of the American Symphony Orchestra League; it became independent in 1985. The guild is devoted to advancing the art of conducting and to serving the artistic and professional needs of its members. Its journal, published twice a year, includes scholarly articles on the history and craft of conducting, as well as lists of errata in the scores and parts of standard orchestral and choral works. The guild also publishes the quarterly *Podium Notes* and a monthly bulletin of current vacancies in the field. In addition to annual conferences, seminars and workshops, the guild presents the Theodore Thomas Award to conductors who have made significant contributions to the art and to the education of young conductors, and administers the Thelma A. Robinson Award in Conducting for the National Federation of Music Clubs. In 1998 the guild had approximately 1900 members in more than 30 countries.

□

Conductor's part. A reduction of an orchestral score to two or a few more staves with the parts for transposing instruments notated at sounding pitch and all entrances of the different instruments cued. Band scores are often printed in this form, which is also known as 'condensed score'. *See* SCORE.

Conductus (Lat., from *conducere*: 'to escort', 'to guide'; pl. *conductus, conducti*). A medieval song with a serious, usually sacred, text in Latin verse. The genre seems to have originated in the south of France near the end of the 12th century. Taken up by the Parisian composers of Notre Dame, it flourished with great brilliance from about 1160 to about 1240. It was superseded in the second half of the 13th century by the motet. A handful of new conductus from the 14th century are peripheral, chiefly German in origin.

1. Aquitaine and related areas. 2. Notre Dame of Paris. 3. Rhythmic interpretation in the Parisian conductus. 4. Style and construction. 5. Spain, Germany, England and Italy.

1. AQUITAINE AND RELATED AREAS. The word 'conductus' first appears in mid-12th-century sources. It is found in *E-Mn* 289 (*c*1140) above nine songs, several of which are introductions to lessons. *Resonet intonet*, for example, concludes with an exhortation to the congregation to prepare itself for the reading of the scriptures:

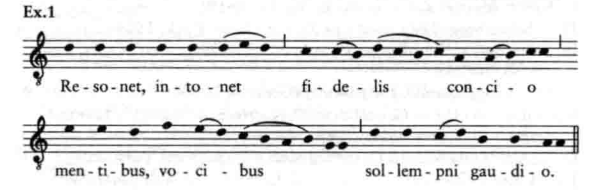
> Munda sit, pura sit hec ergo concio,
> Audiat, sentiat quid dicat lectio.

The presumption is that such a piece was sung as the lectionary was carried to the place appointed for the reading.

Each of four songs in the manuscript in *E-SC*, allegedly compiled by Calixtus between 1123 and 1152, is presented under the rubric *conductum*, a word otherwise used in the period for 'safe conduct'. Three are followed by an injunction to the lector to commence the reading; the fourth, *Salve festa dies*, was undoubtedly used for the same type of procession as the ancient hymn that is its model. One of the songs, *Sancte Iacobe*, is supplied with an alternative ending that transforms it into a *Benedicamus Domino* introduction. Copied in very small letters beneath the closing line of the poem are the words 'Quapropter regi regum benedicamus Domino'. This sort of adjustment is not unusual, as processional introductions, conductus and *Benedicamus* tropes are, in fact, readily interchangeable.

The Tegernsee *Antichrist Play* (*c*1160) makes mention of a conductus, *Alto consilio*, to be sung while Ecclesia, attended by Iustitia, Misericordia and others, moves towards her throne.

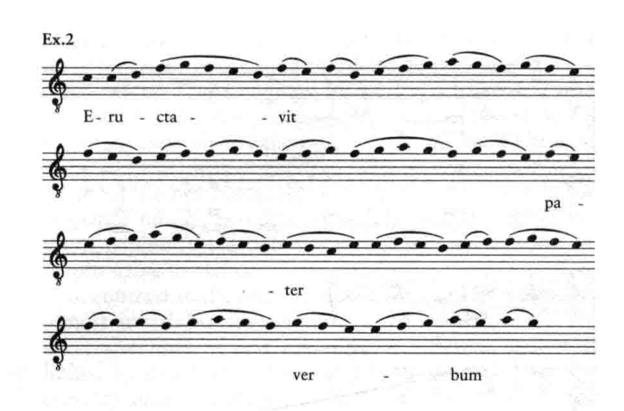
Songs called conductus had an important place in Circumcision Offices that were compiled early in the 13th century for the northern French cities of Laon (*F-LA* 263), Sens (*SEm* 46) and Beauvais (*GB-Lbl* Eg.2615), as well as for the Office, known from a 16th-century manuscript, for the town of Le Puy in the south. These pieces relate to a variety of ritual activities: a conductus 'ad tabulam' for the beginning of first Vespers in Sens, for example, was designed to precede the reading of the tablet (a list of duties for the week's services, naming the persons to whom they were assigned). The song is the famous 'prose' of the ass, *Orientis partibus*, which repeats after each of its seven strophes the French refrain 'Hez, sir asne, hez!'. Conductus are associated, in one or more of the Offices, with the readings for Matins and the Mass, the medieval drama, the dismissal following second Vespers, and with the festive meal at the close of the day. The *Play of Daniel*, written by the students of Beauvais and recorded in *Lbl* Eg.2615 with the Circumcision Office, uses conductus to accompany the entrances and exits of the *dramatis personae*. (*See* MEDIEVAL DRAMA.)



Designated conductus by reason of their particular function, the foregoing pieces belong to a larger repertory of freely composed Latin song. The core of this repertory, Aquitanian in origin, is preserved in a series of four manuscripts, three of which came into the possession of the abbey of St Martial in Limoges soon after the beginning of the 13th century. (The idea, once current, that St Martial was the leader in the musical-poetic movement represented by these manuscripts has since lost ground.) The earliest layer of *F-Pn* lat.1139 (A), dating from the end of the 11th century, contains over 50 verse songs. Some of these are independent, their function betrayed neither by content nor by rubric; 16, including an *Alto consilio*, are called *versus*. The contents of *F-Pn* lat.3549 and 3719 (manuscripts that together span the greater part of the 12th century) and *GB-Lbl* Add.36881 (from just beyond the turn of the century into the 13th) bring the total of Aquitanian verse compositions to well over 100.

Historical aspects of the relationship between Aquitaine and the places named above are not clear: the existence of an independent Sicilian school and its possible connection with that of Aquitaine can only be speculative; likewise the probability that these smaller centres were offshoots from the flourishing, long-lived Aquitanian line. However, taking into account not only broad similarities of style, but also a significant number of concordances, one may speak with certainty of a single artistic movement, a single, all-encompassing repertory.

Like the tropes and proses of an earlier era, the songs that make up this repertory celebrate the great festivals of the Church year. The overwhelming majority are dedicated to the Nativity and the feasts within the Octave: St Stephen, St John and Holy Innocents. Those honouring Mary are next in importance, followed by a few for St John the Baptist, St Nicholas, Mary Magdalene and, in *E-SC*, St James. *Jerusalem mirabilis* (A, f.50), which urges participation in a crusade to recover the holy city, is one of the rare topical pieces in the repertory.



The music tends to reinforce the characteristically strophic structure of the poetry, although as many as a quarter of the Aquitanian songs are through-composed. The declamation of the accentual verses – some of which are entirely regular, while others show stability of rhythmic pattern only at the cadence – may be either syllabic or melismatic. Syllabic is to be understood strictly, i.e. as a single note to a syllable, and in the broader sense of a delivery which, though ornamented, permits the ear to grasp the poetic organization. *Resonet, intonet* (ex.1)

Ex.1

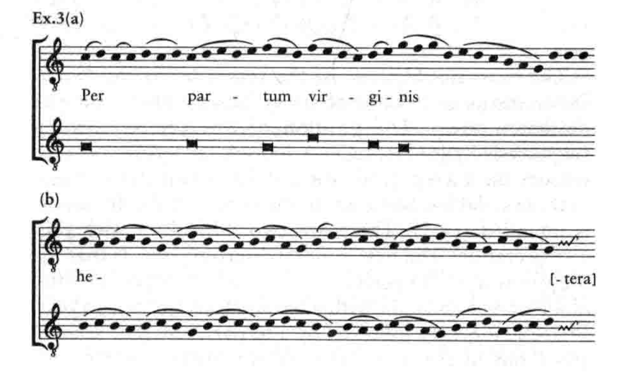
is essentially syllabic, its embellishments so placed as to emphasize the ordering of the line into four groups of

Ex.2

three syllables. The second strophe of *Letabundi iubilemus* (ex.2) illustrates a fundamentally different relationship between music and text. (The transcriptions are not meant to suggest that all notes were of the same duration, but, because we do not know what the rhythmic practice was, singing the notes evenly is feasible.)

One of the distinguishing features of the Aquitanian school proper is its early, continuing interest in polyphony. Scholars have identified eight compositions for two voices in the hand of the original scribe of A, and three others in a later hand. The latter show a steady increase in the amount of part-writing, most of it associated with verse songs. The successively composed voices of the polyphony relate to each other in one of two ways: they may move simultaneously (i.e. note against note), a relationship equally appropriate to syllabic and to melismatic delivery of a text; on the other hand, the notes of the first voice, each linked with a single syllable, may be overlaid with figures of two, three, four or occasionally, for reasons of emphasis or formal definition, as many as a dozen or more notes in the second voice. Excerpts from a polyphonic song surviving in all but the oldest of the Aquitanian sources show both types of contrapuntal structure (exx.3*a* and 3*b*). The similarity of range and the predominantly contrary motion of the two voices are standard features; so also are the liberal use of dissonance in the texted opening of the piece, and the restriction to consonant intervals, perfect and imperfect, in the note-against-note passage.

2. Notre Dame of Paris. The Parisian school of song composition shows few if any signs of direct contact with that of Aquitaine. Limited concordances between the Notre Dame sources and those from Sens and Beauvais further suggest that Paris had no strong musical ties with these, its close neighbours. It was, rather, at the centre of a movement that attracted English participation and thats seems to have had some influence in an easterly direction.



The name 'conductus' appears not in the Parisian musical sources but in the theoretical literature. The anonymous author of the *Discantus positio vulgaris* (*c*1240), the earliest of the relevant treatises, defined the conductus as a (polyphonic) setting of a poetic text (*CoussemakerS*, i, 96). What was originally used to refer to function has become a generic or categorical designation. Subsequent theorists took this use of the term for granted. They amplified the definition, noting that the first voice, now called tenor, was newly composed and that the single text was simultaneously declaimed in all voices.

An English theorist, known after Coussemaker as Anonymus 4, analysed the Notre Dame repertory in terms of books devoted to particular species of composition. In an essay on measured rhythm (*c*1275) he listed, among others, a book of three-voice conductus with caudas (i.e. melismas), one of two-voice conductus with caudas, and a third of two-, three- and four-voice pieces without caudas. He made no secret of his preference for the melismatic pieces, several of which he singled out for comment. Thus we learn, for example, that *Salvatoris hodie* (earlier identified as the work of Perotinus) and *Relegentur ab area* have organum-like cadencing figures at the ends of verses, and *Hac in die Rege nato* is a centonization of conductus titles. He dismissed the simple pieces with the remark that they were much used by lesser singers. Anonymus 4's primary concern was with polyphony, but he did point out that monophonic categories, including the conductus, have their own books (ed. F. Reckow, 1967, p.82).

The central source for the Notre Dame conductus is a manuscript of the mid-13th century, *I-Fl* Plut.29.1. More than 250 compositions are arranged in fascicles which correspond loosely to the books of Anonymus 4. Fascicles six and seven contain, respectively, 55 conductus for three voices and 129 for two. Within the fascicles, melismatic and syllabic pieces are on the whole arranged together. The tenth fascicle preserves about 80 monophonic conductus; three pieces for four voices follow the four-voice organa at the beginning of the manuscript. The repertory in *I-Fl* is virtually all-inclusive. Sources next in importance, *D-W* 677, of English provenance, and *E-Mn* 20486, contain but a handful of pieces not present in the larger manuscript.

The subject matter of the Notre Dame conductus is varied. Songs dedicated to feasts of the Lord, particularly the Nativity, have preference, as in the older repertory. Among the saints, however, it is not only the companions of Christ who are honoured, but also more modern witnesses to the faith: Martin, Germanus of Paris, William of Bourges and Thomas à Becket. There are laments, after the manner of the ancient planctus, on the deaths of temporal and ecclesiastical princes, and more joyful songs associated, also by tradition, with coronations, elevations and homecomings. Outraged protests against corruption in the clergy have a significant place in the repertory; pious in intent, they can hardly be considered sacred. Certainly, love songs and a scattering of witty, thinly disguised requests for money are at odds with the serious tone of the poetry as a whole. A few of the texts are attributed in other sources to Walter of Châtillon, Philip

Ex.3(a)

the Chancellor and John of Howden. The majority, however, remain anonymous.

3. Rhythmic interpretation in the Parisian conductus. Music theorists of the 13th century were consistent in describing the conductus as a species of discant or precisely measured polyphony. They included it with the organum, the motet and the hocket among the genres governed by the rhythmic modes. The notation of the melismas is such that in most instances a reading in one or the other of these modes is easily deduced. As in all Notre Dame polyphony, the 1st mode is by far the most popular; it is followed at some distance by the 3rd, then by the 5th, 6th and 2nd. The interpretation of texted material is more difficult; figures which seem to suggest no mode at all must be recast in the mind ('in intellectu') into patterns with rhythmic significance. The theorists sketched out a few guidelines for this procedure, and some help is to be gained from a handful of pieces that survive in both texted and melismatic form. Combining the information from the theoretical and musical examples with a careful analysis of poetic rhythm, scholars have been able to solve at least some of the problems related to the proper delivery of the text.

Trochaic verses, which dominate the repertory, are frequently declaimed in the 1st mode, the alternating accents of the poetry coinciding with the longs of the musical phrase. Quite as often, especially in settings with caudas, the syllables move in the more deliberate pace of the 5th mode. In such cases it is necessary to distinguish between the declamatory rhythm and the overall musical rhythm. The latter may be that of any mode (including the 5th); more often than not it is orientated towards the 1st.

Among non-trochaic verses, the one most widely used is the octosyllabic line with an antepenultimate stress. This could signify a series of iambs that might, in theory, be translated into the breves and longs of the 2nd mode. However, while the cadence is iambic, the first half of the line is variable; some of the time it is regular, much of the time it is not. Once again the 1st mode seems to be indicated. A ternary long substituted for one long–breve pair effects the alignment of stressed syllables with the longs of the mode (see exx.4*a* and 4*b*). These patterns are also subject to augmentation.

Ex.4(a)

se dè - so - lá - tam dé - se - ri
è - ius non ést ab-scón - di - tùr

(b)

mó - do só - la re - lín - qui-tùr

The most troublesome of the verses set by the Notre Dame composers is one of six syllables with an antepenultimate stress. The position of this primary accent suggests dactylic rhythm, and, indeed, the largely syllabic settings show a regular division of the line into two groups of three syllables. Some are of the view that the 4th mode is intended (ex.5). There are two difficulties with this interpretation. The first, a purely musical one, is that all the phrases are imperfect or incomplete; a proper 4th-mode phrase ends not with a ternary long but with a pair of unequal breves followed by a ternary rest. The second arises out of the irregularity of the poetic rhythm; the

accentual patterns of the couplets cited are not the same. If these and others like them are read in the 4th mode, the relationship of poetic and musical values is in a constant state of flux; the stressed syllable in the first half of the line falls now at the beginning of the foot, now in the middle, sometimes with a breve of one beat, sometimes with one of two beats. Conflicts of this kind, common enough in the motet, are seldom encountered in the conductus.

A stronger case can be made for the 5th mode (ex.6). A progress in ternary longs neutralizes the poetic stresses

and provides for phrases that are complete. Most of the songs built of these six-syllable lines belong to the earliest extant layer of Notre Dame composition. The date of origin tends to corroborate the use of the 5th mode, one of the first to take shape. (*See also* Rhythmic modes.)

4. Style and construction. The conductus is distinguished from the other categories of Notre Dame polyphony by its original tenor. The exceptions to this rule are a few syllabic songs based not on plainchant but on vernacular tunes. When, as occasionally happened, a composer set a liturgical text in the manner of a conductus, he put aside the traditional melody. The stereotyped patterns imposed by usage on the chant differ from those of accepted conductus models, which call for a rhythmically flexible tenor, closely orientated towards the other voices. The orientation, which is not only rhythmic but also melodic, is sometimes complete, as when the voices exchange identical material a phrase at a time. The harmonic relationship of the voices is, broadly speaking, consonant. Perfect intervals occur at those points that define the structure of the composition; dissonances are freely interspersed. Major and minor 3rds, the secondary consonances associated by the author of the *Discantus positio vulgaris* with the conductus (*CoussemakerS*, i, 96), are most prominent in compositions of English origin.

Anonymus 4's opinion as to the relative merits of melismatic and syllabic composition seems to have been

representative. Less than a third of the repertory is made up of pieces without caudas; of these, the majority are for three voices. The simplicity of the declamatory style is matched by the clarity of formal design. The strophic melodies, with their balanced, sharply outlined phrases, show a great deal of text-related repetition. Normally found at the beginning, this may, in stanzas of the lai or sequence family, be continuous. The added voices (duplum, triplum, quadruplum) cadence with the melody, so emphasizing its structural divisions.

In contrast to the syllabic songs, those with caudas are almost invariably through-composed. Within strophes, successive lines of text are sung to different melodies; linked by common melodic and rhythmic figures, however, the musical phrases, though seldom twice alike, are stylistically consistent. Repetition has a large place in the elaborate compositions, but it is most often associated with the melismas. There are occasional correspondences between texted and melismatic passages and a few repetitions from one melisma to another. More important than these, however, are the repetitions that govern the internal structure of the melismas. The conclusion to the second strophe of *Seminavit Grecia* (ex.7) is typical. Two phrases, of proportionately different lengths, are each subject to immediate restatement, one with voice-exchange, the other with a partially new counterpoint in the duplum. (The figure in bars 158–9 is what Anonymus 4 meant by an organum-like cadence.) Equally characteristic is a passage from the end of *Rex eterne glorie* (ex.8): here there are no clear breaks in the texture, and the repetition – varied, sequential and quasi-canonic – is continuous.

Melismas, by definition ornamental, may be enriched and enlivened by a variety of devices. From time to time a short passage in organum purum is introduced for purposes of climax. An anonymous theorist, thought by some to have been associated with St Martial, described this practice (ed. in *AnnM*, v, 1957, p.33). He warned against using it too extensively lest the basic note-against-note texture be destroyed. Brief hockets and rhythmic diminutions (Johannes de Garlandia's 'colores') heighten

Ex.7

Ex.8

intensity, as do fragmentary changes of mode (if we read the notation correctly).

The conductus is a vocal composition; there is nothing to substantiate the theory sometimes put forward that the melismas were, of necessity, performed on instruments. Singers accustomed to the soloistic chants of Mass and Office would have found no difficulty with the wordless melodies. It does seem likely, however, that the medieval fondness for mixed timbres was expressed, under certain circumstances, in an instrumental doubling of the voices.

The monophonic conductus from Notre Dame are highly problematical. The notation is even more ambiguous than that of the polyphonic pieces, and the failure of the theorists to include them in the discussions on rhythm raises serious doubts as to whether they were modally conceived. Some of the songs appear without their texts in the context of larger polyphonic pieces; it is not certain whether the modal rhythm of the latter is applicable to the monophonic songs.

The Wolfenbüttel manuscript *D-W* 1099 (*c*1275) testifies to the decline of the conductus in favour of the motet. The latest of three major sources of Notre Dame polyphony, it contains over 200 motets but only 29 conductus. Theorists of the late 13th century, Franco of Cologne and the St Emmeram Anonymous, and the early 14th century, Walter Odington, Johannes de Grocheio and Jacques de Liège, continued to speak as if at first hand about the genre. Significantly, however, Jacques lamented the fact that the moderns showed no interest in it. As far as France was concerned, the tradition was dead, recollected by the few Notre Dame songs interpolated into the satirical *Roman de Fauvel* (*F-Pn* fr.146) around 1316.

5. Spain, Germany, England and Italy. Outside France the situation varies. A large manuscript copied in the early 14th century for the monastery of Las Huelgas (in *E-BUlh*) shows a retrospective link with the Parisian repertory. Considerably more than half of its 35 conductus

are found in one or more of the older, Notre Dame sources. Evidence of independent or continuing activity in Spain is lacking.

German interest in the conductus, awakened in the 13th century, continued long after the French had abandoned the genre. The manuscript of the *Carmina burana* (*D-Mbs* Clm 4660), from the latter part of the century, has nine Notre Dame songs, four without music, five for one voice. The Weingarten manuscript of similar date (*D-Sl* HB I Asc.95) contains songs from both the Aquitanian and the Parisian repertories; with few exceptions, these appear in monophonic form. A large number of later manuscripts, among them *D-EN* 314 and *Mu* 156 (14th century) and *GB-Lbl* Add.27630 and *D-Bsb* Cod ger.8°190 (15th century), continued to include conductus, some borrowed from older sources, some original, some monophonic, some for two voices.

Two strains of activity are discernible in England: one, represented by the elder Wolfenbüttel manuscript and by the text manuscript *GB-Ob* Rawl.poet.C510, is inseparable from the Notre Dame tradition; the other shows the same combination of materials and influences as the German school. Manuscripts of the 12th, 13th and early 14th centuries, nearly all reduced to fragments, have compositions borrowed from both the great French repertories, together with songs of English origin. The majority are simple settings for two and three voices.

Italy presents a very different situation. The conductus, like the motet, appears to have been rejected completely. Certainly the genre as such never took root there. Handschin's suggestion that its influence lives on in the vernacular songs of the 14th century, however, is both attractive and plausible. The spirit of the Italian song, with its single text, its combination of syllabic and melismatic textures, and its elegant refinement, both rhythmic and contrapuntal, is exactly that of the most highly valued Notre Dame conductus.

JANET KNAPP

Cone, Edward T(oner) (*b* Greensboro, NC, 4 May 1917). American musicologist, theorist and composer. He studied composition with Roger Sessions at Princeton University, where he took the AB in 1939 and the MFA in 1942. He taught at Princeton from 1947; in 1969 he was appointed professor and continuing fellow of the Council of the Humanities. He has been professor emeritus since 1985. From 1965 to 1969 he was co-editor of *Perspectives of New Music*, and in 1969 he became an advisory editor for the publication. In 1973 he was awarded the honorary doctorate of the University of Rochester.

Although Cone has composed for orchestra, piano, chorus, solo voice and chamber groups, he is known principally for his critical and analytical writings, which cover a broad historical range. In addition to discussing specific works he has dealt with more general questions, such as types of aesthetic perception and the determining elements of musical form. An accomplished pianist, he is particularly sensitive to the interdependence of performance and analysis, as best expressed in his *Musical Form and Musical Performance* (1968). He has written provocative criticism of analytical methods, particularly intervallic and 'total' analysis, and has dealt with the relation of rhythm and phrase structure to style from the Baroque era to the present. His later works are more historical than analytic, and his *The Composer's Voice* (1974) is a philosophical inquiry into the relation of composition to performance.

PAULA MORGAN

Conelly, Claire. *See* CROIZA, CLAIRE.

Confédération Internationale de Sociétés d'Auteurs et Compositeurs [CISAC]. *See* COPYRIGHT, §II.

Confinalis (Lat.). (1) In medieval theory, the note a 5th above the FINAL of a MODE, on which some melodies in that mode end.

(2) A synonym for AFFINALIS.

Conforti, Giovanni Battista (*b* ?Bologna or Parma; *fl* 1550–70). Italian composer of vocal and instrumental music. His *Primo libro de ricercari* for four instruments (Rome, 1558, ed. in Concentus musicus, iv, Cologne, 1978) is dedicated to Cardinal Niccolò Caetani of Sermoneta, to whom he claimed to owe much. It is likely that Conforti had been in the cardinal's service in Rome; the book, an elegant production from the Dorico press, is not only dedicated to Caetani in these personal terms, but also carries his coat of arms on the title-page. The ricercares are notable for their use of idiomatic writing. The *Madrigali, libro primo* (Venice, 1567; ed. in Concentus musicus, iv, Cologne, 1978) for five voices, which Conforti described in his preface as 'some of my youthful

compositions', is dedicated to Anselmo Dandino, the abbot of S Bartolomeo, near Ferrara. According to the title-page, Claudio Merulo not only printed and published the pieces, but apparently also edited them, a fact which has led some commentators to suggest that Conforti may have been Merulo's pupil. Claims that books had been 'newly corrected' by distinguished editors was a common feature of the trade, and by the second half of the century was being increasingly used by music publishers as a marketing strategy. Nevertheless, the inclusion of a piece *in memoriam* Willaert, *S'hoggi son senz 'honor*, in this book, does suggest personal connections with Venice and with the musicians of S Marco.

CAROL MACCLINTOCK/IAIN FENLON

Conforti, Giovanni Luca (*b* Mileto, Calabria, *c*1560; *d* Rome, 11 May 1608). Italian composer and falsetto singer. Conforti sang in the papal chapel from 1580 to 31 October 1585 when he was expelled along with several of his colleagues for joining the Congregazione dei musici di Roma sotto l'invocazione de S Cecilia, membership of which was forbidden to papal singers. He was reportedly in the service of the Duke of Sessa in 1586 when Cardinal Scipione Gonzaga and protonotary Camillo Capilupi recommended him (with G.B. Jacomelli, also dismissed from the papal choir) in a series of letters for service at the court of Mantua. Capilupi reported favourably on hearing him sing Lenten music at Santa Trinità and proclaimed him the best falsettist in Rome: 'he sings with a head voice, improvises counterpoint, and ornaments like a nightingale'. According to Cardinal Gonzaga, Conforti sang contralto in full voice ('a voci pieni') in the papal choir and soprano, more sweetly ('più dolce') and very high ('alto assai'), *in camera* and in Oratories: 'he sings gracefully with many *passaggi*, but according to the local use [of Rome] that has little of the Neapolitan [manner]; I do not know how this will agree with the style of Lombardy'. In the event, Duke Guglielmo Gonzaga allowed negotiations for the Mantuan position to lapse, to the annoyance of Paulo Faccone, a Mantuan agent in Rome and bass in the papal chapel, who wrote that the decision would make it difficult to hire in the future musicians for Mantua and that Conforti had gone to Tivoli. Conforti subsequently served at S Luigi dei Francesi under Ruggiero Giovanelli from 1 June 1587 to 30 April 1588; he rejoined the papal chapel in 1591 and remained there until his death in 1608.

Conforti's works comprise an instructional book on vocal ornamentation and a three-volume set of embellished Vesper psalm and *Magnificat* settings for soprano, tenor, and bass voices with basso continuo. The *Breve et facile maniera d'essercitarsi* (Rome 1593/*R*; Eng. trans., 1989, as *The Joy of Ornamentation*) is designed to teach the beginner the art of ornamentation quickly and easily; Conforti claimed that following his method mastery could be achieved in the space of several months. The treatise is systematically organized in a practical manner. Successive sections deal with how to fill in ascending and descending intervals of the 2nd, 3rd, 4th, 5th, octave and unison with *passaggi* in a variety of rhythmic patterns. These follow some more elaborate *passaggi*, a table of conventional ornaments (*groppi* and *trilli*), and examples of decorated cadence formulas. A concluding section ('Dichiaratione sopra li passaggi') explains the examples. Though primarily a singer's manual, it could also benefit instrumentalists. The practical but sophisticated application of these ornaments is realized in Conforti's three volumes of *Salmi passaggiati* (1601–1603, 2/1618 as *Passaggi sopra tutti li salmi* ed. M.C. Bradshaw, 1985). Each volume contains nine embellished *falsobordoni*: psalm tones harmonized with repeated chords on the reciting note with main cadences on the mediant for the first half of the verse and a final one for the last half. The psalm tone itself is not embellished but rather hidden in the structure. Verses are to be sung in a flexible declamatory style but the cadences are to be sung in tempo. The psalms are set as strophic variations in alternatim style so that successive verses receive a varied treatment with attention to the verbal sense. Conforti also collected for publication and wrote dedications to Paolo Quagliati's two volumes of three-voice *Canzonette* (both Rome, 1588) the second of which (RISM 1588[26]) contains Conforti's own *Amara vita è quella de gl'amanti*; he is also the compiler of the *Psalmi, motecta, Magnificat, et antiphona Salve Regina diversorum auctorum*, 1592[2]).

DAVID NUTTER

Conforto [Conforti], **Nicola** (*b* Naples, 25 Sept 1718; *d* Aranjuez, 17 March 1793). Italian composer. He studied with Giovanni Fischietti and Francesco Mancini at the Conservatorio di S Maria di Loreto in Naples. His first *opere buffe*, mounted at Naples and Rome in 1746 and 1747, were so successful that in 1750 he was invited by S Carlo to set Metastasio's *Antigono* (also successfully mounted at London in 1757). In 1751 he was commissioned by the Austrian ambassador at Naples to compose a cantata, *Gli orti esperidi*, for the birthday of Maria Theresa. This was followed by commissions to compose Metastasio's *Siroe* for the name day of Ferdinand VI the following year, and *L'eroe cinese* for the king's birthday in 1754. The success of these works at Madrid was such that he received an appointment to compose operas for the court. After arriving at Madrid (14 October 1755) he composed two *opere serie* which were sumptuously mounted the following year – *La ninfa smarrita* and the first setting of Metastasio's *Nitteti*. His annual salary was then nearly doubled, and he received a grant to bring his wife, the singer Zefferini Anselmi (whom he had married in 1749), and two sons from Italy. After Carlos III came to the Spanish throne in 1759 Conforto's importance declined. From then on he wrote occasional festive music and enjoyed the title of the king's *maestro de capilla*, but

composed no large-scale theatrical works. He may have been the only composer to set Metastasio's *La pace fra la tre dee*.

Conforto wrote brilliant, pleasing melodies similar to those of Corradini, Mele, David Perez and other Neapolitan composers who were brought to the Iberian peninsula. In collaboration with the famous castrato Farinelli, who was then the manager of the court theatres at Aranjuez and Buen Retiro, he played an important part in establishing the taste for Italian opera in Spain: his works were sung in Italian by Italian singers (except for the tenor roles assigned to Raaff) with bilingual librettos for those ignorant of the language. He did not ally himself with national currents, and remained in Spain for business reasons rather than artistic ones. His church music, written after 1759, shows the influence of Feijoo, who argued against the use of violins in liturgical music. Of his nine Lamentations for solo soprano and orchestra (1766) the three for Good Friday dispense with violins, while the first for Holy Saturday omits strings except violas d'amore; his *Miserere* for three choirs (1768) is accompanied by violas and woodwind.

ROBERT STEVENSON

Confractorium [antiphona ad confractionem] (Lat., from *confringere*: 'to break in pieces'). In the early Latin Christian rites, a part of the Mass Proper sung during the Fraction. *See* AMBROSIAN CHANT, §7(i); GALLICAN CHANT, §7(xiii); and MOZARABIC CHANT, §4(xii).

Confrérie (Fr.). *See* GUILDS.

Confrérie de la Passion. Theatrical troupe active in 15th- and 16th-century Paris; it performed mystery and morality plays interspersed with farces and *sotties*. *See* PARIS, §II, 2.

Confrérie de St Julien-des-Ménétriers. The strongest of the medieval musicians' guilds, established in Paris in 1321, and active there until the late 18th century; *see* PARIS, §§II, 2; III, 1 and 4.

Confrey, Zez [Edward Elzear] (*b* Peru, IL, 3 April 1895; *d* Lakewood, NJ, 22 Nov 1971). American composer and pianist. After studying music at the Chicago Musical College he formed a touring orchestra with his brother James in about 1915. Through his work as a pianist and arranger for various piano-roll companies (QRS, Ampico, Imperial and Victor) he developed a popular style known as NOVELTY PIANO. This combined classical piano technique with syncopated rhythms and peppy tunes. The technical possibilities of piano rolls helped inspire some of his flashy keyboard effects and rhythmic tricks that influenced later composers in the novelty-piano idiom. Among his most popular pieces were *Stumbling* (1922), *Dizzy Fingers* (1923) and *Kitten on the Keys* (1921), the last of which he performed at Paul Whiteman's Aeolian Hall concert, 12 February 1924. These and other pieces were issued by Jack Mills, Inc. as *Modern Novelty Piano Solos* (1923). The novelty-piano craze soon ceased to be novel, but Confrey continued to compose concert, popular and student pieces into the 1940s.

MARK TUCKER

Confucius (given name, Qiu; style, Zhongni; 551–479 BCE). Chinese philosopher. Founder of the official state ideology of imperial China and a sage venerated by Chinese people throughout the last 25 centuries, Confucius laid the foundations of Chinese music theories and practices. He taught that music is a genuine expression of human hearts and minds, and should be practised in conjunction with

ritual as a means of governance and self-cultivation; 'proper music' should be promoted, while 'licentious' music should be banished. Confucius' musical ideas and practice, documented in texts such as the *Lunyu* ('Analects') and *Kongzi jiayu* ('Familial Sayings of Confucius'), have been studied and interpreted by successive generations of Confucian and music scholars.

Confucius practised music throughout his life of teaching, travelling, and service with a number of regional states of the time. He performed and composed music for the *qin* zither: when young, he learned *Wenwang cao* ('King Wen's Instrumental Solo') from the music master Xiang of his native state Lu (in modern Shandong), practising the piece until he grasped not only its structure but also its meaning; he composed *Yilan* ('The Lone Orchid') to lament that his idealistic social policies found no patron. He sang all the 305 songs he collected in the *Shijing* ('Classic of Odes'), and sang his own swan song seven days before he died.

Above all, he was a most perceptive and forceful musical critic. In 517 BCE, he heard *Shao*, a work attributed to the legendary Emperor Shun, and proclaimed it as the most perfect and beautiful example of 'proper music'. By contrast, he denounced the tunes of the Zheng and Wei states as licentious, urging that they should be banished. In 497 BCE, to demonstrate his disapproval of such music, he abruptly left the Lu court when its ruler Jihuanzi accepted a gift of female musicians and succumbed to their charms. His musical influence has been sustained to the present day.

Conga [congo]. A Latin-American carnival road march that gained prominence in the USA from around 1937. The bandleader Desi Arnaz was chiefly responsible for transforming it into a social dance craze, especially through his appearances in Rodgers and Hart's Broadway musical *Too Many Girls* (1939; film, 1940). The conga experienced a revival in the 1950s which Bernstein parodied in *Wonderful Town* (1953). The music for the dance is built on a repeated rhythm, which corresponds to three shuffle steps on the beat and a kick that slightly anticipates the fourth and final beat, with the torso twisting from side to side. Couples can perform the conga by moving apart and back together again, but more characteristically it is performed in a long line, with the outstretched arms of each dancer placed on the shoulders or waist of the preceeding dancer. A variation of the conga that also became popular in the 1950s is the bunny hop, which is performed in a moderate 4/4 as a line dance. The pattern of steps consists of two kicks to the right, two kicks to the left, a hop forward, a hop back, and three hops forward.

Conga drum [conga, congas, tumba] (Cuban *tumbadora*). Afro-Cuban barrel drum (*see* DRUM, §I, 2(ii)(b)). It is classified as a membranophone: struck drum. It has a long, barrel-shaped shell, of wood or fibreglass, about 76 cm deep and a single head between 25 and 33 cm in diameter. Early types had thick vellum pegged or nailed to the shell; on later instruments the drumhead is screw-tensioned, with the hoop well below the rim of the shell (as with bongos) to allow free action of the fingers. The pitch can be raised by applying pressure to the drumhead, from edge to centre, with the heel of the hand. Congas were integral to the Latin-American dance bands of the 1930s and have since become one of the main rhythm drums in all types of music. They are usually used in sets of two to four, of different sizes: the largest drum is the *tumba* (about 33 cm), then the conga (30 cm), the *quinto* (28 cm) and the *nino* (25 cm). In the hands of an expert, congas are essentially hand drums; they are frequently played with sticks in the orchestra.

JAMES BLADES/JAMES HOLLAND

Congiet, Petrus [?Congeri, Pe.] (*fl* 1480s). Composer, possibly French. The name appears only in the Florentine chansonnier *I-Fn* B.R.229, for two secular pieces: *Trays amoureux* (also as *Ma dame helas*, ed. in Brown, no.120, showing the extensive variants in an earlier source) and *Je cuide se ce temps me dure* (ed. in Brown, no.93). *Je cuide* was very widely distributed, elsewhere gathering less plausible ascriptions to Japart and Orto. Although there are no obvious stylistic links, he may well be the composer 'Pe. Congieri' credited with a three-voice mass cycle in *I-VEcap* 759 (also transmitted anonymously in *I-VEcap* 755) for two equal voices above a low contratenor. If so, he could also be the composer of a rondeau with the same voice distribution, *Qui ne le croit*, in *E-Sc* 5–1–43 with a cut off ascription that could read 'P Domarto', 'P Convert' or 'P Congiet'. There is a slight possibility that the text incipit *Se prens congiet* for a song in *I-Rc* 2856 really reflects a song *Se prens* that is by Congiet, since similar confusions occur in that manuscript.

Congo. *See* CONGA.

Congo, Democratic Republic of the. (Fr. République Démocratique du Congo) [formerly Belgian Congo, Zaïre]. Country in Central Africa. It is the third largest country in Africa, with an area of 2,344,885 km² and a population of 51·75 million (2000 estimate). Recognized as The Congo Free State in 1884, it was annexed to Belgium in 1908 as the Belgian Congo. It became independent in 1960 and was renamed Zaïre in 1971. In 1997, following Laurent Kabila's defeat of the government of Mobutu Sésé Séko, the country was renamed the Democratic Republic of the Congo (fig.1).

I. History. II. Main rural musical traditions. III. Modern urban developments.

I. History

Archaeological excavations undertaken over several years in the Lupemba region, situated along the Congo river in the marshy lakeland area of Kisale and Lupemba

1. Map of the Democratic Republic of the Congo showing the principal peoples

in the middle of Katanga province, has shown that these parts have been inhabited since the 9th millennium BCE. However, no remains of musical instruments preceding the Congolese Iron Age (i.e. before *c*200 CE) have survived.

The set of seven copper bells described by Jacques Nenquin (1963, p.233) dates from the Iron Age of the 'Kisalain period' (8th–9th century CE), as does the metal whistle mentioned by Hiernaux (1971, p.16). Most of the metal bells found in archaeological excavations undertaken by Pierre de Maret from 1974 onwards date from the 'classic Kisalain period'. One of these bells has been dated at between 1165 and the 14th century (de Maret, 1978, ii, p.276). According to Gansemans, the lamellae found near some of these bells could have been part of lamellophones (Gansemans and Schmidt-Wrenger, 1986, p.12). This hypothesis would contradict the present, widely held belief that the lamellophone is a recent instrument. The newer theory is supported by two early descriptions of the instrument. The first, made by Brother Santos, appears to date from 1586, and the second, by Bonani, from 1722, according to François Borel quoting a manuscript of Audard (Borel, 1986, p.7).

For later periods, ethnohistory and travel writings provide plenty of information. A study of the portrait statues of the Kuba Ndop kings, for instance, has shown how the royal drums of the 17th to 19th centuries were tensioned and decorated. Four kings (Mbo Mboosh, 17th century; Misha Reylyeeng [Mishap I] and Kot aMbul, 18th century; and Mbop aKyeen, 1900) are shown with one of these instruments beside them, symbolizing a reign of peace and prosperity.

For the same period (17th to 19th centuries), among the Lega people of Kivu, allusions to music in oral history and an analysis of names of ancestors (that is, the names featuring in genealogical trees with meanings referring to a musical instrument, genre or institution) have led to the following conclusions: the drum and trumpet were in use in the 18th century, and so was musical accompaniment to rites such as the ceremony celebrating the birth of twins or special children, circumcision, and certain adult initiation ceremonies. However, musical instruments such as the raft zither of the interlacustrine area, the stick zither from the African coast of the Indian Ocean and certain types of lamellophone were not introduced to the Lega until some time between the middle and the end of the 19th century (Kishilo W'Itunga, 1994, 'Essai sur les elements … ').

Early visitors to the Congo often commented on the music they heard there, although their remarks usually concentrated on descriptions of musical instruments. The Portuguese traveller Duarte Lopez, who visited the kingdom of the Congo in 1578, wrote (as recorded by Pigafetta) that the people used 'three principal sounds in war': kettledrums, a type of iron gong struck with 'rods of wood' and horns made from elephant tusks. He continued:

Touching their marriage or other feasts, they celebrate them by singing love ballads and playing on lutes of curious fashion. These lutes in the

hollow and upper part resemble those used by ourselves, but the flat side, which we make of wood, they cover with skin, as thin as a bladder. The strings are made of very strong and bright hairs, drawn from the elephant's tail, and also from palm-tree threads, which go from the bottom to the top of the handle, each being tied to a separate peg, either shorter or longer, and fixed along the neck of the instrument. From these pegs hang very thin iron and silver plates, fitted to suit the size of the instrument, which make various sounds, according as the strings are struck, and are capable of very loud tones. The players touch the strings of the lute in good time, and very cleverly with the fingers.

Others through the centuries wrote accounts of music, but the observations were from varied outlooks. Andrew Battell, an English captive of the Portuguese in Angola from 1590 to 1610, spent some time as a hostage of the Jaga people of the interior. He commented of their funeral songs, 'every month there is a meeting of the kindred of the dead man, which mourn and sing doleful songs at his grave for the space of three days'. Captain J.K. Tuckey, commander of an ill-fated expedition up the Congo river in 1816, wrote 'they are ... fond of singing ... They have songs on love, war, hunting, palm wine, and a variety of subjects'.

Men such as Livingstone, Cameron and Stanley wrote of their adventures in the 1870s and 80s; they always included information on music and musical instruments, although still adopting a patronizing attitude. These men were, however, moved by Congolese music, as is evident in some of Stanley's descriptions. By the early 1900s ethnographic compilations had appeared, among them the series on Congo peoples edited by Van Overberg. Each volume in his *Collection de monographies ethnographiques* included a section on music and musical instruments in which all the quotations that could be found were arranged in logical order. At the same time, early ethnographers were undertaking fieldwork. Among the data of men such as Emile Torday were first-hand and sometimes fairly extended accounts of music, though instruments continued to receive the most attention.

In 1902 the Musée du Congo (now the Koninklijk Museum voor Midden-Afrika or the Musée Royal de l'Afrique Centrale), Tervuren, began publishing illustrated volumes on its collections; one of its earliest publications concerned music and musical instruments. The authors wrestled with problems of the relationship between song and dance, aesthetics, and whether or not harmony was present in the music. There was some discussion of differences in musical style within the Congo, of music specialists and of whether men or women were the principal singers. Most valuable in this book was the extensive treatment of musical instruments and the photographs of more than 300 of the 443 examples owned by the Belgian museum at that time. The monograph established a tradition of interest in musical instruments, which has led to the publication of a large amount of data and thousands of detailed photographs.

The questionnaire organized and administered by Gaston Knosp in 1934–5 was in the same tradition. It asked for information on musical instruments and, to a lesser degree, vocal music and was distributed to government officials of the Belgian Congo, of whom 71 replied. The results were filed in the Musée du Congo and remained unpublished until 1968.

The first strictly ethnomusicological research in the Congo was a survey in widespread areas of the country undertaken in 1951–2. At about the same time, Leo Verwilghen, a priest, began a comprehensive recording programme, and other individuals, most of them non-specialists, were encouraged to record by the government research organization, the Institut pour la Recherche Scientifique en Afrique Centrale. In 1951 Colin Turnbull began an investigation of 'pygmy' music, and in 1953 and 1954 Jean-Nöel Maquet undertook field research among the Pende (Phende) and Cokwe (Chokwe). Merriam did an intensive study of music in a Songye (Songe) village in 1959–60.

Important ethnomusicological research has been done by the ethnomusicology department of the Institut des Musées Nationaux du Zaïre (IMNZ), an institution created on 11 March 1970. Directed by Benoît Quersin, the department has managed to collect many tape recordings, chiefly among the Mongo. Very little of this work has been published, with the exception of a few 33 r.p.m. discs and CDs.

In addition, the music department of the Institut National des Arts (INA) has a small research facility with the cassette recordings of traditional music, although not made on professional equipment. As well as these tapes, the student dissertations accumulated over more than 20 years constitute a rich scientific heritage, although their quality is uneven. The 33 r.p.m. disks recorded by Hugh Tracey for ILAM (the International Library of African Music) also provide valuable material. The number of research workers who combine the collection of music with continuous analysis is not nearly adequate for such a large country.

II. Main rural musical traditions

1. Musical style areas: (i) 'Pygmy' music (ii) Bantu music. 2. Musical instruments.

1. Musical style areas. There have been no stylistic studies of the music of the Democratic Republic of the Congo as a whole, although the area has figured in general music mappings of Africa. In a tentative division of Africa into music areas in his article 'African Music' (1959), Merriam included almost all of the country in a Central African music area. While the music of this part of Africa was sharply differentiated from that of the areas around it, in particular those to the south, east and north-east, it was postulated that differences in the music of the 'West Coast area' to the north-west, were more of degree than of kind. Merriam suggested that as more information became available, 'it may ... be necessary to group the West Coast and Central Africa areas together', a view that now seems correct.

There is a clear distinction between the music of the Bantu peoples of the Democratic Republic of the Congo and that of the 'Pygmies', who live in numerous scattered areas of the country, notably in the Ituri Forest region. This basic division seems the most distinctive that can be made regarding the country's traditional music.

Discussion of the music of the Democratic Republic of the Congo is further complicated by the fact that some 250 different groups of people are known to have lived in the area in 1900. Vansina has suggested that the country's cultures be organized into those of the northern savanna, the equatorial forest, the southern savanna and the African Graben or Rift valley in the eastern part of the country. Another means of division is that based on the major and minor culture clusters of the peoples of the Democratic Republic of the Congo. Such clusters comprise groups of people who live together, share a common way

of life and recognize common bonds uniting them; among the most important clusters are the Kongo, Mongo, Kuba (Bushoong), Lunda, Luba, Lega and Mangbetu-Zande. However no correlation of musical styles and culture clusters can yet be established.

(i) 'Pygmy' music. Although their origin is unknown, 'pygmies' are considered by many experts to be one of the world's oldest peoples, and they are usually also considered to be the earliest inhabitants of the region. They were pushed back by Bantu invaders and eventually restricted to the dense tropical forest. They are now a marginal population found in the regions of Kibali–Ituri, Kivu, Tanganyika, Lualaba, Tshuapa, Sankuru and Ubangi, and it is estimated that there are still 80,000 'pygmies' in the country. The best-known group is the Mbuti of the Ituri Forest region, with a population of about 40,000.

Mbuti (Lese) music is primarily vocal, with percussive accompaniment of *banja* (pairs of concussion sticks), *ngbengbe*, *epopo* and *koko* (wooden clappers) and hand-clapping, foot-stamping and body-striking. Other instruments include the *piki* and *segbe* (wooden whistles) and *molimo* (wooden trumpets); all of these were used apparently for signalling rather than for musical purposes. *Likembe*, drums and xylophones are borrowed from Bantu neighbours.

'Pygmy' vocal music is characterized by yodelling and by descending melodic lines, which are often disjunct. A dense texture is achieved in partsongs by hocketting with a variety of voice qualities, and by polyphony. Up to three leading voices may overlay the choral parts. Other traits of 'pygmy' music are repetition by echo or ornamented imitation; the augmentation, diminution and extension of intervals; the use of tritonic, tetratonic and, most often, pentatonic scales; the superimposition of diverse rhythmic structures above a rhythmic ostinato; polyrhythm; and canon and improvisation. These musical characteristics are shared to a large extent by 'pygmy' groups in other parts of Africa; if, indeed, 'pygmies' are of ancient origin, their music may represent an ancient style absorbed by later Bantu arrivals.

Turnbull suggested from his work with the Ituri Forest Mbuti, that the most important general aspect of Mbuti life is the relationship beween the people and the forest, and the knowledge that song attracts the attention of the forest and pleases it. 'Pygmy' songs are sacred because they all concern the forest. Four major types of song exist: hunting, honey-gathering, puberty and death songs (laments). Minor types include lullabies, play songs and elephant-hunting songs. Hunting and honey-gathering songs involve both men and women and are sung during these activities. Puberty songs primarily concern women and young people of both sexes. They 'are first learnt and sung at puberty but may be sung at other important times similarly critical to growth, birth and marriage'. Laments are sung on the death of an adult but may also be sung at other times of crisis that threaten life, such as sickness or poor hunting times. Turnbull said:

> An examination of Mbuti song form not only reveals areas of concern to the Mbuti, such as their food-getting activities, life and death, but it also reveals the concern of the Mbuti for cooperative activity. Each type of song requires a group of people to sing it, and if there is a solo it is sung over a chorus, and the solo is passed around from one individual to another. This is similar to the Mbuti rejection of individual authority and their concern for dispersing leadership as widely as possible. There are certain parts of certain songs that are sung by youths, hunters or elders, strictly according to age, and song form thus reinforces Mbuti concern for the age differential as an important element of their social structure. The songs are most frequently in round, or canon, form, and the hunting songs, in order to heighten the need for the closest possible cooperation (the same need that is demanded by the hunt itself), are sometimes sung in *hoquet*.

All songs share the important power of being able to 'awaken' the forest and draw its attention to the immediate needs of its children.

Other sounds have specific associations for the Mbuti; a sudden noise is 'strong' and bad, and an isolated hand- or arm-clap or loud shout brings immediate silence to a camp. Whistling is 'strong' but not bad; it is used to call for silence when necessary. The forest is full of sound which the Mbuti must interpret and make use of; Turnbull stated that 'if the forest stops "talking", ... it is a sign that something is very wrong and alerts the Mbuti to imminent danger'.

See also PYGMY MUSIC.

(ii) Bantu music. While there is extensive literature on Bantu music, most of it is vague and often romantic. The few professional studies devoted to music often concentrate on the musicological analysis of specific songs and omit discussion of their characteristics. The general statements that can be made about the music of the Bantu peoples of the Democratic Republic of the Congo are true of the music of Bantu Africa. The emphasis on rhythm is shown by the simultaneous use of two or more metres, the dominance of percussive ideas, the 'metronomic' division of time into regularly spaced beats and the off-beat phrasing of melodic accents.

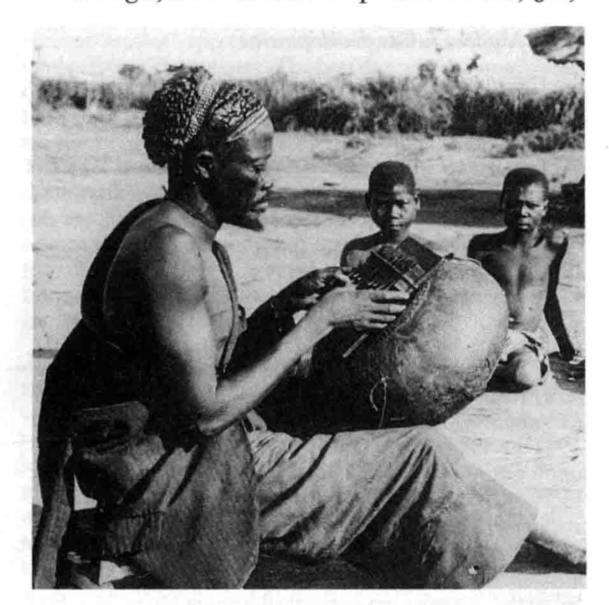
Bantu melody is usually in binary form and strongly marked by the division between solo and chorus. Combinations of notes in 3rds are common. Singers use an open, resonant vocal quality, though a persistent attempt at a burred or buzzing tone is notable in both vocal and instrumental performance. Bantu music is often repetitive textually; emphasis is placed on improvisation and a kind of litany form is used. The voice is traditionally accompanied by instruments.

More specifically, Maquet indicated the following characteristics in his discussion of Pende songs: short phrases, strong rhythm, tuning similar to that of the West but with 'neutral' 3rds, theme and variation form, with the reprise of motifs one tone higher or lower than in their original statement, solo–chorus form, polyphony usually in 3rds, and polyrhythms.

North of the savanna, Pende are the Ekonda. They are a subgroup of the Mongo peoples who inhabit the heavily forested central Congo basin. Their music is complex with an especially characteristic style. The *bobongo* is a combined song and dance form performed in honour of a person who has died, and to drive away any spirits of the dead in the vicinity. Merriam described the musical devices used in this kind of performance:

> Two or more soloists, singing against the chorus in thirds, or, rarely, in unison, is typical; perhaps as typical is the presentation of a major soloist supported by a second soloist singing a totally different, but complementary line. These two leaders are projected against the chorus, which contributes yet a third line; in some cases a third soloist is added, and not infrequently the chorus itself is split into two parts, each taking a different melodic line. Thus an intricate polyphony is established which reaches four parts and, on occasion, five. Characteristic also is the use of the *boyeke* [a rubbed, notched stick used as accompaniment] introduction which establishes the rhythm and tempo for the song; the closings almost invariably take the form of a held note followed by a drop of a minor third which is quickly released.

2. *(a) Xylophone and (b) gourd-resonated lamellophone of the Cokwe people, Katanga region; (c) slit-drum (left), two drums with nailed heads, and basket rattles (right), Yaka people, Kwango region*

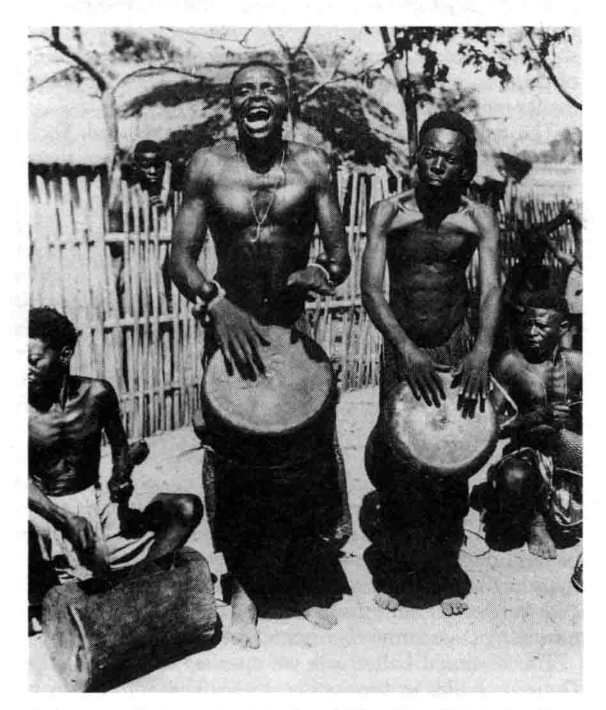


The use of grunts as a rhythmic accentuation is also important. Many devices are used to build climaxes; among them are increase in tempo, increase in rhythmic complexity, an increasingly rapid-fire delivery of texts, more involved polyphony and harmony, an increase in the number of parts represented, and a clever use of small climaxes followed by a relaxation of tension, which is then built up again from a slightly higher level than before.

These characteristics are found not only in the *bobongo*, but also in short songs of the Ekonda. While knowledge of the structural characteristics of Bantu music in the Democratic Republic of the Congo is slender, virtually nothing is known about musical concepts and behaviour. The only group that has been studied from this angle is the Songye of the eastern Kasai, and something is now understood of the distinctions between musical and non-musical sounds, of the sources from which music has been drawn, the sources of music ability and other conceptual subjects. Although song texts have been collected, little is known about the effect of language tone on melody. Some understanding of this problem is provided by Carrington's extensive studies of drum and gong signalling in the Democratic Republic of the Congo, and by less detailed studies of ocarinas among the Songye and whistles among the Pende.

The functional nature of Bantu music in the Democratic Republic of the Congo has been stressed. Song accompanies ceremonial, paddling, mourning, birth, marriage, warfare, fishing, planting, harvesting and scores of other activities. Studies of art and aesthetics. However, have been neglected; many writers have simply assumed that these play a part in the music, while others have ruled out the possibility. Similarly, uncritical writers have emphasized an unending cycle of song in daily life. However, although music does play a strong part in Bantu culture, it is by no means omnipresent. The importance of music-dance relationships has been emphasized, but there is insufficient information for significant comment.

2. Musical instruments. Much more research has been done on this aspect of Congolese music than on any other. Besides the monographs on musical instruments, there are descriptions in special articles and general ethnographic accounts. The monograph (1902) on the collection of musical instruments in the Musée du Congo was the first of several volumes devoted to the subject, including Boone's works on xylophones and drums, and Laurenty's separate studies of chordophones, lamellophones, aerophones and slit-drums. These monographs were all based on the museum's collections, but the authors also took account of other sources of information.



Boone's monograph on xylophones (1936) set the general format, although new methods, techniques and problems were included as they appeared. At the time of publication, there were about 800 xylophones in the museum's collections; Boone studied their form and attempted to construct an evolutionary sequence based on their transformations. She distinguished two major areas of distribution: the homogeneous Kasai–Katanga region (fig.2*a*), which she found to be characterized by pierced gourd resonators with vibrating membranes, a variable number of keys of graded length and ascending tuning; and the less homogeneous Ubangi-Uele area,

3. Gourd-resonated lamellophone of the Cokwe people, Shaba region

which comprises four subregions. Successive works published by the museum are similar, and conclusions are given on the distribution of instruments.

All the peoples of the Democratic Republic of the Congo use drums, which may be divided into three major types: those in which the drumhead is nailed to the body (fig.2*c*), those in which the drumhead is attached by thongs or laces and those in which a combination of these two is used. Chordophones include ground bows, musical bows, harp zithers, stick zithers, board zithers, trough zithers, ten types of pluriarc, seven types of harp, and lutes. The distribution of chordophones is sharply delineated by the Congo and Lualaba rivers; harps and zithers are found to the north of the Congo and east of the Lualaba, while the pluriarcs are found to the south of the Congo and the west of the Lualaba in the Congo basin. Similar divisions occur in the distribution of xylophones and drums, confirming what is known of culture clusters and their history.

4. Slit-drum (left), two drums with nailed heads, and basket rattles (right), Yaka people, Kwango region

22 kinds of lamellophone are found in the country, though in some areas they are unknown; they are most common in the Lower Congo, Kwango, Kasai, Lulua, Uele and Ubangi regions. Their distribution does not apparently correspond directly with that of other instruments, although coincidences occur. Slit-drums are found everywhere, and their distribution is roughly the same as that of xylophones and certain other instruments. Idiophones not previously mentioned include pairs of concussion sticks, bells, gongs, rattles and scraped sticks.
